Born "on the faintly respectable edge" of a St. Louis slum on April 7, 1909, Joe Jones' early life led him to a "desperate kind of hooligan rebellion." His father was a house painter, and in his teens he began slapping paint around, too, meanwhile acquiring a great ambition and a "colossal

ego" without doing much about it. Finally he drifted into a job in a shoe store. The manager made a hobby of painting—on canvas rather than walls—and at 18 Joe was induced to try it. From then on there was no stopping him. Entirely self-taught, picking up his knowledge "from looking, listening and reading, in about that order of importance," his talent didn't long go unrecognized in St. Louis. In 1931 he won the Baldwin portrait prize, in 1932 both the Spaeth Prize for modern painting, and the Healy Prize for lithograph work. His canvases were big, bold, often violent, always honest—he wanted to paint "things that will knock holes in the walls." When he was 23 he became a Communist; he called the Diego Rivera of that period a "bourgeois reactionary." There were patrons who suggested that he might find Mexico both more paintable, and more palatable than St. Louis, but Joe wanted to paint St. Louis as he saw it—and he did. In 1933 he was awarded a prize of \$100 for the best work of art in the St. Louis Artists' Guild show of that year. There wasn't much disagreement; as one critic said: "In a St. Louis show with hundreds of pictures . . . suddenly there was Joe Jones."

But exhibiting in St. Louis and in upper Manhattan's exclusive galleries are two different things. Joe Jones found that out when he came to New York and spent most of the spring of 1935 lugging one of his canvases and a portfolio of photographs from one art dealer to another before getting a showing at the A. C. A. Gallery in May. Then his depictions of evicted women, striking workers, lynchings with hooded Ku Klux figures, all painted while living on a Missouri houseboat propped "on the ruined levee," created a sensation among the New York critics. They greeted him as a genius, compared him not only with Gropper (see sketch this issue) but with Goya. Archibald MacLeish (see sketch this issue) spoke of him as having "digested a lot of the good ideas of a lot of good people" and as having "more scope, more vitality, more fecundity and more promise as well as more mastery than most artists a decade his senior."

After going to Arkansas that summer to paint a mural for Commonwealth College (in "grays, blues and fiery reds," it included sharecroppers, coal miners, Negro lynching victims, a dust storm, a farmer plowing his cotton under), Joe Jones spent the rest of the summer in the wheat fields near St. Louis, painting the grain and its threshers. He wanted "to understand the farmers and present them on their own feet." The artistic results of that summer were exhibited in New York at the swank uptown Walker Galleries in January 1936, eleven wheat-field pictures forming the main part of the show. Of the eleven, *Threshing No. 1* was most discussed, critics varying in their opinions of this new phase of his work but for the most part finding it as distinctly his own as before. They spoke particularly of his "blazing, clear skies," his

dramatic color sense, though one critic found his landscapes less interesting than his other work: "It is when he paints the human figure singly or in groups that his work takes on organic vibrancy and warmth of human understanding." One of his wheat-field pictures was purchased for the Metropolitan Museum of Art.

In spite of his success, however, some of Jones' friends told him his work was getting too "slick." In atonement he went home and painted a Negro prostitute. "That's us," he told his New York representative. "We all prostitute ourselves."

The next year found the artist of social revolt among the recipients of a Guggenheim Memorial Fellowship, a paradox which inspired one art journal to head an article: "It Can Happen Here." His third Manhattan exhibition displayed an even greater "militancy" than the others, for the most part depicting the disasters of Fascism. Henry McBride was alarmed: "Carried too far, it's danger; it is death." Edward Jewell of the New York *Times* disposed of him in short order by describing *Without Mother*, perhaps the most typical of his canvases, as "a piece of sentimental posturing. . . Joe Jones seems still one of those characters in search of an author . . . lacking the clear, pure flame of a unique artistic purpose." But Klein of the New York *Post* called the new exhibit "a great forward step in technical realization," and Emily Genauer of the *World-Telegram* placed *Without Mother* "the tops." Of Jones himself she said: "His work is emphatically social again. But from it he has sloughed whatever characteristics it had in common with message-bearing political posters. Today his pictures have a much more profound human content. There is in them cosmic perspective, passionate insight."

By the autumn of 1939, when new work by Joe Jones appeared once more in New York's A. C. A. Gallery, something had happened. Some of his paintings still dealt with harvesters and railroad workers, but in general "violent social protest played a minor rôle." *Nude with White Cloth*, *Three Trees* and *Road to Verplanck* were pleasant pictures pleasantly mentioned by critics, but created little stir. Nor did his 1940 show, although again concerned with the social scene. It was sometimes agreed that the artist, now only 31, had, perhaps, been "over-rated" or recognized too early. In any case there was still plenty of time for him to find himself.

Jones once insisted that "art must please and instruct the plain brain." Following his own advice, the best of his work has won praise for its "superb color, sound technique and unquestionable honesty," its "strong and simple compositional unity." His color sense leads him to "dramatic, nacreous whites tinged with faint pearl-like pinks, bronze browns, rich greens and blues, permeated with smoky shadow." Technically he has mastered his art; whether

he will develop into the important American painter that his first work seemed to foretell is for the future to decide.

JONES, JOHN JOSEPH Dec 8, 1873-British trade unionist and Labor Party politician

Address: 9 Wanlip Rd, Plaistow, E. 13, London, England

When "Jack" (as he is invariably known) Jones retired from Parliament in February 1940 because of poor health, the British legislature was robbed of one of its most picturesque and unconventional figures. The very first time Jones opened his mouth in the House he was instantly called to order because, instead of using the usual formula of "Mr. Speaker, Sir. . ." he began his speech with "Gentlemen. . ." That one was only a slip, but in a stormy 21 years of Parliamentary life Jones was frequently in conflict with authority: called to order, escorted out, even carried out. From a back seat under the Gallery he would fire interjections, and was quite capable, when aroused, of shouting "Liar."

Jones' constituency was Silvertown, and *Punch* once alluded to him as "the honorable Member for Silver-Tongue." Shortly after he was elected the London *Sunday Chronicle* said of him: "The man who has been thrown up to the top by the maelstrom of the new Parliament seems to be Mr. Jack Jones, the burly Labor member for Silvertown. . . He has proved that there is solid stuff in him. True, he is unconventional, really and unconsciously unconventional. His statement that the house he occupies in Silvertown is so cramped that he has to open the windows to swing his braces when he puts his trousers on was made in all sincerity, and his look of amazement when the House laughed immoderately was really funny. . . He is called frequently and he always has something to say that is worth listening to."

Jones can hardly be described as a statesman and was never awarded office; on the other hand, he is by no means a clown. He went into Parliament, as he went into the trade union movement, with the simple idea of ameliorating the condition of the workingman. Once there it did not occur to him to adapt his style to the august halls. "I simply spoke in the Parliament of 1919 in my natural manner," he wrote in his autobiography. "I could not invent a

JONES, JOHN JOSEPH—*Continued*

false 'Parliamentary' style even if I would, and I certainly would not. So you see complete naturalness became quaint in an assembly where the sense of tradition, the sense of importance and sometimes the sense of false pride and pomposity undoubtedly affect like a plague many of its members."

Born at Nenagh, Tipperary, Ireland, Jack was the son of laboring parents, John and Margaret Jones. He was sent to the Christian Brothers' School at Nenagh village, but stayed there only until 1884. In that year his father died and his mother went across to Liverpool, England, as so many poor Irish do when they are looking for work, since it is the nearest port. Jack began his working life as an errand boy to a Liverpool draper at \$1 a week. In 1889 he became a page in a hotel, but soon grew too big for this and went to work at the Liverpool docks at 10 cents an hour.

It was there that he joined his first trade union. Soon, though, he left the docks for the engine sheds of the old Lancashire and Yorkshire Railway at Horwich, Lancashire and after 15 months there was fired for attempting to form a union. He joined the Social Democratic Federation and in 1897 was sent to prison for persisting in speaking at Nelson, Lancashire, in defiance of a police order. It was in that year that he met Arthur Hayday, a trade unionist working in West Ham, London, who persuaded Jack that he could do useful work in the metropolis.

The move was made, and Jones found himself in West Ham, a grim, swarming industrial region of East London, abutting on part of the dockland. He immediately started a very active life there as a trade union organizer and municipal politician. He served on the Board of Guardians (the body charged with the maintaining of the poor laws), was elected to the town council and rose to be Mayor of the borough.

Jones' first attempt at Parliament was made in 1906 for the tin-mining division of Camborne, Cornwall. He was howled down and polled only a miserable 108 votes. He tried again in 1910, this time for Poplar (the London division including the West Ham district and made famous by the stories of Thomas Burke), and again failed. Eventually he reached Parliament at the end of 1918 as Labor member for Silvertown (a West Ham division). From that time on he was regularly returned for Silvertown at every election; and even in 1935, the peak of the National Government's popularity, he came back with a majority of 13,901. During these years in Parliament Jones occupied a position with the National Union of General Workers, from which he retired, under the age limit, in December 1938.

Unsophisticated and unruly though he proved to be, in Parliament Jones was soon seen to be capable of contributing valuable elements to debate. Never a well-informed,

expert Parliamentary hand like Herbert Morrison or Clement Attlee (see sketches this issue), his speeches were, nevertheless, well constructed and full of shrewdness, force and sincerity. He never allowed himself to forget that he was a poor man from a slum representing thousands just like himself and often turned debate from academic lines to urgent practical consideration. A celebrated remark of his was: "I do not want to rise from the ranks but with the ranks."

One of his main interests as an M. P. was in housing reform, and Jones lived to see gigantic improvements in housing. He has also always been a defender of the workingman's right to drink his pint of beer and often spoke vigorously against the restrictions which, imposed during the War of 1914 to 1918, were partially continued into the peace. Many of the causes he worked for and the experiences he went through in Parliament are described in *My Lively Life* (1928), a discursive autobiography which presents a very good picture of Parliamentary life and one or two ill-founded political prophecies—for instance he pointed out Oswald Mosley, Fascist leader, (see sketch this issue) as a coming man in the Labor Party.

Jones is a large, roundheaded, ruddy man who cares less than nothing for sartorial niceties and never troubles about a crease in his trousers. He has often poked fun at Labor members who wear Court dress when in office. "Boiled shirts and knee breeches look best to me in pictures," he wrote, "or on old Court officials. The poor chaps look quite pleased with themselves dressed up like ninepenny rabbits, and why shouldn't they? If it pleases them and does no harm to anybody else, let them get on with it. For myself, I like a comfortable old suit and a low collar."

Who's Who

JONES, SAM HOUSTON 1897- Governor of Louisiana

Address: b. State Capitol, Baton Rouge, Louisiana; h. Lake Charles, Louisiana

Elected Democratic candidate for Governor of Louisiana in a run-off primary election in early 1940, Sam Houston Jones broke the 12-year reign of the Huey Long machine in that State. He was overwhelmingly elected in the formal election of April 16 against the first Republican candidate in many years, W. W. Tuttle. Celebrating the defeat of Governor Earl Long, during whose régime several Long henchmen were indicted, huge victory parades were held in Baton Rouge. The Long defeat was decisive: only 37 of the 100 members returned were Long adherents.

On May 15 a record-breaking crowd gathered to see him inaugurated and to participate in a giant barbecue. Immediately afterward the new Governor launched a terrific clean-up. He swept through the state bureaus and departments chucking out dead timber and began, with the assistance of legislative consultants, to draft bills to repeal the dictatorial laws enacted by the Long machine. He made it clear that while the effects of the Long machine rule cannot be immediately wiped out, he is determined to rebuild the state government. At the first sign of interference, he says, he stands ready to appeal directly to the people who had elected him.

Sam Houston Jones' career has been one of quiet but steady advancement; and—in contrast to Huey Long's—it has been entirely unspectacular. He was born in 1898 in a two-room farmhouse near Merryville, Louisiana, close to the Texas line, one of a large family. His parents had settled there when Sam Houston was a living hero. Later they moved to De Ridder, and there young Sam first went to school. He wanted to go to the State University to study law, but the family had no money. He got work at a neighboring sawmill, earned enough to enter the University and worked his way through.

When the United States entered the First World War, young Jones joined the infantry. After the Armistice he read law for himself, in 1922 was admitted to the Bar and hung out his shingle in De Ridder. After a term as city judge there he moved to Lake Charles, where an oil boom had started. For nine years he was assistant parish prosecutor. Always active in the American Legion, known for his speeches at conventions, he was made State commander of the Legion in 1930 and 1931, and afterward served as national committeeman.

At the time Huey Long was launching his share-the-wealth plan, Sam Jones returned to private law practice. In 1934, the same year, he married his former boyhood sweetheart, Louise (Gambrell) Boyer. They have two children, Carolyn and Robert; and he is the stepfather of two boys, Jimmy and Billy Boyer.

The gigantic Huey Long machine was careening from scandal to scandal, and settling-up time had come. Disclosures were followed by a Federal investigation. The State was in bad financial shape when Sam Houston Jones, prosperous and respected lawyer, was put on the ballot with other candidates to run against Earl Long in the Democratic primaries. During his campaign he never missed an engagement. He has the voice of an excellent orator and makes a good platform appearance. In the courtroom, however, he is quiet, methodical, positive. On the stump in the country he knows how to talk to people in homely vernacular. And he has the knack of turning in his own behalf the weapons chosen by his

SAM H. JONES

enemies. Longsters had called him "High-Hat, Sweet Smellin' Sambo." At his inauguration he giped, "I take off my high hat," and perfume hawkers sold "Sam Jones sweet smellin' perfume."

Mr. Jones sees his job in Louisiana as one of the biggest since Reconstruction. He hopes to put forward a complete house-cleaning program to get rid of the practices developed during the 12 years that Huey Long and his heirs ruled the State. On the day of his formal election, four Constitutional amendments proposed and indorsed by incumbent Governor Earl Long were swept to defeat. The vote was interpreted as an overwhelming indorsement of Jones' program. Among his campaign pledges were promises of \$3 automobile license plates, better farm-to-market roads, regular auditing of books of State departments, increase of old-age pensions, continuation of free lunches for needy children, no rattle of arms at or between elections, repeal of the one per cent State sales tax. "We are again a democracy," he says. "Louisiana has been given back to the people and the people will rule."

KALTENBORN, HANS VON (käl'těn-born") July 9, 1878- NBC news commentator

Address: b. National Broadcasting Co, 30 Rockefeller Plaza, New York City; h. 9 Garden Pl, Brooklyn, New York

H. V. Kaltenborn, the "suave Voice of Doom" familiar to so many radio listeners, terminated his long association with the Columbia Broadcasting System in the spring of 1940, and also canceled a projected trip to Europe. His version of what's-happening-this-minute-and-why can now be heard over NBC.

Kaltenborn's crisp voice has reported the day-to-day events of so many wars—those that didn't quite happen and those that did—that his wife once expressed her amazement at the people who really believed Orson Welles' broadcast of the invasion from Mars. "Why, how ridiculous!" she said. "Anybody should have known it wasn't a real war. If it had been, the broadcaster would have been 'Hans.'" In Europe the radio is sometimes known as war's "Third Front" (the other two supposedly being military and economic), and it is here that Kaltenborn has taken up his position. "I get no joy out of war," he said a few months ago. "I would rather discuss a fireman's ball than spend one word combatting the propaganda of the 'Third Front.' But," he added, "while knowledge makes for peace, and the truth can set men free, I hope to remain at my post." Quincy Howe (see sketch this issue) announces, however, that he has now "become indistinguishable from those Americans who can think of American problems only in terms of defending the British Empire."

H. V. Kaltenborn (the V is for "von," which he dropped during the World War) is "technically a baron," since the Kaltenborns have been nobility since 1352. His father was Baron Rudolph von Kaltenborn, a Hessian Guards officer who came to America in protest against absorption of Hesse by Prussia, and who married an American schoolteacher, Betty Wessels, and settled in Milwaukee. Hans was born there on July 9, 1878, but spent most of his childhood in Merrill, Wisconsin. After only a year in high school he ran away to work in a lumber camp, then for five years worked for his father in the building-material business at \$3 a week, at the same time doing odd jobs for the local news-

paper. When he was 19 the Spanish-American War came along and he went as first sergeant in the 4th Wisconsin Volunteer Infantry. He never got any closer to the war than an Alabama camp, but he started his newspaper career by covering it for the Milwaukee newspapers, writing his accounts in both English and German.

He came back to be city editor of the Merrill *Advocate* for a year, but found himself bothered with wanderlust. It was the year 1900 when he picked out a freight train bound for New York, hopped it and from New York made his way casually to Europe on a cattle boat. For two years he was a traveling salesman in France, selling stereoscopes to pay his way. Then in 1902 he came back to the United States, this time found a job on the Brooklyn *Eagle* as a reporter, stayed with the *Eagle* until he decided there was something to formal education after all. In 1905 he entered Harvard at the age of 27 as a special student, having prepared for the entrance examinations by himself (he didn't pass his entrance examination in algebra until two weeks before being elected to Phi Beta Kappa). There he debated, studied speech, won prizes in oratory and acquired the accent which, superimposed on his original Midwestern, has caused so many listeners to wonder about his birthplace. From 1907 to 1908 he was secretary to the Harvard-Berlin Professional Exchange in Berlin, a year later he took his B. A. degree from Harvard *cum laude* and sailed away to the West Indies on the *Nourmahal* as Vincent Astor's tutor. In Berlin in 1910 he married the beautiful young Baroness Olga von Nordenflycht. Then once again back to the *Eagle* and the impecunious life of a newspaperman.

Kaltenborn was with the *Eagle* for 20 years. During that time he was consecutively drama editor, assistant managing editor and associate editor, but most of his experience was as editorial writer and commentator. That experience prepared him to lecture on current events for the paper, and this speaking experience, in turn, meant that when radio came he was prepared to speak over the air. In 1922 he became radio's first news analyst. Because he was used to talking to living audiences he was at first troubled with "mike fever"—to this day he makes gestures and changes his expression as if his ether-audience were really visible—but he had a great advantage in being able to speak extemporaneously from nothing more than a few jotted notes. Thus he began building up a solid, if not a sensational reputation with the radio public. He continued spending most of his summers increasing his already wide knowledge of foreign affairs by travel and study abroad, usually accompanied by his wife. From 1926 to 1927 he was in Russia and in the Far East as a correspondent; from 1929 to 1934 he was a member of the

Russian-American Chamber of Commerce delegation in Russia. Finally in 1930 he left the *Eagle* to become news analyst for the Columbia Broadcasting System, and he was with Columbia during one of the most troubled decades in history.

During the past 10 years Kaltenborn has been lecturer on current history for various universities and study groups, and since 1932 has reported the Republican and Democratic Conventions, the London Economic Conference, the League of Nations sessions and every major crisis.

The Spanish War he covered under highly unusual circumstances. At the front during its early days, Kaltenborn was the first to bring the sounds of an actual battle to a radio audience. It was on a point in a sharp bend of a river where French territory extended right into the battle line that he found a farmhouse with a telephone line, arranged for a radio connection through the wire, and took up his position in the shelter of a haystack with a coil of cable under his arm. After nine hours, and after mending the cable when an exploding shell broke it, he succeeded in establishing radio connections with the outside world. At last America heard the familiar dignified diction, the famous Kaltenborn-clipped consonants, only this time punctuated by the rattle of machine gun fire. A description of Kaltenborn under fire is rather typical of the man: he was "a solid, substantial figure in a well-cut business suit and pince-nez, Phi Beta Kappa key dangling across his ample vest front; but as a slight concession to the adventurous nature of his trip he wore a steel helmet over his thinning hair."

During the days of the Czechoslovakian crisis which terminated in Munich, Kaltenborn slept on a couch in the studio, subsisted mainly on onion soup prepared and brought to him by his wife ("a crisis is a fine opportunity to lose weight," he says). Between sorting out the constant bombardment of fresh dispatches, talking by radiophone to European capitals, listening to speeches of European statesmen and to short-wave broadcasts in French and German he managed to give 85 broadcasts in 18 days. This almost superhuman feat brought him 50,000 letters and telegrams, telephone calls from Herbert Hoover and Alfred Landon, and all sorts of cups, medals, scrolls and special citations.

During the summer of 1938 the Kaltenborns stayed home for the first time in many years: they wanted to enjoy their infant granddaughter and their new country place at Stony Brook, New York. The summer of 1939 brought no such opportunity, however. Kaltenborn spent three weeks in Europe on a flying trip, mostly interviewing key men on the ominous political situation, and when war came in September it was a war that he had predicted. Until the spring of 1940, when he became news analyst for the National Broadcasting Company, he reported the Second World War for Columbia.

H. V. KALTENBORN

This "tall, ruddy-faced, white-haired" man is the only radio commentator to go on the air without a script. From his newspaper experience he knows how to avoid libel and giving offense. His training and background have enabled him to read a news bulletin at a glance and explain it without a pause, and for this purpose it is also enormously helpful to have had personal contacts such as his with men like Hitler, Chamberlain, Mussolini. He talks rapidly, but so distinctly that listeners seldom complain that they can't understand him, and he says that short sentences, simple language and frequent repetition are very important in making oneself clear to a radio audience. In his opinion it is the news analyst's job to present all sides of a question, not to take sides—to "calm emotions, not to incite them"; and he believes it is proof of his impartiality that he has been accused of being pro-German, pro-Roosevelt, pro-Japanese, pro-Communist, and pro-British—one as often as another. One woman wrote criticizing his "Oxford accent": "Your sentiments may be pro-British, but please keep your voice neutral." In all his years of broadcasting he has never allowed himself to be interrupted by commercial announcements.

Kaltenborn tries to read all the books on foreign affairs as they come out, and every day there are bulletins of various associations, newsletters, newspapers and domestic and foreign magazines of such varying types as *The Japanese American* and *The Soviet World Today* waiting for him to look over, as well as innumerable letters and telegrams from listeners or personal correspondents either begging for more information on some point or volunteering some information of their own. He makes his job more difficult by insisting on fulfilling lecture engagements besides. He is his own manager, travels by

KALTENBORN, H. V.—*Continued*

plane, speaks without fees when it is for a cause which particularly appeals to him, and prides himself on never delivering the same lecture twice. Somehow he has found time to write and publish three books: *We Look at the World* (1930); *Kaltenborn Edits the News* (1937); and *I Broadcast the Crisis* (1938). He also finds time for an occasional trip to the Harvard Club for a "good sweat, swim and massage." And somehow he manages to keep right on bumping into adventures. One of his exploits was to be mistaken for a robber while on a lecture tour and arrested when he got off a plane in a strange city. It took so much time to persuade anyone that he really was H. V. Kaltenborn that he almost missed his broadcast that time.

Mr. and Mrs. Kaltenborn live in Brooklyn, New York and have two children, Anais and Rolf. Mr. Kaltenborn is also listed as winner of first place in a newspaper poll for "most popular radio commentator" conducted by the *Motion Picture Daily* and the Scripps-Howard press in 1939.

KEITEL, WILHELM (kī'tēl) Sept 22, 1882— Chief of the Supreme Command of the Armed Forces of Germany; member of the Cabinet for Defense of the Reich

Address: Ministry of War, Berlin, Germany

It was Colonel General Wilhelm Keitel, Hitler's chief of staff, who read the long

document which spelled France's ruin on that historic day in June 1940 when Hitler and members of his Cabinet met representatives of the French government in a railway car in Compiègne forest to dictate to them the terms of the German peace.

The fact that Keitel read the peace terms indicated his high position in the German Reich. Colonel General Keitel was Germany's spokesman on all military and naval matters and had been since February 4, 1938. That was the date on which Hitler reorganized the army with a Napoleonic gesture, firing Von Blomberg, Minister of War, and Von Fritsch, commander in chief of the army, on grounds of "ill health," and himself assumed personal and direct command of all of Germany's armed forces.

Under the new order of things there was no position of Minister of War. Hitler, like the Kaiser, was the all-high chief. His authority was exercised through a "Supreme Command of the Armed Forces headed by General Wilhelm Keitel." Thus Keitel became technically Von Blomberg's successor, but without the latter's authority. He took over the War Ministry and in accordance with Chancellor Hitler's decree was, during times of peace, to have "charge of national defense in all fields." The new German armed hierarchy was now first Hitler, then General Keitel, as a kind of administration officer in charge of liaison to the three fighting services—Marshal Goering for the air, Admiral Raeder for the navy and Von Brauchitsch (see sketch this issue) for the army.

Later Keitel also became a Cabinet Minister. On August 31, 1939, on the heels of mobilization in Poland, Hitler organized his government on a war basis, appointing a "Cabinet Council of Defense of the Reich." Keitel, as chief of the Supreme Command of the Armed Forces, was, of course, a member of the new Cabinet.

Keitel's appointment, like Von Brauchitsch's position as commander in chief of the army, was not looked upon in Germany as a political appointment. General Keitel was a good soldier and not a politician. Born September 22, 1882 in Helmscherode, he was descended from an old family of German army officers. He started his officer's career with the artillery in 1901 and rose slowly through the ranks by seniority. In 1902 he was made a second lieutenant. It was 1910 before he became a first lieutenant.

During the First World War he was a captain, spending most of his time on the general staff in the Ministry of War. After the War he served successively in the field artillery and the general staff and was instructor of the Reichswehr Cavalry School from 1920 to 1922. In 1923 he was promoted to the rank of major and served in the Reichswehr (Army) Ministry from 1925 to 1927; he was made lieutenant colonel in 1929; colonel in 1931; and major general in 1934, commanding the 4th Infan-

WILHELM KEITEL

try Division with headquarters at Bremen. From 1935 to 1938, when he became chief of the Supreme Command of the Armed Forces, he was chief of the administration department in the War Ministry.

General Keitel apparently has stood well in the graces of his Führer since he became his chief of staff. In a personal letter written to Keitel in November 1938 Chancellor Hitler expressed his congratulations to his chief of staff for "his valuable cooperation." General Keitel was also promoted to the rank of colonel general at this time.

The General has accompanied the Führer on many of his most important missions. He was with Chancellor Hitler on the latter's visit to Rome in May 1938; was present during the visit of Prime Minister Chamberlain in Berchtesgaden, September 1938; and was also present at the Munich Conference of September 1938.

What influence, if any, he has on Chancellor Hitler is not known. French military writers, however, generally credited Keitel with a strategic victory over Admiral Erich Raeder by persuading Hitler to concentrate air forces on the Western Front instead of diverting a large proportion of them to a coordinate attack rôle with the German Navy. Hitler is said to have wavered, but finally concurred in the idea of concentrating Germany's air forces on the Western Front. The result and the smashing of the Maginot Line is history.

Again Keitel was said to have had a voice in arguing against the German air offensive in Britain in the summer of 1940. According to an English newspaper which attributed its information to the "most neutral sources," a serious difference of opinion among Adolf Hitler's advisers delayed the airplane invasion of Great Britain. It was said that Marshal Goering, Propaganda Minister Goebbels and

KEITEL, WILHELM—*Continued*

Colonel General Keitel were insisting that the invasion must not be launched because the risks were too great, while Foreign Minister Von Ribbentrop and Heinrich Himmler, chief of the Gestapo, were pressing for the invasion.

In October 1940 Keitel took over the Axis African command, succeeding Italian Marshal Rodolfo Graziana, shortly after the Brenner Pass conference between Hitler and Mussolini.

Colonel General Keitel was married April 18, 1909. He has three sons and two daughters. He is described as "hard, unsmiling and always mysterious."

KENNEDY, JOSEPH PATRICK Sept 6, 1888— Former United States Ambassador to Great Britain

Address: h. 294 Pondfield Rd, Bronxville, New York

Fortune described Joseph Kennedy's career as picaresque even before he was appointed United States Ambassador to Great Britain: "The legends of Joe Kennedy make him at once the hero of a Frank Merriwell captain-of-the-nine adventure, a Horatio Alger success story, an E. Phillips Oppenheim tale of intrigue, and a John Dos Passos [see sketch this issue] disillusioning report on the search for the big money." And it is true that he has had an assortment of experiences any one of which might last another man a lifetime. Joseph Kennedy has never been able to decide whether he is an athlete or a banker, a Wall Street wolf or the investor's guardian, a businessman or a statesman. The only stable and permanent classification he falls into is that of a father.

It was on East Boston's Meridian Street that he was born, on September 6, 1888, the son of Patrick J. and Mary (Hickey) Kennedy. His father was sort of a "soft-spoken, benign-appearing" political boss, with a coal business and part-interest in a couple of saloons besides, so that the Kennedys were moderately well-off. Just the same Joe peddled papers, sold candy on an excursion steamer, took tickets on a sight-seeing boat, and went to Parochial school until the seventh grade. Then he attended the Boston Latin School, where he made records for himself in basketball and football and won the Mayor's cup for his batting; on to Harvard in 1908, to major in economics, make the basketball team, Hasty Pudding, Institute of 1770, Dicky and D. U.; and out into the world in 1912, with a B. A. degree and the experience of \$5,000 already earned by running a sight-seeing bus to Lexington during three summers.

Joseph had decided he would have a million by the time he was 35, but temporarily contented himself with a bank examiner's job at \$125 a month, traveling around eastern Massachusetts. (His father was a director of the Columbia Trust Company.) After only 18 months on this comparatively humble job he managed to borrow enough money to buy a great part of the stock of the Columbia Trust around the time First Ward National Bank seemed about to take it over; and in 1914 he was elected president of the bank. He was only 25, the youngest bank president in the United States. He was making a good start toward that million.

On October 7, 1914 Joe Kennedy married the daughter of the Mayor who had presented him with the cup for batting six

years before: her name was Rose Fitzgerald. The young couple moved to Roxbury, and his father-in-law made Kennedy the director for the city of the Collateral Loan Company, a job that turned out to be troublesome enough to keep anyone else out of politics for more than 20 years. In 1917 Kennedy quit banking for a while and became assistant general manager of the Fore River (Massachusetts) plant of the Bethlehem Shipbuilding Corporation. He spent 20 months building ships for Bethlehem Steel and Assistant Secretary of the Navy Franklin Delano Roosevelt, got himself on the board of trustees of the Massachusetts Electric Company, and finally in 1919 joined the Boston branch of the Hayden-Stone Company, investment bankers, as their manager. (He had met Mr. Stone while trying to interest him in ordering ships.) Until 1924 Kennedy moved in the "intense, secretive circles of operators in the wildest stock market in history, with routine plots and pools, inside information and wild guesses"—and he learned market operations thoroughly. "Anyone can lose his shirt in Wall Street if he has sufficient capital and inside information," he summed up his experiences.

It wasn't quite an accurate description, though. In 1919 Kennedy had bought control of a New England chain of 31 small movie houses and taken a brief flier in production. Then in 1926 he sold part of his little theatre chain, bought control of the Film Booking Offices of America, and started making about one picture a week—mainly Westerns and melodramas. It was a highly profitable venture. In 1928 he became special adviser on the board of Pathe, in 1929 chairman; he bought a controlling interest in Keith, Albee, Orpheum Theatres Corporation and for five months served as chairman of their board; finally a general reshuffling of stocks and the formation of Radio-Keith-Orpheum left him holding a fortune in RKO. He retained only the chairmanship of Pathe, and left that position in 1930, but when he quit the movies he had something like \$5,000,000. He was also 32 pounds underweight and had to go to the hospital before he could "clarify his social views."

He emerged looking for "a leader who will lead," and decided it was Franklin D. Roosevelt. It is reported that he gave \$15,000 to the 1932 Democratic campaign fund, lent \$50,000 more, and is supposed to have contributed another \$100,000 indirectly. In 1932 he traveled with the Roosevelt campaign train and all kinds of rumors went around about him; it was said he was the man who had brought Hearst into the Roosevelt camp, and it was known that he was friendly with Cardinal Pacelli and Father Coughlin (see sketch this issue). After Roosevelt's election he didn't get a Cabinet position, however, although he is supposed to have wanted the job of Secretary of the Treasury, and 1933 found

JOSEPH P. KENNEDY

him back on Wall Street cleaning up in a pool in stock of the Libbey-Owens-Ford Glass Company.

In 1934 a good many people were startled when his appointment as the head of the Securities Exchange Commission was announced. Putting a speculator in charge of a commission formed to protect the investor caused most liberals to break into a cold sweat and decide that Wall Street had captured the New Deal. John T. Flynn described Kennedy as an "antisocial gambler, a blundering wrecker of corporations, a tool of other capitalists, and a conscienceless market manipulator to boot." But when Kennedy resigned in September 1935 after 431 strenuous days it was not only the praise of the conservative press that was ringing in his ears, but the same John T. Flynn was calling him the "most useful member of the Commission."

Back to private life, Kennedy worked for a short time as an independent corporate consultant reorganizing RCA, making a report on Paramount Pictures and reorganizing the Hearst properties. He also published a campaign volume, *I'm for Roosevelt* (1936), in which he claimed that the New Deal was doing away with the necessity for more drastic changes in the American way of life. Then in 1937 he was asked to be chairman of the newly-formed Maritime Commission, set up to create an American merchant marine and to administer the United States Merchant Marine Act. He was in charge for 75 days, performed a remarkable job of settling ship operators' claims against the government, worked out a scheme for subsidizing shipping companies to the tune of \$25,000,000 a year, which caused some to tag him a lobbyist for the shipowners, and got himself called a "union-wrecker" by the N. M. U. because of his advocacy of legislation to

KENNEDY, JOSEPH PATRICK—*Cont.*

outlaw strikes and to make arbitration of labor disputes compulsory. His own opinions of the Merchant Marine Act and of Frances Perkins (see sketch this issue) grew less and less printable, and when in December 1937 he was appointed the United States' (first Irish and first Catholic) Ambassador to Great Britain it was probably a happy day. But Kennedy waved farewell with a plaintive: "I am simply a babe thrown into a foreign country to do the best I can."

In England Kennedy was hailed as "Jolly Joe Kennedy" and "The U. S. A.'s Nine-Child Envoy" (Joseph P., John F., Rosemary, Kathleen, Eunice, Patricia, Robert, Jeanne, Edward). The new Ambassador made a hole in one at golf the first Sunday, said he was fond of Rugby, rode horseback in Rotten Row, put his feet on his desk during his first press conference ("You can't expect me to develop into a statesman overnight"), told Queen Elizabeth she was "a cute trick," didn't wear knee breeches when he presented his credentials to the King but found it "no fun to go to one of those parties and be the only man in long pants," and ended up by making himself very popular. Perhaps that is why he was called the most pro-British Ambassador the United States has ever had. A great friend of Chamberlain's, it was said that he worked closely with the appeasers. In October 1938 a Trafalgar Day speech he made caused the New York *Post* to comment: "If this precious specimen of diplomatic expediency had been written in the British Foreign Office it could not have served better to bolster the propaganda of Prime Minister Chamberlain." By this time Kennedy was saying openly that he didn't approve of all of the New Deal, and President Roosevelt was hearing reports that he had assured British conservatives that there would be a "safe" man in the White House after 1940.

But it was not long after Munich when Kennedy changed his tune and began issuing frantic warnings that 1939 would be a year of war. In September 1939, two hours before it was delivered, he read Chamberlain's speech declaring war. "It's the end of the world," he said. In those early days of September the American Embassy was working day and night, and the cable wires to Washington were equally busy. Ambassador Kennedy moved to a country house outside London after his family left for the United States, but drove into the city each morning.

In November he was holding conferences in Paris with Ambassador Bullitt (see sketch this issue); early in 1940 he was in Washington conferring with Bullitt and Secretary Hull (see sketch this issue). As usual, rumors flew busily about. It was reported that he was trying to enlist Roosevelt's support for an Italo-Vatican peace move; it was reported that he was going to resign. Kennedy made it known that he

had no intentions of resigning, at least. "I cannot forget that I now occupy a post which at this particular time involves matters so precious to the American people that no private considerations should permit my energies or interests to be diverted," he said. In February he returned to London, and the next month was occupied in visiting Gibraltar, Rome and Paris with Under-Secretary Sumner Welles (see sketch this issue), denying German press reports that he had criticized the Allies, keeping silent on the revelations of the German White Book as to his statements on the United States' War policy (already denied by Roosevelt and Hull). June found him working for the evacuation of British children and cabling pleas to Roosevelt for aid to the Allies. He was said to have warned the United States previously of the probability of German successes. In August he narrowly escaped death when a German bomb fell within 300 yards of his country house.

In October 1940 Joseph Kennedy arrived in the United States, and when asked whether he was planning to hand in his resignation, refused to comment, as Hull refused to comment. He immediately proceeded to spike rumors of a rift between him and Roosevelt by making a radio speech strongly advocating his re-election. Not long after election an "off the record" interview printed in the *Boston Globe* created quite a sensation. Kennedy was quoted as having said the presence of Labor leaders in the British Cabinet was merely a sign that "national socialism" was growing out of the British war effort; that "democracy is finished" in England. Late in November 1940 he announced his resignation, saying that as a private citizen he wanted to help the President keep the United States out of war.

Kennedy has said: "I never liked what I had to do until I did it; then it became my career." Red-faced, with receding sandy hair and spectacled blue eyes that usually have an affable glint in them, he has been summed up as "athletic, unperplexed, easily pleased, hot-tempered, impatient and restless as they come." He is "a backslapper, a good cusser, almost a teetotaler." He likes exercise, plays golf in the 80's, swims, rides, plays tennis, enjoys good food, detective stories, warm climates, long battles, speech-making, talking pictures, music. He used to play the piano himself and has an excellent collection of records, of which Beethoven's *Fifth* is his favorite. He gave up smoking in 1937 and now is a great candy-eater and gum-chewer.

It is quite obvious that he is a family man. His family is as attractive as it is large, consisting of pretty, youthful-looking Mrs. Kennedy, five daughters and four sons. John got his LL. D. at Harvard; the subject of his thesis was non-intervention in the Spanish Civil War. *Why England Slept* (1940) in his contribution to a much-debated problem. Joseph Jr. worked for

a time in the Paris office of Ambassador Bullitt. Another member of the family that shouldn't be forgotten is Edward Moore, "nurse, comforter, friend, stooge, package-bearer, adviser," who used to be the secretary of Mrs. Kennedy's father and who is now Joe Kennedy's personal aide.

CHARLES FRANKLIN KETTERING

KETTERING, CHARLES FRANKLIN
 (kět-ēr-ing) Aug 29, 1876- Engineer;
 manufacturer

Address: b. Winters Bank Bldg, Dayton, Ohio

"Most people think of research as one of two kinds," Charles Franklin Kettering once told a group of businessmen, "either high-brow or nuts." He believes it's neither. "Research is an organized method of finding out what you are going to do when you can't keep on doing what you are doing now."

Kettering, who is now vice-president of General Motors Corporation in charge of its Research Laboratories Division, has gone along on this premise ever since the day when, a "loose-jointed, raw-boned six-foot-three country boy just turned twenty-seven," he got off the train at Dayton, Ohio and walked over to the offices of the National Cash Register Company to ask for a job. He was asked to develop a motor to run cash registers. He made one.

Since then he has made or had a hand in making Delco-lighting, which provided cheap lighting for farms; Duco paint, which reduced the time needed to paint cars from seventeen days to about three hours; the Diesel engine; the hypertherm, which treats diseases by artificially induced heat; the crankcase ventilator; Ethyl gasoline; the self-starting motor; Frigidaires; and a gadget for opening bedroom windows without getting out of bed.

This "monkey wrench scientist" was born on an Ohio farm near Loudonville on August 26, 1876, the son of Jacob and Martha (Hunter) Kettering. He went to the small district school near his home and to high school, earning extra money by working on country telephone lines. After high school Kettering got a job as a country school teacher, but left it a year later to go to Ohio State University.

It took Kettering six years to get through Ohio State, mostly because of an eye ailment which kept him out of school for two years and made it necessary for him to have somebody read to him. In 1904, at the age of 27, he was graduated, threw his diploma into the wastebasket, and went after the National Cash Register Company job. The next year he married Olive Williams and was on his way in the career that was to make him head of the Dayton Engineering Laboratories Company, with Edward Andrew Deeds; president of the General Motors Research Corporations; president of C. F. Kettering, Incorporated, and vice-president of the General Motors Corporation.

There were three men who had contributed to Kettering's understanding of science and research. They all taught him that "formulas should always follow facts and not facts formulas." His country schoolteacher, John Rowe, used to teach square root by whittling out blocks of wood; he did the facts first and then developed the formula. His friend, Neil McLaughlin, taught him that most things in this world are related, and a carriage maker named Sweet in the town where he was teaching school taught him the joy of invention and discovery.

For the past 36 years Charles Kettering has been a researcher. Not the ivory tower kind, but the sort of researcher who firmly believes that he "needs the practice of experience and commercialism." His fellow engineers gave him the Washington Award in 1936 for "accomplishments which pre-eminently promote the happiness, comfort and well-being of humanity."

Humanity's happiness and well-being are promoted by labor-saving devices, Kettering knows, but he knows, too, that it is the

KETTERING, CHARLES F.—*Continued*

labor-creating inventions which can do even more to increase the well-being of great numbers of people. Kettering regards the creation of jobs as a "primary responsibility," and for an example points out that because of researches on Diesel engines the General Motors Electro-Motive plant near Chicago, where his only son Eugene is an engineer, has created work enough to employ 2,000 men.

In these past 36 years Kettering has become less and less interested in the research that turns out annual improvements in Chevrolets or Frigidaires. The most important research job in the world right now, he thinks, is "to find out why grass is green." To discover the answer he set up a thorough study of photosynthesis at Antioch College which costs him about \$30,000 a year. He is interested, too, in the practical research which means basic changes in the things around us. He insists: "Time and change are tied together so eternally that we cannot separate them."

This research is mostly carried on now in the special 11-story building in Detroit that houses the General Motors Research Division. Forty per cent of the work here is consultative engineering at the request of the manufacturing divisions; about forty more per cent is advanced engineering, to discover the upper limits of Diesel performance, for instance; about twenty per cent is "pure science," to discover the nature of combustion, perhaps, or of friction. But the whole is "900 per cent Charles Franklin Kettering."

They know him in the laboratory as "Boss Ket." Engineers in rival factories say that you have to be a yes-man to work for "Ket." That's not strictly true, since he does love to argue and insists on a certain amount of it. "But you can't help noticing how the department heads fall unconsciously into his ways of speech and constantly quote him. It's doubtful if even the strongest-minded engineer could work for him without showing it. Sometimes, when in a vein of iconoclastic preaching, the Boss reminds you of an old-womanish Abe Lincoln. At others, when he is tinkering with a stroboscope or drawing graphs on his big office pad, he looks like a young and impish Ichabod Crane."

At 63 he is as loping and active as he was when he first walked into the National Cash Register Company. His eyes still glisten and peer from behind thick lenses just as they did when he was an Ohio farm boy fighting for an education against blindness and poverty. "What makes them gleam now is a prodigious intellectual curiosity." But "Ket" is not satisfied merely to solve problems; he must moralize on his methods.

All around his office are aphorisms: "A man must have a certain amount of intelligent ignorance to get anywhere." "Nothing is so conducive to thought as the sheriff." "Any problem thoroughly understood is fairly simple."

For Kettering economic problems are not exceptions to these rules. "We have too many men out of work, too much idle capital, and too many raw materials," he states firmly. "So, obviously, we have too few projects." In April 1940 he told the Temporary National Economic Committee that more new machines and more projects were the answer to the ills of our economic system.

He tries to remedy this situation by his General Motors' research, the chief purpose of which, he claims, is to supply new industrial projects to society. Thousands of projects go into the G. M. Laboratory and it's often impossible to tell how or in what form they will come out. "The only sure thing is that General Motors' research will sooner or later produce something, and the probability is that it will make General Motors some money, fill a new human want and put some men to work."

KIERAN, JOHN (kī-rūn) Aug 2, 1892-Sports columnist of the *New York Times*; member of the *Information, Please* radio program

Address: c/o New York Times, 229 W 43rd St, New York City

The popularity of the question and answer program on the radio shows that Americans still hanker for the parlor games of three generations ago. Evidently Americans yearn

for self-improvement—for culture in easy, painless capsule form. Europeans smile at our naïveté, yet there is something refreshing in the thought of millions of people sitting in their comfortable living rooms waiting for the clarion call of *Information, Please*: "Wake up, America! Time to stump the experts!"

One "walking encyclopedia" who has answered many hundreds of questions correctly on the *Information, Please* program over a period of almost three years is John Francis Kieran (he does not use his middle name). He was born, as he puts it, "of poor but Irish parents" in New York City in 1892. His father, a native-born New Yorker, now deceased, was James Michael Kieran, scholar and teacher of the classics, a man of deeply analytical and factual turn of mind who was president of Hunter College in New York City. His mother, Kate (Donahue) Kieran, was a public school teacher before her marriage. "She wrote poetry," says Kieran, "but showed no other signs of mental derangement." Completely opposite in temperament to her husband, she was a romantic who loved music and books. When winter came it was her habit to settle herself in an upstairs sitting room with piles of books close at hand and have all her meals brought up by the maid. She read during practically all her waking hours and could, naturally enough, quote poetry by the yard. Kieran says: "Mother quoted the classics on the slightest provocation." An accomplished musician as well as a student of literature, Mrs. Kieran instilled a love of music in all her children.

As a child John Francis was something of a prodigy. He was tremendously interested in music but showed no disposition toward a musical career. By the time he was 10 he knew most of the music and something about the lives of the great composers. At the same time he read avidly whenever he could get away from his schooling. He maintains that a poor boy can get a lot of pleasure from library books at no cost. But to assume that Kieran and his numerous brothers and sisters led a completely bookish life is incorrect. They were Irish and fond of every kind of boisterous fun and sport. "At high school and college," says Kieran, "I played many games but none too well. Was on the varsity baseball team and fancy diver on the swimming team. Later I won a newspaper golf championship. Now I play tennis and chop wood for regular exercise."

When he was graduated, *cum laude*, from Fordham University in 1912 his father remarked that if he had been a less distinguished shortstop he would probably have been a more distinguished student. For a year after graduation he taught a country school in Dutchess County, New York. He had only six pupils, received \$10 a week and ran a poultry business on the side. Both these occupations left him with leisure time, which he spent reading twice, two thick volumes of Blackstone from cover to cover and making voluminous notebooks filled with

JOHN KIERAN

his own comments. The inquiring mind of his father and the love of books and poetry of his mother definitely showed up in the young man. He played no favorites—every kind of book was his constant companion.

He noticed birds in his walks and began to study them. Now he can identify the plumage and the call of nearly every bird in Eastern America. From birds his interest went to flowers and insects. For Kieran to become interested meant to read everything on the subject he could find. As one study led to another he began building up his tremendous memory.

A year of schoolteaching seemed enough for Kieran and in the fall of 1913 he got a job as timekeeper for a sewer construction project. The workers were Italian and Kieran promptly learned the language—not only the words but the gestures and fiery Italian enthusiasm that went with them. This job was an hour by subway from his home. He made the trip six days a week with a French book and a dictionary instead of a newspaper. During 12 hours a week for 12 months Kieran taught himself French—"you can learn a lot of French in that time," he says—and he did.

All this time he wanted to become a journalist. He kept sending in pieces to the *New York Times*. In 1915 he joined the staff of the paper in the capacity, he says, "of added starter in the sports department." At the *Times* he admired from afar the chief of the telephone operators, Alma Boldtmann. Eyewitnesses report that at the time he was very bashful and "too small for his clothes." "I thought he was the new office boy," she recalls. The World War snatched him away from her, however, and he went overseas with the 11th Engineers. Kieran's tunic was undoubtedly the most unshapely in the whole A. E. F.

KIERAN, JOHN—*Continued*

It was stuffed at various times with volumes of Dickens, Thackeray, Shakespeare, Keats and George Borrow.

"I did no harm," Kieran recalls, "to anybody on either side in the War; collected no wounds but was scared to death many times. After the War I returned to newspaper work. After a short term with the New York *Herald Tribune* and Hearst I returned to the home team January 1, 1927 to start the first daily signed column ever published in the New York *Times*. It's still going on. So am I." Meanwhile in 1919 Kieran had married Alma Böldtmann. They went to live in Fieldston, a suburb on the edge of New York City, and have lived there ever since. They have three children—a girl, and two boys who are students at Yale.

Kieran says that his luckiest break in the pursuit of culture was his assignment to go on the road with New York baseball teams. "Nobody on a ball team," he explains, "gets up early and I had almost every morning to myself." Thus he discovered the "culture potential" of every large city in the country—where the libraries were; the parks; the museums; the art exhibitions.

During the years Kieran's curiously dual nature expanded—a scholar and student discussing in true "sports argot" southpaw pitchers, shortstops and winners on the race track, while finding time to dip into the Latin text carried in his pocket. In addition to his sports writings—he has been called one of the world's really great authorities on sport—he found time to rent from the city of New York the concession for the rowboats of the three lakes in Central Park. He did well with them until the profitable venture was put to an end by some trouble with a man named Peter Pappas. One of the Kieran children's earliest recollections is a family chant which went, "PE-ter PAP-pas did PAP-py out of PARK."

Kieran, called the "know-it-all" of *Information, Please*, is essentially a very modest man. That modesty conceals a streak of pugnacity, however. As a boy he was called the "fightingest" Irish. During the War he was given the title "The Battling Supply Sergeant" for taking care of a bullying non-com; once he was formally presented by his fellow sports writers with a plaque—"To John F. Kieran, The New World's Champion" for putting into his place an offensive sports writer.

In 1939 Kieran was asked to address a very swank preparatory school. The professor who introduced him said that it was not customary for the school to invite sports writers. Kieran's Irish flared up. Then the professor went on to say that Kieran was no ordinary sports writer. That maddened Kieran as a reflection on his profession. Finally the learned professor

wound up with a "salvo of Latin" in order to put the squirming guest in his place.

"But the Lord," says Kieran, "delivered him into my hands." Kieran arose. "I am sure," he said, "that you will forgive me for correcting one conjugation and one case in your quotation." He corrected them. Then he proceeded to deliver a 30-minute extemporaneous speech, every word of which was in Latin.

The radio program *Information, Please* did not "make" Kieran. He was recognized as a journalistic phenomenon long before. Brooks Atkinson, dramatic critic of the New York *Times* and one of its top intellectuals, once introduced Kieran to his wife, Oriana. Kieran immediately replied with the verse from Tennyson's ballad:

"My heart is wasted with my woe,
Oriana
There is no rest for me below,
Oriana"

"That," said Atkinson, "is the first time that any one ever recognized the literary ancestry of my wife's name."

Once, when William Lyon Phelps was asked to write his estimate of the New York *Times*, he startled the editors by passing over its outstanding qualities and writing of Kieran's column—"it is generally conceded that nothing like that column—'Sports of the Times'—was ever seen before among sports pages. Kieran knows the things about sports that every sports writer is expected to know and a good many things that are not required."

The man who carried Thoreau's *Walden* and Carlyle's *French Revolution* through the War, and whose coat pocket houses a book as part of his wardrobe, was a natural for *Information, Please*. The story goes that Dan Golenpaul, who first started the program, met Kieran at the Dutch Treat Club luncheon in New York and was astonished by Kieran's "knowledge of Greek philosophers, obscure composers, classic poetry and other erudite subjects." Since May 1938 Kieran has continued to astonish his listeners.

He denies that his memory is out of the ordinary. "I remember what I'm interested in," he says. "Everybody does. I just happen to be interested in a lot of things—most of them, luckily, the kind that don't cost much." He uses no memory tricks and has but two mottos: "Improve each shining hour" and "Whenever a new book comes out, I reread two old ones."

Since the program started he has answered extemporaneously more than a thousand questions on subjects ranging from "ornithology to mythology, from sports to dead languages, from Shakespeare to ceramics." With him appear F. P. Adams, Oscar Levant (see sketch this issue), and Clifton Fadiman, who acts as master of ceremonies. A successful series of motion picture shorts made without rehearsal has carried the fame of this "omnis-

cient pack" to every corner of the country, and a new *Information, Please* book published in November 1940 records their radio errors and triumphs for posterity.

Kieran receives about \$500 a week for the radio hour. This in addition to his *Times* salary amounts to a substantial income, but the family lives simply, almost frugally. They have a summer cottage on an island near the city. With the family away for the summer, Kieran prepares his own breakfast and spends the week in town. Mrs. Kieran told him to be careful not to put wet clothes in the hamper as they might mildew. When she returned to see how he was getting along she found 17 shirts hanging from chairs, light fixtures and furniture in his bedroom. "But I made my bed every morning," he reminded her.

"Neither Kieran nor his brow was built to wear the laurel wreath that the public has bestowed upon him," remarks a critic. "In person he is small, rosy and bashful. His hair is gray; his face and his cumbersome ears authentically Irish; his body slightly bent at the middle. He quotes the classics softly and well. But the accent is unmistakably New York." That accent has given people cause for reflection. It is so definitely what one writer called "Tenth Avenoo": unaffected and candidly no scholarly accent.

Some people feel that Kieran's memory is almost never at a loss when it comes to poetry. One of the most amusing stories concerning him is the time Clifton Fadiman asked him to give the second verse of three famous poems sent in by a Yale undergraduate—one John F. Kieran Jr. Kieran answered two parts correctly but was stumped on the third—stammered and gave up—then called upon a Kieranized Shakespearean line for the last word. "How sharper than a thankless tooth it is," he said, "to have a serpent child."

KING, WILLIAM LYON MACKENZIE
Dec 17, 1874- Prime Minister of Canada

Address: Laurier House, Ottawa, Ontario, Canada

For the duration of the War parliamentary government in Canada was virtually abandoned. The election of March 26, 1940 was such an overwhelming victory for the Liberal government that there were left in Parliament only a few men capable of criticizing its work. The man who was granted almost dictatorial powers at that time was Prime Minister Mackenzie King, who for years has guided Canada's policy down the middle of the road, and the rapid march of events since his election has brought to the country a great deal of unprecedented legislation designed to galvanize Canada's war machine into action. Although the Opposition at first showed symptoms of wishing to displace him, the session of Parliament that ended in August 1940, not to reconvene until November, brought him tributes from the leaders of all parties. If he serves his full term of five years he will have been Canada's Prime Minister for 19 years. To Canadians his is a familiar figure: "small, black-coated . . . with inches of starched shirt cuff, the single wisp of hair sprawling over the forehead, the bouncing little stride, the battered red dispatch case under his arm"—familiar, and perhaps reassuringly undictatorial in appearance.

It was a bold and shrewd move on King's part that turned possible political embarrassment into victory, back in the first months of 1940. Shortly after Canada declared war on Germany, Mitchell Hepburn, provincial Premier of Ontario and dissident Liberal, persuaded the Liberal members of the Ontario Parliament to pass a vote of censure on the Prime Minister for lax conduct of Canadian war activities. Dr. Robert J. Manion, leader of the Conservative minority in Parliament, took up the cry, charging that King's conduct of the War had been "half-hearted, incompetent and neglectful." To the sessional opening of Parliament on January 18, 1940 Opposition leaders came all primed to insist upon their Parliamentary right to facts and figures, which, they believed, would expose unfair campaign censorship and patronage in awarding war contracts, previously hidden under a cloud of "dictatorial secrecy." They were surprised; after walking "like a trained actor through all the preliminary ceremonies," the Prime Minister, without a word of warning, dissolved Parliament four hours after it assembled, called for a "direct and unquestioned mandate from the people." Dr. Manion, after protesting that King wished to gag the House, after calling "Dictatorship! Why should we fight for democracy in Europe and lose it at home?" was met with the quiet retort: "Democracy doesn't

WILLIAM LYON MACKENZIE KING

mean that I am answerable to the leaders of the Opposition—but to the people.”

The people answered two months later by giving the Liberals more seats in Parliament than ever before, by re-electing all the government ministers, and by defeating Manion in his own home town. It is supposed that Manion's program seemed more than a little vague, particularly without the hoped-for “facts and figures,” and that King's promises to fight the War with vigor, to spread war sacrifices as evenly as possible over all sections of the people, and not to draft men for war service seemed more dependable than those of a comparatively unknown Opposition.

Mackenzie King was born in Kitchener, Ontario, Canada, December 17, 1874, the son of Isabel Grace and John King, a law lecturer at Toronto. His maternal grandfather, William Lyon Mackenzie, was a “Scottish journalist and politician who played some part in obtaining parliamentary government for Canada in early colonial days” and who gave him his name. Young King's first and last interests have always been economics and political science. Of a scholarly turn of mind, he took B. A., LL. B. and M. A. degrees from the University of Toronto, went on to Harvard to add another M. A. and a Ph. D. to the long string of letters after his name, became a protégé of Harvard's President Eliot, won a fellowship in political science and a traveling fellowship which enabled him to study European social and economic conditions, and finally polished off his education at the University of Chicago. Here for a while he did social work under Jane Addams at Hull House. When he returned to Canada he had more than adequate background for making his bow in sober Canadian politics, and in 1900 he entered the Canadian civil service as Deputy

Minister of Labour, became editor of the *Labour Gazette*. At this time he was beginning to acquire the reputation of a radical, a reputation perhaps not entirely deserved even then, for during the eight years in which he served almost continuously as Deputy Minister his main claim to such description was the authorship of the Industrial Disputes Investigation Act of 1907, limiting Capital and Labor in the rights to strikes and lockouts.

In 1909 Sir Wilfred Laurier, the late Liberal leader, cast his eye about for a brilliant young Minister of Labor and found 35-year-old Mackenzie King. King served for two years under Prime Minister Laurier, and though defeated in the election of 1911 when the Conservatives came into power, he remained Laurier's faithful lieutenant until the older man's death in 1919. From 1912 to 1914 he was president of the General Reform Association of Toronto; during the War he was not at the front, but engaged in industrial relations investigations under the sponsorship of the Rockefeller Foundation in the United States, where he worked out a plan of employer-employee representation that was put into practice by the Colorado Fuel and Iron Company, the Bethlehem Steel Company and other great industrial concerns; finally in 1919, at the death of Sir Wilfred, he was chosen by the Liberal National Convention as their new leader. Although at the end of the War he had published a book titled *Industry and Humanity* (1918), whose main thesis was that “autocratic government in industry must be superseded by a system in which all the parties to industry are represented,” when the Liberals returned to power and King became Prime Minister in 1921 his government “steadily avoided responsibility for labor questions” on the plea that they fell within the jurisdiction of the provinces. This Liberal government held office until the debacle of 1930, with only a brief period out of office in 1926; 1930 to 1935 were years “in the wilderness”; then in 1935 Mackenzie King once more became Canada's Prime Minister, President of the Privy Council, Secretary of State for External Affairs.

Traditionally the Canadian Liberal Party, polling most of the rural and French vote, stands for provincial rights, low tariffs, curtailment of central orders-in-council, equality of farmer-labor interest with those of urban industrialists. But under the pressure of economic necessity most of these policies have been slowly reversed, until the Liberals have been accused of having become, if anything, more conservative than the Conservatives. During King's premiership there has been little pampering of Labor. Although his Conservative predecessor had inaugurated various “New Deal” measures—unemployment insurance, laws for the regulation of hours and conditions in industry—the new Prime Minister, a firm believer in individual enterprise, who opposed much of the economic program

of his friend across the border, had these Canadian laws referred to the Courts. They were declared *ultra vires*. Of low tariffs and free trade he remained a strong advocate, however, and he welcomed the opportunity to negotiate the Canadian-American trade treaty in 1935.

In matters of foreign policy King's outlook is said to be "essentially North American and nationalistic." For many years he was an isolationist. From 1928 to 1936 he served as a member of the League of Nations' Council and vice-president of the assembly, but he disapproved of the military sanctions of the League of Nations' Covenant, talked of making the League over as a body of conciliation only and at one time repudiated a Canadian representative who wanted to impose oil sanctions against Italy during the Ethiopian conquest. Still, although he played "a large part in shaping the cause of the Imperial Conference of 1926, which registered the emancipation of the Dominion from the control of Downing Street," he believed in maintaining close relations with both the United States and Great Britain. Before the present War some Canadians were even suspicious of the degree of cooperation between Canadian and English military authorities, and it is said that the Opposition had little reason to criticize the Prime Minister for neglect of war preparations, for it is now coming to light that significant preparations of that kind were made in 1938 and early 1939. When England declared war on Germany, Canada was the first of the colonies to follow suit.

In June 1940, with a warning that "Germans may be crossing the oceans now in a fleet they have seized to conquer new lands," the Prime Minister introduced in the House of Commons a measure to conscript all men between 18 and 45 for military service within the country. Under other legislative measures in the interest of national defense wealth can be conscripted, Canadian taxation has become the heaviest in the country's history, and for the first time unemployment insurance has been introduced. August 1940 marked the creation of a Permanent Joint Defense Board for Canada and the United States—one of the Prime Minister's "fondest dreams."

His function, as Mackenzie King sees it, is to "ascertain all the conflicting views of his party, weld them into the best compromise possible," and at this he is said to be past master. Because in Parliament he is a "cautious, cool, ponderous speaker" who, you feel, "has never uttered a sentence here without visualizing it in his mind on the printed pages of Hansard," most observers characterize him as without much color or human appeal, but one reported: "On the stump he looks tired and smart, something like J. Ramsay MacDonald on the downhill trail; a veteran performer, capable of twisting the interruption of a

heckler into an outburst of applause, and playing on the emotions of any audience as Fritz Kreisler does with a violin." The care of government he does not take lightly; in the recent campaign he "likened himself, with an ingratiating smile, to Abraham Lincoln and William E. Gladstone, with such an air of depreciating aplomb that the observer knows he thinks of himself in terms of historic statesmanship, and is wearing himself out no longer merely for office, but for rank in world history."

Mackenzie King has never married and has few intimate friends. "Bachelor-like, he has lavished his affection on an Irish terrier by the name of Pat, now 17 years of age, wobbling on his pins and too gloomy to permit his picture to be taken." Society as a whole bores him; he has been dubbed "the Hermit of Kingsmere," after the beautiful country home where he spends so much of his time. In the winter he lives in Laurier House, an old-fashioned stone house in Ottawa which Sir Wilfred left to the Liberal Party, and here a light can almost always be seen burning in the Prime Minister's top-floor study. "Politics and government are his life and he has no other interests." He is, perhaps, "the scholar, the dreamer, dragged from his books, his bric-a-brac, his papers and his dog, by the accident of politics and the drive of his own ambition"; he is, surely, the most powerful and one of the ablest men in Canada.

KNICKERBOCKER, HUBERT RENFRO Jan 31, 1898- Journalist

Address: c/o International News Service, 235 E 45th St, New York City

H. R. Knickerbocker (he uses only the initials of his name) is an "astringent red-headed Texan" who has been reporting the world since 1923. Wherever big events happen, wherever history is being made, he has a ringside seat. From Munich, from Moscow, from Vienna, Jerusalem, Prague, Ethiopia, South America, Spain and China he has cabled out his sensational stories, his beats so varied, his material so important that even a hardened newspaperman like Alexander Woollcott was moved to write: "Not since I first met Richard Harding Davis five and twenty years ago have I myself encountered any journalist whose panache so completely fitted in with my slightly romantic notions about the profession."

With his "pleasant but unmistakable drawl," H. R. Knickerbocker, in March

1940, began lecturing all over the United States about his experiences and the conclusions he drew from them. He assured audiences that if Hitler wins the present War the United States will not be much better off than was Czechoslovakia in 1938; he urged this country to throw its whole weight behind the Allies, not with troops, but with arms, money, air force and the navy. And when listeners objected to his strong interventionist stand he asked them: "Why all this talk about not being emotional? What did God give us emotions for? To protect us from fear, of course..."

After revisiting the battlefields of Europe Mr. Knickerbocker came back to the United States in October 1940 persuaded that "we should go into war today—as soon as possible," and ready for another four-months lecture tour.

The son of Hubert Delancey Knickerbocker, an itinerant Methodist preacher, and Julia Catherine (Opdenweyer) Knickerbocker, Hubert Renfro was born in Yoakum, Texas and got his college degree at Southwestern University in Texas in 1917. For a while he drove a milk wagon in Austin, Texas, but sold his route to study psychiatry in New York. When, in 1919, he arrived at Columbia University "all he could afford was a course in journalism," so he took that instead. Before that he had spent a few months in the army as a telegraph operator on the Mexican border.

After a year at Columbia, Knickerbocker got a job on the Newark (New Jersey) *Morning Ledger* and was conspicuous mainly for his success in conducting a vice crusade. From there he spent a short time on the New York *Evening Post* and another short time on the New York *Sun*. In 1922 he was head of the department of journalism at Southern Methodist University.

Knickerbocker hadn't really given up his idea of becoming a psychiatrist, however, and in 1923 he went to Germany to study. He enrolled at the University of Munich and to pay his way took a job as occasional correspondent for the United Press. He was in Munich when Hitler gathered together his followers for his first unsuccessful *putsch*. After a year Knickerbocker left Munich for Berlin, where he enrolled in the university and where he became assistant Berlin correspondent for the New York *Evening Post* and the Philadelphia *Public Ledger*. In 1925 he got his first job with Hearst's International News Service and spent two years in Moscow.

In 1928 Knickerbocker was back in Berlin, covering news both for INS and the Philadelphia *Public Ledger*. He got his *Ledger* position by introducing Sinclair Lewis to Dorothy Thompson (see sketch this issue). When Lewis married her he stepped right into what had been her job. Up to the time Hitler came to power "Knickerbocker's income and prestige topped that of any other foreign correspondent." In the winter of 1931 to 1932 he created a sensation by touring Germany, by writing 90,000

H. R. KNICKERBOCKER

words in 48 days and never missing a cable filing. "After only a minimum of editing" came his book based on these stories, *The German Crisis* (1932). Before its publication he had already (in 1930) been awarded a Pulitzer Prize for a series of 24 articles on *The Red Trade Menace*.

When the Nazis came to power they quickly marked him as an observer out of sympathy with Nazi views; the market for his books and lectures fell; gradually he was edged out of Germany. Hearst immediately gave him an assignment as roving reporter. For Hearst he covered the Abyssinian War; he was with Franco's Army in the Spanish Civil War, the first reporter to reach it after the outbreak of hostilities; in 1937 he covered the Sino-Japanese War; he did a series of articles on Palestine; he saw German troops march into Austria and then into Czechoslovakia. After one month on the Allied Front, covering the Second World War, he took a leave of absence, flew back to the United States and started giving lectures on Europe and the part the United States should, according to his views, play in the international scene.

During these years he published *The Red Menace* (1931); *Fighting the Red Trade Menace* (1931); *The German Crisis* (1932); *Will War Come in Europe?* (1934); *Siege of the Alcazar* (1937). Nearly all reviewers found these books extremely readable, vivid and exciting as reporting, although many complained of Knickerbocker's over-simplification, inconclusiveness or hastiness in the rôle of interpreter of the international scene. The *New York Times* called his *Seige of the Alcazar* neither an "enlightening" nor "even a reliably informative book." As a newspaperman, however, readers and fellow correspondents alike agree that this slight, bespectacled reporter with a "shock of wavy flame-red hair (balding on top)" has a "capacity for sensing copy which will be weighty with significance when it appears across the water in the American press." Quick at sifting the facts, "quick at detecting the relevant from the irrelevant, writing directly in cablese," he is usually, too, the first to get out his story. Nevertheless, H. R. Knickerbocker has always been less interested in spot news than in trends. His has been the long-range view of politics. Four years before the Anschluss he predicted in a dispatch that Germany wanted and would get Austria. "Adolf Hitler," he wrote, "was born in Braunau on the Inn. He will never rest until his Austrian homeland has become a part of his, the third Reich."

KNOX, FRANK Jan 1, 1874- Secretary of the Navy

Address: b. Navy Department, Washington, D. C.; h. 1320 Sheridan Rd, Lake Forest, Illinois

On the eve of the formal opening of the 1940 GOP National Convention in Philadelphia came the news that President Roosevelt had invited former Secretary of State Henry Stimson (see sketch this issue) and newspaper publisher Colonel Frank Knox to enter his Cabinet as Secretary of War and Secretary of the Navy respectively, and that the two Republicans had accepted. Since a coalition Cabinet had never been formed by any United States President since George Washington, Messrs. Stimson and Knox soon became officially ex-Republicans, and political observers all over the world began

FRANK KNOX

to emit sounds of pleasure or displeasure as they examined the implications of the appointments. The two men have often been called "interventionists." Whether the nomination of Knox for the post of Secretary of the Navy made the Democratic Party a "war party" or simply showed abandonment of partisanship in a time of national emergency was a matter for the Naval Affairs Committee and the Senate to fight out before finally confirming his appointment on July 10, 1940.

William Franklin Knox (known as Frank) has little in common with his President but his middle name and a foreign policy. He was born in Boston on New Year's Day 1874, the son of an oyster-market man, William Edwin Knox, and of Sarah (Barnard) Knox. Four years after he was born his family moved to Nova Scotia to enter upon an unsuccessful lobster-market project. Then they moved back to Boston, broke, and from there to Grand Rapids, Michigan, where his father opened a small grocery store. Frank was seven then. The grocery business prospered not much more than his father's other ventures. At 11 Frank was attending the Jefferson Street School, writing prize English themes, and getting up at 3 a. m. to deliver newspapers. After high school he went West and hustled around as a salesman until the panic of '93 lost him his job. Then he attended Alma College, "a rather aggressively Christian (Presbyterian) college in Michigan," and managed to earn enough money to continue his education there by coaching gymnasium classes, painting signs on barns and spading up gardens for faculty wives. It was 1898 when he took his B. A. and left football, Latin and Greek to enlist in the Army and to become one of Theodore Roosevelt's Rough Riders.

Theodore Roosevelt became Frank Knox's lifelong hero. For the next 10 years he was to be a "Roosevelt man at a distance," but at 24 he began his own political and newspaper career by helping to put over Senator William Alden Smith's campaign and by being rewarded with a job on the Senator's Grand Rapids newspaper, the *Telegram-Herald*. Arthur H. Vandenberg (see sketch this issue), present Senator from Michigan, went to work as a cub reporter on the same newspaper on the same day.

It was on a cub reporter's salary that Knox married his college sweetheart, Annie Reid, in December 1898, but he had advanced from city editor to circulation manager before he left the Grand Rapids paper in 1901 to engage in his first publishing venture. His wife had succeeded in saving \$500 from his pay envelope, and he borrowed another \$1,000 in order to buy a half-interest in Sault Sainte Marie's weekly *News*.

As a country editor Knox was a belligerent crusader against vice, gambling and corruption, and he still likes to tell stories about his experiences in the colorful little town of "Soo." Lumberjacks and sailors were being robbed in "protected" saloons; Knox was out to clean up the town, and at one time was so zealous as to knock out a saloon-keeper. For a while things were pretty uncomfortable, but he continued fighting not only the saloons but the "interests"; managed the campaign for the Michigan Governor who first imposed heavy taxation on the Michigan Central Railroad and introduced the first workman's compensation law; was given the chairmanship of the Republican Central Committee in 1910 and finally branched out into national politics.

In 1911 it was Knox who was Theodore Roosevelt's pre-convention Midwest campaign manager, and it was Knox more than anyone else who dragged him into the unfortunate 1912 campaign on the Progressive ticket. That same year, after selling his expanded publishing properties in Sault Sainte Marie for \$50,000, Knox moved to New Hampshire to become half-owner of the *Manchester Union and Leader*, papers which are still running smoothly under his partner's guidance. His "business life," someone said, has been a pattern of settling in strange towns and making good."

Knox's crusading instinct was as strong as ever, but soon the crusades were of a different nature. Long before the United States' entrance into the First World War his New Hampshire papers were raging at President Wilson for being "too proud to fight." When war was finally declared the 43-year-old publisher enlisted in the Army as a private, went overseas with the 78th Division, and by the time of the Armistice had become a major of field artillery. Grown more conservative in his views (or perhaps it was the times that had changed), in 1920 he was floor manager for General Wood, another defeated Rough Rider, at the Chicago Republican Convention; in 1922 he was successfully fighting the imposition of

a state income tax in his state; and in 1924 he himself sought the Republican nomination for Governor of New Hampshire but was defeated. By 1927 he was quite ready to retire, but Hearst offered him approximately \$1,000 a week, put him in complete charge of his Boston *American* and *Advertiser*, and early in 1928 made him general manager of all the Hearst newspapers at a salary three times as large.

Knox was with Hearst only five years, but during those five years he earned half a million dollars. By 1931 he was ready to retire again, actually resigned from his position—and then heard that the Chicago *Daily News* was up for sale. The *Daily News* in Chicago was more than a newspaper—it was an institution. Frank Knox couldn't resist bidding for a controlling interest.

One of Knox's first announcements as publisher was that he would "never Hearstify" the *News*. Through its columns he fought the corrupt Len Small Republican régime; from time to time with "steaming" front-page editorials, written over his own name, he came out for such issues as academic freedom; and it is rumored that one of his best reporters nearly lost his job for asking him how he wanted him to write a certain story. But when the *New Deal* came along he found himself labeled reactionary by those who liked neither his "Communist-alarmist" attacks on the régime of President Franklin D. Roosevelt nor his attitude toward labor.

Knox's first anti-New Deal editorial, in August 1933, when Roosevelt placed a blanket code on industry, lost him 5,000 readers; but the editorials continued, and in 1934 he went on a trip to Russia, Italy, Austria and Germany for fresh anti-New Deal ammunition. He found it. A pamphlet later in the year denouncing the European dictatorships caused many Republicans to see him as a party hope, and after he had gone around from city to city making speeches to raise money for the Republican chest, rumors began going around that he was a candidate for the Republican Presidential nomination. It was Roosevelt he was attacking rather than the Democrats: the President's aides were "fanatics," the President himself a "shadow boxer," the suggested Republican slogan "Fewer and better Roosevelts!"

He himself believed firmly in economic *laissez-faire*, in the competitive system. He condemned the AAA, the Social Security Act, the Wagner law, wanted to pay veterans' bonuses from the billions appropriated for relief, suggested that pensions be administered by the states rather than by the government.

It was only after having received the Republican nomination for Vice-President and having been defeated in the 1936 elections that Colonel Knox began to find any of Roosevelt's policies to his liking. Knox was

opposed to all world courts and leagues of nations, "axiomatically a nationalist." In December 1937 he publicly supported President Roosevelt for perhaps the first time in his stand against "peace at any price" in the *Panay* incident with Japan. Even before World War II began he was pointing out the threat of the importation of Nazism from Europe to South America, the need for achieving superiority over any enemy on the high seas (he had always been a "big Navy" man), throwing out "dark hints about a future United States extending from the North Pole to the Equator." He suggested getting the British and French West Indian Islands in payment for debts, making a special trade agreement with Brazil. At that time, however, he argued against involvement in European quarrels and asserted that "it will never be possible to make a decisive attack on us by air."

Shortly after the War began, however, he was advocating all possible help to the Allies short of an expeditionary force, and when Germany invaded Holland in May 1940 he published a two-column editorial on the first page of his newspaper calling for uncompromising rearmament and unflinching defense of the entire Western Hemisphere. A few days later he was authorized to organize civilian groups to cooperate with the government in training 10,000 pilots at volunteer "air Plattsburges"; shortly afterwards it was reported that Knox was being considered for a secretaryship in a coalition cabinet; but it was not until June 1940 that Roosevelt's nomination for successor to the post of Navy Secretary Charles Edison (see sketch this issue) was announced.

In August the Colonel left his paper for the duration of his services as Secretary of the Navy. In October he professed himself well pleased with the progress of the two-ocean Navy building program, and stated that the United States now had the "most powerful fleet afloat."

Stocky, smooth-shaven, with a "large, pleasant face and rather reddish hair," Colonel Knox, "like the late Dean Briggs of Harvard, acts like an editor, swears like a trooper. The look of energy and shrewdness is just what you would expect, the heartiness, the manner of the successful business man, the brisk gestures, even the pipe." It is said that those who work for him call him "a swell guy." He has a home on Chicago's North Shore, and he's an honorary member of Chicago's swank Commercial Club, a member of Room 100 of the Chicago Club, the Old Elm and the Union League, but home still means a great red brick colonial house on the outskirts of Manchester, New Hampshire, "maple-shaded and enclosed by an old stone fence." Here publicity-shunning Mrs. Knox lives most of the time with her sister, ready to welcome the Colonel home every month or so. In Manchester he goes to Rotary meet-

KNOX, FRANK—*Continued*

ings, rides horseback, plays "mediocre golf."

KNUDSEN, WILLIAM S. (nūd'sēn)
 Mar 25, 1879- Member of the National De-
 fense Commission

Address: b. War Department, Washington,
 D. C.; h. 1501 Balmoral Drive, Detroit,
 Michigan

Famed industrial expert appointed by President Roosevelt to the National Defense Commission is William Signius Knudsen (he uses only the initial of his middle name), president of General Motors Corporation. Mr. Knudsen was given a leave of absence from the corporation to enable him to devote his time to the Commission. He stated in an interview his belief that America could turn out sufficient munitions for national defense and General Motors could, if need be, match Henry Ford's offer to produce 1,000 airplanes a day. On June 3, 1940 Secretary Morgenthau (see sketch this issue) turned over to Knudsen the direction of mobilizing machine tools for the defense program. It was expected that the work which Secretary Morgenthau had been doing in the aircraft and aeronautical engine fields would also go to Mr. Knudsen.

Since that time, the other six members of the National Defense Commission have faded a little into the background, for the chief problem of the Commission is production, and it is production that Mr. Knudsen is in charge of. The President of the United States has final say, but Knudsen can advise, suggest, request—and he has personally supervised the placing of all contracts. He got the President to agree to the bill permitting manufacturers to amortize the cost of defense plants within five years, argued for the removal of restrictions that the House put in the excess profits tax bill, and fought Attorney General Jackson's (see sketch this issue) ruling

concerning the awarding of contracts to violators of the labor laws. "Certainly," he said, "the Defense Commission has no authority and does not want to undertake the job of enforcing the labor laws." If by October 1940 contracts amounting to \$8,253,000,000 had been cleared, with only \$4,000,000,000 remaining to be awarded, it was chiefly due to Mr. Knudsen. Since September all his connections with the General Motors Corporation have been severed.

The man who headed the huge General Motors plants, and who earned one of the 10 biggest incomes in the country, was born in Copenhagen, Denmark March 25, 1879 and came to America at the age of 20, when he could speak scarcely a word of English. In Copenhagen his father was a customs inspector, and young Knudsen had a good education, excelling in mathematics. He wanted to go to sea, but his father apprenticed him instead in a bicycle factory. There he startled the townspeople by building and riding the first tandem ever seen in Copenhagen.

On arriving in America he got a job in the shipyards in New York, learned "American" from the children in the streets, and also how to use his fists. After a session repairing boilers in an Erie Railroad roundhouse, he became stockroom keeper, and in 1902 superintendent, of the John R. Keim Mills, a Buffalo bicycle factory. This company began producing automobile parts for Henry Ford, and Ford took it over in 1911. Knudsen began his career with Ford as an installer of assembly plants all over the country. He wanted to go to college, but with a substantial salary increase he was married instead, in 1911, to Clara Elizabeth Euler, a Buffalo girl. The Knudsens have four children: Elna, Clara, Martha and Semon. It was in 1914 that Knudsen became an American citizen, and thereafter giving up his name—Signius Wilhelm Poul—became plain "Bill" Knudsen.

During the War years he became Ford's production manager and right-hand man; but in the depression years that followed differences arose between them, and he resigned. General Motors immediately annexed him; and at the age of 40 Knudsen became vice-president and manager of Chevrolet. His job was to build a Chevrolet to outsell Ford's Model-T. He did this so successfully that in 1927 Ford shut down his plant and changed his philosophy of motorcar making. In 1933 Knudsen became executive vice-president of General Motors, with five lines of automobiles to manage. He put each division so rapidly on its feet that in 1937 he was appointed President of General Motors, with Alfred P. Sloan (see sketch this issue) moving to the post of Chairman of the Board.

It was in 1937 that Homer Martin, heading the United Automobile Workers, called sit-down strikes that closed 14 General Motors plants. Governor Murphy of Michigan (see sketch this issue), as mediator, tried to bring Knudsen and Martin together. But Knudsen wanted the withdrawal of the strikers, whom he denounced as "lawless trespassers." He

felt himself under obligation both to his workers and to General Motors' stockholders. President Roosevelt sat tight and refused to intervene or take sides in the strike. Governor Murphy hoped there would be no violence, but when trouble arose between strikers and non-strikers at the Chevrolet plant and 19 were injured, the National Guardsmen were mobilized. The long strike was finally settled by an agreement in which neither General Motors nor the CIO could be considered victor, and for the settlement of which Governor Murphy was given credit. Knudsen emerged, however, with an epitaph on strikes: "Let us have peace and make automobiles." A report of the La Follette Civil Liberties Committee charges General Motors with employing a great number of labor spies during Knudsen's management. Knudsen has also been charged with having produced the "speed-up" system, but refutes the charge, saying that the only thing that produces good work is accuracy. He objects to the CIO because he believes in craft unionization. Having learned, since the General Motors strike, to think of industry as a whole instead of in terms of a few plants, he says he looks forward to the time when unions will be as responsible as management is today, and collective bargaining will be a matter of course.

Hard-working, forthright, genial, thoroughly democratic, Knudsen has always held the respect and affection of the men working for him. He is large: six-feet-three inches, with a boxer's slope-shouldered frame; some time ago he gave up boxing, but he still likes to swim. His strong, well-shaped hands compel attention. "In repose, their half-curved stiffness testifies eloquently to a past of manual labor. They seem to demand a spanner or marlinespike. That they could grasp a marlinespike competently you know when you learn that the sea sang in his boyhood dreams, that his home is adorned with marine paintings and that he warms inwardly when anything nautical is mirrored in his sea-blue eyes." These same hands are nimble performers on the accordion and the xylophone. Knudsen loves music and he likes dancing parties too, with plenty of young people—his "kits." Since coming to Washington, where his home overlooks scenic Rock Creek Park, he flies back to Detroit nearly every week end to see those same "kits."

He always wears a hat at his desk. "I think better in a hat," he explains. His voice is soft and quiet (but he can shout like John L. Lewis when he wants to) and he uses words simply and effectively. He doesn't like women secretaries since one burst into tears once at the language he used in conference. He depends on the one-page reports of a small staff of assistants to show him the curve of progress in national defense production, and he doesn't interfere with their work.

In spite of his still broad accent, Knudsen is a good extemporaneous speaker. He has

WILLIAM S. KNUDSEN

gone back to Europe every two years or so on business but he much prefers traveling in America, visiting the small towns where "they show you something they're going to build." But he has a staunch loyalty for his native land (several of his good friends in America are Danes like himself) and for all Scandinavia. He has been knighted by Denmark's King Christian, but this embarrasses him because his daughters like to tease him about it. In 1938, when he returned from a visit to Germany, the *New York Times* reported him as saying that the transformed Reich was "the miracle of the twentieth century." He has changed his mind since then, however.

Knudsen has great respect for book learning and, although he never had a formal education, he reads much. His library is said to contain one of the world's finest Spinoza collections. From his experience as a workman and a boss, however, his advice to the young man today is to get some kind of work to do with his hands—to learn how to create with practical skill, whether he adopts mechanics or a desk profession as a career.

KONOYE, FUMIMARO, PRINCE (kō-nō-ě fū-mī-mā-rō) Oct 1891- Premier of Japan

Address: Tokyo, 26 Nagatacho Nichome, Kojimachiku

In July 1940 Prince Fumimaro Konoye became Premier of Japan. Immediately it was felt that the way had been opened up for a totalitarian régime and the Chungking press went so far as to say that Konoye was merely a puppet set up by the army to mask the reality of a totalitarian state. When he formed his cabinet it was called "the most totalitarian minded and antiliberal in Japa-

nese history," and his new political party, it was indicated, would be organized on Fascist lines. All other political parties were dissolved.

However, there were some commentators who believed that Konoye intended to try his hand "at something that will combine Fascism with Democracy," and as Hugh Byas in the *New York Times* put it: "The ideal party or political structure that Prince Konoye is trying to find is one that will allow the Japanese to be governed with their own cooperation. . . . It will be a government in which the people can respectfully express their wishes." In any case, it seemed clear that Konoye was trying to keep his government free of the Axis powers, for in his first speech he declared for the "establishment of a new order in East Asia" to be achieved "by our own power."

In September the announcement of the Rome-Berlin-Tokyo Axis took the world by surprise, but was speedily followed by the United States' embargo on scrap iron to Japan, and Britain's reopening of the Burma Road in October. Threats of Japanese reprisals—even of war—did not have their expected effect.

Now "the most popular statesman in Japan," Prince Konoye has a difficult political job ahead of him. First, he must bring about a favorable settlement in China as quickly as possible. Second, he must unite the dissident and disorganized old political parties of Japan into what he calls "a strong national and political structure." He must, too, some observers feel, meet the problem of disciplining the army which in three years has "developed practically unbreakable habits of willfulness." And all this while faced with an increasingly tough-minded United States and Britain and a Russia that had always been unfriendly. The "new order in East Asia" seemed likely to encounter more obstacles than had been looked for.

Konoye, who at one time was "a melancholy Marxist," who later was called a liberal because he sent his son, nicknamed "Butch," to Princeton, and is now labeled a Fascist, comes from a family of the highest rank and prestige. One of his ancestors was an important enough empire builder to have his face on ten-yen notes today. His father, Prince Atsumaro Konoye, was "a great man," an intimate and protégé of Prince Kimmochi Saionji, last of the Genro (Elder Statesmen). Although Prince Atsumaro died when he was only 42 he contributed much to the development of parliamentary government as president of the House of Peers and performed valuable services in guiding diplomatic policy during the Sino-Japanese and the Russo-Japanese Wars.

Eight days after Prince Fumimaro Konoye was born his mother died, and he was only thirteen when his father died. Prince Konoye still remembers incidents with creditors and debtors, how friends

grew fewer as his money grew less. All this, he says, "bred in my susceptible mind a hatred of injustice. I was a gloomy youth throughout my student days, with an inclination to read extremist literature from Western Europe." In 1914 Konoye went to Kyoto Imperial University and was graduated with a law degree in 1917.

It was clear during his student days that Prince Saionji was grooming him for an important rôle in state affairs and after Prince Konoye left the University he went into the home ministry. He still continued to read Marx and other Western authors and went so far as to consider renouncing his titles and going to live in the United States. But Prince Saionji was able to persuade him to be his secretary at the Paris Peace Conference.

Shortly before leaving for Paris, Konoye published a dissertation setting forth what he considered the principles governing the peace and happiness of mankind. In it he stressed the importance of greater justice among individuals and equalities of rights and opportunities among nations. The Conference was a disappointment to him.

Back in Japan, Konoye devoted himself to repairing the family fortunes. Notable friends and a successful marriage helped, and today he is a man of independent means. He entered the House of Peers and identified himself with one of its political clubs, the Kenkyu-kai. Soon he became a power, credited with a large part of the responsibility for Japan's adoption of universal manhood suffrage. In fact, in the many years he was a member and president (1933 on) of the House of Peers, it has been said that "not a single important national issue has failed to receive his thoughtful consideration or to feel his influence before settlement."

In 1934, when amiable Japanese-American relations had been disrupted as a result of the "Manchurian incident," Konoye was sent to the United States on a good-will tour "to make a few official friends unofficially." He came bringing dolls with him as good-will emblems; he met many leading Americans and made many friends.

In 1936 Konoye was offered the Premiership for the first time and refused it. He said he couldn't accept because of ill health. This was the first important appearance of Konoye's famous "ill health" on the political scene. Whenever, in his first Premiership, which began in 1937, Konoye was conscious of bickering and strife and loud criticism he would go home to his villa, lock the door and announce that he was "sick." When he came back wan and pale the difficulty would usually be over. When the army rammed through its embarrassing National Mobilization Law, Konoye had a bad "cold." When the China Incident broke out he was taken with a "heat stroke." It has been figured that he has spent one-half of his political days in bed. Some suggest that the basis of his ill health

Japanese American News Photos

PRINCE FUMIMARO KONOYE

can be found in the deprivation and exhaustion Konoye suffered in the great earthquake and fire of 1923, when he was searching for his family. But others stoutly maintain that he uses his frail health "as a sort of storm cellar into which he retires whenever he see a political twister coming."

When Konoye became Premier in 1937 it was as the head of a "New Party." Immediately after he was appointed he sat down and rang up the prospective ministers of what was soon tagged "The Telephone Cabinet," and described as "the broadest, the most nearly 'national' in Japan's history." His job, as Konoye put it, is "to heal strife and eliminate friction." That meant that he had to "conciliate the powerful army (ruler of every Tokyo cabinet since the Manchurian War), recognize the disgruntled civilian parties and win the sympathy of the electorate."

There were observers at that time who felt that in his marshaling of all parliamentary groups Konoye had set up the initial state of a totalitarian government. They felt, too, that he was using his liberal reputation to hold the nation behind the army's policy. But it was over a quarrel with the army that Konoye resigned. Unwilling to sanction the army's demand for limiting industrial profits, in the winter of 1938 he gave up his position. When he was made Premier again, in 1940, after the army forced the resignation of Premier Yonai (see sketch this issue) he was acting as president of the Privy Council.

"Very dark, very sad, very tall—morose, indolent and possessor of perhaps the only gangling figure in all the Empire," Prince Konoye is said to be a "bundle of nerves." He's so fussy about hygiene that he sprinkles alcohol on an apple before eating it and dips the raw fish Japanese eat in

KONOYE, FUMIMARO—*Continued*

boiling water before touching it. He also suffers from insomnia. His main interests are talking and reading, but he does like to watch wrestling matches and occasionally plays a couple of holes of golf with his son, Fumitake, who, known as "Butch," won himself a reputation at Princeton as a golfer and was voted "most likely to succeed." He has three other children—one son, and two daughters, both of whom married into the nobility.

KOUSSEVITZKY, SERGE (kōō"sū-vīt'-skê sër gā) July 26, 1874—Conductor of the Boston Symphony Orchestra

Address: b. Symphony Hall, Boston, Massachusetts; h. 88 Druce St, Brookline, Massachusetts

The Boston Symphony Orchestra, "unquestionably the finest in the world," started its sixtieth season in 1940. For 26 of these seasons Serge Koussevitzky has been its conductor; to Back Bay, Boston, "an idol, firmly pedestaled"; to musicians, the "number one full-time conductor in the United States."

A consistent champion of modern music, Dr. Koussevitzky has in these years brought to the American public Sibelius, Honegger, Gruenberg, Walton (see sketch this issue), Kodály and other contemporaries. "Over a similar period no conductor in America has produced so many valid new works, both domestic and foreign," for Koussevitzky firmly believes that "we cannot refuse a careful performance and a fair hearing to the composers who are working in our own time."

It is Koussevitzky, too, who is responsible for the Berkshire Music Center, for the Symphonic Festivals held at Tanglewood every summer since 1934 and the Berkshire Music School, begun in 1940. The Symphonic Festivals started in a tent; eventually a shed was built and in it the Boston Symphony presented and will continue to present works of the classic masters and the significant moderns. When Tanglewood, the 150-acre estate of Mrs. Gorham

Brooks and her aunt Miss Sara Aspinwall at Lenox, Massachusetts, was presented to the Orchestra as a permanent home, and a donation given by the Rockefeller Foundation, Dr. Koussevitzky was able to see the "realization of my long cherished dream" of an American music center.

At this music center Dr. Koussevitzky hopes to bring together "the greatest writers, the greatest musicians, the greatest painters to work with one another in creating a new . . . form growing out of our life." Already the music school is well under way. "We have a junior orchestra and orchestra classes for higher studies. We have conducting and opera classes. We have drama classes and composition classes. We have some of the best composers and lecturers," among them Aaron Copland (see sketch this issue), Paul Hindemith, Herbert Graf, Roy Harris (see sketch this issue), Olin Downes. Dr. Koussevitzky is willing to be modest in his promises for this American music center, "but by no means modest in our aspirations."

Serge Koussevitzky, "a pince-nezed Russian who strongly resembles a diplomat of the Napoleonic era," conducts the Boston Symphony Orchestra, whether at Tanglewood, Boston, Philadelphia or any other place, with energy, nervous intensity and fire. As a conductor he has an "instinct for building dramatic effects, for color, for correct phrasing, for expressive dynamics"; he has an "unusual ability to cull sonorities of great richness from the brasses and a wonderfully singing tone from the strings." Neat, precise, faultlessly tailored, his gestures are graceful, his beat straightforward, and, merely glancing at the score he always keeps on the stand, he presents performances that are almost consistently brilliant.

They are brilliant because Koussevitzky himself at his best "is a singularly inspired and inspiring conductor"; they are brilliant because his orchestra of faultless players has been drilled to the point where he can receive, "almost as a reflex action," any response he seeks. At rehearsals, dressed in "baggy rough trousers, a soft white shirt and an old gray sleeveless sweater," Dr. Koussevitzky "shouts, sings, gesticulates, lunges and paddles with his baton, grins froglike at pleasant sounds, scolds frantically in heavily battered English." No slip is allowed to pass; no interruption is permitted—if asked a question Dr. Koussevitzky has been known to say, "Do not spik. If you spik I go home." He shouts to his men in French, Russian, English. "No!" he shouts to the violins. "No! It's *Da Da Dadada DA*," he sings, stressing the rhythm. And always he tells the orchestra, "Sing, always sing your phrases. There is no music without singing."

Sergei Alexandrovich (as he was christened) Koussevitzky, who has been called a "haughty, gray-haired, tyrannical aristocrat," was born in the small Russian town of Iver, the son of poor but musical parents.

His father, Alexander Koussevitzky, gave lessons on the violin; his mother, Anne (Barabeitchik) Koussevitzky, who died shortly after Serge was born, was a pianist. Serge took piano lessons and learned to play other instruments, but always wanted to be a conductor. He used to make believe he was one. He would line up empty chairs and put an open score on a music stand. Next, "entering the parlor stiffly, he would majestically bow to the empty seats and then, rapping his stick sharply on his stand, would give the imaginary orchestra the signal to begin. Suddenly he would begin to gesture wildly and would sing the different parts of the orchestral score at the top of his voice." Later he conducted a band of real musicians who played at performances of the strolling actors of Vyshnū Volochok and toured with them.

By the time he was 14 Koussevitzky had exhausted the musical possibilities of his home town and with three rubles in his pocket and a bundle of clothes on his back he set out to Moscow to seek his musical fortune. When he reached the Philharmonic Conservatory of Moscow he found that the only scholarships open were for horn, trombone and double bass. He decided on the double bass and when he was graduated in 1894 was able to get a position playing it in the Moscow Imperial Theatre Orchestra. From 1896 to 1905 he gave solo performances on the double bass in Russia and in Europe's great cities, playing the ungainly instrument as though it were a cello. Today he is the "greatest living double bass virtuoso."

Dr. Koussevitzky first saw his wife, Nathalie Oushkoff, when he was giving a double bass concert and she was sitting in the audience. It was two years, however, before they met and two years more before they were married in 1905. After their marriage they settled in Berlin, where Serge had studied under Artur Nikisch and where, in 1906, he made his debut as a conductor with the Berlin Philharmonic Orchestra. Later in that same season he conducted in London, Paris and Vienna.

It was in 1907 that Koussevitzky got his own orchestra, a wedding present from his wife's father, one of Russia's wealthiest merchants. With his orchestra Koussevitzky introduced composers rarely heard; he made symphonic music familiar to Russians and brought leading European conductors, composers and soloists to Russia. One of his innovations was a series of popular Sunday concerts at which young conductors led and young soloists had a chance to perform. His greatest, however, was the series of tours in Russia which he led in 1910, 1912 and 1914. Down the Volga for 2,300 miles in a chartered steamer Koussevitzky and his orchestra stormed Russia, bringing music to people who had never had it.

Koussevitzky and his wife founded the Russian publishing firm which printed and distributed those new Russian works he had

Bachrach

SERGE KOUSSEVITZKY

introduced. Probably it was these years of Russian success that account for Oscar Levant's (see sketch this issue) famous dictum on the conductor: "He is unparalleled in the performance of Russian music, whether it is by Moussorgsky, Rimsky-Korsakoff, Strauss, Wagner or Aaron Copland."

When the Russian Revolution arrived Koussevitzky's orchestra and publishing house were liquidated, but he was made director of the Russian State Orchestra. He held this post until 1920, when, discouraged by performances in mittens in freezing Soviet halls and by his belief that there was "no chance there for artistic endeavor," he left for Paris, abandoning almost all his money and personal property. For the next four years he conducted in Paris, England, Italy, Spain, Portugal, and his *Concerts Koussevitzky* which he founded in Paris in 1921 became an important feature of French musical life.

In 1924 he was invited to become conductor of the Boston Symphony Orchestra. This orchestra, founded in 1881, had fallen upon hard days. After a brilliant period under Karl Muck (see sketch this issue), who was interned during the War, it had deteriorated under the leadership of Henri Rabaud and Pierre Monteux. Its ablest musicians had been lured away and, with the failure of a general strike to establish a union in the orchestra (it is today the only important non-union symphony orchestra in the country), more than 20 of the best players, including the concertmaster, had resigned. Within one season under Koussevitzky the orchestra changed—older players were pensioned; those who couldn't meet his standards were dismissed; the country was sifted for the best orchestral material.

KOUSSEVITZKY, SERGE—*Continued*

Immediately painstaking rehearsals were started and when the concerts came they came with real musicianship, lighted by Koussevitzky's "flair for showmanship" and his gift for program building. "One of the most brilliant program makers before the public," Koussevitzky gave Boston programs "electric in their experimentalism" yet well balanced in their combination of classical, romantic and modern music. And Boston, which at first found him "somewhat exaggerated and theatrical," soon admitted that he had an "uncannily transparent tone" and a repertoire more varied than that of any other conductor in the United States. It did hear a mediocre performance occasionally; mostly it heard inspired ones.

Today the Boston Symphony Orchestra is great and its conductor adored by Boston. But this slender, rather short man with iron-gray hair and rugged features and his "pleasant, portly Russian wife" give Boston and its social life little attention. All Dr. Koussevitzky's days are "regularly and carefully apportioned, with so much time allowed for rehearsing, so much for walking, so much for studying his scores." He studies new ones by reading them through and playing sharp dissonances on the piano. "Then the work begins," he says, "the work which is required before the music can be brought to life by performance. I study, study, study . . . then finally I arrive at a point where I feel that I realize what the composer wished to say."

He does this studying in "a large, sunny room, neat and simple and bare," in a large rented house in the "quiet, substantial, somewhat stuffy Boston suburb of Brookline." The room contains countless musical scores, a grand piano, a chest of drawers, two easy chairs and one stiff little armchair in front of Koussevitzky's worktable. "On the table is a music stand, two or three volumes of music, two stop watches and a Russian Bible."

In private life Dr. Koussevitzky is "an affable, courtly, talkative, rather posey Russian . . . of the old school. . . . Temperamentally a romantic, he loves to brood over the oniony ideas of such dank German philosophers as Schopenhauer and Nietzsche." But his manner is far from gloomy—"as enthusiastic as champagne"—and his conversation, "always accompanied by violent gesticulation, is loaded with rhetorical *ahs* and wreathy superlatives." Nevertheless, this attractive, pleasant Koussevitzky is a tyrant on the podium and many legends have graced his reign over the Boston Symphony. Perhaps the best-known one tells of a musician who played four sour notes. "You're fired," Koussevitzky shouted. "Ged out. Ged out." On his way out the musician passed the room where Koussevitzky was sitting hunched over a score. "Nuts to you, Koussevitzky," he bellowed. Koussevitzky haughtily turned

his head. "It's too late to abologize," he snapped.

KRUEGER, MAYNARD C. (krü'ger)

Jan 16, 1906- Educator; economist

Address: b. University of Chicago, Chicago, Illinois; h. 6630 University Ave, Chicago, Illinois

Thirty-four-year-old Professor Maynard C. Krueger was the Socialist Party candidate for Vice-President in the 1940 Presidential election. The son of Fred C. and Nelle C. (Hoewing) Krueger, he was born in Clark County, Missouri and reared on a farm. Before he was 17 he was teaching a one-room rural school, with a year of university work already behind him. He was graduated from the University of Missouri in 1926, became an instructor in the department of history and received an M. A. degree the following year. In 1927 he was one of six Americans to receive scholarships to the Geneva School of International Studies. He has studied at various times at the University of Paris, University of Berlin and the Universities of Pennsylvania and Chicago.

Most of Professor Krueger's time from 1925 through 1928 was spent in Western and Central Europe, and he has returned there twice since then, although he has been unable to get a German visa since early 1933. It was the failure of a study of diplomatic records of the summer of 1914 to throw any very useful light on the causes of the First World War which led him to the study of economics and its relation to war, and which "today leaves him skeptical about the ability of diplomacy to rectify or alleviate international situations which are basically economic."

During the ascendancy of the League of Nations, Professor Krueger served one term as tutor in the Geneva School of International Studies. He then taught international relations and history at Albion College, Michigan during the school year 1927 to 1928. After four years on the faculty of the Wharton School of Finance and Commerce of the University of Pennsylvania he went (1932) to the University of Chicago, as assistant professor of economics.

At the University of Chicago he married Elsie C. Gasperik. They have two daughters, Karen and Linda.

Professor Krueger's hobby is politics. As a student he took an active part in "campus politics." Motivated by a "fine ethical spirit which frequently puts him at odds with the dominant trends of the day," he has been an active member of the Socialist Party. He served as chairman of the Party in 1934 and previously was chairman of local groups in Pennsylvania and Illinois. He was associate editor of their *Campaign Handbook* (1932). As official delegate in 1933 to the Socialist and Labor International Congress he presented a majority report criticizing the NRA because "it did not give labor adequate representation in the control of industry." He was the keynote speaker at the St. Louis National Convention (1940). He was vice-president of the American Federation of Teachers for three terms and is an active member of the League for Industrial Democracy and the American Civil Liberties Union.

As a lecturer "his wit and humor are made to serve the purpose of enlightenment rather than unprincipled ridicule." He has participated in the University of Chicago *Round Table Broadcasts* over NBC. A round table in which he took part at the time of the Munich crisis was immediately translated by NBC and rebroadcast to Germany by directional shortwave with the approval of the American State Department, but without that of the German State Department.

In addition to writing magazine articles, Professor Krueger is the editor of *Issues of the Day*, a Socialist Party pamphlet service. He contributed to the *National Industrial Recovery Act* (1933), one of the series, and wrote *Inflation: Who Wins and Who Loses?* (1934). He is also the author of *Deflation and Capital Levy* (1933) and coauthor of *Economics Question Book*.

Professor Krueger believes that while we can operate our automobiles and telephones quite successfully without knowing how they really work, we cannot operate an economic and political system without knowing how it really works; that is, we cannot if we want it to be operated by the people instead of a dictator. He believes, too, that objectivity in the analysis of pressing problems is not synonymous with sitting on the fence, and that the most controversial of subjects can be discussed in such a manner as to achieve truly educational results.

America's Young Men

LAGERLOF, SELMA (lä'gur-luf" sel'mä)
Nov 20, 1858—Mar 16, 1940 Novelist

Selma Ottiliana Lovisa Lagerlöf, the grand old lady of Swedish letters, died at the age of 81 at her family home, Marbacka, in Sunne, in the province of Värmland, Sweden. Her books were translated into 30 languages; she won the highest literary honors. She was the first woman to win the Nobel Prize for literature, and the first woman to become a member of the Swedish Academy.

The fourth child of Lieutenant and Mrs. Erik Gustaf Lagerlöf, Swedish gentlefolk of the landowner class, she was one of a large family of brothers and sisters. She had a sickly childhood and, instead of romping around the Sunne farmlands with her brothers and sisters, spent her time reading. At 15 she had read and reread every book in the house, and she had started writing her own poetry.

Miss Lagerlöf went to Stockholm at the age of 22 to study for a teaching career. In 1882, after a year at Sjöberg's Lyceum for Girls, she entered the Royal Women's Superior Training College, where she completed her education. Three years later she became a teacher at a girls' school at Landskrona in Skåne in southern Sweden, and remained there from 1885 to 1895.

But while she was teaching she continued studying and writing. In 1890 she began work on *Gösta Berling*. When a Swedish magazine offered a money prize for the best 100-page novelette she submitted the

SELMA LAGERLOF

first five chapters of her work, and won the contest. When the completed novel was published later, it was widely acclaimed for its imaginative power and its treatment of Värmland legendary material.

Miss Lagerlöf continued teaching until after the publication of her second book, *Invisible Links*, in 1894. Through financial aid extended by King Oscar of Sweden and his son, Prince Eugen, and by the Swedish Academy, she was able to give up teaching in 1895 and to devote her entire time to writing. She made a trip to Italy that year, and the result was her third novel, *The Miracles of Antichrist* (1897). There followed *Jerusalem* (1901)—after a trip to the Orient—and two volumes of short stories, *From a Swedish Homestead* (1899) and *The Adventures of Nils* (1906-07), the latter written at the request of Swedish school authorities for a book for primary school children.

In 1904 Selma Lagerlöf received the gold medal of the Swedish Academy. Three years later she was honored with the degree of Doctor of Philosophy at the Linnaeus Jubilee of Upsala University, the first of several honorary degrees. She was awarded the Nobel Prize for literature in 1909. It was said that the prize had been withheld from her for three years because members of the Swedish Academy feared they might be accused of favoring their own country-woman. But literary critics throughout the world were now clamoring for recognition for Selma Lagerlöf, and the Swedish Academy bowed to popular judgment. Miss Lagerlöf was herself made a member of the exclusive Swedish Academy in 1914.

A modest, unassuming woman, Miss Lagerlöf cared little for the doings of modern society, though she was hospitable to a fault and loved to see people about her. Velma Swanston Howard, Miss Lagerlöf's

chief English translator, described her as "a woman of medium height, with a fine, fair face, splendid head, superbly set on neck and shoulders. . . Her sense of humor was keen. There was a twinkle in her eye, a twist about the mouth and a certain sly humor that preceded her speech, while her chuckle was inimitable."

The famous novelist spent her summers at Mårbacka Manor, the place of her birth. Winters she often spent at Falun, Delarne, where *Jerusalem* was written. Her family had lost Mårbacka at the death of her father. Selma Lagerlöf determined to buy it back and eventually did so with the profits from her novels. She lived there alone after the death of her mother in 1916.

Mårbacka Manor, to which hundreds of visitors made pilgrimages each year to see the scene of *Gösta Berling*, was modernized by Miss Lagerlöf, but its old dignity and simplicity remained. She cultivated 140 acres of land and looked after 53 tenants during her years there.

Dr. Lagerlöf's first novel, *Gösta Berling*, one of her masterpieces, was written several times unsuccessfully before it achieved its final form. The author started to write it in verse, then rewrote it in realistic prose, and then rewrote it again in the romantic style which distinguished all her later writings. A Stockholm author, who recognized her talent, aided and encouraged her with the novel, it is said.

In Sweden Dr. Lagerlöf was appreciated largely because of her skill in putting into vivid prose the background of contemporary Swedish life. Abroad it was the manner of her writing rather than the substance which won fame for her. Her writing of the Northern sagas had a rich Homeric sweep. Hugo Alfén, the Swedish composer, once said of her: "Reading her books is like sitting in the dusk of a Spanish cathedral. You do not know whether what you saw or felt was a dream or reality. You certainly were on holy ground." Folklore, magic, superstitions, customs, the farm, the countryside, the family and childhood associates—all furnished material for her novels, and all of them she colored with her gift of understanding, intuition and sympathy.

An editorial written on her work after her death described her as having the "true storyteller's art of making the unreal seem as plausible as the real."

On her seventieth birthday Miss Lagerlöf was honored with the Order of St. Olaf, first class; the Danish Distinguished Service Medal and the diploma of the French Legion of Honor.

During her last years, she wrote almost exclusively of her childhood, writing, as Lewis Gannett in the New York *Herald Tribune* said, "miraculously like a child." She published *Memories of My Childhood* (1930 to 1932) and *The Diary of Selma Lagerlöf* (1937).

In the early days of the Third Reich, Nazi publications sang her praises as the "Nordic poetess," but when she began help-

ing German intellectual refugees they changed their minds.

Although her death was caused by peritonitis, it was said that her grave anxiety over the future of Sweden and Scandinavia in warring Europe contributed to her illness. A firm believer in peace, she was shocked by the Second World War and later by Russia's invasion of Finland. She cherished the hope that the United States might lead the world to peace, and her only visit to the United States was in 1924 as a delegate to the Women's Congress in Washington. Only two months before she died she gave her gold Nobel Medal to the Swedish national collection for Finland.

In addition to the saga of *Gösta Berling*, her most famous novel, she also wrote *Invisible Links* (1895); *The Adventures of Nils* (1906-07), published in the United States as *The Wonderful Adventures of Nils* and *The Further Adventures of Nils*; *The Miracles of Antichrist* (1897); *From a Swedish Homestead* (1899); *Queens of Kungahälla* (1899); *Jerusalem* (1901); *Herr Arne's Hoard* (1904); *The Girl from the Marsh Croft* (1908); *The Emperor of Portugallia* (1914); *The Outcast* (1918); *Mårbacka, the Tale of a Manor* (1922); *Memories of My Childhood* (1934); *Harvest* (1933); and *The Diary of Selma Lagerlöf* (1937). Other books were published in the United States under the titles of *Christ Legends*; *Liliecrona's Home*; and *Treasure*. Three short novels, *The General's Ring* (1925); *Charlotte Löwensköld* (1925); and *Anna Svärd* (1928) have been published in English separately, and in a single volume entitled *The Ring of the Löwenskölds*.

LA GUARDIA, FIORELLO HENRY (là gwär'dyà fē-ô-rēl'ō) Dec 11, 1882-Mayor of New York City

Address: b. City Hall, New York City; h. 1274 Fifth Ave, New York City

Fiorello La Guardia, New York City's "short, swart, tousled" Mayor, already has on his hands the second or third toughest political job in the United States, but he has found time to do a lot of traveling around the country and even to take on new duties. Since 1936 he has been president of the Conference of Mayors. In August 1940 he was appointed head of the joint board to coordinate American and Canadian defense measures. "The problem," he commented, "is whether or not strategic points in the Western Hemisphere shall be taken for offensive action by a potential enemy or used as points of defense for the Western Hemisphere."

This political dynamo with the Italian name of "Little Flower" is not only generally agreed to be the best Mayor New York City has ever had, but is actually a New Yorker by birth. His father was Achilles La Guardia, composer, conductor and cornettist, who came to this country with his wife, the former Irene Coen Luzatti, a "Sephardic Jewess from Venice," to be accompanist to the famous singer Patti. He stayed to become army bandmaster at various frontier posts, and his family went with him: first to Fort Sully, South Dakota, then to the Whipple Barracks near Prescott, Arizona. It was in Prescott, where the La Guardias lived until the Spanish-American War, that young Fiorello attended high school, learned to make spaghetti sauce in his mother's kitchen, to play the cornet, to love Italian opera. Then he spent a short time as unsalaried correspondent for the *St. Louis Dispatch*. In 1898 his father died after eating putrefied meat—army rations—and not long afterwards his mother took him to Budapest. He was only 19 when he got a job in the consulate there; a few months later he was transferred to Trieste as an interpreter; next (in 1904) he went to Fiume as United States Consular agent.

Finally in 1906 La Guardia resigned from the consular service, returned to the New York he had left two decades before, and a year later, while studying law in the evening school of New York University, found himself an interpreter's job at Ellis Island. His assorted experiences there and abroad gave him a speaking knowledge of Italian, German, Croatian, French, Spanish and Yiddish. In 1910 he acquired his LL. B., was admitted to the bar, changed his middle name from "Enrico" to "Henry" and hung

FIORELLO H. LA GUARDIA

out his shingle. His first real clients were garmentworkers during the strikes of 1912 and 1913.

Living in Greenwich Village, Tammany's home base, stubborn young La Guardia became a Progressive Republican. In 1914 he got himself on the Republican ticket for Congress (nobody knew him, but it didn't matter—Tammany always won), and after strenuous campaigning astonished the Republicans by snaring 14,000 votes that usually belonged to Tammany. As a reward he was appointed Deputy Attorney General of New York in 1915, but he decided he would actually win that Congressional seat. He continued to make friends in the district, offered free legal advice to its pushcart peddlers, icemen and shopkeepers, mobilized the letter carriers and garmentworkers to campaign for him, and in the election morning of 1916 pulled flophouse voters out of bed before Tammany was awake. He won by 257 votes, and was the first Republican ever to go to Washington from his district. The Republicans weren't too pleased with him, however, since the first thing he did when he got there was to join House liberals in battling for liberalization of House rules. They even threatened a recount. He laughed.

When the First World War came Congressman La Guardia voted for entrance into the War and for the draft, and then decided to go to War himself and resigned his seat. Only five-feet-two, he was turned down at Plattsburg but found himself a flying instructor and ended up as captain of the American aviators in Italy, the "flying Congressman." He returned with all conceivable decorations and honors, the rank of major, a wife (he had met Thea Almerigotti in Trieste and married her in 1919), and when he campaigned for Congress once more even Tam-

many wasn't opposing him. Again he failed to make himself popular in Washington, though: in 1919 the War hero was opposing military and naval appropriations, fighting A. Mitchell Palmer's espionage acts, speaking against post-War loans to the Allies. One of the few things the rest of Congress agreed with him about was woman suffrage.

In 1919 La Guardia ran for the presidency of New York City's Board of Aldermen, and won. He proceeded to fight graft and corruption, make an alliance with the Mayor against Tammany, accomplish very little, irritate almost everybody (they called his tactics "Blackguardia," and at one meeting someone suggested: "Hit that little wop over the head with the gavel")—but the experience in municipal government must have been valuable. There was also a big scrap over New York's famous five-cent fare, and the Republicans, who had promised to nominate him for Mayor in 1921, decided he was too radical.

In 1921 blow after blow followed in quick succession. La Guardia was defeated in the primaries; he had a serious operation; his new home was rifled by burglars; his year-old daughter died of spinal meningitis; his wife succumbed to tuberculosis. He was apparently a broken man. But by the next year he had not only recovered his combative instincts but had blackmailed the Republicans into nominating him for Congress from East Harlem by threatening to run as an independent against their candidate for Governor. Delivering some of his campaign speeches in Yiddish, he won, and was to be re-elected for five terms from his predominantly Italian-Jewish district.

In Congress there followed 10 years of "apparently fruitless opposition" to almost everything: the Drys, judicial corruption, Congressional "pork," letting Henry Ford have Muscle Shoals. "In Congress in 1924 I was taken off all my committees," he said later, "but I didn't whine about it. I told Nick Longworth that if he wouldn't let me attend his caucuses I wouldn't let him attend mine, and I'd hold mine in a telephone booth."

In 1924 the Single-taxers, Farmer-Laborites, Socialists, Liberals and Progressives fused interests and voted for him. In 1925 he made history in the House by pulling a lamb chop from his pocket, then a steak, then a \$3 roast. "What workman's family can afford to pay \$3 for a roast of this size? What are we coming to?" During the height of the "dry era" he manufactured beer at a drugstore counter in the Capital, defied police to arrest him. Senators Wagner, Wheeler (see sketch this issue), Norris and La Follette liked him and he worked with them. He got an anti-injunction bill passed that abolished the "yellow-dog" labor contract; fought for a shortened working day, old-age pensions, national unemployment insurance, employers' liability laws; wanted Andrew Mellon impeached and tried to keep him from reducing income taxes. With the 1929 crash he sailed into Insull and Richard Whitney, and anticipated most of the find-

ings of the Seabury investigations while running for Mayor of New York against the debonair Jimmy Walker, who called him a "Red." And when La Guardia was one of the Congressional casualties in the Democratic victory of 1932, Samuel Seabury and A. A. Berle Jr., (see sketch this issue) managed to put him across with the reformers' Committee of Fourteen as the nominee for Mayor on the 1933 Fusion ticket. On January 1, 1934 he became New York City's ninety-ninth Mayor.

At one of the last big Fusion rallies La Guardia had warned: "You've nominated me but don't expect any patronage if I'm elected!" He kept his promise, appointing to important posts staunch Democrats and "foreigners" from other states if he found them best suited to the jobs, and getting almost twice as many highly paid positions covered by Civil Service rules as was the case under Tammany. He got a new charter for the city, tried to put New York on a pay-as-you-go basis, and, having found the \$41,000,000 budget out of balance, succeeded in balancing it by raising half in taxes and saving the remainder. Though he increased total expenditures, his own salary was cut from \$25,000 to \$22,500, and the city began to get its money's worth in new parks, highways, hospital facilities, low-cost housing developments, sewage-disposal plants, school seats, transit improvements—even an airport at North Beach. When the sales tax which he had previously fought against was introduced, said the Mayor: "It is wholly wrong except for one thing—it raised the money we need." Labor didn't like it much, but it liked other things. For the first time the union label appeared on city printing, and a clause was written into the municipal franchise requiring bus operators to bargain collectively with their employees. And in spite of the disapproval of "silk-stocking" Republicans, complaints that the explosive little Mayor insisted on doing everything himself and in his own way, and occasional feuds with the press, in 1935 La Guardia was re-elected with the support of the American Labor Party.

During his next term in office La Guardia was frequently criticized from both Left and Right. In 1937 I. F. Stone wrote in the *New Republic*: "He is a friend of labor, but he took New York's taxi drivers for a ride. He has been better than Tammany on relief, but he assailed the leader of an unemployed demonstration as a 'yellow dog.' He makes strong speeches on power, but he sabotaged the fight for a municipal power plant in New York City. . . He is a leader of democratic forces, but a dictator by nature. . . He is loud in denouncing the Interests but cautious in dealing with them. Wall Street knows that he is more bark than bite; a tub-thumper rather than a radical." At about the same time a writer for the *American Mercury* was complaining that he was a rabble-rouser, that he had failed to curb the strike tactics of labor groups, that "he does not intend to use the

forces of law and order to protect property owners and taxpayers," while Republicans continued to accuse him of being more pro-New Deal than most Democrats. Nevertheless, in the 1937 campaign he was supported by the "Republicans, the independent pro-Republican Democrats, the American Labor Party, the Socialists and the Communists"—from the New York *Herald Tribune* to the *Daily Worker*, from Park Avenue to the Popular Front. Even most of those who criticized him announced their firm intentions of voting for him, and there was hardly a dissenting voice to Oswald Garrison Villard's (see sketch this issue) opinion that "never have we had in the City Hall anyone more certainly or completely honest, more rigidly set against all graft, all favoritism." As returns were coming in from the November election that year an eight-year-old tugged at the Mayor's coat-tails: "It's a landscape!" was the news. "La Guardia by \$500,000!"

During his third term La Guardia's increasing preoccupation with foreign affairs has been noted. Although he had never before expressed any opinion of Mussolini, he had already shown his healthy disregard for Nazi feelings by publicly suggesting Hitler for a "chamber of horrors" at the coming World's Fair, by illegally refusing to renew a license for a German masseur back in 1935, by giving a Nazi delegation an escort of Jewish police. He was known as a pacifist, however. As a member of the House Military Affairs Committee he had battled against compulsory military training in colleges, in 1937 told a delegation of American Legionnaires they should parade to the steady rhythm of "mind your own business, mind your own business!" As late as 1939 he told an annual parley of the A F of L that it was the workers who suffered in a war, that we were well out of the European mess, and that he would prefer to have voted against American entrance into the First World War. But early in World War II he made a speech in Boston in favor of lifting the embargo, later showed himself anxious to send arms to the Finns. In June 1940 he told an international audience that Hitler and Mussolini were in the same boat and that to American noses "the bilge stank," asked for an anti-Nazi plank in the Republican platform; in July he suggested a united military organization of the United States, Canada and Latin-America to defend the Western Hemisphere, pleaded for compulsory military training as "the only means of keeping us out of war."

La Guardia has also been much talked about for national public office and before the party nominating conventions was often mentioned for a Senatorial post, for the Vice-Presidency or even the Presidency, if Roosevelt did not run. He was said to have stated that this term would be his last as Mayor, but in August 1940 friends gave assurances that if Willkie (see sketch this issue) were elected, La Guardia would again run for Mayor of New York City.

LA GUARDIA, FIORELLO H.—Cont.

while if Roosevelt served a third term he would become Secretary of War. In September 1940 La Guardia pledged his support to Roosevelt in the Presidential campaign.

At the same time labor thinks it has detected a growing conservatism in La Guardia's administration, accuses him of having made his peace with both Tammany and the bankers in order to further an ambition for higher office.

Even when he is receiving an honorary degree from some university (as he did from Yale in June 1940), Mayor La Guardia is no guardian of municipal dignity. "In structure and temperament he is a queer combination of a bull and a baby—of the dominating male and the worried little boy." He looks a little like Napoleon, likes to shout and pound, swears with enthusiasm and originality—but when he sits down his feet dangle a foot from the floor, he can turn his temper off as fast as he turns it on, and his voice is inclined to get shrill. The voters find these traits endearing.

Though he likes to rage against the "politicians," it is said that La Guardia is no purist himself when it comes to electioneering, that he knows all the tricks of pre-convention tactics and has even shown himself willing to endorse such "reactionaries" as George Harvey or Bruce Barton if it is expedient in a particular campaign. In such matters as the source of campaign funds no one could be more the purist, however. He has also been called "a demagogue" and, more tactfully, "a virtuoso in exploiting his temperament" for the benefit of the public, but—as he once told a bunch of actors—"What the hell—how else are you going to get people excited about a sewer?" So, whether he is leading a vice raid or a band, pulling the lever of a steam shovel on a big construction job or climbing a ladder at a fire, there is always drama. The horse-play that goes on at City Hall itself "frequently reminds one of life in a prep-school dormitory": once the Mayor turned off the heat in a room where negotiators were sitting wrangling over a coal strike; once he proved the efficiency of his police force by turning in a riot call in front of the Stock Exchange.

In 1929 he married Marie Fisher, who used to be his secretary in Washington, and they have adopted two children. Home life is happily quiet, after the strenuous days. Both Mayor and Mrs. La Guardia are fond of music, particularly Haydn, and the Mayor once asked: "Would you ruin my enjoyment of music by talking politics?"

LAMONT, THOMAS WILLIAM (lä-mönt') Sept 30, 1870- Banker

Address: b. 23 Wall St, New York City; h. 107 E 70th St, New York City

Of Thomas W. Lamont, Ferdinand Lundberg said, "He has exercised more power for 20 years in the Western Hemisphere, has put into effect more final decisions from which there has been no appeal, than any other person. Lamont, in short, has been the First Consul *de facto* in the visible Directory of post-War high finance and politics, a man consulted by presidents, prime ministers, governors of central banks, the directing intelligence behind the Dawes and Young Plans." Of him it has also been said: "Few can be more charming, more considerate or more generous. Few have

led cleaner lives; he is the soul of respectability. Banker that he is, he is not a covetous or grasping man; his fortune is by no means great."

Executive committee chairman of J. P. Morgan & Company; executive committee chairman of the Guaranty Trust Company until June 1940; on the board of banks controlling industrial empires; director in the United States Steel Corporation, the A., T. & S. F. Railway Company, Lamont, Corliss & Company, the International Agricultural Corporation and numerous other enterprises, Thomas Lamont is second in prestige not even to J. P. Morgan, whose best publicist he is. "Mr. Morgan speaks to Mr. Lamont and Mr. Lamont speaks to the people." For many years a director of the Crowell Publishing Company, Mr. Lamont's literary and journalistic ties are almost as important as his business connections. He maintains correspondence with writers and editors all over the world; has often entertained H. G. Wells, André Maurois, John Masefield and other literary notables; is an intimate friend of Henry Seidel Canby of the *Saturday Review of Literature*, Ellery Sedgwick, formerly editor of the *Atlantic Monthly*, and Walter Lippmann (see sketch this issue), who went with him on a trip to the Near East in 1931; numbers among publisher-friends Henry Luce of *Time*, Arthur Sulzberger of the *New York Times*, Mrs. Ogden Reid of the *New York Herald Tribune*; once even made a pilgrimage to the California ranch of William Randolph Hearst. Newspapermen who cover Wall Street have instructions to see him regularly, and when newspaper references are made to the "consensus among bankers" or "prominent banking opinion" it is often taken for granted that the reference is to Lamont.

Articles under Lamont's name, mainly on finance and international affairs, have appeared in leading magazines, more often in past years than recently. Nearly every word written about J. P. Morgan passes through his hands or those of his staff of readers, after its publication, if not before. He is quick to detect errors in fact or criticisms which he considers fallacious and to attempt to have them corrected or retracted.

Mr. Lamont has a great interest in education. In January 1936 he made a gift of \$500,000 to Harvard University, of which he had been an overseer from 1912 to 1925, suggesting that it might be used for a professorship of political economy. He has also given large sums to Phillips-Exeter Academy.

A lifelong Republican and in the past, at least, one of the most reliable sources of Republican campaign funds, Lamont was "a mentor of Woodrow Wilson in Wilson's second administration as well as of President Hoover throughout his fateful single term in the White House," and in 1940 his name has been linked with Wendell Willkie's (see sketch this issue). Surely Lund-

THOMAS WILLIAM LAMONT

berg's description of him as "Protean" is apt: he is "a diplomat, an editor, a writer, a publisher, a politician, a statesman."

He was born in Claverack, New York on September 30, 1870. His father, Thomas Lamont, was a Methodist minister who had once been a teacher of Greek. His mother was Caroline Deuel (Jayne) Lamont. He grew up in a parsonage where cards, dancing or even walks "outside the yard" on Sundays were considered sinful, but managed to make up for the uneventfulness of parsonage life by extensive reading—for the most part novels and romances. He attended Phillips-Exeter Academy, New Hampshire; was graduated in 1888 and then worked his way through Harvard, acquiring his B. A. in 1892. From 1893 to 1894 he was a financial reporter on the old *New York Tribune* which later merged with the *Herald*, and in October 1895 he married Florence Haskell Corliss of Englewood, New Jersey. From 1903 to 1905 he served as secretary and treasurer of the Bankers Trust Company, from 1905 to 1909 as vice-president, from 1909 to 1911 as vice-president of the First National Bank. It was 1911 when he accepted a partnership in J. P. Morgan & Company, bankers.

A large part of the criticism which has been directed at the House of Morgan has been for its rôle in selling to the Allies and floating their bond issues early in the First World War, when the United States was still ostensibly neutral. Disclosures of the Nye Committee investigation were intended to show that subsequent pressure exerted by the House of Morgan helped to bring about the United States' declaration of war. Mr. Lamont, however, has always emphatically denied not only propaganda and attempts to influence Washington, but even that there could have been any motivation for such

LAMONT, THOMAS WILLIAM—*Cont.*

pressure. He states that although his firm's sympathies were naturally heart and soul with the Allies, several Morgan partners actually favored keeping out of the conflict until Wilson recommended United States' entry, and he has often publicly wished that "someone would run down the sources of the idea that businessmen are inclined to war."

In 1918 Lamont acquired the New York *Evening Post* from Oswald Garrison Villard (see sketch this issue) and terminated "Villard's critical attitude toward Wilson." He sold the paper in 1922 at a reputed loss of \$2,000,000. In 1919 he served as representative of the United States Treasury on the American Commission to Negotiate Peace at Paris. According to William Boyce Thompson, he "wrote the financial part for Wilson's League of Nations and was more relied upon abroad in financial matters than was Bernard Baruch."

Although the rest of the Morgan camp was split on the issue, Lamont became and remained an ardent supporter of Wilson's League of Nations, led the *Post's* pro-League newspaper campaign and in 1920 backed Cox because of his pro-League stand.

In 1922 he gave up the *Post* and soon afterwards privately financed Henry Seidel Canby in founding the *Saturday Review of Literature*. In 1929 he became one of two alternate delegates on the Committee of Experts on German Reparations at Paris, headed by Owen D. Young. And although President Coolidge insisted that the American government had no connection with the project, the resulting Young Plan was later found acceptable here.

Thomas Lamont was said to have been one of President Hoover's two principal advisers, the other having been the late Dwight Morrow. When Lamont was not in Washington the telephone wire between the White House and 23 Wall Street was rumored "in almost constant use." For a long time Lamont had favored the moratorium on war debts which Hoover finally declared in 1931; he had conferred with Hoover just before Hoover announced the extension of time limits on New York bank credits to Germany, on the theory that there was no danger of German collapse; he shared with Hoover the persistent idea that the depression should be allowed to "take its course."

With Roosevelt in the White House another Lamont thesis still found friends outside: that New Deal spending was paving the road to ruin. On the other hand, he favored Hull's (see sketch this issue) trade agreements, and was even more cheerful than the Administration on the question of World War II. In 1936, returning from one of his frequent trips to Europe, he signed a reassuring statement for the press: "I do hope and trust and believe that Europe will keep the peace," he said.

With the actual coming of World War II Lamont almost immediately affirmed his belief that the United States should avoid armed conflict, speaking before the Academy of Political Science at the Hotel Astor in November 1939. This he proposed we do by encouraging the Allies to buy defense supplies here, by a vigorous defense program of our own and by making the United States so strong economically and financially that it could cooperate toward "lasting peace." Writing somewhat later, he saw the ideal solution of the War as an economic United States of Europe—though naturally "the Allies must win." In April 1940 he again urged that the United States remain aloof from the European War, although his participation in the founding of the Committee to Defend America by Aiding the Allies created a little suspicion that he was not quite on the isolationist side.

Mr. Lamont is not only hurt but puzzled by those who are "given to spinning fantastic 'spider webs' of capitalist ownership," often pointing out how small J. P. Morgan's actual holdings are in various corporations. The House of Morgan frequently bears the brunt of public criticism while its clients profit from its operations, and Mr. Lamont is sensitive about it. It is also true that he himself is not an extremely wealthy man.

One of his sons, Thomas S. Lamont, is also a Morgan partner; another is Corliss Lamont, formerly instructor in philosophy at Columbia University, well-known Leftist author and one-time national chairman of the Friends of the Soviet Union. Mr. Lamont himself is a member of the Harvard, University, Union League, Metropolitan, City, Century, New York Yacht, Down Town, Links and Englewood Country Clubs.

LANGMUIR, IRVING Jan 31, 1881-
 Chemist

Address: h. 1176 Stratford Rd, Schenectady, New York

Dr. Langmuir has been described as a scientist who "chose a trail into the in-

initely little as his way of satisfying the great curiosity, and out of that highly specialized pursuit has come new light on familiar mysteries, a new understanding of fundamental phenomena, a whole new branch of science. New industries, new products, new conveniences, as well as new ideas, emerged from his findings—yet he had no practical end in view when he entered upon the search."

He was born in Brooklyn, New York, one of four sons of Charles and Sadie (Comings) Langmuir. The father was a self-made businessman who started as a clerk at 14 and accumulated a tidy fortune by the time he was 35. However, he lost it, and his middle years were filled with financial struggles. As a result the four Langmuir boys early developed a serious attitude toward life. The boys were taught to record systematically everything that went on in their lives in minutely-kept diaries—an inherited habit which both their parents carried to an extreme.

Young Irving early showed an overwhelming curiosity about everything in his daily life and particularly about chemistry. Once, when he was six, walking with his brother Arthur (a student of chemistry), he was asked to smell a bottle of gas, and inhaled so much that he almost strangled to death. It gave him no inhibitions about science—at nine he made a childish workshop and at twelve had a laboratory of his own in which to conduct his experiments. The father's business made it necessary for the family to live in Europe and Irving "hated" the rigorously disciplined French school and, in his own words, "did poorly at it." But always his tremendous interest in chemistry stayed with him, and his happiest hours were in scientific discussion and experimentation with his brothers.

On his thirteenth birthday his mother wrote to a friend: "Irving's brain is working like an engine all the time, and it is wonderful to hear him talk with Herbert [his brother] on scientific subjects. Herbert says he fairly has to shun electricity, for the child gets beside himself with enthusiasm, and shows such intelligence on the subject that it fairly scares him."

After attending Pratt Institute, Langmuir went to Columbia University where he received a degree in 1903 and then went abroad for further study at the University of Göttingen, Germany, where he obtained his doctorate. Then he returned to the United States to spend three unhappy years teaching at Stevens Institute of Technology, where the piles of papers to be graded and the elementary chemistry to be taught to oftentimes uninterested students proved unsatisfying.

In the summer vacation of 1909, instead of his usual mountain climbing, he decided to work in the laboratory of the General Electric Company at Schenectady, New York. Fascinated by the freedom for research, the equipment, the uncommercial atmosphere, he never returned to the class-

IRVING LANGMUIR

room. It was a turning point in his life—one which led to the heights of scientific achievement. Since 1932 he has been associate director of the laboratory. Years of tireless experimenting and amazing results achieved have given him his reputation as "one of the outstanding figures in the world of science."

His investigations, in many fields, have been the result of an insatiable curiosity. In 1932 his work in the field of molecular films won for him the coveted Nobel Prize in chemistry—the first industrial chemist in the United States to be so honored.

Earlier, at the Schenectady laboratory, his extensive studies of "hot filaments in gases produced important improvements in incandescent lighting." This discovery—the result of Langmuir's curiosity about "what goes on in a lamp"—became the basis of a huge industry. It superseded the use of the vacuum incandescent lamp and the arc. "United States sales alone in 1939 of [Langmuir's] type of lamp were in excess of \$58,000,000, and it has been estimated that the use of these lamps saves the public about \$1,000,000 a night."

Another great industry was built on Dr. Langmuir's work on "the behavior of electrons in vacuum," which formed "the foundation for our present knowledge of vacuum tubes and their application to radio." A third important industry resulted from Dr. Langmuir's work in the atomic hydrogen welding torch, which is used in industry in welding metals which require quick melting and high temperatures.

Dr. Langmuir's most recent work has been in invisible films. These findings were the basis for the discovery of "invisible glass"—a process for coating glass which made headline news in 1939 and brought fame to Langmuir's coworker, Dr. Kathar-

LANGMUIR, IRVING—*Continued*

ine Blodgett (see sketch this issue). During the First World War Langmuir worked on submarine detection devices. More than 60 patents have resulted from his studies, about half being in the field of radio engineering, and the latest is for an "image reproducer" designed to make dim X-ray fluoroscopic images intensely brilliant so they may be photographed by an ordinary camera.

Maintaining that the task of the scientist does not need expensive and elaborate apparatus to achieve important results, Dr. Langmuir says: "Dr. Katharine Blodgett and I have been using a simple method, which does not require expensive or complicated apparatus, to measure the sizes of molecules that are only one ten-millionth of an inch in diameter." This feeling for simplicity characterizes Langmuir. The man to whom *Who's Who in America* devotes a third of a page for the recording of the honors and decorations which United States and foreign scientific bodies, universities and honorary scientific fraternities have bestowed upon him leads a quiet life in Schenectady with his wife and their two children. He has lots of hobbies, among them aviation. Close contact with the experiments of Colonel Charles Lindbergh has deepened his interest in aviation. He also enjoys winter sports and mountain climbing, and Lake George, nearby, affords fine motorboating.

LATOUCHE, JOHN TREVILLE (la'-
tōōsh') 1917- Playwright

Address: c/o National Broadcasting Co, 30
Rockefeller Plaza, New York City

John Latouche, coauthor with Earl Robinson of *Ballad for Americans*, is a "short, dark and dynamic" Virginia poet who has written what has been hailed as the "long-awaited great American epic."

Described as "Whitmanesque in scope," *Ballad for Americans* was heard by American radio audiences for the first time early in November 1939, when Paul Robeson, Negro baritone, sang it over CBS on the Sunday afternoon *Pursuit of Happiness* program. The results were startling. The demonstration in the studio continued for 20 minutes after the program went off the air. CBS switchboards in New York, Chicago and Hollywood were deluged with calls. On December 31 Robeson repeated the ballad on the same program; enthusiasts in the Southwest sent chain letters to friends urging them to listen in.

Since then the song, published by the Robbins Music Corporation, has been bought by nearly every high school and college in America. Clubs and civic organizations are learning it, and to get the Victor album of four sides recorded by Mr. Robeson "you enroll your child before birth." Lawrence Tibbett sang it over the air a few months after its introduction. In fact, so great was the response to the song that Metro-Goldwyn-Mayer purchased it for a Judy Garland-Mickey Rooney musical at the reputed sum of \$6,000. Early in 1940 the song was booked for three performances by Robeson and his chorus with the Philadelphia Orchestra in the fall; was scheduled to be sung at the Philharmonic Stadium concerts in New York during the summer and was chosen by the Republican Party to open its national convention. The Westminster Choir included it in its repertory.

On the strength, many believe, of the wide success of the ballad, 29-year-old Earl Robinson, who wrote the music, has been given a \$2,000 Guggenheim Fellowship; he plans to write a full-length ballad-operetta based on Carl Sandburg's (see sketch this issue) *The People, Yes*.

Ballad for Americans was originally a long poem Latouche had written about human rights. "It comes out of my own country," says Latouche, "out of my home state, and out of the South, out of the young people of the South—out of a younger generation that does not accept a defeatist philosophy."

While working in *Sing for Your Supper*, Latouche, at the instigation of Harold Hecht, adapted the poem into a ballad for the stage. It was presented as *Ballad for*

Uncle Sam in the finale of *Sing for Your Supper*, but failed to make an impression. Latouche saw the possibilities of projecting a musical background for it. At the same time Earl Robinson had also entertained the idea of a ballad with a musical background; he had even written the music and was looking for a lyric writer. The two met during a production of *Sing for Your Supper*, and *Ballad for Americans* was born.

The ballad, which is a chant with antiphonal choral responses and occasional spoken lines, is written in the vernacular and presents the soloist as a composite American type of all races, creeds and activities. It traces the development of the United States from the Revolution through our Western Expansion and Civil War to the Machine Era. The soloist is an epic figure who embodies the hopes, the fears and the spirit of all the people. In each of the four eras the ballad covers, he reaffirms, half spoken, half sung, his belief in America. In the final passage, the soloist expresses his conviction that liberty will continue to be the keystone of American democracy.

Latouche calls the song a "pamphlet for democracy" and is dismayed at some public comment that it is a George M. Cohan flag-waver. "That," Latouche denies stoutly, "is the farthest thing from my intentions. Americans should be proud of their traditions, but never smug about them."

Although he looks French (he is dark-complexioned and has light blue eyes) and his name is French, Latouche is actually of Irish descent. The explanation is that at the time of the Edict of Nantes many Frenchmen came to Ireland and settled there; later many came to America. Among those was his great-grandfather, who became a wealthy landowner in Virginia, where, a few generations later, John Treville Latouche was born, the son of the late Burford Latouche and of Mrs. E. E. Tupper Latouche.

Latouche, beginning to write at the age of six, composed poems, drew pictures and wrote plays which he put on as one-man shows, directing and acting in them himself. At the age of 14, while attending the Richmond Academy of Arts and Sciences, he submitted a fanciful story in a short-story contest and won the grand prize. James Branch Cabell, who was one of the judges, became interested in the young prize winner. He suggested that Latouche leave the South, where he was unhappy—he was revolted by the harsh treatment of the Negro there—and continue studying and writing in the North. So the following year the 15-year-old prize winner, armed with a scholarship left his home and came to New York to attend the Riverdale Preparatory School on the Hudson. At school Latouche was so active and gave the authorities so much trouble that they debated whether to graduate him and rid themselves

of him that way, or to fail him and punish him by keeping him in school. However, on the strength of a grade of 100 on an English college entrance examination, Latouche was graduated into Columbia.

At college he majored in modern French literature, and in his freshman year made himself prominent by being the first freshman to win the Columbia Award for both poetry (*Legend of a Great City*) and for prose. In his sophomore year he again won the Columbia Poetry Award (*The Sea Gull*) and split the prose award with Leonard Robinson. The following year he wrote the book, lyrics and some of the music for the college varsity show, *Flair Flair from Paris*, from which he later sold some of the songs to the American Music Hall. The show, a parody on current theatre forms, took many characters out of Proust and Rabelais, and aroused a storm of controversy. Many critics were shocked with its boldness; others, among them Lucius Beebe (see sketch this issue), defended it as one of the best out of Columbia and gave it laudatory write-ups. As a result of all the comment aroused by the show, Columbia University, for the first time in its history, was moved to set up a board of censorship for its future musicals.

His success with the Columbia production drew Latouche into the theatre, where he received encouragement and assistance from Ira Gershwin and song-writer Vernon Duke. Soon afterwards he met Erika Mann (see sketch this issue), whose play, *The Pepper Mill*, he adapted into English. Once when the leading man, Kurt Bois, was unable to perform Latouche stepped in and played the rôle himself.

Green Mansions, a summer resort where Harold Rome was director of entertainment, attracted him next. He wrote satirical sketches and lyrics, two of which he sold to *Pins and Needles*. Later he wrote for the WPA production, *Sing for Your Supper*.

In New York City Latouche lived in an old Greenwich Village house built over a creek where the rebels in the Revolutionary War used to hide out from the British. Engaged in working on experimental radio forms for NBC and as a writer for its Saturday night *Listeners' Playhouse*, he believes that "Homer's lute was a weak instrument compared to the microphone, which is yet to be touched by an audience of millions." Besides his radio work, Latouche is writing a novel, *Crosstown*, which will deal with life in a great metropolis; a Negro show called *Little Joe* with Vernon Duke; and is also working on an adaptation of Shakespeare's *Much Ado About Nothing* with George Abbott (see sketch this issue). With Vernon Duke he wrote the music for the successful Negro musical, *Cabin in the Sky*. Secretly engaged for two years, Latouche married on October 30, 1940 Theodora Griffis, socialite daughter of Stanton Griffis, motion picture executive of New York City.

LAVAL, PIERRE (lä"väl') June 28, 1883- Former Foreign Minister of Vichy Government in France

Address: h. Châteldon, L'Allier, France

December 1940 Bulletin: On December 14, 1940 Laval was removed from his post.

In France the same politicians have the habit of turning up over and over again, not always in the same party. Pierre Laval, after numerous prominent appearances in Cabinets of every shade of political opinion, has since 1936 been simply Senator and Mayor of Aubervilliers. In 1940 the "new" France found him again at the fore, this time as Vice-Premier and eventual successor to Marshal Pétain (see sketch this issue) as Chief of the French State, and, since the shake up in Pétain's Cabinet, the only politician in the government. On October 28, 1940 he became Foreign Minister for the Vichy Government.

"A chubby, olive-skinned little man with wiry hair, a pouting lower lip and a tinny toy trumpet voice," French wits have often pointed out the fact that L-A-V-A-L spells the same thing from Left to Right as from Right to Left as an indication of its owner's character. All things to all men, Pierre Laval has been on thee-and-thou terms with more people than anyone in France, numbering men of every party among his friends, being careful to remain on speaking terms even with his enemies and trusting no one completely. His slipperiness is almost as famous as his reticence, and he used to be called the Calvin Coolidge of France.

He was born June 28, 1883 in Châteldon, in the Auvergne, whose thrifty, close-mouthed people are sometimes known as the Scotsmen of France. Actually there is a heritage of Moorish blood. His father was village butcher, unsuccessful innkeeper, and also ran the mountain mail coach. As a boy Pierre used to drive it—reins in one hand, Greek grammar in the other—and, gaining the interest of a passenger-priest by such studious habits, won a scholarship to St. Etienne. Then he taught in the village school for two years and went on to the Universities of Lyon and Paris, earning his way as school crammer and taking degrees first in natural science, then in law. He was a brilliant student, though with little interest in abstractions or the arts. Even then he was, above all things, practical.

In 1907 he was admitted to the Bar in Paris (nominally he is still a barrister at the Paris Court of Appeals), and as a labor lawyer proceeded to win his first case—that of defending an anarchist. He was never a particularly good pleader, however: his talents were mainly for "inside" jobs on corporate work. And for politics. He was at first an ardent Socialist, and in 1914 was elected both Socialist deputy for the Seine and Mayor of "Red" Aubervilliers. During the First World War he made a reputation for himself in the Chamber as a "dangerous" antimilitarist, refused to volunteer in the army, escaped all but rudimentary military service on the grounds of varicose veins, but, they say, at the same time made a small fortune in munitions supplies. It is also reported that he had the privilege of refusing an offer to become Clemenceau's Under-Secretary of State.

In 1919 he lost his deputy's seat and was also beaten when he ran for Mayor on the Socialist slate. Shortly afterward, following a split in the Tours Socialist Party when he voted for affiliation with the Third International, he is said to have taken membership in both the Socialist and Communist Parties—just to be safe!—and in 1923, running again for Mayor of Aubervilliers as an Independent Socialist, he was elected. (Since then he has been perpetually Mayor of the industrial suburb, whose inhabitants think of him affectionately as "Pierrot.") The following year he was re-elected to Parliament as well.

In 1925 he began his long Cabinet career, first as Minister of Public Works in the Left coalition headed by Painlevé, then as Briand's Under-Secretary of State and Minister of Foreign Affairs. In 1926 those who voted for him voted for him as an Independent, and he was elected Senator for the Department of the Seine. In the same year he was Minister of Justice in several Briand Cabinets, but the crash of the Left coalition, when Poincaré came into power, made him realize that it would be wise to cultivate the Right as well. This he did, in the person of Tardieu, and in 1930 Tardieu appointed him Minister of Labor. It was at that time that Laval forced through the unpopular Social Insurance Law.

Still flirting with both Briand and Tardieu when the latter was overthrown in January 1931, Laval became Prime Minister and Minister of Foreign Affairs at the insistence of Briand, but by making Tardieu his Minister of Agriculture sacrificed Left support. During this term he upset precedents by making trips both to Berlin and to the United States, where he spoke for the non-payment of French war debts and is supposed to have rebuked President Hoover for declaring a moratorium without consulting France. By February 1932 he was out of office, having angered both the people and the Bank of France; but he reappeared in the Doumergue Cabinet as

Minister of Colonies in February 1934, as Minister of Foreign Affairs in October 1934, and served in Flandin's Cabinet in the same office. Then, according to John Gunther, after the Banque had permitted the financial crisis of June 1935 in order to beat Flandin, Laval took over both as Minister of Foreign Affairs and as Prime Minister, with the right to legislate by decree until November 1935; having learned his lesson, he obeyed the Banque in a "merciless policy of deflation" which manifested itself in the De Wendel-Laval Decree Laws of July and August 1935. (Laval had for a long time been the munitions king's intimate law counsel.)

In the meanwhile, with Laval's talents for "saving both faces," foreign relations had been growing amazingly complicated. In the spring of 1935 he had negotiated the Franco-Russian pact of mutual assistance, which those who favored a system of alliances against Germany had long been demanding, but kept deferring its ratification; he had permitted military conscription in Germany, too. He had tried to remain friendly at once with Great Britain and with Italy, making a visit to Mussolini in January in which Il Duce agreed to frustrate German ambitions in Austria, the Danube and the Balkan countries in return for a slice of French territory in Africa. He had smoothed Italian-Jugoslavian tension; he had helped Hitler by seeing to it that France had nothing to do with policing the Saar Plebiscite; he had obtained Italian-British support for the French attitude toward Germany's rearmament, forming the "Stresa Front."

His juggling seemed to be going remarkably well, however, until Italy declared war on Ethiopia and it developed that Mussolini considered he had been given a free hand in Abyssinia by Laval; until the British accused him of failure to uphold the League by taking his stand against sanctions; until, finally, there was revealed the Hoare-Laval (see Hoare sketch this issue) agreement by which France and Britain were to make peace between Italy and Ethiopia at Ethiopia's expense. Both advocates of collective security and Anglophiles, including Reynaud (see sketch this issue), worked up a popular storm against the Prime Minister; the Left also complained of his hesitancy in ordering dissolved the French Fascist leagues; while most of the Right considered itself irrevocably committed to French-Italian solidarity, and its press campaigned as violently against Britain as against collective security. Though both British and Italian relations were now strained, Laval remained in power until January 1936, even his opponents showing no great desire for taking over the reins of government before that time.

After the tragic sequels to the Ethiopian débâcle Laval explained his diplomacy of that period as aimed toward gaining both Italian support for preventing the Germans

Pictures, Inc.

PIERRE LAVAL

from taking Austria and British support for preventing Nazi fortification of the Rhineland. When he later opposed war at the time of Munich, he said it was in order to stall for time really to prepare against Hitler.

At the outbreak of World War II Laval is reported to have refused a seat in the Daladier government, keeping up relations through Alfred Mallet, former managing editor of the *Petit Journal*. In March 1940 United States newspapers named him as at the forefront of those pressing Daladier (see sketch this issue) to "find a battlefield and make war," but Michel Gorel, a former writer for the Paris *Midi*, claims that three days after the Russian-Finnish peace Laval told Daladier: "You have uselessly irritated Russia by promising support to Finland, but you could not prevent the Finnish defeat. You drove Italy into Germany's arms. The French Army is demoralized, the blockade is a myth and the British Empire will be slow to get under way. We must make peace." According to the same writer, in return for the Ministry of Foreign Affairs Laval promised mediation by his intimate friend Mussolini, with whom he had remained in close contact throughout the winter, and who offered "a white peace to offset the Red danger." Daladier, however, is supposed to have hesitated and have been finally ousted "because of a plot against him by Paul Reynaud and Léon Blum" (see sketch this issue). Daladier himself claims that before the Armistice Laval and other Rightists induced him and his companions to go to North Africa to prepare a new seat of government there, merely in order to get them out of the way. These are all, however, unconfirmed rumors.

What is known is that when Laval became Vice-Premier in France's new authori-

LAVAL, PIERRE—*Continued*

tarian régime of July 1940 he stated that France is through being "a humanitarian crusader for other nations" and will devote her efforts purely toward "national reconstruction within the framework of a European bloc of nations." Reynaud, Blum, Daladier were to be tried for responsibility for the War, all Popular Front personages eliminated from power. Since then his own position has continued to be strengthened despite, or perhaps because of, his continued parleys with German officials and Hitler himself. He is known to favor a National Socialist form of government for France.

Laval is married, but his wife does not appear often in public life. They have one daughter, José, who is the wife of Count René de Chambrun, now in the United States. Laval owns a villa in Paris, a château in Châteldon, two or three country estates. He adores animals, and when Premier, used to interrupt state conferences to telephone to one of his farms and ask about the welfare of his cows and pigs. He has "homely manners," bad teeth, dresses carelessly, wears a perpetual washable white tie, has a phobia against railway sleepers, appreciates food, smokes around 80 cigarettes a day, plays around with his own provincial newspapers (*Le Moniteur* among them) but has never written a book, speaks badly, is said to be totally without vanity or temper. He is a devout Catholic. He has "grown rich without explanation"—perhaps by munition supplies during the First World War, real estate profits and speculation on the currency exchange with advance political information as a guide. He may have other information. Reports are that astrology, in the person of M. Maurice Privat, has played no small part in his conduct of foreign and other affairs!

LAWRENCE, ERNEST ORLANDO

Aug 8, 1901— Nobel Prize winner in science, 1939; professor of physics

Address: b. Radiation Laboratory, University of California, Berkeley, California; h. 111 Tamalpais Rd, Berkeley, California

Dr. Lawrence was born at Canton, South Dakota, the son of Carl Gustavus and Gunda (Jacobson) Lawrence. His father is an educator, now teaching at Northern State Teachers' College, Aberdeen, South Dakota. Young Lawrence studied at St. Olaf College, Northfield, Minnesota, received a B. A. from the University of South Dakota in 1922; did graduate work at the University of Minnesota and the University of Chicago; received his Ph. D. from Yale in 1925. He received honorary Doctor of Science degrees from the University of South Dakota in 1936, Stevens Institute of Technology, Yale University and Princeton University, and an LL. D. from the University of Michigan.

He married Margaret Kimberly Blumer and has three children, a boy and two girls. He has taught physics at Yale and in 1940 is director of the Radiation Laboratory at the University of California.

Dr. Lawrence, a jovial good-looking young man, joins 12 other United States scientists as recipients of the highest honor a scientist can receive—the Nobel Prize. It was awarded to him for the invention of the cyclotron, a "Rube Goldberg contraption of steel, copper and aluminum weighing 220 tons and used to study one of the tiniest units of the physical world, the nucleus of the atom." About 10 years ago he invented the first one which weighed a mere 60 tons. In 1940 he hopes to work on a 4,900-ton cyclotron, for in April the Rockefeller Foundation promised him \$1,150,000 to build it and to "smash atoms as atoms have never been smashed before." In his special Radiation Laboratory on the campus of the University of California, Dr. Lawrence and his coworkers "have already created scores of artificially radioactive substances, including common salt, and have even created a few atoms of gold." What the 4,900-ton machine will uncover in "the inner heart of matter" no one knows, but no physicist doubts that it will "unlock many a treasure house of secrets."

All over the world in scientific laboratories there are other cyclotrons which are being used to study the world's supply of

ERNEST ORLANDO LAWRENCE

energy, locked inside the nucleus. Many physicists who studied under Dr. Lawrence are now working independently. With his brother, John Hundale Lawrence, the Nobel Prize winner is considering cyclotron treatments for cancer.

Other awards made to Professor Lawrence include: Elliott Cresson Medal of the Franklin Institute (1937); Research Corporation Prize and plaque (1937); Comstock Prize of the National Academy of Sciences (1937); Hughes Medal of the Royal Society (1937); William K. Dunn award of the American Legion (1940); and the William Du Bois Duddell Memorial Medal of the London Physical Society, one of the highest awards of English science (December 1940).

LAWRENCE, GERTRUDE July 4, 1901-
 Actress

Address: 17 W 54th St, New York City

Gertrude Lawrence, who has been called the "undisputed queen of the light comedy stage," has led a storybook life with all the standard plots, including the ancient from rags to riches one. After a hard life, fortune and fame are hers. Fame has come, as it should come for actresses, in the form of Standing Room Only signs outside the theatres in which she is playing; it has come, too, in the form of awards and medals. The latest added to her already large collection are the gold medallion awarded by the New York Academy in February 1940 "for the best performance of the year" and the annual award of the Comedia Matinee Club, also "for the most outstanding theatrical performance of the year."

This famous British star—actually she's half Danish and half Irish—was born in London on July 4, 1901 and named Gertrud Alexandra Dagma Lawrence Klasen. She made her first public appearance at the age of two when her father, an interlocutor in a minstrel show, put her in a chair in the lobby and told her to smile. Her smile helped sell the programs. Her parents were divorced soon after and Gertrude went to live with her mother, a very minor actress. When her mother had a bit in a play there was meat to eat; when she didn't there was only very thin soup.

At nine Gertrude was dancing in a pantomime in London and later was one of fifty girls playing in *The Miracle*. Noel Coward was one of the fifty boys who played in it, and he acted, too, in *Hannele* in which they both appeared in 1913. He remembers her then as "a vivacious child with ringlets to whom I took an instant fancy. She wore a black satin coat and a black velvet military hat with a peak, her face was far from pretty but tremendously alive. She gave me an orange and told me a few mildly dirty stories, and I loved her from then onwards."

Gertrude studied dancing under Madame Espinosa, and elocution and acting at the Italia Conti Dancing Academy, first as a pupil and then as a student teacher. Whenever she had a spare shilling she went to the theatre. She began to get small parts. "I went on the stage to make money," she says now, to those who speak with awe of the glamor of the theatre. "I had to earn a living and that seemed the most attractive way to do it."

It wasn't a very attractive way at first. For seven years she played in the English provinces: "I danced and sang and acted and did everything but sell tickets." There was the time when she was playing in Shrewsbury and the manager skipped, leaving the company flat without money to pay hotel bills. The landlady told Gertrude she could stay on until something turned up if she'd lend a hand in the bar. She was glad to do it. She stayed as barmaid until the next acting company reached town and wanted a girl to sing before they began their play, *The Rosary*. Someone said: "There's a pretty nifty bar-

GERTRUDE LAWRENCE

maid down at the Red Lion. She's had stage experience. Why not get her?" "So they got me," she says, "and I put on a nun's habit and sang *My Rosary* before each performance and then scampered back to the bar."

Eventually Gertrude Lawrence got to London as dancer and understudy in a revue called *Some* and got her real start as a chorus girl in one of the earlier *Charlot's Revues*. Charlot signed a three-year contract with her for £3 a week for the first year and £6 a week for the next two. In return for this Miss Lawrence was to dance and sing and understudy a couple of parts. She understudied Beatrice Lillie's rôle and Miss Lillie was kind enough to break her leg by falling from a horse. Miss Lawrence took over Bea Lillie's routine—successfully. But in the next revue she was back in the chorus again—until Miss Lillie decided to get married and leave the show. Gertrude got her part for keeps at £6 a week and rave notices with it.

In 1924 Gertrude Lawrence came to New York for the first time. She was already married (the marriage was later dissolved) to Francis Gordon-Howley, by whom she had one daughter, Pamela, now living in New York City. She came to New York with Beatrice Lillie to do *Charlot's Revue* of 1924. Singing a number called *Limehouse Blues* Gertrude Lawrence was a hit. She was even more of a one when, dressed in a dazzling white dress, she sang insinuating patter.

In the annual *Charlot's Revues* Gertrude Lawrence always "danced with magical lightness and her voice was true and clear; the personification of style and sophistication, she could still convulse an audience with a bit of cockney horseplay or bring tears to its eyes with a sentimental ballad—the ideal musical comedy star," her admirers said.

After five years of musical comedy in London and New York, Gertrude Lawrence got her first "straight" part—in the Viennese comedy, *Candlelight*. "I hadn't much experience in playing a legitimate part," she says, "but I'd played in a lot of sketches, some dramatic, some comic. An actress is like a piece of blotting paper. You don't consciously learn the technique of acting, you absorb it." According to a couple of critics, in *Candlelight* Gertrude Lawrence "was as charming and as decorative as ever, but she turned on all the comic stops at once and overplayed consistently."

Overplaying is a fault of which Miss Lawrence has occasionally been accused. Noel Coward used to try to cure her of it and to a large extent succeeded. She knows all about her tendency. "Now and then," she frankly admits, "I find myself reverting to the old habit of overplaying a part or emphasizing and banging home points that should be underlined. But now, thank goodness, I know when I'm doing so and I have a horrible thought of what Noel would say were he out front."

Gertrude Lawrence has been associated with Noel Coward a lot, of course, since the time they first met in *Hannele*. He's written plays for her; he's acted, sung and danced with her. *Private Lives* (1930), which he wrote for her, is the play that made her the acknowledged queen of the light comedy stage, for her portrayal of Amanda Prynne was "a brilliant, sustained and restrained piece of high comedy acting." Her "sureness of touch and fluency of expression" were astonishing in another of Coward's plays, *Tonight at 8:30*, presented in New York in the winter of 1936 to 1937. *Tonight at 8:30* was a series of nine short plays, three of which were given at each performance. In the cycle Miss Lawrence had to play comedy, high and low, tragedy, melodrama or revue—do everything but balance a rubber ball on her nose—all in an evening.

When Miss Lawrence toured in this country in 1935 with John Golden's production of *Susan and God* the play broke attendance records in practically every city where it appeared. Critics were unanimous in heaping on Miss Lawrence for her "dazzling performance" the sort of praise previously reserved for Helen Hayes and Katharine Cornell.

Miss Lawrence's latest appearance is in *Skylark* "which fortunately has Gertrude Lawrence to give it wings." When the play opened in October 1939 the critics agreed that this comedy owed a good deal more to her bright, particular sparkle than to its own merits, and some went as far as to say that it was merely "an inadequate vehicle for her vivid talents and ingratiating personal charm."

After her marriage on July 4, 1940 to Richard S. Aldrich, theatrical producer whom she met on Cape Cod when *Skylark* was being tried out, Miss Lawrence went on

tour with *Skylark*. In the spring of 1941 she is going to appear in *Lady in the Dark* by Moss Hart (see sketch this issue), where her rôle will be that of a woman who is being psychoanalyzed.

Those who know Miss Lawrence away from the stage insist that she is just as charming as when she is in a play especially designed to show off her talents. Her voice has the same throaty resonance; her manner is just as pleasing. Off stage and on she is lovely to look at, "tall, somewhat angular, yet lithe and graceful," with a "winning smile, eyes that sparkle and a nose that can crinkle delightfully."

LAWRENCE, MARJORIE 1908- Soprano
 Address: c/o Metropolitan Opera Company,
 Broadway and 39th St, New York City

There is little doubt that the most startling event of the 1936 Metropolitan Opera season was the dashing exit of Brünnhilde on horseback in the last scene of the *Götterdämmerung*. For years buxom prima donnas had led ancient nags across the stage by the bridle or left them in charge of a stable groom. But on the evening of January 12, 1936, Marjorie Lawrence charged boldly on her horse in the direction of the funeral pyre.

Such a feat, however, is to be expected of a soprano, the daughter of William and Elizabeth (Smith) Lawrence, who was born and brought up in Australia and spent much of her youth rounding up cattle and sheep. This was in Dean's Marsh, a country village of some 140 people in the heart of the bush country. There were four Lawrence boys and two girls, all of whom attended the little village school from which Marjorie used to escape by the window when she'd been kept after school for misbehaving. "I was an impossible child," she now says of herself. "I wanted to be a boy like my brothers. I simply never did what I was told, and my relatives and neighbors wondered what would happen to me when I grew up."

Marjorie's first music lessons came from the Reverend A. J. Pearce, Dean's Marsh's Church of England parson, who had already taught her most of the world's great reli-

Musical America

MARJORIE LAWRENCE

gious music by the time she was 18 and beginning to realize that she wanted to sing more than anything else in the world.

Her father was against Marjorie's having a career, and so one day she and her brother Cyril, now her manager, stole away to Melbourne. For two years she studied with Ivor Boustead while supporting herself by working as a seamstress. In 1929 she won an operatic contest sponsored by the Melbourne *Sun* which sent her to Paris for study under Madame Cecile Gilly. After three years of hard study learning rôles and vocal technique, she made her debut in Monte Carlo as Elisabeth in *Tannhäuser*, and shortly after made her Paris debut as Elsa in *Lohengrin*. Marjorie Lawrence's Metropolitan debut was on December 18, 1935 as Brünnhilde in *Die Walküre*.

From the time of her first debut Marjorie Lawrence has been recognized as "one of the truest Wagnerian interpreters, alike for the stirring magnificence of her Brünnhilde and the tender simplicity of her Sieglinde, the stately loveliness of her Elsa and the compelling malevolence of her Ortrud."

Marjorie Lawrence, actually, isn't much like *Tannhäuser's* saintly Elisabeth or stalwart Brünnhilde, with her "saucy blond head" and "pert little nose." Nor is she like the general idea of operatic artists. There was the night she strode into the smoker of a midnight train armed to the teeth in full battle regalia, brandishing Brünnhilde's shield and spear while strong men ran for the door. Or the time the Metropolitan mouse that hid in her ermine wrap picked the center of the Astor Hotel lobby to jump out. She herself insists on being Marjorie Lawrence. "For heaven's sake, don't let me catch you calling me a prima donna or a diva," she'll tell you. "And I'm not Madame Lawrence, or any-

LAWRENCE, MARJORIE—*Continued*

thing like that. I'm just Marjorie. I don't have a favorite recipe for kugelhupf or spaghetti. I hate cities and crowded rooms and stuffy people and I just can't wait until I get out in the fresh air with a good horse or my bike. How I love a bike!"

In Paris, which she still considers her home city and where she maintains a "wonderful, crazy" studio in Montmartre, she has established an unique place for herself, and can be counted on to put some new sensation into almost any opera season—"whether because Brünnhilde rides again, or because all seven of Salome's veils come off on schedule in a dance outdaring even Mary Garden's, or merely because Marjorie Lawrence is singing."

LEE, MANFRED B. See Queen, E., pseud.

LEHRBAS, LLOYD (lěrbäs) Oct 15, 1898- Associated Press' "roving correspondent"

Address: c/o The Associated Press, 50 Rockefeller Plaza, New York City

Lloyd Lehrbas, who was given honorable mention for his foreign dispatches in the 1939 Pulitzer Awards, has crowded an improbable amount of experience into his life. Born in Montpelier, Idaho, on October 15, 1898, he attended school there and at Boise, spent a year as a student at the University of Idaho and as local correspondent for the *Salt Lake Tribune*, then enrolled in the school of journalism of the University of Wisconsin. After two years at the university his roving began, and he has been on the move ever since.

First it was the World War. Young Lehrbas quit school to enlist in the air service, and although the Armistice came before he got to France, he didn't go back to Wisconsin, but found a job as reporter on the *San Francisco Chronicle*. He wasn't there long; he had an itching foot that got him onto an army transport in a bellboy's uniform, and eventually brought him to Siberia, China, Japan, the Philippines. Back in the United States, he tried Chicago, and joined the staff of the *Chicago American*; he returned to the Philippines, and worked nine months as night editor of the *Manila Bulletin*; he was with the *Shanghai Evening Star*, on a Hearst paper in New York City, two years with a Washington newspaper, editor of Fox Movietone News in New York, a freelance reporter in the Orient and in Europe. Finally, on December 4, 1933, he joined the state department of the Associated Press in Washington, D. C., expressing his desire to become their "roving correspondent."

It was evident that he already had a good many qualifications for the job. In December 1935 A. P. sent him to London to cover the Naval Conference. In January 1936

Associated Press

LLOYD LEHRBAS

he was back in Washington, covering the Republican and Democratic conventions. In November of the same year he was in Buenos Aires with Cordell Hull (see sketch this issue), and at last, early in 1937, he set sail for Shanghai with the roving commission.

From then on Lloyd Lehrbas kept bumping into history, maybe because he kept following it around. He was in the thick of the Chinese-Japanese War. He was in Warsaw at the time of the German air-raids on Poland, and from his apartment, telephone in one hand, gas-mask in the other, he dictated the story of the first air-raid on Warsaw to a fellow correspondent in Budapest who had telephoned to find out if "anything was doing." When it became necessary to leave, he started for the border town of Lwow in an ancient German automobile, while "bombs fell in front of us and bombs fell behind us." Continuing to Bucharest, he arrived just before the assassination of Rumanian Premier Calinescu, and managed to score a world beat for the Associated Press by getting the story out before the censor clamped down.

Lehrbas returned to the United States late in 1939 and spent a short time as correspondent for the A. P. in Washington, but in May 1940 he was on his way back to Europe again.

Firm-jawed, with high cheekbones, Lehrbas belongs to the rugged type of newspapermen who make legends and who somewhat justify Hollywood's romantic versions of the press. Fellow newspapermen say there has not appeared such a combination of ace reporter and colorful character since the late Webb Miller.

LEIGH, DOUGLAS (1ē) May 24, 1907-
Advertising executive

Address: b. 630 Fifth Ave, New York City

Times Square in New York has been called the Louvre of advertising spectacles. From the Square to Columbus Circle, about 200,000 electric bulbs and 25 miles of neon tubing blazon forth the glories of innumerable products. What used to be the largest sign of them all, the Wrigley Gum aquarium scene opposite the Hotel Astor, was put up by the General Outdoor Advertising Company. Most of the next largest signs and those which seem to fascinate most gapers were put up by a former General Outdoor Advertising employee, Douglas Leigh. And in October 1940 his "mazda-piece" was opened—the largest animated cartoon ad in the world.

When Douglas Leigh arrived in New York in 1929 he had \$8.25 in his pocket. Today, his firm, Douglas Leigh, Incorporated, has physical assets of half a million dollars, mostly in erected signs, and holds contracts of an aggregate face value of more than a million.

He was born on May 24, 1907 in Anniston, Alabama, the son of an executive of a local manufacturing concern. At 10 he was earning \$2 a week selling magazines for an Anniston drugstore. At 13 he entered high school in Greenville, North Carolina and for four years was advertising manager of the year book. In his spare time he ran a magazine agency and during his senior year made as much as \$150 a month. Summertime he visited an uncle and aunt in Atlanta and worked up a magazine route there.

In 1927 Leigh entered the University of Florida, where he was none too good in his studies. But he made money there. In his freshman year he bought the advertising rights to the year book for \$2,000 credit. Advertising had never run over \$1,500, so this looked like a good price to the editors. Leigh sold more than \$7,000 worth of advertising that year.

Next year the editors wouldn't sell him space, but he had other ideas. Through program concessions, through selling buckles, raincoats and stickers with the college seal he made \$5,000 and, with the profits from his two years in college, quit. "When he was asked whether he had worked his way through college, he replied: 'Well, in a way. It's really a business and I went there to make money.'"

Leigh worked for a sign company in Birmingham, Alabama, then in Atlanta, where he led all the salesmen and got several increases. But the increases didn't come fast enough to suit him, so he resigned. Right after the stock market crash he landed in New York, broke—he always had a talent

DOUGLAS LEIGH

for dissipating money and had been helping a brother in medical school.

In New York he got a job with the General Outdoor Advertising Company at \$50 a week. As the depression got worse he received salary cuts, though he did good work selling billboard space and bulletins in Brooklyn. When his bosses wanted to cut him to \$30 a week, he begged to be allowed to sell Broadway spectaculars (signs with more than 200 feet of neon tubing or the equivalent in electric light bulbs). He was told that one needed social prestige for that job. He quit.

He had \$50 and a second-hand Ford and the day after he quit he came down with the mumps. When he really got started was on the day President Roosevelt closed the banks in March 1933. "After breakfasting at the Automat where he always ate, Leigh bought a 50-cent Japanese camera and a roll of film and took a subway up to Fordham Road in The Bronx, a neighborhood he had scouted before. He walked along Fordham Road until he came to a likely sign spot on the roof of a building. He talked the owner of the building into giving him an option on the space, on credit, and took snapshots of it. An unemployed artist friend enlarged the shots, on credit, and painted in a sign, singing the praises of the St. Moritz Hotel. Armed with his compositographs, Leigh dropped in on the business manager of the tony hostelry on Central Park South and sold him the space."

Leigh peddled his Ford to get some of the money necessary to put up the sign and got from the hotel a two-room suite for a year, rent free plus \$50 a month. He made his office in the bedroom and used hotel stationery with a rubber stamp of his name on top. Then he proceeded to ex-

plore Times Square with his camera, got the help of his artist friend again and took his pictures around to dozens of firms. Finally the A & P signed a contract and Leigh put up his first spectacular, the central figure of which was a large cup which gave off white clouds like a cup of steaming-hot coffee.

Since then he has erected the Kool cigarette advertisement with the penguin that blinks 3,600 times a minute, the Ballantine beer sign that has clowns tossing quoits on a peg, the huge Schenley advertisement over Columbus Circle, the Gillette razor spectacular with a clock and Westminster chimes, the Trommers sign with the German beer pixies and the Four Roses whisky spectacular, the highest sign on Broadway. "His Coca-Cola sign on Columbus Circle giving weather forecasts is a masterpiece of imagination, sold to the Coca-Cola people on the strength of their own slogan, 'Thirst knows no season.'" Once he put up a Coca-Cola sign in Bryant Park and a woman tenant used to hang her wash in front of it every Monday. She said she had been hanging it in the same place for 20 years and didn't intend to change. Leigh has been mailing her \$2 a week with the understanding that she send her laundry out to be done.

The most talked of of all Leigh's signs are his two animated cartoon comics, advertising Old Gold cigarettes and Wilson's whisky. In 1936 he obtained the American rights to the animated cartoon patent, an invention of Kurt Rosenberg, an Austrian. The cartoon is made on film and is projected onto the bank of photo-electric cells. The cells are activated and the current transmitted to mercury tubes, where it is magnified and passed onto the corresponding outside bulbs on the sign itself. When Leigh sold the sign to the P. Lorillard Company, he inserted a clause in the contract promising that the spectacular would attract more attention than any other in New York, and permitting the company to cancel its \$4,000 a month contract if he failed to deliver. He doesn't have much to worry about. The sign "draws the biggest standee crowd along the Rialto."

Leigh gets the ideas for the comic strips himself, as he gets all the other ideas he develops and sells. A couple of years ago he excited a reporter into doing a long article when he prophesied he was going to rent the Empire State Building's mooring mast from Al Smith and develop it into an electrically lighted 100-foot cigarette which would give off smoke and be visible 100 miles away. When pressed, Leigh will admit he knows it's a pretty far-fetched idea.

Physically Leigh is slight and "looks like an actor who will always be cast in juvenile rôles." "His manner is mousy"; he speaks softly and answers everyone with a "Yes, Sir," or "No, Sir," even the tobacconist who sells him cigarettes. He's scared to death of high places and won't live in an apartment above the third floor.

If by some chance he has to take a hotel room above the third floor he loops one end of a sheet around his ankle and the other end to the bedpost before retiring. He hates banks and won't borrow from them, maybe because he found it hard to borrow when he first started; maybe because the man he admires above all, Henry Ford, doesn't like banks either. There's a story that when Leigh was taking a course at Columbia University, a professor referred to Ford slightly. Leigh stood up, walked out and never came back.

In 1936 Leigh met Patricia de Brun, the pretty daughter of a New York manufacturer, and shortly after asked her to marry him. Her family objected because she was only 18. Leigh and Miss de Brun eloped, by Long Island Sound ferryboat, and were married in Stamford, Connecticut. Now "his wife need never worry about being supported; he has a little notebook in which 11 pages are filled with substitute ways of making money in case anything ever happens to his spectaculars."

LEINSDORF, ERICH (līnes'dorf ěr'ik)
Feb 4, 1912- Chief conductor, Metropolitan
Opera Company

Address: c/o Metropolitan Opera Co, Broad-
way and 39th St, New York City

Chief conductor of the largest opera house in the world is an enviable title, but as a job it is one of the toughest. As one critic has said, it requires a man who is "showman, diplomat, handshaker, politician, executive, psychologist"—and, not purely incidentally, musician. Being chief conductor of the largest opera house in the world at the age of 27 is just plain unprecedented, and perhaps that's why Erich Leinsdorf has been one of the most publicized and most argued-about young men of the year. Having now survived his strenuous first season in that position, it seems likely that the Metropolitan Opera Company will go on permitting him indefinitely to live down his age while wielding its baton.

Erich Leinsdorf began his career early. Born in Vienna in 1912, he was taking piano lessons under Paul Emerich by the time he was seven, studying to be a concert pianist. When he was 13 he began also to

Musical America

ERICH LEINSDORF

study the cello, musical theory and composition. By the time he was 18 he knew where his ambitions really lay: in interpretation. And four years later he was already beginning to achieve them.

He was engaged for the 1934 Salzburg Festival as an assistant conductor to Bruno Walter when it was found that they needed someone familiar with the Italian language for the opera *Don Giovanni*. After the opera was produced successfully Leinsdorf was asked to stay for other work.

Back in Vienna the next spring he was asked to play the piano rehearsals of Kodály's *Psalmus Hungaricus* conducted by Toscanini because no pianist was available who knew the score well enough to work with the great conductor. At the concert he was pianist for the Kodály work and for Beethoven's *Ninth Symphony*. In May 1935, he worked again under Walter at the Florence Festival, and at the Salzburg Festival that same year he was general assistant to both Walter and Toscanini, preparing both singers and chorus. In the fall and winter of 1936 he had several operatic and symphonic engagements at Bologna, Trieste and San Remo, and in 1937 he once more assisted at the Florence and Salzburg Festivals, making himself known as Toscanini's right-hand man.

At about this time the general manager of the Metropolitan Opera of New York City, "gray-haired, wiry" Edward Johnson, was looking for an assistant conductor of German opera for his over-worked chief conductor, Artur Bodanzky. At the recommendation of Toscanini, young Leinsdorf was engaged for the 1937 to 1938 season, sight unseen. He had never publicly conducted an opera, and his duties were supposed to consist largely of piano rehearsals with the singers.

LEINSDORF, ERICH—Continued

The young conductor's debut was for a performance of *Die Walküre* on January 21, 1938. His appearance was something of a triumph. Said the late Lawrence Gilman, music critic of the New York *Herald Tribune*, of the audience that night: "They saw an astonishingly boyish figure, short, small of build, graceful, with one or two of the familiar gestures of his great master (Toscanini). . . . Though he wiped his brow occasionally with his handkerchief . . . he soon made it evident that he was entirely at home."

The same critic spoke of his "remarkable musical memory," his "clear and intelligible" beat, his "musical feeling, taste and authority." He noted in conclusion that Leinsdorf was "a very welcome acquaintance, an artist whom one must admire and, better yet, respect."

That same season Erich Leinsdorf conducted 10 performances, earning admiration by taking over the performance of *Parsifal* at Easter on 12 hours' notice after Bodanzky became suddenly ill. For his second season, ending in the spring of 1939, thirty-six performances of operas by Wagner and Richard Strauss were turned over to him. At the end of the season he conducted four performances of the NBC and one of the Montreal Symphony Orchestras, and spent the fall season with the San Francisco Opera Company conducting *Pelléas et Mélisande*.

In the next season Leinsdorf expected to conduct only twenty-five to thirty performances of four or five operas. Three weeks before opening night he returned to find his chief again in ill health. In those three weeks the young man prepared and rehearsed nine German operas—and six days before the opening curtain on Thanksgiving came Artur Bodanzky's catastrophic death. Leinsdorf was suddenly forced to assume all that veteran conductor's assignments in addition to his own; and this meant all performances of 13 works, many of which he had never before conducted in public. During his first Metropolitan season Leinsdorf had conducted *Die Walküre*, *Parsifal*, Richard Strauss' *Elektra*; on tour that same season he had added *Lohengrin* and *Tannhäuser*; in his next season with Metropolitan he had also conducted *Siegfried* and *Das Rheingold*. But in one season *Die Meistersinger*, *Tristan und Isolde*, *Götterdämmerung*, *Orfeo ed Eurydice*, *Der Rosenkavalier* and *Pelléas et Mélisande* had to be added to his repertoire.

It would have been a tremendous assignment for a conductor of many years' experience. The reaction of many of the critics might be summed up in the words of one: "One might reasonably ask if this is not excessive. It might not be if the incredible had happened and Mr. Leinsdorf proved himself at a step a young Toscanini. But that is not the case, and was not expected to be." Mr. Leinsdorf's great precocity and talent were universally acknowl-

edged, but as the season wore on there was criticism that his inexperience made him rather unheeding of the needs of singers—reluctant to give cues, given to playing in different tempi and to varying his interpretations from performance to performance.

Late in January 1940, some of this criticism on the part of members of his company was pounced upon by the press. Lauritz Melchior was quoted on January 25 as having acknowledged Leinsdorf as a "genius" but as stating flatly that he was "not yet ready to be senior conductor of the finest department of the greatest opera house in the world." Kirsten Flagstad was reported to have hinted that she would not continue with the Metropolitan that season if Leinsdorf continued as conductor. "Since Mr. Leinsdorf is inexperienced in playing Wagner," she was quoted, "he watches the music. I see his arms moving, but I can't tell where the music is."

General Manager Edward Johnson, however, was firm in defense of his "young Toscanini." He spoke darkly of certain "old boats in the company . . . who, because they have exalted egos since they have no competition for their rôles, would like to be dictators of the Metropolitan." Of Mr. Leinsdorf he said: "He will be so acclaimed in a few years that they won't want to remember that they opposed him." Leinsdorf himself maintained a dignified silence.

It was a poor time for a musical feud—the time of the campaign to raise a million dollars to pay for the purchase of the opera house from the Metropolitan Opera and Real Estate Company. And it was true that box-office receipts were even larger in the 1939 season than 1938, indicative of the approval of Leinsdorf by a large section of the public. On the evening of January 25, 1940 at the performance of *Götterdämmerung*, Melchior and Leinsdorf appeared together and at the second act it was Leinsdorf who was given an ovation by the audience. One critic said of his conducting that evening: "It was clearly an exhibition of youth, if not of emotional depth, subtlety and finesse." On the evening of January 29 the feud was officially ended by a hand-clasp at the performance of the *Die Walküre*, amid further ovations by the audience. And in February, Flagstad appeared on schedule.

By the end of the regular 1939 to 1940 season Erich Leinsdorf had given a total of 55 performances. Music critics of Boston were uniformly kind during the Boston tour. W. S. Smith said of Leinsdorf: "He was last year and the year before [1938-39] a young man working for his place next to the older colleague—now, young as he is, he is the master of whom we expect confidently mastery." The consensus of critical opinion was that he had acquitted himself remarkably well in "one of the most grueling schedules a Metropolitan Opera conductor ever faced." Mr. Leinsdorf, however, claimed that he was not at

all tired, that he had even put on weight. "Why all this talk about too much work?" he asked. "I am glad I had the opportunity to work so much. It doesn't exhaust me—on the contrary, it's stimulating, and I'm in better condition right now than I was at the beginning of the season. Why, in Vienna, where I got my training, we had a ten months' opera season, with nightly performances, and there were only three conductors. Each of them had more work than I undertook at the Metropolitan this year."

Whether the exercise of his profession is or is not ideal to keep one in physical trim, it is the only exercise Erich Leinsdorf gets during the winter seasons, and his short, chunky figure is that of an athlete, topped by broad shoulders. During the summer months he plays a little tennis, but, he says, "poorer than second-rate."

In this country less than three years, the young Viennese is becoming rapidly Americanized. His English has scarcely a trace of accent; he already has his first citizenship papers; he is at least a conservative supporter of swing music and he is an enthusiastic believer in operas in English with American casts. In August 1939, he married Anne Frohnknecht. The young couple have set up housekeeping in a rambling, old-fashioned five-room apartment just off Central Park West, and Erich spends most of his time there when he is not working. He doesn't like parties, and claims one cocktail gathering tires him more than conducting *Götterdämmerung*.

He has definite—and mildly revolutionary—ideas as to what he would like to do with the Metropolitan of the future, although no real plans are possible. It should be put on a permanent, year-round basis, he thinks; conductorial training should be offered to at least one or two especially talented young American musicians; he would like to give a representative cycle of German operas there—something besides Wagner; and there should be a "summer training camp for younger singers." "For five decades the Metropolitan has been buying readymade singers. Now, I think, it is our duty to grow our own," Erich Leinsdorf says, firmly.

LENROOT, KATHARINE FREDRICA

Mar 8, 1891- Chief of the Children's Bureau
Address: b. Children's Bureau, United States
Department of Labor, Washington, D. C.;
h. The Kennedy-Warren, Washington, D. C.

In 1911 a blond-haired girl who was still a Junior at the University of Wisconsin appeared before the legislature in Madison to speak for a minimum-wage law. Armed with statistics, she sought legal protection for the workers of the state. Today that same woman, Katharine Lenroot, as chief of the Children's Bureau of the Department of Labor, is interpreting those provisions in the Fair Labor Standards (Wages and Hours) Act which apply to children.

The law forbids, as a general rule, the employment of children under 16. However, it confers upon the chief of the bureau authority to permit youngsters of 14 and 15 to work in an occupation which will not interfere with their health or education. It likewise gives the head of the bureau the right to decide which occupations are so dangerous that boys and girls under 18 may not be employed in them. Miss Lenroot's decisions are not only important for the welfare of the children involved but have an economic effect upon the industries in which children have been employed.

Born in Superior, Wisconsin, Miss Lenroot has been interested in progressive welfare movements and social problems since she was a little girl. She accompanied her father, Judge Irvine Luther Lenroot, Republican member of the House of Representatives and of the Senate, to Washington for a year and observed the workings of the government. Her mother was Clara Pamela Clough of Superior.

Miss Lenroot was graduated from the Superior State Normal School in 1909 and then studied under Dr. John R. Commons, sociologist and labor legislation authority at the University of Wisconsin. She received her B. A. in 1912 and an honorary LL. D. in 1938.

In 1913 Miss Lenroot was appointed, as a result of a state civil service examination and not through the influence of her father, woman deputy of the Industrial Commission of Wisconsin. It paid \$1,200 a year. She made cost-of-living investigations in Milwaukee, preparatory to the development of plans for administering the newly enacted minimum-wage law for which she had fought while a student. She resigned in December 1914 to accept a position as special agent in the newly created United States Children's Bureau for which she had qualified again through civil service examination.

Blackstone

KATHARINE F. LENROOT

In the summer of 1915 she attended the New York School of Social Work, then was assigned to the Social Service Division of the Children's Bureau. She served as assistant director until June 1921, making studies concerning provision for dependent children and methods of juvenile court administration.

In 1921 Miss Lenroot was appointed director of the Editorial Division, a position which she administered until November 1922, when she was promoted to the rank of assistant chief. After 20 years of tracking the footsteps of Grace Abbott, second chief of the Children's Bureau, she grew big enough to step into Miss Abbott's shoes. She was appointed by President Roosevelt in 1934. Of the appointment the *Journal of Home Economics* wrote: "She has a thorough understanding of the aims and needs [of the bureau] and of its relation to other organizations and workers, governmental and private, who are concerned with similar social welfare problems. That she has the confidence of social workers is shown by the fact that they have made her president of the National Conference of Social Work (1935)."

Five years after the Bureau was created, Miss Lathrop, the first chief, proposed a public program for maternity and infancy. The program suggested was based on Federal and State cooperation. Three years later it was put into effect. Between 1921 and 1929 a beginning was made in direct Federal cooperation with the State and in Federal aid for mothers and babies. Now we have the Social Security Act and the Fair Labor Standards Act.

From its inception the Bureau has served as a clearing house for information. It gathers all possible data on child health

not only in this country but throughout the world. And the Bureau does not stop at investigating and reporting. It also plays a part in the administration of the maternal and child welfare provisions of the Social Security Act, and, under the direction of a physician, it works in cooperation with the states in allotting financial assistance for study and services for improving the health of mothers and children, for the medical care of crippled children, for the public health nursing units and for assisting communities in regular child welfare activities.

Miss Lenroot is "probably the most valiant fighter" in the battle for the Child Labor Amendment, proposing that Congress shall have the power to limit, regulate and prohibit the labor of persons under 18 years of age. The bill passed the House and Senate in 1924 and since has been ratified by 28 of the 36 states necessary to make it a law.

In 1937 and 1938 she served as a member of the Advisory Committee on Education appointed by the President to review Federal relations to State and local conduct of education, was research secretary of the Delinquency Committee of Child Health and Protection and in 1940 was executive secretary of the White House Conference on Children in Democracy. Miss Lenroot lapped up a Spanish grammar in order more ably to represent her department at three Pan-American Child Congresses. She was chairman of the United States delegations to the Cuba (1927) and Peru (1930) meetings.

Miss Lenroot is a member of the board of directors of the American Public Welfare Association and a fellow of the Child Hygiene Section of the American Public Health Association. She is also a member of the Technical Advisory Committee on a National Relief Policy of the National Resources Planning Board and of the Council of the International American Institute for the Protection of Childhood (which has headquarters in Montevideo, Uruguay), and she represents the United States on the Advisory Committee on Social Questions of the League of Nations.

In addition to supervising the many publications of the Children's Bureau, Miss Lenroot contributes to many magazines articles on child care in this country and South America.

There is an air of the school teacher about her, likewise a suggestion of the social worker, but she possesses one trait which distinguishes her from the serious-minded with whom she works. She has a sense of humor which even serious subjects cannot down. She smiles often as she talks, her laugh is infectious, her voice low and musical. Her wide-set blue eyes and her round face—that still dimples—betray her Scandinavian ancestry. Streaks of white show in her wavy golden hair, which she wears parted on one side. She is a comfortable-looking person, kindly, almost matronly.

Although dealing with dry statistics for years had made an impression upon her, she "has not lost her sense of the ills which afflict the children of the world." "The progress of the bureau, its tradition of concern for the whole child," she says, "is in her bloodstream."

LEVANT, OSCAR Dec 27, 1906- Pianist; composer; conductor; radio wit
 Address: h. St. Hubert Hotel, New York City

Thousands of people would never recognize the name Oscar Levant if it hadn't been for a hot summer day in 1938. Nobody was in town and the producer of the New York radio program, *Information, Please*, needed a fourth performer. He remembered an amusing and musically inclined young man named Levant and he invited him to join. So, quite by accident, radio listeners became acquainted with the uncanny musical knowledge of a young man who has been a legend to his friends. S. N. Behrman, the dramatist, feelingly observes that if Levant "did not exist," he "could not be imagined."

Oscar Levant was born in Pittsburgh, the son of Max and Annie Levant. His father is dead but his mother is living. A brother and an uncle are also musicians, so it was natural that the boy when he had to leave high school at fifteen to earn his living should choose music for a profession. He came to New York in 1922 determined to take the metropolis by storm, but cannily decided to use the piano as a means of earning a living. While he was playing for young ladies' ballet classes he studied piano with

Eric Schaal

OSCAR LEVANT

the noted Sigismund Stojowski and even once performed for Paderewski. Later he developed a more popular technique and learned to play anything "from the accompaniment to a violin cadenza at a ladies' luncheon to hot jazz tunes in hideaways" off Broadway. In 1928 he became an actor in *Burlesque*, in which he played the piano in a speakeasy scene. When the play was made into a motion picture, Oscar went along to Hollywood. There for a time he says he was "Twentieth Century-Fox's private WPA." In reality, though, he became an assistant to a producer of Westerns, a composer of film and popular music and a student of the ultra-modern composer, Arnold Schönberg.

Oscar has been called a musical dilettante, but his works refute that accusation. "In the space of a year and a half," notes Sidney Carroll, "he composed two string quartets, a piano concerto, a nocturne for symphony orchestra, music for two films, some smaller piano pieces, and a handful of popular songs. Such production is not the mark of a poseur. And when he feels like it, Levant can compose popular ditties with the best of them. . . . Even among musicians, Levant is considered an important musician." He has been soloist with symphony orchestras in many cities; composer of musical comedies for Fred Stone; radio concert artist; and music composer and conductor for *The American Way* in 1939.

He also became an actor in 1940 when he played a part modeled after Oscar Levant in a picture called *Rhythm on the River*, which starred Bing Crosby and Mary Martin.

"Oscar is not on the handsome side," comments a critic, "but his physiognomy may explain the source of a great deal of his glibness. 'When I first meet somebody,' Oscar says, 'I have to destroy that

LEVANT, OSCAR—*Continued*

first impression.' He is medium tall, husky and dark. He has black hair, large eyes and a large mouth. He is known for his carelessness of dress. Lately he has been straightening his tie and he often combs his hair."

His living habits merit attention and in some respects may explain his character. After a round of New York night spots which begins regularly at Lindy's, Broadway restaurant patronized by music and theatre crowds, and includes the Stork Club, rendezvous of café society, Oscar retires regularly at 5 a. m. He does not drink, and relies on his own acidulous comments for stimulation. In order to get to sleep at that queer bedtime he resorts to sleeping tablets. Arising next midafternoon, he is so befogged by the tablets that he starts his incessant chain cigarette smoking and coffee drinking. It is said that rarely does a day go by that doesn't see Oscar imbibe from 20 to 30 cups. Trying to go to sleep again after that intake, he must resort to sleeping tablets. This routine, explains Oscar, is a regular one, for he likes to lead a regular life.

In spite of so bizarre a routine he manages to work intensively. He can practice a piano concerto while dictating letters and listening to a radio broadcast of a big league baseball game. Baseball, by the way, is his passion. He hoped as a boy to play professionally. Country life, sunshine and cozy apartment living he dislikes intensely. He lives in a hotel, the St. Hubert, on 57th Street, New York. On December 1, 1939, at Fredericksburg, Virginia, he married June Gale, Hollywood cinema actress and in October 1940 a daughter was born to them. Previously he was divorced in 1933 from Barbara Smith, musical comedy actress.

The numerous listeners to *Information, Please* are frequently amazed when he identifies a symphony after hearing a few bars, or unravels a tangled phrase of music and places it as part of a Broadway musical. In his book, *A Smattering of Ignorance*, published by Doubleday, Doran (1940), Levant hastens to dispel illusions about his fabulous musical knowledge. He speaks of "a widespread misconception" that he is "infallible in musical knowledge." That misconception, he adds, "flourishes exclusively among people largely ignorant of music. Most persons professionally engaged in music, who have been reared in a musical atmosphere, would qualify as well to answer the average questions that are asked. The questions, generally speaking, are taxing only to a layman's knowledge of music, not a musician's." Such acutely self-deprecatory words are open to question.

Levant is a strange mixture of impudence and artistic integrity. His book, filled with malicious anecdotes, some new, some bearded, while amazingly readable, is a bit of a disappointment. His is the type of brilliant wit which is wonderful around a

dinner table but somehow, like a freshly baked cake exposed to a rush of air, seems to fall a bit when encased in the confines of a book. While it is a first attempt and should not be too harshly criticized, the style, instead of being colloquial, is stiff, awkwardly formal and inclined to a strange use of language.

His friends claim that once the name of Levant is mentioned, it becomes necessary to discuss him for hours. S. N. Behrman speaks of "his hard-bitten integrity which, if it does not spare his friends, does not spare himself either." Once when he parked himself, a "penthouse beachcomber," on the Gershwins for a visit which went on indefinitely, he made some distasteful remark which caused Mrs. Ira Gershwin to say: "Get out of this house." Levant, in the midst of buttoning his jacket, stopped, sat down and said, "I'm not going." "Why not?" she asked. "Because I have no place to go," replied Levant and, comfortably sitting down, he stayed another two years.

At one time in New York he received a wire from Harpo Marx in Hollywood asking him to come and promising to pay half his fare. "Fine," wired Levant, "I'll go to Kansas City." He went, however, and as a joke refused to say a word to his host for four months while eating breakfast, lunch and dinner with him.

The number of enemies his book will make for him leads one critic to call him a "Broadway James McNeill Whistler." Of Stokowski Levant says: "I would like to have been present, if I could have my choice of all moments in musical history, when Stokowski suddenly became conscious of his beautiful hands. That must have been a moment." Of Serge Koussevitzky (see sketch this issue): "He is unparalleled in the performance of Russian music, whether it is by Moussorgsky, Rimsky-Korsakoff, Strauss, Wagner or Aaron Copland." Of Toscanini: "Many orchestral players consider him cruel, inflexible and even petty. He would have done more for American music had he played none at all."

Levant is passionately in earnest when he speaks of music. He gives American music and American composers their due. His good friend George Gershwin was treasured as an artist.

What makes Oscar mad is that the public wants everything from him but the accomplishment which he cares about the most. "Yeah," he roared at his editor, "movies, radio, Broadway, popular songs—and now books! You guys want me to do everything but my own racket. Do you know what I am?" he wailed. "I'm a concert pianist and nobody'll believe me!"

LEVIN, MEYER (lě-vín' mī-yer) Oct 8,
1905- Author

Address: b. c/o Viking Press, Inc, 18 E 48th
St, New York City; h. 264 S Vendome St,
Los Angeles, California

Free-lance writer, reporter, editor, actor,
theatrical producer, worker with marionettes

—these are careers in the background of
Meyer Levin, outstanding among the
younger American novelists. Most of his
novels, particularly the later ones, deal with
some strong aspect of the social scene;
their setting is Chicago, where Mr. Levin
was born and grew up.

Meyer Levin's latest novel, *Citizens*
(March 1940), is a story based on the Mem-
orial Day picketing during the 1937 steel
strikes in Chicago, when 10 men were killed.
Because it combines factual historical record
with the human details of real lives, and
because it tries to analyze the underlying
causes of industrial conflict in our social
structure, *Citizens* is an unusually well-
rounded and effective work.

Much of the material of *Citizens* is taken
from the report of the La Follette Civil
Liberties Committee. Evidently Mr. Levin,
who knows Chicago well, was an eyewitness,
too, of the scenes he describes so vividly in
Citizens. An article written for *The Nation*
(June 12, 1937) called *Slaughter in Chicago*,
is a graphic, firsthand account of Memorial
Day 1937, outside the Republic Company
steel plant of Chicago.

Meyer Levin, the son of Joseph Levin, was
born in Chicago October 8, 1905. In 1921 he
entered the University of Chicago; during
his freshman year he edited the *Chicago High
School News*, and during his last two years
there he worked on the *Chicago Daily News*
under the late Henry Justin Smith. He was
graduated from the University in 1924, in the
same class as John Gunther; Vincent Sheean
had been graduated a year or two before.
Levin went to Europe for about a year. His
next few years in the United States were "a
jumble of trying to earn money so I could
have time to write, working for the *News*
again, working as a press agent, writing a
column, going to Palestine and working
with the pioneers, stopping to write a
book. . ." He became a special writer for
the Jewish Telegraphic Agency in 1931;
from 1933 to 1939 he was successively
reader and editorial assistant on *Esquire*,
Coronet and *Ken* magazines.

Levin married Mabel Schamp Foy on
February 19, 1935. They have one child,
Eli Jonathan.

Though he wrote two short novels pre-
ceding it, the novel *Yehuda* (1931) first made
Meyer Levin known. Written from first-
hand experience, it was a story dealing with
life in an agricultural commune in Pales-
tine—the first novel of modern Palestinian
life to appear in English. In 1932 appeared
The Golden Mountain, a book of Chassidic
legends centering around the wonder-work-
ing Rabbi Israel Baal Shem Tov (Master
of the Name) and his followers. This vol-
ume opened the way for several studies of
this sect. *New Bridge* (1933) was a vivid
story of an evicted family, and *The Old Bunch*
(1937) a deftly drawn social study of a
group of Chicago Jewish boys and girls
who leave high school and start on their
various careers.

MEYER LEVIN

Besides his writing, Mr. Levin has always been interested in photography, the theatre, and marionette theatre production. He taught marionette production at the New School for Social Research, New York City, from 1931 to 1932. He presented *The Hairy Ape*, *The Crock of Gold*, *From Morn to Midnight*, and other plays with marionettes. He writes: "Although the author of several novels and numerous short stories, often find myself better known for my work with marionettes, which extended over several years, even after I had begun to publish novels; and also for my work as *The Candid Cameraman*, a motion picture criticism department in *Esquire*."

Levin has also been strongly interested in the acting side of the theatre, and appeared behind the footlights on Broadway in *If I Were You* and *Counsellor-at-Law*. Though his acting career was ended by acute appendicitis, he became director of the summer experimental theatre in Brookfield Center, Connecticut in 1932.

LEWIS, MARY Jan 28, 1897- Fashion director of the 1940 New York World's Fair

Address: b. 647 Fifth Ave, New York City

Success stories on the career of Mary Lewis usually have stressed two facts—that

she has a Dresden doll-like, blonde prettiness and that income tax lists of 1937 and 1938 gave her salary for those years respectively at \$56,527 and \$54,622. Apparently it made a strong impression on interviewers that a self-made woman, who started working at \$9 a week and became one of the best-known and highest paid women in retail merchandising and advertising, had not lost any feminine attractiveness on the way.

Mary Lewis does things quietly and efficiently and without a blatant executive air. In the spring of 1940 when she was preparing to open her own shop and at the same time to take over the duties of fashion director of the New York World's Fair, probably two of the most important steps in her business career, she went about her work with unruffled efficiency. She said, "I get to the office at 9, work until 6 and then forget about it at night."

Miss Lewis has had long training at getting jobs done. She was born in Louisville, Kentucky, the daughter of Henry and Mary (Hicks) Lewis. She came to New York at the age of 13 with her widowed mother. Mrs. Lewis was employed as a stenographer in a bank and later as a lawyer's secretary, and little Mary had to begin working at an early age. After her graduation from the Wadleigh High School she got a job in an interior decorator's shop—without pay. She decided to seek her fortune at Macy's and wrote a letter asking for a job. She got one at \$9 a week, first in the basement upholstery department and later designing "occasional" furniture. This was in 1917.

She was promoted to \$18 a week and a job writing copy in the advertising department, where she worked with an old school acquaintance, Estelle Hamburger, who had been instrumental in getting her into the department. Miss Lewis made a hit with the first advertisement she wrote for Macy's by slugging a miscellaneous lot of merchandise for which she could find no other heading: "Made in America." In 1918 "Made in America" was a popular thing to say.

Women's Wear Daily, Bible of the retail trade, had hailed the "Made in America" advertisement as a stroke of Macy genius, and Mary Lewis' upward climb began. The First World War found her working far into the night as enlistments depleted the staff. Her salary rose to \$35 a week and then in one step to \$45. But declaring the \$10 raise an undervaluation, she left in a huff and in October 1919 got a job at Best and Company, Fifth Avenue women's wear shop, as a copywriter at \$65 a week.

By 1930 she had risen to the position of vice-president at Best's. Her fashion innovations became as well-known as her promotional exploits. Ideas that have been credited to Miss Lewis include the shirt-waist dress, the dirndl, the denim suit, the fireman shirt, the Dutch girl dress and

G. Maillard Kesslère

MARY LEWIS

the resurrection of cotton as a fashionable dress fabric. One of her better known promotional stunts was the two girls who looked like twins but were unrelated and who went about to fashionable resorts wearing Best's clothes and incidentally popularizing Best's styles.

Miss Lewis remained with Best and Company for 19 years. She left in April 1938, and six months afterward joined Saks Fifth Avenue as vice-president in charge of promotion. She resigned from Saks in December of 1939 and a few months later had opened her own shop.

In addition to running her retail shop she is fashion consultant to several large stores throughout the country, among them Sears, Roebuck and Company. Clothes she sells in her second floor Fifth Avenue shop may also be sold through a syndicate arrangement throughout the country. The year she became her own boss Miss Lewis also stepped into the limelight as the director of the Fashion Building at the New York World's Fair. As an added attraction in its second year the Fair was beginning a series of novel fashion shows offering the first coordinated display of fashion interest—from basic materials to the finished product. These shows were a huge success and gave the Fair columns of publicity.

Although her entire career has been identified with fashion Miss Lewis calls herself not a designer but an "editor" of clothes. She says she merely tells manufacturers what she wants and how she wants it made. She prefers the fundamentally classic styles, although many of her novel fashions have swept the country. And, unlike many successful fashion executives, she believes a woman is not smart in ratio to what she pays for her clothes but that good taste is possible at any price.

LEWIS, MARY—*Continued*

Career-woman Mary Lewis' personal life has received little publicity. She was married from 1920 to 1937 to Arthur Finley, a commercial artist. Discussing the question of a career versus marriage with an interviewer, Miss Lewis was quoted as saying (and this was after the breakup of her own marriage) that she would "chuck the whole business of a career to be a wife."

Despite her topflight position as a business executive Miss Lewis apparently does not take herself too seriously. *Life* magazine in July 1940, in an illustrated story of her career, showed her taking exercises in shorts (she has an hour's daily workout in a Fifth Avenue salon), showed her barefooted in a housecoat, and photographed her in a gay mood at her Cold Spring, New York home where she spends week ends with her mother and stepfather.

LEY, ROBERT (li) Feb 15, 1890- Head of the German Labor Front

Address: Berlin W 57, Potsdamerstr. 75, Germany

Dr. Robert Ley, head of the German Labor Front, has become more and more "the spokesman of German doctrine, the utterer of slogans, the salesman of ideas." He it is who delivers the stirring pronouncements on the War. War, itself, says he, is "a blessing of God, the eternal fount from which new generations of men are born"; it is "the expression of the highest and best in manhood." And this War against Britain is intended to bring Europe and the whole world "to their senses."

Now when Germany wants to bring its people to a full appreciation of this War Ley sings out about the War. Before, when the party wanted discipline, he ranted against nicotine, alcohol and debauchery (even though he himself has been known to indulge too generously on "Strength through Joy" outings). When Germany needed man power he lectured the Many Children League on the "natural, healthy" phenomenon of illegitimacy. When vilification of Britain was in order he branded the enemy "a rich parvenue wishing to play world policeman" and insisted that "a German laborer is worth more than an English lord."

In his ability to incite and to entertain Ley has "combined the talents of Billy

Sunday and Billy Rose" (see sketch this issue). It was he who staged the vast Nürnberg Party rallies each year, and he who created in November 1933 the "Strength Through Joy" organization which "mass-produced recreation, playgrounds, loyalty—all convertible for war uses." Apart from Hitler himself, "Ley probably has more influence on the morale of the masses in Germany than any other one person."

This leader of the Nazi Party was born in Niederbreitenbach, Germany, the son of Ludwig Ley, a farmer. From an early age he was interested in chemistry and studied the chemistry of foodstuffs at the Universities of Jena, Bonn and Münster, from which he received his Ph. D. From school he went right into the First World War as a pilot and, almost lost his leg from a severe wound; from 1917 to 1920 he was a prisoner of war in France. Back in Germany he became a chemist in the dye industry and stayed in a factory in Leverkusen until 1928.

Ley entered the Nazi Party early—in 1924, after reading an account of Hitler's trial after the abortive Munich *Putsch*. Himself a fanatical anti-Semite and Nationalist who had already been building an independent organization along Hitler's lines, he was appointed to a leading position almost immediately. Up and down his native Rhineland he went, haranguing all who would listen. In 1925 he was made head of the party district for the Rhineland. He founded, wrote, proofread and edited two newspapers, one of which has been described as "the wildest, maddest anti-Semitic publication which ever made use of the German language." But he believed that National Socialist ideas could be put over even better "by the fist and the beer mug" than by intellectual weapons, and innumerable times was imprisoned for his violent acts.

Both the frays in which he took part and his unbridled attacks against Jewish businessmen and financiers brought him special distinction in the Nazi movement, however, and in 1928 he became a National Socialist deputy. In April 1931 he was transferred to party headquarters at Munich, made leader of the chaotic organization there, and proceeded to compile the first service rules for the political organization of the party—perhaps his greatest contribution to National Socialism. The next year, after the resignation of Strasser, he was made head of the whole party organization—a position which he still holds. In March 1933 Ley became a member of the Prussian State Council and on May 5, 1933, Hitler further rewarded his unswerving loyalty with the job of liquidating the free trade unions and a position as head of the Labor Front.

"Brutally and ruthlessly," as Hitler had told him to, Ley occupied union premises, seized their property and arrested their leaders. All union members, except Jews, were told that they were automatically

ROBERT LEY

members of his Labor Front; the only other choice was starvation or a concentration camp. A month later, when Ley entered the great hall in Geneva to take part in a session of the International Labor Conference, a fierce cry went up: "Jailer of the German Workers!" It marked the end of participation in the work of the International Labor Office both for Ley and for Germany.

Under his governing hand, however, the Labor Front grew until it now includes 95 per cent of all gainfully employed persons in Germany, a total of between 25,000,000 and 30,000,000 human beings. What is more, "it was Dr. Ley who supported with all his energies the plans of Hitler, Goering and Schacht for combatting unemployment by introducing general conscription in Germany, and switching German industry completely over to armaments."

Abroad, and perhaps even in Germany, Ley's reputation is none too good. He has been in the police courts several times, once for wrecking a beer hall in Cologne and once for assault. He is considered the greatest toper in the party, said to have been in insane asylums off and on. He is married, and his home is a luxurious villa in Berlin that once belonged to a Rhineland industrialist, but it is said that in the evening he finds a tavern more to his liking.

LIDDELL HART, BASIL HENRY
(lid'el) Oct 31, 1895- Author

Written before the outbreak of War in September 1939, the defensive theory expounded in Captain Liddell Hart's latest book, *The Defence of Britain*, was "among the many things which died on the morning of May 10, 1940." Until then Captain Liddell Hart's authority as a military strategist, and his known influence upon recent British policy, gave weight to his analysis of strategy and his ideas concerning the future rôle of Britain's army. The first part of the book presented his basic theory: that since Britain could not attack others save by the process of economic strangulation, she must be made secure through defense. Thus land participation must be limited, with sea and air effort stressed. The analyst further discussed England's "forward positions"—France, the Low Countries, and Switzerland. A final section of the book was devoted to the reorganization of the British Army. Captain Liddell Hart believed that if England made the most of a defensive position, Germany would be defeated in the present struggle just as in 1918.

Allied practice in the first months of the War followed his theory closely, and as late as March 1940 Captain Liddell Hart had not changed his mind about the inadvisability of a spring offensive by the Allies, nor about the dangers to Germany if she attempted such an offensive. But with the Nazi invasion of the Low Countries Britain began to wonder if actually the best defense was not offense.

Still, there seems to be a good deal of justice in Liddell Hart's claim that the policy of a waiting war would have worked if it had been consistently practiced as he expounded it. It wasn't.

Basil Henry Liddell Hart was born October 5, 1895. He was sent to St. Paul's in London, and as a small boy had a more-than-average fondness for tales about military and naval heroes. "Waterloo" and

Pictures, Inc.

BASIL LIDDELL HART

"Wellington" were so strangely but mystically fused in his own imagination that the broad expanse of rails at Waterloo became the battlesite itself and he could see Wellington riding up and down his line.

The World War cut into his university days at Corpus Christi College, Cambridge. He was twice wounded during a long service (1914-18); was placed on half-pay status in 1924; and retired in 1927. In those years of fighting he saw not only real but "artificial" history in the process of manufacture: too often the "record" was all-hallowed, the actualities negligible. He recalls how Field-Marshal Haig once contended that the poor physique of his prisoners was proof of the excellence of his offensive, and then immediately phoned advance instructions that all able-bodied prisoners be removed from the corps cages before his arrival with the Prime Minister.

By 1926 Liddell Hart had established a real reputation as a military strategist and on request made official visits to the training centers of the French, and later the Italian, Armies. From 1925 to 1935 he was Military Correspondent of the *London Daily Telegraph*; more recently he was with the *London Times*, but a nervous breakdown forced his retirement to the West of England after a disagreement with the *Times* on questions of policy. Since then he has been writing for a number of English journals.

With *A Greater Than Napoleon: Scipio Africanus* (1926), the only English forerunner of which was an 1817 book by a country clergyman, he made a serious plunge into military biography. He was particularly interested in illuminating Scipio's remarkable understanding of the interplay of economic, military and political forces. In the two years following came *Great Captains Unveiled*

and *Reputations—Ten Years After*. The second of these was a combination of personal estimate and official military record. A year after *The Real War* (later expanded into *A History of the World War*) came a full-length profile of Foch—*The Man of Orleans*. T. E. Lawrence, his much admired friend, said of it: "You demolish him thoroughly as a soldier; as a politician he needed no other evidence than his own to discredit him. But as a human being he came out well and honorably in what you wrote."

As early as October 1929 Liddell Hart had been approached with the task of placing the Arab Revolt, and T. E. Lawrence's part in it, in proper historical perspective. The book finally emerged as *T. E. Lawrence—In Arabia and After*. Lawrence himself once credited Liddell Hart with being "one of the few Englishmen who can see the allusions and quotations, the conscious analogies, in all I say and do, militarily."

In May 1937, at the suggestion of Sir Thomas Inskip, Minister for the Co-ordination of Defence, Captain Liddell Hart began the preparation of a paper on the reorganization of the Army, recommending four anti-aircraft divisions of the existing scale and a doubling of the number of guns. Not until the German invasion of Austria the following March did it find any favor with the general staff. At the risk of becoming a "private nuisance" in the eyes of Mr. Hore-Belisha, he suggested a number of advantageous changes in official jurisdictions. By midsummer 1939 an amazing number of his reforms had been achieved, and all of them were embodied in his national and imperial approaches to *The Defence of Britain*.

Captain Liddell Hart was married, in 1918, to Jessie Stone, by whom he had one son, Adrian John.

His literary domain extends, obviously, well beyond field strategies, and he has actively supported the Association of Writers for Intellectual Liberty. His achievements as both historian and authority on the art of warfare did much to break down a part of T. E. Lawrence's pessimistic observation that because the creative mind is seldom allowed a hand in the actual building of a military structure the evolution of military science still remains no more than a "swing of the pendulum."

LIE, JONAS (lē yō-nas) Apr 29, 1880—Jan 10, 1940 American artist; former president of the National Academy

Jonas Lie, well-known artist and pioneer in the revolt against conservative policies of the National Academy, died on January 10, 1940, in New York, at the age of 59. Mr Lie, who came to this country when he was

JONAS LIE

13, was born in Moss, Norway, the son of Sverre and Helen Augusta (Steele) Lie. His mother was an American and had lived in Connecticut before she went to Norway, and his father was a native of Norway.

Soon after the family moved to this country, the father died and young Lie went to work as a designer in a cotton factory to support his mother and sisters. He submitted a painting to the National Academy, then called the National Academy of Design, and it was accepted. During the years he achieved fame as a painter of landscapes and marine scenes. His work has been bought by the great museums of the world. He was married twice, first to Charlotte E. Nissen, and after a divorce in 1916, to Inga Sontum, a Norwegian dancer. She died in 1925 and one daughter, Sonja, survives.

In 1919 Lie led a small group of "moderns," including George Bellows, Paul Manship (see sketch this issue) and Joseph Pennell, in revolt against the conservative leadership of the National Academy, and succeeded in deleting Design from its name and modernizing its principles. From 1934 to 1939 he was president of the Academy. In his later years radical painters called him a reactionary, and he became the center of many bitter disputes.

LIN YU-T'ANG Oct 10, 1895- (lín yü'-tāng') Author; philosopher

Address: b. c/o Reynal & Hitchcock, Inc, 386 Fourth Ave, New York City; h. 2393 Castilian Dr, Los Angeles, California

In October 1940 Dr. Lin Yutang (his books use this spelling instead of the Library of Congress form above) returned to the United States from a trip to China insisting that "China can never be conquered by the Japanese—even if China gets none of the help to which she is entitled from the democracies." What Dr. Lin says carried weight, since for many years this brilliant young Chinese philosopher has lectured and written in the United States. Among his best known books are *My Country and My People* (1936); *The Importance of Living* (1937); *Moment in Peking* (1939); and *With Love and Irony* (1940), his latest. This collection of 50 essays, sketches and satires has been praised for "the sparkling, thrusting quality of his thought." The subjects of his lectures and books are varied: the importance of living—and loafing, China and the War, Chinese national traits, and curious American customs.

Lin Yutang was born in Changchow, Fukien Province, China. His father was a pastor in the American Reformed Church Mission, a "second-generation Christian" who loved his parishioners. In his childhood he had been a peddler of sweetmeats, a bamboo-shoot seller, and a seller of rice at the prisons. Lin was early associated with peasant life and became interested in the welfare of the masses. As a young boy he was fascinated by machinery, had done some inventing, and still believes he is going to invent the best Chinese typewriter. He was educated at mission schools and went to St. John's College in Shanghai. He thought for a time of taking up the ministry but, unable to accept the doctrine of the virgin birth and other precepts, gave it up to become what he calls "happily a pagan."

LIN YU-T'ANG

After being graduated, Lin became a teacher of English at Tsinghua, the American Boxer Indemnity College. He married a girl who was also born in a mission family. To her he pays the highest of tributes, adding that he has always been devoted to her because she allows him to smoke in bed. With characteristic Chinese modesty, however, he does not tell us the year of their marriage. He and his wife came together to America, where he studied at Harvard for a year (1919-20). Afterward they went to Jena and Leipzig. He received an M. A. from Harvard, a Ph. D. from Leipzig, his subject being philology.

On his return to China, Dr. Lin Yutang was appointed a professor in Peking National University, 1923 to 1926. He was counted among the radical professors, and took part in many student demonstrations, where he learned to fight with bricks and poles. When his name was put on the blacklist he had to spend months in hiding. The rebellion was then stirring China, and he joined the new Wuhan government as secretary in the Ministry of Foreign Affairs. He liked revolutions, but not all revolutionaries; and he threw over politics after four months because he said he realized he was "a herbivorous, rather than a carnivorous animal, vastly better at minding my own business than that of others." Seeing through the farce of the revolution, he says he "graduated into an author, partly by inclination, and partly by necessity."

The Lins have three daughters, Adet, 16, Anor, 13, and Meimei, 9, who in 1939 wrote a book called *Our Family*, which threatened to rival their father's in charm and popularity. It contained shrewd and witty comments on the Lin family, and the children's impressions of the United States, Europe and China.

In *My Country and My People* (1936), a book giving a lively picture of what the Chinese are like today, Lin speaks of China's debt to Western civilization and discusses the country's needs and future rôle. He loves China, but he criticizes her more frankly and honestly than do any other Chinese. His *History of the Press and Public Opinion in China* (1937) is a monograph on the fight for freedom of the press in modern China.

The Importance of Living (1937), a Chinese philosophy for Western readers, has been described by its author as "a personal guide to enjoyment." In a style pleasingly simple yet urbane and ironic, Dr. Lin presents the philosophy of generations of Chinese sages, pointing out their wisdom for modern use. It is full of the salt and tang of daily living. A reviewer writing in the *Atlantic Monthly* said of it: "When a book by an Oriental has the style of a sophisticated contribution to the *New Yorker*, we are put at once on our guard. If this author has become so completely one of us, we ask, can he have anything to say for himself? But if the reader suspects this book he soon changes his impression. Dr. Lin has learned to talk our language as we might wish to talk it ourselves, but he has not changed his spiritual home. His insight is too subtle to be merely clever. In the midst of his colloquial banter he preaches a gospel that applies to all men, and behind his sense for the apt American word is the artist's awareness of the universal."

Lin Yutang's first novel is *Moment in Peking* (1939). This long chronicle of life in China begins with the Boxer Rebellion and takes us down to the epic flight of China's millions to the interior in 1938. Its story is the story of three wealthy upper middle-class Chinese families, and in it Lin Yutang has achieved "the quintessence of Chinese life." The technique, even, is Chinese rather than Western, and according to almost every critic demands slow, leisurely reading.

Clifton Fadiman says: "The book is a remarkable panorama; you must sit back in your seat and allow it to flow past your eyes. Its charm and significance inhere not in any detail or any particular episode but in the movement itself, the flow of time, the incessant flux of gesture, people, habits, architecture, interiors, relationships—all somehow loosely uniting to give one a sense of a life at once alien and beautifully familiar."

In an essay, *Faith of a Cynic*, published in *The Nation* May 6, 1939, Dr. Lin has some pertinent things to say about contemporary religion. "Stated in the simplest terms, science is but a sense of curiosity about life, religion is a sense of reverence for life, literature is a sense of wonder at life, art is a taste for life, philosophy is an attitude toward life based on a greater or lesser, but always limited, comprehension of the Universe so far as we know it."

The greatest enemy of old religions, he says, is the 200-inch telescope. And he repudiates the ideal of the perfect man for the reasonable man. We are living in a barbaric and cynical time: "International morality has never sunk so low." He is of the opinion that the only kind of religious belief left for the modern man is a kind of mysticism that consists of reverence and respect for the moral order of the universe and the effort to live in harmony with it. Dr. Lin likes to discuss democracy and fascism from the Chinese viewpoint. He believes in the ultimate triumph of democracy because dictatorship is inhuman, and "anything inhuman cannot last. To be human is the great thing in life; and to be allowed to live human, individual lives is the primary longing of every human being." The Chinese ideal is that "he governs best who governs least."

Lin Yutang likes to combine idealism and cynicism, whimsy and common sense. He loves contradictions, such as seeing safety-parade busses kill pedestrians. Once he went a long way to a temple in Western Hills near Peiping to see a eunuch's sons. He is interested in everything from atoms to pretty girls, from literature to electric dry shavers, from music to all kinds of scientific gadgets. He models clay, and for his pastime drips colored wax portraits and landscapes on glass from candles. He doesn't like the sea, possibly because he can swim only "about three yards," but adores mountains.

He doesn't go in much for sports, except walking, or lying on the ground in Central Park when the police aren't watching. "I have an abhorrence of physical effort and have never sat on a fence, nor have I turned a somersault, physical, spiritual or political." He doesn't play Mahjong, but he does like poker. As a matter of fact his favorite recreation is reading. He reads everything: politics, fiction, religion, science; Greek, Chinese or contemporary English and European writers. He likes to read the papers for scientific and medical news, but is contemptuous of statistics, and thinks all academic jargon is a way of hiding lack of understanding. He can not stand Kant; but he loves Heine and Stephen Leacock and Heywood Broun.

Socially, he has no desire to impress people. He hates a tuxedo because he says it makes him look exactly like a Chinese waiter; and he avoids having his picture published because he says he doesn't want to spoil the reader's illusion of him as a bearded grand old wise man from the East. Among the things which would make him happy he lists a nice comfortable not-very-tidy room of his own, a pair of old shoes, freedom to wear as little as he cares to, old trees in the neighborhood, a good cook, good library, good cigars, some bamboos in front of his study window. And he wants good friends, "friends who are as familiar as life itself, to whom I need not be polite,

and who will tell me all their troubles, matrimonial or otherwise, who can quote Aristophanes and crack dirty jokes, friends who are spiritually rich and can talk dirt and philosophy with the same candor."

Pearl Buck, who well understands China and the Chinese, writes of Lin Yutang: "He is Chinese to the core, far more Chinese than most of his Western educated contemporaries. He is a great patriot and lover of his country and has done more than any other person to make China intelligible but likeable. But he is more than a Chinese. Any one can talk with him with complete frankness and intellectual honesty, for his is an honest intelligence. He is afraid of nothing and of no one. . . He is sophisticated and keen and knows himself. He enjoys success but he laughs at it and at himself a little, being at heart too large for petty vanity. He takes the truth without flinching and has an unshakable integrity of judgment beneath the brilliance of his talk. To a crowd which he feels is responsive he will deliver an entertainment of wit and laughter and hard hits. But if he doesn't like the crowd, he disappears into a slight, stiff, masked figure, academic and remote—and knows what he is doing and doesn't care."

LINDBERGH, ANNE SPENCER MORROW 1907- Author; aviator

Address: h. Englewood, New Jersey

When Anne Morrow was a shy English major at Smith College, contributing short stories and poems to the college paper, she wrote one poem that began:

"Everything today has been
Heavy and brown
Bring me a Unicorn
To ride about town."

It ended:

"And I will kneel each morning
To polish bright his hoofs
That they may gleam each moon-night
We ride over roofs."

There are few roofs in any country in the world that Anne Morrow has not ridden over since she became Anne Lindbergh; and her life has been both more adventurous and more tragic than if she had literally achieved her wish.

LINDBERGH, ANNE—*Continued*

She was born in Englewood, New Jersey in 1907, the daughter of the late Dwight Whitney Morrow, Morgan partner, Senator and at one time Ambassador to Mexico; and of Elizabeth Reeve (Cutler) Morrow, poet, and in 1940 acting president of Smith College and active with the Committee to Defend America by Aiding the Allies. Anne was graduated from the fashionable Miss Chapin's School in New York City and in 1923 attended Smith College, where she didn't take much part in social events but was known as "a shy girl of unusual charm and great literary ability," remembered for her "unaffected manner" and "lovely disposition."

She was graduated in 1927 with special honors, being awarded the Mary Augusta Jordan Prize for the most original piece of work and the Elizabeth Johnson Prize for the best essay on "Women of Dr. Johnson's Time." When in 1929 her engagement to America's most eligible bachelor was announced after Colonel Charles A. Lindbergh's good will flight to Mexico, where he visited the Morrow family in Mexico City, a dispatch from Northampton called her "an argument . . . for old-fashioned femininity." She was described as "a brunette, slender and graceful . . . a studious, diffident girl, said by her friends to be interested in modern literary and artistic movements, but at the same time domestic." It was surely the most publicized romance of the '20s, for the nation immediately began to consider "Anne" its property as much as "Lindy." But rumors that the engagement was a case of mistaken identity and that the famous flyer had really preferred her "more beautiful" sister could not have added to Anne Morrow's comfort in finding herself living in a spotlight.

Nevertheless on May 27, 1929 Anne and "Lindy" succeeded in getting themselves married in a ceremony at which the press was notoriously absent and in which even the guests didn't know in advance for what they were assembled. The honeymoon, too, was private until a photographer learned they were at sea and began circling around them in a motorboat. The attraction of the lost Mayan cities, whose cliff dwellings the young couple explored that same year, seems quite understandable.

Her husband had been teaching her to fly, but it was not until 1930 that Anne Lindbergh made her first solo flight. (She got her private pilot's license in 1931.) It was also in 1930 that "we three" made a transcontinental record, Anne acting as co-pilot and navigator. It was in June of that year that Charles Augustus Jr., was born.

The following year came the Lindberghs' flight across the Pacific to act as "ambassadors of American good will in the Orient." *North to the Orient*, published in 1935, tells Anne's story of this voyage from New

York to Japan and China. Her friendship with the Chinese people made at this time lent earnestness to her radio plea for funds for Chinese flood relief in February 1932.

In Shanghai in October 1931 the Lindberghs had been informed of Senator Morrow's death. A few months later, in March 1932, nearly every newspaper in the world carried large, black, shocked headlines telling of the kidnaping of Charles Augustus Lindbergh Jr. The discovery of the child's body in May, near the Lindberghs' New Jersey estate, did not end the glare of sympathetic but undesirable publicity, for the case was still unsolved. And when in August a second son, Jon Morrow, was born, threats against his life began to come. False arrests, false clues, false hopes about the solution of the first son's death were innumerable. There were constant rumors that the Lindberghs were about to take up residence abroad, though these were always denied.

In June 1933 the Lindberghs gave their estate as a welfare project for children, and shortly afterward made a five-months, 40,000-mile flight over five continents to survey transatlantic air routes, returning to the United States in December. For her work as co-pilot and radio operator Mrs. Lindbergh received the Cross of Honor of the United States Flag Association, in 1934 was the first woman to be presented with the Hubbard Gold Medal of the National Geographic Society, and in December 1935 was to be listed by Carrie Chapman Catt (see sketch October issue) as one of ten leading American women. *Listen! the Wind*, published in 1938, is her account of 10 days during this trip—in Santiago, an island off the African coast; in Bathurst, a British town on the African seacoast; and over the Atlantic, flying from Africa to South America.

In 1934 the government's cancellation of air-mail contracts caused the Colonel to protest to Washington, and during the investigations that followed he was called upon to testify more than once. In September of the same year a German carpenter was arrested as a suspect in the kidnaping of Charles Augustus Jr., and all through 1935 the Hauptmann case—trial, conviction, sentence, appeals—dragged on, giving the tabloids a holiday which reached ghoulish proportions. It was necessary for the Lindberghs to appear and testify many times.

Finally, however, the Lindberghs set sail for England with their three-year-old son, in December 1935, not planning to return to the United States. By this time there were few who were anything but sympathetic with their desire for privacy and protection for their child which America could not give them—including, paradoxically enough, the press itself. There was no visit to the United States again until 1937, and during the interval the Lindberghs took up residence in Kent, England, though making flying visits to France, Germany, Denmark, Ireland, Italy. During their first

visit to Berlin in July 1936 the Colonel visited German flying fields for a week and made a speech on the horrors of aerial warfare which was much applauded in America as well as in Germany. In May 1937 another son, Land Morrow, was born, but the Lindberghs refused to stay put. October found them receiving an ovation at the Munich Air Congress and being entertained by Goering.

In December 1937, when the Lindberghs left their children in England and unexpectedly revisited the United States, they were once more beset with crank telephone calls and letters, threats, photographers. Upon their return to Europe in March 1938 they proceeded to find a refuge on the Island of Illiec, near Port-Blanc, France, within rowing distance of the island laboratory of Dr. Alexis Carrel (see sketch this issue), with whom Lindbergh invented the mechanical glass heart. They were also reported as frequent visitors to Lady Astor's (see sketch this issue) Cliveden estate. In August 1938 they visited Russia for the second time (Anne had written very pleasantly of her first visit in 1933); the Colonel attended a Soviet air circus, later saw certain officials in Czechoslovakia, visited Paris, saw Lady Astor in England—and soon the press was full of rumors. It was reported that he had described German air power as so strong and Soviet air power so weak that the authors of Munich were able to use his information as a justification for the partition of Czechoslovakia.

Lindbergh was widely attacked, particularly by the Soviet press, which claimed he had orders from British reactionaries to make just such a report. On the other hand there were denials that he had seen enough of Russian air strength to have given any report at all. He himself refused to comment. When in October 1938 he accepted German hospitality for the third time, however, and was presented at a banquet with the Service Cross of the Order of the German Eagle, suspicions seemed more reasonable. In November the Lindberghs were reported as thanking Goering for his hospitality and planning residence in Berlin. In December Harold Ickes criticized the Colonel publicly, his name was removed from the TWA air-line slogan, and in a small, upstate New York town even Anne Lindbergh's best-selling *Listen! the Wind* was banned. The Lindberghs did not return to Berlin, however, but rented a Paris apartment.

In April 1939 Anne and the two small Lindberghs arrived in the United States to stay for a while at the Morrow home in Maine before going on to Englewood, New Jersey. The Colonel was already in this country as special adviser to the Army on aircraft production. After making a quick survey of American aviation plants he submitted a report to the President and returned to private life in September. That

ANNE MORROW LINDBERGH

same month, after the outbreak of World War II, he gave a radio address pleading for United States' isolation. In October he denounced Canada's entry into the War and advocated the sale of only "defensive" weapons to belligerents in a speech whose tone brought renewed accusations that his sympathies were with the totalitarian powers—that he was, at best, advocating "appeasement."

Other radio addresses by Colonel Lindbergh since that time have not allayed that suspicion among a large part of the American public. On October 3, 1940 was published *The Wave of the Future*, Anne Lindbergh's third book—just a day after her first daughter was born. This book Lewis Gannett finds "a subtler, less dogmatic, more persuasive statement of the philosophy expressed by her father-in-law, the pacifist Representative Lindbergh, in the early years of the last War, which has been echoed, mingled with dubious overtones, in the younger Lindbergh's speeches." Mrs. Lindbergh, like her husband, calls for "reform at home rather than crusade abroad," but unlike him asserts that "if we do not *better* our civilization, our way of life, and our democracy, there will be no use to 'save' them by fighting; they will crumble away under the very feet of our armies." It is, she says, a confession of faith, though James Thurber (see sketch this issue) finds her faith utterly mystifying.

All of Anne Lindbergh's books have brought her a reputation as "a two-career woman, a flier and a writer, and both with honors." Lewis Gannett said of her first book, *North to the Orient* (1935), that it "has a rare and delicate intimacy and a winning girlish charm, and it reveals Mrs. Lindbergh as far more than a wife and a daughter. The girl can write." Reviewing

LINDBERGH, ANNE—*Continued*

Listen! the Wind, which in February 1939 won the American Booksellers Association Award, Amy Loveman said that Mrs. Lindbergh "has the seeing eye and the singing heart." Clifton Fadiman finds that "Mrs. Lindbergh's books, quite apart from their value as aeronautical history, are small works of art." In them she shows herself serious, sensitive, fond of daydreaming, fond of philosophic speculation on such matters as time and space, but also capable of remarkable impersonality and detachment. She observes and describes small things with an eye that is scientific as well as poetic.

The late Amelia Earhart once described her: "She is small of stature, and has a charming dignity when surrounded by people. . . Her dress is simple, like her direct manners. . . About her mouth a smile always seems to lurk." A head of Mrs. Lindbergh, done by the sculptor Charles Despiau, created a sensation in Paris. It was regarded as the symbol of "a mother's martyrdom in a disturbed era."

LIPPMANN, WALTER Sept 23, 1889—
Author; editor

Address: c/o New York Herald Tribune, 230
W 41st St, New York City

To a good many of the 8,000,000 who read his syndicated column, *Today and Tomorrow*, Walter Lippmann is truly "the Man with the Flashlight Mind, the Great Elucidator," as the New York *Herald Tribune* called him. "Master of a lucid style"—cynics call it "the best prose on the market"—his comments on America and the world are simple, straightforward and forceful.

Most of the argument between his loyal followers and loud critics seems to center about the question of Walter Lippmann's "liberalism." Many who know his past feel that he has "sold out," that he is now using "the vocabulary of liberalism to support the doctrine of the mortgage note holders." They point to the "pleasant old ladies on Park Avenue who like to think themselves as a shade to the left of William McKinley" and who have adopted his column "as part of the morning ritual with their warm tub and their orange juice." They say that "Lippmann has moved steadily to the right and his prestige and prosperity have increased concomitantly."

But there are others, and their number is legion, who still believe that Walter Lippmann is "one of the most prominent and influential liberals of our generation,"

a man whose greatest wish is to bring a "good society" to the world. There are still others who find in him one of the most successful and powerful supporters of the cause of capitalism and who read him for that reason.

There is no doubt that Mr. Lippmann has come a long way since his student days when, together with John Reed, he organized the Harvard Socialist Club. He was born in New York on September 23, 1889, the only child of a successful Jewish manufacturer, Jacob and Daisy (Baum) Lippmann. After winters at private schools and summers in Europe he entered Harvard University in 1906. In only three years he was graduated with honors.

It was while he was at Harvard that Walter Lippmann first became socially conscious. There was a bad fire in a poor section of Boston, and when the students were called out to help, Lippmann saw misery for the first time in his life. It was a shock. It was then that the Harvard Socialist Club was formed. It was at Harvard, too, that a scathing criticism in the college paper of a book which said the poor were pretty well-off brought him to the attention of William James, whose friend and disciple he became.

After graduation Lippmann spent a year at Harvard as assistant to George Santayana, professor of philosophy. In 1910, when his year was about over, Lincoln Steffens, reporter of the "muckraking era," asked the Harvard professors: "Who among the new graduates has the ablest mind which can express itself in writing?" The unanimous choice was Walter Lippmann. He became Steffens' assistant in investigating corruption in big business and politics. Of Lippmann at 21 Steffens wrote: "Keen, quiet, industrious, he understood the meaning of all he learned; and he asked the men that he met for more than I asked him for. . . . He searched them; I know it because he searched me, too, for my ideas and theories."

Steffens' articles were intended for *Everybody's Magazine*, and when his work with Steffens was through Lippmann went to the magazine as sub-editor. He didn't like it much, since his job consisted mainly of reading stories and editing jokes, so he left after a few months to become secretary to the Socialist Mayor, George R. Lunn, of Schenectady, New York, helping him clean up a very crooked city.

In the summer of 1912 Lippmann quit his job and went to a cabin in the Maine woods to write *A Preface to Politics* (1913), the first of his 17 books on politics, morals, economics, personalities and social life. Theodore Roosevelt wrote an enthusiastic review of it, from which a warm friendship developed. Through Roosevelt, Lippmann became associated with Herbert Croly and the *New Republic* and continued as one of its editors until 1921. During the early years of Wilson's Presidency the *New Re-*

WALTER LIPPMANN

public "was the almost-official White House organ," and Lippmann was a frequent visitor to Washington.

In June 1917 Lippmann was called to Washington to be special secretary to Newton D. Baker, Secretary of War, to handle the relations between the War Department and organized labor in building cantonments. In September of that year Wilson made him a member of Colonel House's committee to help in preparing maps and data for the peace conference. A year later he was commissioned a captain of military intelligence and sent to France. When the War ended he was a member of the American Commission to Negotiate Peace, but he disagreed with its policies and resigned.

In 1921 Lippmann joined the editorial staff of the *New York World*; two years later he was in charge of the editorial page; eight years later he was editor. During those years he wrote brilliant editorials on the Harding scandals, the Scopes trial, the Dawes Plan, the defects of the Hoover Administration. His editorship "made and kept the *World's* editorial page the brightest lighthouse in United States journalism."

Hard times sent the *World* out of existence in 1931 and in that same year Walter Lippmann was hired by the *New York Herald Tribune* "to provide in its ample pages a little corner of mild Left-wing philosophy to offset its own conservative columns." He was told he could write whatever he pleased—all the paper wanted was four articles a week on whatever appealed to him in the news of the day. He is still with the *Herald Tribune*, his column syndicated in over 170 papers.

In 1932 Lippmann was for Roosevelt and in 1933 he supported the NRA. He began to oppose Roosevelt's banking acts, the stock exchange and securities act. How-

LIPPMANN, WALTER—*Continued*

ever, later he was against the Utility Holding Company Act and the Neutrality Act. After two years of the New Deal he said "the courts will do an historic service . . . if they liquidate a major part of the central regulation to which the New Deal has committed itself." And in 1936 he announced that he would vote for Landon. In 1940, however, he did not go along with the *Herald Tribune's* support of Wendell Willkie (see sketch this issue). Whatever his political position in 1940, it is clear that "Big Business has always respected Mr. Lippmann's utterances. He has those rare qualities of investigation and judgment, as Thomas W. Lamont (see sketch this issue) once said." By then "liberals" were sadly saying: "Mr. Lippmann's brand of liberalism is the intellectual garment of capitalist power; it is the liberalism of the . . . professors and editors and lawyers who want at the same time to preserve the *status quo* and their self respect"; they were regretful, for "with his active mind, his great talent, his industry and his brilliant style," he "might have been a rain that would have helped freshen the streams of American thought."

Walter Lippmann does his writing mornings. He starts at 8:30 and usually finishes from 700 to 1,200 words in about two hours, writing furiously and illegibly in longhand on white paper. His afternoons and evenings are given over to a rather full social life, in which he "is more apt to be on intimate terms with Morgan partners than with union leaders." Husky and powerful, Lippmann rides, fishes, plays golf ("fairly"), tennis ("better") or referees a polo game. He and his second wife, Helen Byrne Armstrong, whom he married in 1938 (he was first married to Faye Albertson in 1917), have three houses—in Manhattan, Florida and Long Island.

LITTLE, WILLIAM LAWSON JR. June 23, 1910- Golf champion

Address: c/o A. G. Spalding & Bros, 105 Nassau St, New York City

Lawson Little is the winner of the 1940 United States open golf championship. The sixth player to win both the American amateur and open championships and the first to win both the British and American amateur titles in succeeding years, Little started his golf career in 1917. His father, Colonel William Lawson Little, an officer in the medical corps, and his mother, Evelyn Baldwin (Ryall) Little made golf their avocation, though neither was a championship player.

The Little family was transferred to many army posts in remote corners of the world. William Lawson was born at Fort Adams, Newport, Rhode Island, and was a baseball fan up to the age of seven. One day Dr. Little, when stationed at Old Point Comfort, Virginia, broke a golf club on one of his morning rounds. Junior displayed an interest in the broken shaft and inherited it. He spent hours swinging the club as he had seen his father swing it.

During the war years of 1918 and 1919 the elder Little was shifted to El Paso, then to San Antonio as district surgeon. Here Lawson Jr., practiced and caddied occasionally for his father. From Texas they were transferred to Manila. There Junior shot his first round of nine holes with his mother when his father was unable to play one day, and turned in a score card of 53. In China, at the Tientsin post, the family encountered the macabre local links' rule: "ball may be lifted without penalty from open graves." The course there bisected a Manchu cemetery which followed the custom of leaving coffins on the ground so that the departed ones might sink gradually into the soil, a process that required from 15 to 20 years.

After they returned to the United States the Littles moved from post to post along the Pacific Coast. Now known in the golf world as a powerful hitter whose sturdy frame rifles a ball 300 yards on occasion, it is remarked that Little might not be the powerhouse he is were it not for the competition supplied him by a boy several years his senior when his father was stationed at Vancouver Barracks, Washington. Then 12 years old, Lawson used to play with George Van Way, now Lieutenant Van Way of the United States Army. Being older, Van Way could naturally drive farther than Little and seized every opportunity to twit the younger player. As a result Lawson kept pressing all the time to equal George, hitting every ball just as far as he could. For three years he waited to outdrive the older boy. Finally he did. This experience has now become a part of his teaching, and he advises all young boys to put all their strength into their shots. "When they become good enough to enter tournaments," he says, "they can cut down their power for greater accuracy—and still get distance."

Mel Smith, the professional, and Dr. Oscar F. Willing, a former United States Walker Team Cup member at the Waverly

Club, Oregon, became interested in Lawson and taught him a great deal. He entered his first real tournament test in that state and won a place in the select circle of Oregon golfers with a 163, two strokes better than his father. He was defeated, however, in the first round, but went on to win the first flight.

In California, when the Little family was transferred to The Persidio, Lawson Jr. was coached by Larry Brazil and reached the fourth round of the San Francisco junior championship tourney. He won the North California amateur championship that same year, 1928.

In 1929 Lawson gained his first national reputation by defeating Johnny Goodman, the "man who defeated Bobby Jones" in the United States open championship at Pebble Beach, when he was only 19. The following year he entered Stanford University and disappointed football devotees who saw great possibilities in the young giant with the wide shoulders. Lawson turned his back on the chance to shine on the football field and became the constant companion of Eddie Twigg, golf coach, to whom he gives great credit for developing his short game. But his record with the Stanford golf team was not outstanding "perhaps because he had his eyes focused upon championships." He never became an intercollegiate star and was seldom rated higher than third best golfer at the University. Although he won the Pacific Coast interchampionships in 1931 and 1933, he found it difficult to mix studies and golf, and his play in 1931 and 1932 was "so dismal that the boy wonder of Pebble Beach became just another flash-in-the-pan in newspaper stories."

But he believed in himself from the very beginning and in his ability to win against any and all opponents. He trained sedulously. He ran three miles very early in the morning, had a light breakfast and then played from 27 to 36 holes. He came back in 1933 to the semifinals at Kenwood in Cincinnati. This qualified him for the American Walker Cup team in England. He returned from Prestwick, Scotland with the 1934 British amateur championship cup and then proceeded to the Brookline Country Club in Massachusetts to win the American crown.

Lawson Little repeated the two records the following year. To accomplish this he won 31 consecutive matches, most of them over the 18-hole route. In all 31 he only once had to play off a tie. At Cleveland he played 156 holes 19 under par, went through the whole tournament without taking more than five strokes on any hole. The double victory in both amateur championships was regarded as fine a performance as has ever been known in golf, and while it was not as brilliant an achievement as was Bobby Jones' when he won all four tournaments in 1930, it ranks a close second. Sports editors regarded Little as the outstanding athlete of 1935, and, in spite of some lack of public popularity and an "egotistic, ruthless reputa-

LAWSON LITTLE

tion," voted him the James E. Sullivan Memorial Award.

A sports writer says: "It is debatable whether Little's most potent weapon on the links is his cool and methodical brain or his unusually powerful physique. To his unusual strength this champion adds an enviable tournament temperament. From the first hole of the first match he sets about winning in a businesslike way, and the vicissitudes of the ancient game have little effect on his control. His admirers say that his coolness in a crisis is his most admirable trait. He is never discouraged and never plays a hurried or sloppy shot. He has the power of concentration of a wild animal trainer."

In 1936 Lawson Little turned professional, won the Canadian open championship (with 271, the lowest recorded score) and married Miss Dorothy Hurd, the daughter of Mrs. Robert Maxon of Chicago. The round-faced, snub-nosed, curly-haired player has built up a reputation of affability, particularly while touring the country giving instruction and demonstration for a company manufacturing golf equipment. He is now serving as director of golf at Bretton Woods, New Hampshire and won the 1940 United States Open by defeating Gene Sarazen at Cleveland.

LLEWELLYN, RICHARD, pseud.
(lōō-ēl'lin) Author

Address: c/o Macmillan Co, 60 Fifth Ave,
New York City

Richard Llewellyn's *How Green Was My Valley* (1940), the first novel of an unknown Welsh writer, is a best seller in both England and America. This story of life in a Welsh mining community before South Wales had become a "depressed area" is told by Huw Morgan, the last of his family, just before he leaves the valley forever.

The novel is made up of Huw's remembrings. He remembers the valley before industrialism came to it, before the slag heaps had risen to blacken its green. "Happy we were then for we had a good house, and good food, and good work." They were a fine family, the Morgans, in the little house on the hill—father, mother, five sons besides young Huw and three daughters. Hard working they were, and their lives were simple and primitive.

A time came, however, when wages were cut and a new order of things began. Huw's father, Gwilym Morgan, who was a leader in the valley, put his trust in reasonable argument; but argument failed, and the men struck tentatively, doubtfully, without organization. They won the strike, but their wages were lower than before. That was only the beginning. Other strikes and increasing bitterness were ahead. Davy and Owen, Huw's brothers, fought hard to build the union, but they were struggling against forces that bore them down with the years. The closing of a single pit left 400 men idle. Times grew blacker as the slag rose. Strangers appeared in the valley and found hearers, and to men like Huw Morgan it was sad to know that the brave ideas "and the brave ones of early days had all been forgotten in a craziness of thought that made more of the notions of foreigners than the principles of Our Fathers." The alien notions prevailed and at last there was war in the valley. But that came after the Morgan sons had been scattered abroad and Gwilym himself didn't live to see much of it.

How Green Was My Valley has been acclaimed by critics for the characterization, the emotional intensity, the poetry in the story of the Morgans. "In one book the author has done more than all his predecessors to show the English what Wales really is, giving us with tingling vivacity, quenchless spiritual force, the prose epic of a nation." It has been called "vivid", "eloquent", "poetical," and though slight charges of over-poetical writing and sentimentality have been brought against it, the consensus of critical opinion is that *How Green Was My Valley* is a "beautiful story" "well performed."

Of himself Richard Llewellyn tells us: "I have two birth dates and the honour of choice between two birthplaces, one the largest, and the other the smallest city in

RICHARD LLEWELLYN

the world: London, and St. David's in Pembrokeshire. My school days were spent in St. David's, Cardiff and London. At 16 I was sent to Italy to learn hotel management, starting in the kitchen. In Venice I studied painting and sculpture in my spare time, and worked with an Italian film unit, learning the rudiments of the cinema.

"I should describe the years up to 19 as turbulent. Realizing a need for discipline, I joined the ranks of H. M. Regular Army and served both at home and abroad. Returning in 1931, jobless, I turned to the cinema and entered the studios as extra player in order to study the methods of men then in charge of production. In an interval I became a reporter on a penny film paper, and it was during this period that I started writing for pleasure."

Mr. Lewellyn returned to the cinema to become assistant director, scénarist, production manager, and finally director. Then a slump in the industry turned him to play-writing and his *Poison Pen*, a psychological mystery play, was successfully produced in London.

How Green Was My Valley was begun in St. David's from a draft written in India and was rewritten in Cardiff and again "in St. James's Park, London, during a period of unemployment." After another period of work in Wales, Mr. Llewellyn returned to London, where a friend introduced him to the publisher who accepted the manuscript of the novel he 'had been working on for so long. "That was the happiest day of my life," he says.

Altogether he has written five novels and destroyed them, and three plays, "one of which was produced, one is now in production, and one was written purely for

pleasure." In 1940 he was a captain in the Welsh Guards, defending England.

LOCKRIDGE, RICHARD Sept 26, 1898—
Drama critic; author

Address: b. c/o New York Sun, 280 Broadway, New York City; h. 74 Washington Pl, New York City

As drama critic for the New York Sun Richard Lockridge's judgment is independent and, according to fellow critics, "his perceptions are excellent and his observations are generally sound." As the creator of the *Mr. and Mrs. North* whose saga frequently appears in the *New Yorker* and whose adventures have been the subject of two books, *Mr. and Mrs. North* (1936) and *The Norths Meet Murder* (1940), written in collaboration with his wife, he has shown himself an author of humor and understanding. The new Frances and Richard Lockridge mystery novel, *Murder Out of Town*, will be published in January 1941.

When Mr. and Mrs. North first appeared in book form, reviewers defied readers to "suppress" their "mirth in a staid chuckle." They pointed out the sense they got of having read "an unobtrusive but far from negligible contribution to current Americana" and hoped that this delectable couple would appear sometime, not only in short sketches, but in a novel. Four years later they got their wish when fluttery-minded Mrs. North and her sometimes troubled husband met murder in New York City. A "good crime puzzle," the book had the added charm of "excellent characterization" and infectious humor of writing.

Mr. Lockridge's first book, *Darling of Misfortune: Edwin Booth* (1932) combined his interests as dramatic critic and author. In this biography of the great American tragedian he shows that Booth frequently had to act in life as tragic a part as any on the stage. An arresting book, with much important detail collated from all kinds of sources, critics were almost unanimous in its praise.

Richard Orson (he does not use the middle name) Lockridge has had a lot of jobs in his life, but since his first position on the Kansas City *Kansan* his main interest has been newspaper work. He was born in St. Joseph, Missouri, the son of Ralph David and Mary Olive (Notson) Lockridge. His public school education was capped by two years at the Kansas City Junior College, from 1916 to 1918, when he left to enlist in the Navy. He never really got to see the War—his job was to scrape paint off warships in the Brooklyn Navy Yard.

When the War ended, Lockridge began working for the United States Census Bureau and at the same time started to study journalism at the night school of George Washington University. Tired of this, he went back home and spent one semester of 1920 at the University of Missouri, after which he got himself a job in a wholesale grocery company. That didn't last long either, and Lockridge drifted from one kind of work to another in the South—part of the time he worked as roustabout with a carnival. Then he returned to Kansas City, Missouri and spent a couple of months in the Post Office as printer and registry clerk.

It was in 1921 that Richard Lockridge was hired as a reporter by the Kansas City *Kansan*. He stayed there a year until he went back to Missouri to the Kansas City *Journal*. While on this paper he met Frances Davis, a reporter on the Kansas City *Post*, and they were married on March 4, 1922. They both decided it would be a good idea for them to go to New York to try free-lance newspaper work, but homesickness overcame them and within a few months they were back in Kansas City, this time Mr. Lockridge getting a job on the Kansas City *Star*.

Before the year was up, however, they decided to try New York again, and this time they stayed. Richard Lockridge got a

RICHARD LOCKRIDGE

job on the New York *Sun* as a reporter. From 1923 to 1928 he covered general assignments, did rewrite work and reported many of the important trials, including the Hall-Mills, Ruth Snyder and Judd Grey and Browning cases. He also managed to get assigned to second-string reviews.

In 1928 his keen interest in the theatre bore fruit and he succeeded Gilbert Gabriel as the *Sun's* drama critic, a position he continues to hold. In his reviews Richard Lockridge is without doubt the most accurate reporter in New York City, if not always the most exciting. According to *Variety's* box-office poll of dramatic critics, his score was the highest in the season of 1939 to 1940. Of seventy-three plays reviewed he was right in his estimate of sixty-five and wrong about only eight—which makes for the high average of accuracy of eighty-nine per cent.

His reviews are written in his apartment in Washington Place and picked up by *Sun* messengers around 1 a. m. Between theatre seasons Lockridge continues his old trade of City Room rewrite and manages to spend a good deal of time at his country house at Brewster, New York.

LOFTUS, CISSIE Oct 22, 1876- Actress
Address: h. Halifax Apartments, 6376 Yucca Ave, Hollywood, California

Marie Cecilia Loftus set all London talking about her impersonations in 1893 and after five decades of legitimate, vaudeville and motion picture acting still has people talking about her impersonations. Her voice has echoed with startling accuracy hundreds of well-known personalities, from the throaty singing of Florence Reed to the East Side accents of Fanny Brice. She may impersonate John or Ethel Barrymore; be George M. Cohan at his Yankee-Doodliest or Sarah Bernhardt at her stateliest; successfully imitate Gertrude Lawrence (see sketch this issue) or Beatrice Lillie. She has also given impersonations of Lynn Fontanne, Pauline Lord, Norma Shearer, Libby Holman, Robert Morley and others.

Cissie probably inherited her gift of mimicry from her mother, Marie Loftus, a Scottish music hall singer who delighted the patrons of Harry Miner's in the Bowery with such ditties as *I'm So Shy*. Ben Brown, her father, was a member of the trio of Brown, Newland and LeClerce which played the music halls the world over in one minstrel skit, *Black Justice*, and nothing else, for 45 years.

When her mother went on a tour of the United States, Cissie (born in Glasgow, Scotland), then six, was left in a school in Cambridge, Massachusetts. Her education was continued in the Convent of the Holy Child, Blackpool, England. During the holidays she attended the theatre with her mother and, watching the performers from the wings, thought she could do better than an impersonator who failed to change her voice with each characterization.

Cissie made her first appearance at 16 on the stage of the Alhambra in Belfast singing the ballad, *Molly Darling*, and at 17 was at the Oxford Music Hall in London, achieving instantaneous popularity by her "simplicity, reserve, cool sweet inexperience" and a complete absence of make-up. Her vocal abilities were discovered by Sir Arthur Sullivan, who took her to Blanche Marchesi for a tryout. Cissie was surprised to learn that she had an unusual voice fit for grand opera, but "her mother thought that it was very nice of them to say such things, but the music hall was her world, and she had lived it all her life, and she didn't know any other."

During Cissie's early career Scotti and Caruso were among other guests at a party in New York. They were playing and singing. Finally young Cissie was called upon, and said she would imitate Caruso. The accompanist, expecting a burlesque,

Elmer Fryer

CISSIE LOFTUS

asked her what key she would sing in. She said in Caruso's own, and proceeded to sing the song Caruso had just sung. When she finished the tenor rushed up to her and nearly poked his finger through her breastbone, shouting "*Madonna Mia!* It is my voice, and it is in you."

During her first year in London (1893) Cissie had the regular part of Haidee in *Don Juan* at the Gaiety. In 1894 she married Justin Huntly McCarthy, son of Justin McCarthy, the leader of the Irish Party in the House of Commons. After her honeymoon she joined the company of Augustin Daly and played with Ada Rehan. After leaving Daly's company she appeared in vaudeville at Koster and Bails in 1895, doing her sensational imitations. A collection of 30 poems, *First Verses*, of which 100 copies were privately printed and inscribed to "Justin," was the pride of her husband, who at the time was the dramatic critic on the *Pall-mall Gazette*.

In April of 1895 she was playing in *The Highwayman* at the Lyceum. She returned to the music halls of London in 1897, giving imitations, then appeared with Martin Harvey in *The Children of the King* and came back to America in 1900 to make her debut in comic opera as Bettina in *The Mascot*. Later she joined Madame Modjeska's company as Leonie in *The Ladies, Battle*, Viola in *Twelfth Night*, Hero in *Much Ado About Nothing*; then worked under Daniel Frohman at Daly's Theatre, appearing as Elsie in *The Man of Forty*, Lucy in *Lady Huntworth's Experiment*, Lady Mildred Yester in *The Shades of Night*. At the turn of the century she was E. H. Sothern's leading lady in *If I Were King*, a play written by her first husband just as they were being divorced.

LOFTUS, CISSIE—*Continued*

From 1902 on Cissie alternated between England and America, between vaudeville and the theatre. Among other rôles she played Marguerite in *Faust* with Sir Henry Irving and Nora in *The Doll's House*. Her son, by a second marriage to Dr. A. H. Waterman of Chicago, she named Peter for her favorite rôle in *Peter Pan*. *Peter Pan's* author, James M. Barrie, was godfather to the child. While playing in *The Lancers* in 1908 she sustained an accident in rehearsal and underwent a serious operation. In 1911 her voice failed and after that she made only occasional appearances at the Coliseum and other variety houses in her imitations of popular actors and actresses.

She returned to the United States in 1923 to make a comeback, and 14 days later her voice was gone again. In reduced circumstances and with her son to support, Cissie Loftus went into the *Ziegfeld Follies*. Gradually she re-established herself, first by giving private concerts, of which there were 24 the first year, then by stage parts. Since that time she has appeared in many plays: as Mrs. Rimplegar in *Three-Cornered Moon*; as Aunt Chloe in *Uncle Tom's Cabin*; in *Tonight at 8:30*; as Frau Lucher in *Reunion in Vienna* and in many others.

When she inaugurated her Sunday night shows in 1938, *An Evening With Cissie Loftus*, "a white-haired veteran of many battles with life and art, she stopped a Broadway show with her witty caricatures of stage stars. Her audience cried for more and more." After touring the country with her *Impressions and Impersonations* she went to Hollywood and appeared in such motion pictures as *East Lynne*, *The Old Maid* and *It's a Date*. She intends to continue her recitals and is also doing radio broadcasts.

LOMBARDO TOLEDANO, VICENTE
 (lôm-bâr'thō tō'lā-thā'nō vê-sên'tā) July 16, 1894- Mexican labor leader

Address: Villa Rosa María, San Angel, Mexico City, Mexico

December 1940 Bulletin: In 1940 Vicente Lombardo Toledano's term as head of the Confederation of Mexican Workers comes to an end, since re-election is spe-

cifically forbidden by the Constitution of the CTM. His successor is expected to be Fidel Velásquez. (Rumors that he has been removed from his position by President Cárdenas are false.) He remains president of the Federation of Latin American Workers.

From August issue:

As secretary-general of the CTM Vicente Lombardo Toledano, frequently called the "John L. Lewis of Mexico," has a particularly hard job in an election year. The labor movement in Mexico is closely identified with politics and Lombardo Toledano has spent much time keeping his organization solid under "the pulls and strains of the complicated Mexican political patterns." It is to avoid this that he is trying now through his Workers' University, his daily newspaper, *El Popular*, through political activities and through the building up of a workers' militia, to create an independent labor movement which will remain strong whether the President of Mexico is pro- or anti-labor.

"Vivacious, magnetic, confident and relentless in forcing his reasoning to its conclusions, Lombardo Toledano is now the greatest influence in Mexican labor circles"—the "undisputed dictator of Mexican labor" some call him. It is he who heads the million members of the CTM and it is he who is president of the Federation of Latin American Workers, formed in 1938.

Lombardo Toledano's union was founded in February 1936 when a number of labor groups united under him and other labor leaders in opposition to the CROM (*Confederación Regional Obrera Mexicana*) which, according to some of its members, was a "tool of North American imperialism," backward, conservative, merely a governmental agency. Lombardo Toledano had belonged to the CROM and had even been one of its secretaries but he resigned his membership in 1932.

The CTM has been called "the most important labor organ ever formed in Mexico, both in the number of its constituent elements and in its program and the tactics that it has employed." It is made of national industrial syndicates and local federations of syndicates in all the economically important regions of the country and is both vertical and horizontal corresponding to the needs of Mexican economic life. Under Lombardo Toledano the CTM has made many contracts, has succeeded in extending the operation of the labor laws and has raised the minimum wage in every state in Mexico. Its syndicates participate in the operation of many Mexican industries. They manage the national railways, have a share in the management of the oil industry, manage municipal services and control many mills.

In making these gains the CTM has had the "emphatic support" of President Cárdenas and it has been rumored that Cárdenas frequently calls on Lombardo

Toledano for advice. In fact, rumor goes so far as to credit the labor leader with having played a large part in the determination of the expropriation of the oil properties.

Because the program of the CTM extends to the consideration of national problems; because the ambition of Mexican labor is the socialization of all national wealth; because it is an active, new union, the CTM has occasionally been called Communistic, and Lombardo Toledano has even been called "the archpriest of Mexican Communism." Toledano denies his Communism, though he avows his Marxism. Diego Rivera, however, holds that "Lombardo Toledano has closely intertwined his fate with that of the Soviet oligarchy in the Kremlin," and Cedillo once said: "Toledano—one day he is a Nationalist, the next day a Communist. He fools no one though." Others have insisted just as strongly that Lombardo Toledano is not a member of the Communist Party "and not entirely trusted by Communist leaders." It should be pointed out, too, that although Lombardo Toledano went to Moscow in 1938, in that same year he announced the solidarity of the Federation of Latin-American Workers not with the Third (Communist) International but with the Second (Socialist) International, "to which most labor leaders outside Russia belong."

A lawyer and author, "almost the only intellectual ever to secure a following among the Mexican workers," (his enemies call him "a labor leader who has never labored") Lombardo Toledano is well-born and well-educated. He was born in Teziutlán in the State of Puebla on July 16, 1894, of part Indian heritage. At the time of his birth his father and grandfather were on the way to becoming well-to-do operators of a copper mine development which his grandfather had founded when he emigrated from Italy in 1850. Young Vicente was educated in the French Commercial School and the National Preparatory School of Mexico City and in 1919 received his licentiate in law from the National University of Mexico. In 1920 he received his M. A. and in 1933 his Ph. D. During these years he became an attorney-at-law.

In 1917 he became secretary of and professor in the Mexican Popular University and from 1918 to 1933 was professor of law and philosophy in the National University of Mexico. In 1920 he first entered politics as secretary of the Government of the Federal District and in 1923 became Governor of the State of Puebla; in 1924 member of the municipal council of Mexico City; in 1926 and 1928 federal Deputy to the Legislature. During these years his philosophy had undergone a change, mainly inspired by a trip to Europe: "I was at close range when Fascism marched into Italy," he said. "I

was witnessing the dubious successes of social democracy in Germany, and for the first time I became aware of Karl Marx."

Because of his radical views, which increased during the years, he was expelled from the National University of Mexico in 1933. Immediately he founded his own university, devoted almost exclusively to workers and to peasants. This, late in 1935, emerged as the Universidad Obrera with Lombardo Toledano as rector. During these years he had been active in the CROM, later among the workers in general and finally in the founding and development of the CTM.

It was Lombardo Toledano who in 1938 was cofounder and first president of the Latin American Federation of Workers. At their first convention he said: "The principal task of the Latin-American working class consists in winning full economic and political autonomy for Latin-American nations... Fascism is opposed to the objectives of the proletariat and must be combatted in all its forms." "We will," he said, "fight today and tomorrow to drive Fascism from the face of the earth."

"Slight of build, quick in action and in intellectual reflex, Lombardo Toledano is a good example of what the world thinks of as Latin characteristics." In fact he has been said to resemble "the conventional idea of a Latin-American screen star rather than the popular conception of a great labor leader." Dressed in clothes with a distinctly Bond Street cut, his fiery orations are quoted, praised, reviled constantly "in the press, on the lecture platform and at the coffee-clotch forum." With the elections and their outcome a vital concern for him and his union, he affirmed and reaffirmed that "our big job now is to consolidate the gains that we have made in the last six years under President Cárdenas. Our job is to build an independent economy, free of domestic feudalism or Yankee and British imperialism." This distrust of the United States and Great Britain, reflected in his paper, caused frequent accusations of pro-German sympathies until, under pressure, he changed his line and declared: "There was never truer friendship between North American and Latin-American peoples."

LORENTZ, PARE (lo-rentz' pār) Dec 11, 1905- Motion picture director; author; critic

Address: h. Sneed's Landing on the Hudson, New York

In 1934 Pare Lorentz, who until then had been no closer to the motion picture industry than a critic's seat in the audience, was called to Washington to vivify the government's output of documentary films. March

6, 1940 was the première of his third major production, *The Fight For Life*.

A 68-minute film visualizing unforgettably the unending battle in the United States against disease and death during pregnancy and childbirth, *The Fight For Life* is based on the chapters on maternal welfare in Paul de Kruif's book of the same name. The death of a patient in a modern, well-equipped, abundantly staffed urban maternity hospital inspires a young doctor to affiliate with the renowned De Lees Maternity Center in Chicago. In the heart of the slum area the doctor learns the exacting routine of the Center's prenatal examinations, accompanies senior doctors and nurses to squalid, airless tenements, and finally, as a full-fledged doctor, saves the life of a woman who is having a hemorrhage.

Mothers in the waiting rooms of the Maternity Center, undernourished children playing dangerously in the streets—the people of the tenements themselves are the real actors of this film. Of the professional actors two actually studied at the Center to qualify as clinicians, and the others were taught to act as though they were not acting, as though they belonged to the clinic. For the delivery shots one mother was filmed for four hours, then went home and had her baby.

The New York Maternity Center says that because of its stark realism, this is a "dangerous film, one that should not be shown to young people throughout this nation. Pare Lorentz depicts the abnormalities of childbearing in such realistic terms that the movie-goer is overwhelmed, dazed, frightened. Never once does he intimate that the maternal death rate is steadily coming down; that 996 out of 1,000 mothers come through safely; or that the coming of a baby is the biggest, happiest time in the life of a young couple. There is hardly a smile in the whole picture. Everything is stark, sombre."

Movie critics, however, differ. The New York Times: "It's as dramatic as life itself. The drama has been solidly built on human experience, on the tissue of life, on the beat of the human heart itself. . . We wish there were some form of Pulitzer Award for the kind of cinema journalism Mr. Lorentz has been doing"; the New York Herald Tribune: "A stirring and eloquent drama, as well as a document of profound significance. It is strong and even terrifying drama at times, but it never resorts to sensationalism. Here is a memorable tribute to the medical profession, accented by challenging social overtones. . . It is a film like no other you have ever seen. It is one you are not likely to forget soon"; and Cue: "Powerful, excellently produced dramatization . . . unusual, accurately detailed, carefully prepared."

Pare Lorentz was born in Clarksburg, Virginia in 1905. He attended the West Virginia Wesleyan College and then the University of West Virginia, where he edited the humor-

ous magazine, *Moonshine*. At 19, in his junior year, he left school and went to New York City. His first job was editing the General Electric Company's house organ; his second, reviewing motion pictures for *Judge*, lasted 10 years. From 1930 to 1932 he was movie critic for the New York *Evening Journal* and the year following for *Vanity Fair* as well.

Lorentz achieved a national reputation as a serious student and critic of the movies, though he was frequently referred to as a "director's critic." His beginnings in motion picture criticism coincided with the closing years of the silent film, then in its richest development as pictorial expression. His later work as writer and director of motion pictures has been said by a number of commentators to reveal certain techniques reflecting his close observation of the silent screen in its finest period.

From 1934 to 1936 he wrote a movie column for King Features Syndicate, and covered movies for *Town and Country*. He also wrote a nationally-syndicated political column, *Washington Sideshow*, commenting on people and events in the fast changing scene of national affairs. This job was short-lived. In an early column Lorentz praised Henry A. Wallace (see sketch this issue), then Secretary of Agriculture, and also praised the New Deal's farm program. He was fired by wire from San Simeon.

He has never been limited to one activity at a time. He has written miscellaneous work, articles and short stories for a number of publications, including *McCall's*, *Fortune*, *Harper's*, *Scribner's*, *Forum* and *Story Magazine*. One of his articles, *A Young Man Goes to Work*, was reprinted from *Scribner's* (February 1931) as part of a college textbook.

In collaboration with Morris Ernst (see sketch this issue) he wrote *Censorship: The Private Lives of the Movies* (1930), which argues for a more adult and intelligent acceptance of realism on the screen. *The Roosevelt Year* (1933) is a dramatization in still photographs and text of the significant events of the first year of Roosevelt's Presidency. It was written only after Lorentz had vainly tried to persuade "some people down in Wall Street to put up the money for a skillfully edited compilation of newsreel material in narrative form."

In June 1935 he was called to Washington to be consultant on motion pictures. A number of government officials, dissatisfied with dull two-reel films on such subjects as the manufacture of paving bricks, hog-breeding and the love life of the honey bee, asked Lorentz to propose a movie program which could present with dramatic forcefulness of a quality comparable with Hollywood's technical resources some of the problems of American agriculture.

The consultation resulted in Lorentz's heading a new film unit which released in 1936 *The Plow That Broke the Plains*. This is the story of how and why the great favorite central plains of the United States

PALE LORENTZ

became a desert. Here, as in the succeeding films, Lorentz stuck to a stubborn realism, stating the immediate problem simply but so eloquently that the far greater social problem was implicit in the statement.

With three cameramen and a skeleton shooting script, they took thousands of feet of film of the dust bowl area and its people. Back in the cutting room a triple process of creating took place. While Virgil Thomson (see sketch this issue), at the piano, worked out a musical score for the picture, Thomas Chalmers, the narrator, rehearsed the lines into a moving story of the ruin of a great section of this continent by carelessness, selfishness and the lack of a planned far-sighted program of soil conservation.

Hollywood, which had refused all cooperation in making the film, refused, when it was finished, to distribute it through any of the regular booking channels. Lorentz took the can of film under his arm and went from town to town, arranging private showings for the critics, saying: "If you like it, please say this picture can't be shown in your town." Universal critical acclaim and public demand opened many independent theatres to it, and it has been shown to hundreds of schools, clubs and other organizations.

The Plow That Broke The Plains, produced under the sponsorship of the Resettlement Administration under Rexford Tugwell, cost a little less than \$20,000. In spite of this relatively low figure, governmental red tape had complicated the financial aspects of production, and Lorentz, who was paid a salary a little lower than that of his cameramen, often had to meet some immediate expenses from his own pocket. He went to Tugwell's office when the picture was finished, stated his grievances and resigned. As he walked out he pointed to a

LORENTZ, PARE—*Continued*

map on the wall. "There," he said, "you guys are missing the biggest story in the world—the Mississippi River." Tugwell called him back, raised his salary, gave him a \$50,000 appropriation, and work began immediately on *The River*.

With a camera team Lorentz traveled 26,000 miles up and down the River, taking 80,000 feet of film. Again his "actors" were just the people who lived along the banks of the Mississippi. Paring the film down to the required 3,000-foot length took six months, working 18 hours a day. The narrative was written after the film was cut and the music set. James Joyce said of it: "This is the most beautiful prose I have heard in 10 years." Mr. Lorentz himself, in the printed text of *The River* (1938) states: "It was intended as functional text to accompany Mr. Virgil Thomson's score, and to fit the tempo of the sequences of the picture." This time the picture was distributed by Paramount, shown in more than 5,000 theatres in the United States, and televised in England by the British Broadcasting System. It was voted the best short dramatic picture of the year in a pool of movie operators. It took first prize (the Nobel Prize of the Movies) over 70 other "documentaries" at the International Cinematographic Exposition in Venice in 1938. Each of his pictures has been rated as "exceptional" by the Exceptional Photoplays Committee of the National Board of Review.

All the films are an exceptional integration of sound and music, words as soliloquy or narration, and pictures. Lorentz obtained the services of outstanding men in their various fields. For his first two pictures Virgil Thomson, the young American composer, wrote the music. For *The Fight For Life* Louis Gruenberg did the score. In each case Alexander Smallens conducted the orchestra, using at various times musicians from the New York Philharmonic, the Los Angeles Philharmonic and the Metropolitan Opera.

Mr. Lorentz wrote the original outline for *The City* (1939), a documentary film on city planning, financed by the Carnegie Corporation of New York and sponsored by the American Institute of Planners.

In 1938 the *Columbia Workshop* program broadcast a short play by Lorentz, *Ecce Homo*, a radio version of a preliminary sketch for the latest documentary picture the government film unit has been working on. The theme is unemployment and the script was voted the best dramatic presentation of the year. In July 1938 the government named him head of the United States Film Service, whose function is to coordinate and supervise all government films.

In March 1940 the Labor-Federal Security Appropriation Bill, including an item of \$106,400 to continue the United States Film Service, came before Congress. Previously the funds had been supplied by the WPA and PWA. The House Appropriations

Committee found no existing law that would authorize the appropriation; the Senate voted down the bill and the United States Film Service flickered out of existence. Its films are being stored, leased or returned. In May the staff was working without pay. Just what will happen to *Ecce Homo*, the film on unemployment, has not been determined. Mr. Lorentz has not announced any future plans.

Pare Lorentz describes himself as "a reporter and a dramatist." He lives in a large pre-Revolutionary house at Sneed's Landing on the Hudson with his wife Sally (Bates), a former actress, and their two children, Pare Jr., and Tillie. He is dark-haired, brown-eyed, strong-jawed. He has an abundance of energy, imagination and ideas. His manner is dramatic; he dresses dashing; he likes direct and quick action. Hollywood has tried to lure him with tempting offers. In the past he has said no; in the future he may change his mind.

LOTHIAN, PHILIP HENRY KERR,
11TH MARQUIS OF (lō'tliē-àn) Apr 18,
1882—Dec 12, 1940 Late British Ambassador
to the United States

December 1940 Bulletin: Lord Lothian died suddenly at 2 a. m. on December 12, 1940 at the British Embassy, of uremic poisoning.

Shortly before the outbreak of World War II Lord Lothian (he is actually the possessor of several other titles) was appointed British Ambassador to the United States. Although it was his first diplomatic post, the choice was by no means a careless one. As a veteran of 15 trips to this country, as a visitor to 45 out of our 48 states, as secretary of the Rhodes Trust that sent 32 United States students to Oxford every year, Lord Lothian was well qualified to become tactful chief spokesman for British interests in the United States. Since that time he has further proved his qualifications by becoming one of this country's most popular speakers at commencement exercises, dinners, at World's Fair celebrations. On October 15, 1940 he left the United States for his first visit to London since the War began and returned in November to tell the United States that England may soon be in need of credits to purchase materials here.

The Right Honorable Philip Henry Kerr was born on April 18, 1882, son of the late Major General Lord Ralph Kerr of the "crabbed Kerrs," devout Roman Catholics

whose ancestral land titles go back to King Harold, and of Lady Anne (Howard) Kerr. He is proud of being Scotch and insists on being referred to as a Scotsman. After attending the Roman Catholic Oratory School at Birmingham and New College, Oxford University, he went to South Africa in 1904 as a member of the Railway Committee of South Africa Railways. From 1905 to 1908 he was assistant secretary of the Inter-Colonial Council of the Transvaal and Orange River Colonies, working under Colonial Administrator Lord Milner, who was pushing reconstruction and attempting to reconcile the Boers. In 1907 he also took on the duties of secretary of the Transvaal Indigency Commission. As a member of "Milner's Kindergarten," which also included the late John Buchan (see sketch this issue) and John Dawson, editor-to-be of the *London Times*, he helped in the beginnings of the formation of the Union of South Africa. It is said that he was influenced by Milner's philosophy of Empire—that it must be democratized, liberalized—and particularly so after studying the *Life of Alexander Hamilton* and *The Federalist*.

From 1908 to 1909 Philip Kerr was editor of *The State*, a magazine published in South Africa advocating union of the South African colonies; then, back in England, from 1910 to 1916 he edited *The Round Table*, "a scholarly journal of political philosophy." A member of the Liberal Party, in the midst of the First World War in 1916 he became secretary to Prime Minister Lloyd George. He made two secret trips to Switzerland in an attempt to convince the Austrians that further fighting was hopeless and after peace came he went with Lloyd George to Versailles, helping to draft the Treaty. He did not resign as Lloyd George's secretary until 1922, when he was recognized with the Cross of the Companion of Honor.

For the next three years Philip Kerr devoted his time to travel and to journalism—he has been a director of the United Newspapers, Limited (1921-22), political director of the *Daily Chronicle* and a frequent contributor to the *London Times* and the *Observer*; in 1925 he became secretary of the Rhodes Trust, an office which he held until his appointment to the Ambassadorship in 1939; and in the First National government in 1931 he became chancellor of the Duchy of Lancaster. The year before, upon the death of 11th Marquis of Lothian, becoming also Earl of Ancrum, Earl of Lothian, Viscount of Brien, Baron Kerr of Newbattle, Baron Jedburgh, Baron Kerr of Kersheugh and heir to 28,000 acres and three country houses. These included Monteviot in Roxburghshire, Newbattle Abbey in Midlothian, which he donated to Scottish universities as an adult education center, and his present chief seat, Blickling Hall, a great English castle complete with a ghost—Henry VIII's second wife, Anne Boleyn, who carries her head tucked inconveniently underneath her arm.

International

LORD LOTHIAN

In 1931 Lord Lothian became under-Secretary of State for India and chairman of the Indian Franchise Committee, with the task of laying a franchise foundation for a system of responsible government in India. He attended the Round-Table Conferences on the Indian Constitution, visited Delhi (where he was greeted with the sign "Lothian, go back"), lived in a mud hut next to Gandhi's and conceived a great admiration for the Indian leader, whom he has called "the only man of whom one can honestly say that he is both a politician and a saint." In 1932, when the Liberals split over trade policy, he resigned from the Cabinet. He himself had always favored closer United States-British trade relations.

Throughout the '20s and '30s Lord Lothian wrote much on international affairs. A believer in private enterprise, free trade and "social reform," he laid the responsibility for wars and "technological unemployment"—in fact, all the world's major evils—on "international anarchy." Back in 1933 he predicted a new World War if the state of anarchy continued. The solution as he saw it did not lie in giving teeth to the League of Nations and enforcing collective security, but in disarmament, and, while Hitler was growing strong, he suggested giving him non-strategic colonial areas in return for armament limitation. He himself made several trips to Germany, where he met Hitler and other leading Nazis; in 1935, after a visit to the Führer, he announced, "I believe he is sincere."

In 1936 Lord Lothian was already advocating a federation of nations in which the national State surrenders some part of its sovereignty to a common authority representing the whole—a "Union Now" plan. (When Clarence Streit's [see sketch

LOTHIAN, LORD—*Continued*

this issue] book appeared he likened its importance to Adam Smith's *Wealth of Nations*.) He was also advocating Anglo-American cooperation in matters of sea policy, and an Anglo-American treaty of guarantee to France. Other alliances he found undesirable, however: "The alliance system is the murder-trap of the nations."

As a close friend of Lady Astor's (see sketch this issue) he was damned as a member of the Cliveden Set, but, like most of its alleged members, denied its existence. He was, however, a member of the Anglo-German Fellowship. In 1937 he was saying frankly that war was inevitable unless some adjustment was made with Hitler. He also thought France and England would lose the first few years of such a war unless United States aid came swiftly. Still, "I have always understood that it is a first principle of National Socialism to respect the political and economic independence of other races and peoples so long as they respect the independence of the Germans." Just before the *Anschluss* in 1937 he was being reassuring about Hitler's intentions toward Austria; in April 1938 he was said to have been instrumental in forcing Anthony Eden's (see sketch this issue) resignation from the British Cabinet, though he always denied it; it is rumored that he was the chief author of Munich. In 1939, however, he read or reread *Mein Kampf* and called for general conscription in England. Before war finally broke out he was one of those most anxious for the United States to amend her Neutrality Act.

When he was appointed Ambassador to the United States in August 1939, Lord Lothian immediately made himself popular with the American press by holding a press conference right after his first visit to the White House; by posing cheerfully for photographers with a black cat which strolled across his path; by showing an approachability and friendly informality attributed to few of his predecessors. He broadened the circle of Embassy guests, made contacts with New Dealers, was so often at the State Department that a few even criticized his visits as overfrequent. At first he declined hundreds of speaking engagements, though this did not prevent the late Senator Borah and Senator Reynolds (see sketches this issue) from attacking him as a British propagandist.

Lord Lothian's tact was invincible. As early as 1938 he had suggested that Britain make a payment on her War debt, and he still found it a good idea. He predicted that the United States would be the strongest power of the twentieth century; he named Abe Lincoln as his political saint; he admitted that the United States had won the First World War; he was grateful for the American Revolution as having shown Britain how to run her Empire better; Southern fried chicken was his "favorite dish"; his secret ambition was to be a Western orange rancher; he even

could flatter the American language by using such colloquialisms as "socking them in the nose!"

But he had another more serious job to do aside from making himself generally liked. In June 1940 Lord Lothian delivered commencement addresses at Columbia and at Yale after having been presented with honorary degrees by both universities. His speech at the Yale alumni luncheon which followed the latter address summarizes his attitude toward America's stake in the War as he had expressed it many times before and since: "The outcome of this grim struggle will affect you almost as much as it will affect us. For if Hitler gets our fleet, or destroys it, the whole foundation on which the security of both our countries has rested for 120 years will have disappeared. . . I am not concerned today to attempt to tell you what you should do in this grave matter. That is your business. But I am concerned that if and when the crisis arises you should not be able to turn on me and say, 'Why did you not warn us about these facts?'" He is responsible for the expression: "Britain is the United States' Maginot Line." He is convinced that in World War II Britain stands at "Armageddon and the battle for the Lord," and he considers the First World War "a successful war of liberation." As for Hitler, "what force alone constructs has neither permanence nor life." In July 1940 he believed that if Britain could hold out for two years the United States would be ready to enter the struggle; in August his country had won the "Battle of Britain"; in September he was begging for "more of everything—and quickly." In November King George VI conferred a knighthood of the Order of the Thistle on Lord Lothian in appreciation of his work.

Lord Lothian's three sisters live with their bachelor brother in Washington, and on the Embassy staff are more than a hundred people, including an expert on international law and four personal secretaries. As for Lothian himself, he is as famous for the great quantities of orange juice he consumes as for anything else. He is a Christian Scientist and hasn't touched alcohol in 25 years, but broadmindedly serves excellent wines to his guests. He spends an hour or two a day in religious reading, is a "good golfer" (he once tried for the amateur golf title in England), can pilot a plane and likes to drive his own car at terrific speed. His main social talent, he says, is the ability to tell the make of any car in the world merely by a quick glance at it as it goes by.

In appearance, "minus his spectacles, with his broad forehead and high-arched Roman nose, Lord Lothian looks like a Roman of some intermediate period a few centuries before Rome's sliding fall. That appearance is strengthened by the mildly indulgent character of his bulky frame—a respectable

paunch, the lazy slope of his broad shoulders. His family motto is the indulgent apposite *Sero sed serio*—'Late, but in earnest.'

LOUIS, JOE May 13, 1914- World's
heavyweight champion

Address: b. 550 E 61st St, Chicago, Illinois

Nobody wants to fight the "Brown Bomber." Eleven times Joe Louis (he doesn't use his surname Barrow) has successfully defended his heavyweight crown—a feat never approached by any other world champion titleholder—and at 26 remains the two-fisted terror of the ring. Fight-promoter Mike Jacobs, who owes his fame and fortune to the million-dollar gate drawer, is worried: the customers won't turn out unless some challenger can be found good enough to stand up under Joe's diabolical fists. When Max Baer, after downing Tony Galento (July 2, 1940) refused a bout with Louis, the desperate Jacobs decreed that the champion would defend his title but he couldn't say when or with what fighter. Fight fans think that Joe ought to fight the winner of the Bob Pastor-Billy Conn battle which was won by Conn on September 6, 1940. But that doesn't mean that Joe will meet real opposition, say these fans. He has already whipped Pastor twice; and Conn, a light heavyweight, isn't seasoned enough to face the devastating dead-pan of the champion.

The big Negro boy, whose phenomenal rise in three years of professional boxing made him the youngest champion ever to wear the world's pugilistic crown, was born May 13, 1914 near Lafayette, Alabama. His family lived in a one-room shanty set in the cotton fields. His father, Munn Barrow, a sharecropper, died when Joe was four; and his mother, Lilly Reese, took in washing to support her large brood of growing children. When Joe was seven she married Patrick Brooks, who transported his new family to Detroit, where he hoped to find work. But jobs were scarce, and Joe and his brothers sold papers, shined shoes and ran errands to get enough to eat. Then Joe got a real job as assistant to an ice-wagon

JOE LOUIS

driver: toting heavy ice, he says, helped early to develop his big shoulder muscles. At 16 he became a sparring partner in a makeshift gymnasium. There he learned to punch. But in his first local boxing bout he was floored six times in three rounds. His next three fights he won with knock-outs and became popular in Detroit sporting circles. At a tournament in Boston, however, he was thoroughly beaten by Max Marek, ex-football star; and later outpointed by Bob Evans. For a while after that he held a steady job in the Ford auto plant. He continued his boxing, though, and in April 1934, as an amateur, won the National A. A. U. light-heavyweight title in St. Louis.

Three months later he decided to become a professional boxer, taking the name Joseph Louis. It was Jack Blackburn, a Negro trainer, who saw the possibilities in the young fighter, taught him how to punch, and from that time has been the fighting brains behind Joe's natural gift for superb body coordination. After he won his first eight professional victories he became known as the "Brown Bomber of Detroit." Knocking out Stanley Poreda and Lee Ramage brought him national attention. Mike Jacobs, then an obscure Bronx promoter, took on Louis after James Johnston of Madison Square Garden had turned him down. When Joe became world champion, it was Jacobs who replaced Johnston as professional czar of American boxing.

After winning 22 professional bouts, Louis was signed in 1935 to fight Primo Carnera. His defeat of Carnera entitled him to the big battle with Max Baer, another former titlcholder, whom he took in four rounds. When he next knocked out Charley Retzloff in the first round, he became known as a killer who terrified all comers. Then came

LOUIS, JOE—*Continued*

a setback. In June 1936 he was matched with Max Schmeling—and the bets were ten to one on Louis. But in the twelfth round Schmeling blasted Louis with the first knockout he had taken since 1933. Matched with Jack Sharkey in a comeback bout, he won, and later downed Eddie Simms in 20 seconds after the opening bell. Bobby Pastor, who had studied how to keep out of Louis's reach, lasted 10 rounds with him.

Then Louis fought the titleholder, James J. Braddock, June 22, 1937. The "Brown Bomber" became the world's new champion when he knocked the great Irishman out in the eighth round of the battle. He had made the top in three years; he had also saved his earnings and was known as one of the richest boxers in history. He was matched in his first title-defense bout with the British heavyweight Tommy Farr, who went the 15-round limit with him. But Louis was declared winner on points. In a return battle with Max Schmeling, June 22, 1938, Louis found sweet revenge by knocking out the German in the first round. No one expected "two-ton" Tony Galento to last long with Joe in July, 1939—and at the end of the fourth round Tony, terrifically battered, went down. A far different opponent for Joe was the wily South American, Arturo Godoy, whom he fought in February 1940 to a 15-round decision, baffled throughout by the peculiar crouching, unorthodox boxing technique Godoy used. A return bout with Godoy in June drew a very small gate, however. This time Louis was ready for Godoy, and punched the South American into submission in eight rounds. "Toughest man I ever fought," said the laconic Louis. It was the eleventh successful defense of his crown.

Lacking the fighting character, temperament, vivid personality and intelligence of men like Dempsey or Tunney (see sketch this issue), Joe Louis owes his success to a magnificent physique and two equally fine fists—a natural fighting machine developed by a skilled trainer. Blackburn early taught him to use his hands, to get his body behind every punch. He is a "place" puncher—one of the best in boxing history. He is a flat-footed boxer who in training has been forced to step to drawn diagrams on the ring floor. Psychologically, his outstanding quality as a fighter is his murderous, dead-pan calm—a face that never betrays the cold, precisely calculated moves of the quick, muscled body. "Sometimes I get mad inside," Joe admits, "but I don't let nobody know about it." Actually most of the time he is bored by fighting and does it because he doesn't know how to do anything else.

Unlike Tunney, Joe Louis does not read Shakespeare. He refuses to read any books at all. But he does like the comic strips (his favorite is *Superman*) and movies, if they are about gangsters. He dislikes the theatre, politics, formal society, but thor-

oughly enjoys hot jazz, chiefly records by Jimmy Lunceford. When he plays a record he dances around the room with a phantom partner, grinning from ear to ear. He sleeps 12 to 14 hours a day. When not in training he drinks four quarts of milk daily and eats enormous in-between-meal snacks; in training, prodigious breakfasts and dinners, the latter topped off with a quart of ice cream. He has invested most of the \$1,500,000 he made in six years by knocking out white men at the rate of three-a-year, and owns two apartment houses, two homes for himself and family, a restaurant, a farm with prize cattle and hogs, a big black Buick (state license number KO) and 30 suits of clothes costing \$100 each. Swanky models in checks and plaids, with green predominating, are his favorites.

In 1935, two hours before his fight with Max Baer, he married Marva Trotter, a pretty young Chicago stenographer. Their marriage has been a bit less than idyllic chiefly because they dislike each other's friends: Marva is socially ambitious, has an expensive apartment and many furs and jewels, and enjoys formal gatherings, which bore Louis. His best friends are mostly his childhood playmates who, being poor, are a serious drain on his income; Marva calls them parasites. Joe's utter lack of snobbishness has endeared him to most people who know him. Asked his impressions when he once shook hands with Roosevelt he said, "I didn't think nuthin' of it." He is well liked even by his opponents in the ring and he is the idol of every Negro home in the United States. In Harlem hundreds of Negro children, cats and dogs are named after him.

The brains behind Louis, in addition to Jack Blackburn, are John Roxborough and Julian Black, also Negroes from the Midwest, who manage his business affairs, teach him manners and keep him out of trouble. They may have had something to do with his much publicized support of the Republican nominee in the Presidential campaign of 1940. They have taught him to speak politely of and to complement defeated opponents, and to keep away from strange females. Since they once discovered him driving his car at 90 miles an hour, he has been forbidden to drive and to pilot a plane. His mother has always been a big influence in his life; he bought her a fine home and often visits her. Because he likes animals and loves to ride horseback, he goes often to his 447-acre farm in Utica, Michigan. He has ideas of turning the place into a colored dude ranch, tourist camp and picnic grove. Most of all he'd like to retire there. "I been terrible lucky," Louis says, "and I don't want nuthin' to change."

LOW, DAVID Apr 7, 1891- Cartoonist
 Address: 3 Rodborough Rd, N. W. 11, Lon-
 don, England

"In one way war makes a cartoonist's work simple," says David Low, "because there is only one subject." In other ways it makes it harder. "Cartoonists have to be students and when they have to work ahead they also have to be prophets and to be a prophet these days is no joke." When Low does a cartoon for a foreign newspaper one month in advance he knows that "if Hitler doesn't do what I think he is going to do, I shall have to eat that cartoon. I may say that I have taken long chances on that fellow and haven't had to eat one yet. Perhaps it's because we're both artists."

To David Low the Second World War has meant harder work under more difficult circumstances. He feels strongly that "the defence of the decencies of life is part of a cartoonist's business and deflating the flocks of humbugs, hypocrites and incompetents that seem always to grow and flourish like the green bay tree in time of war." It has meant, too, working in black-out days without light; "my studio is all glass on one side but the light is dimmed by sheets of transparent paper stuck on to prevent my becoming a human pincushion if I happen to be there when a bomb drops in." Of course, there has been a lighter side to the War, too, for a cartoonist. Low likes to see and reproduce "everybody walking around with their little gas mask boxes on their shoulders, people with luminous

paint metals on their hats in the black-out, sedate suburbanites hopping out of bed and banging into holes in the ground at the sound of the siren's song."

Even before the War began David Low had "worthily earned the enmity of Hitler, Mussolini and their accomplices." It's been said that when Halifax (see sketch this issue) visited Berlin in 1937 to discuss vital matters with Hitler, the first half hour of his interview consisted of a violent harangue by the Führer on the subject of Low's cartoons. There have been pointed caricatures of Hitler by Low and a prize one of Hermann Goering dressed as a fat and sluttish Rhine maiden. Mussolini, Daladier (see sketch this issue), Franco, Stalin—none of Europe's leaders has escaped him.

Nor have his own countrymen fared any better. There is a famous cartoon in which Neville Chamberlain kneels at Mussolini's feet to wash his hands in the Mediterranean; there is the picture of a confused Chamberlain, standing in front of an ambulance with a stretcher addressing a group of well-fed wolves with a bone (Czechoslovakia) before them: "Excuse me, but did you hear a piercing scream?" Low gives Stanley Baldwin a look of porcine stupidity; he shows Halifax as "the horsefaced Englishman come to life." And he has created Colonel Blimp.

Colonel Blimp is a fat and pompous old gentleman with a walrus mustache who objects to change in anything, detests the working classes of all countries, sees "Red" influences upon all but himself and "makes even Neville Chamberlain look like a tool of Moscow."

Low's gift for caricature has been called the "greatest we have known in our time," and it is true that his pen has probably deflated more self-important leaders and stuffed-shirt statesmen than any in the business. Even though his material very often runs counter to the Tory opinions of Lord Beaverbrook (see sketch this issue), owner of the *Evening Standard* for which Low now works, still they are published, for "Low is not only more admired than any cartoonist in England, he is also more eagerly followed, by hundreds of thousands of people, than any political commentator."

Low works hard at his cartoons, every day. He starts at 8 a. m. by digesting the daily papers. Then breakfast is a political meeting, with the cartoonist, his wife and his two daughters thrashing out the news. After breakfast Low retires to his studio, where, "with much pacing and squirming and pipe smoking," he struggles to express a complex idea in a few vivid lines and a brief, usually wry, caption.

David Low, the son of David Brown and Jane Caroline (Flanagan) Low, was born in Dunedin, New Zealand. He got his start as a political cartoonist in 1902. He was 11 years old and drew a cartoon for the *Spectator* in his native town of Christchurch in New Zealand. It represented the local authorities

LOW, DAVID—*Continued*

as lunatics because of their reluctance to remove certain trees that obstructed traffic. David's mother wanted him to become a bishop and some people "scarred by his corrosive brush" have reason to regret that he didn't follow her advice.

Instead, after attending the Boys' High School in Christchurch, he did free-lance work. When he was 19 he went to Australia, where he got a job on the *Sydney Bulletin* and continued to do free-lance work as well. In 1919 David Low went to England. There he was political cartoonist for the *London Star* until 1927, when Lord Beaverbrook hired him for his *Evening Standard*. In 1920 he married Madeline Grieve Kenning.

During his years on the *Star* and the *Evening Standard* Low's cartoons have been seen in many journals and collections of them have been published in book form. In 1939 *A Cartoon History of Our Times* was published in this country with an introduction and text by Quincy Howe (see sketch this issue). In it Low traces the history of our times through cartoons on six main subjects—disarmament, collective security, the Far East, Spain, the Axis, and the British Empire. In it he shows brilliantly both his gift for caricature and his critical intelligence.

Low often draws portraits of himself, which show him a rather puckish-looking man with a slightly Shakespearean beard. He says that he grew the beard "just to pass the time. When I got home the youngsters wouldn't let me cut it off. I hate it but I'm a martyr to family life." Besides his distinguished beard Low also wears a large black hat and likes to smoke down cigars until they threaten to set his whiskers on fire.

In 1937 he visited America with his wife and children. Prudence and Rachael had looked forward all the way over to visiting Coney Island and eating corn on the cob. "But now that we've come all the way from England," said Low sadly, "they tell us it isn't the season." He did make one discovery, though. "Coming up from South America I discovered hot cakes and syrup. I propose to have them every morning the rest of my life."

LUHAN, MABEL DODGE (lōō'hän) Feb 26, 1879- Author

Address: Taos, New Mexico

One of the most discussed of American women writers, probably America's leading hostess to authors, stage and screen personalities, musicians, psychologists, sociologists—in fact every type of American celebrity—returned to New York in the winter of 1939 after a quarter of a century spent on her pueblo of adobe houses in Taos, New Mexico. She re-opened her literary salon at One Fifth Avenue, fashionable Greenwich Village hotel.

When Mrs. Luhan, then Mrs. Dodge, returned from Europe in 1912, she moved to General Sickles' house at 23 Fifth Avenue and for the next four years held court over the nearest approach to a Paris salon to be found in America. Such long dead "isms" as cubist painting, the I. W. W., anarchy, women's rights and birth control were freely discussed by such personalities as John Reed, Leo and Gertrude Stein, Hutchins Hapgood, Robert Edmond Jones, Walter Lippmann (see sketch this issue), Isadora Duncan, Lincoln Steffens, Amy Lowell and "Big Bill" Haywood. This period of her life is set forth with astonishing candor in volume three of her memoirs, *Movers and Shakers*.

These many years later her son, John Evans, a novelist in his own right, convinced her that New York needed a salon once more. She hoped to capture the bloom of the old ones, but found New York changed, although among the speakers for her "at homes" every other Friday night were Roger Baldwin, Mor-

MABEL DODGE LUHAN

ris Ernst (see sketches this issue), Thornton Wilder, Dr. A. A. Brill and John Collier.

She remained in New York only until March 1940, when she rejoined her fourth husband, a full-blooded Pueblo Indian, Tony Luhan, in New Mexico. At the present time she is doing no writing but plans further revelations in the future.

Among her books are four volumes of *Intimate Memoirs*, of which the first is *Background*; second, *European Experiences*; third, *Movers and Shakers*; and fourth, *Edge of Taos Desert*. *Winter in Taos* has been written of as follows: "Perhaps no book about the Southwest would have more to say than this one does to an outsider who hopes that he may some day live there." For an understanding of the enigma of both D. H. Lawrence and Mabel Dodge Luhan, her book, *Lorenzo in Taos*, is recommended reading. Mabel has recently been described as a "spry . . . brown-eyed grandmother with long graying bangs, horn-rimmed glasses, a thirst for new experiences."

LUNN, KATHARINE FOWLER See Fowler-Billings, K.

LUPESCU, MAGDA (lōō-pes'kōō) 1904- Exiled Romanian favorite

Called "the Cleopatra of the Near East" and King Carol II's (see sketch this issue) "uncrowned queen," Magda Lupescu has since the early '20s been "a king's favorite in the grand line of Du Barry and De Pompadour," perhaps both the best-hated person in Romania and one of the most influential women in history. In September 1940 she and King Carol were reported about to take up residence in Portugal after fleeing from Romania, the King's abdication in favor of his son Michael having been forced by General Ion Antonescu (see sketch this issue). With the former Minister of the Palace, Ernst Urdareanu, the couple were staying in Seville, Spain when, late in October, both Lupescu and Urdareanu were arrested. Accused of complicity in the assassination of Iron Guard leader Codreanu in November 1938, their extradition had been requested by the Romanian authorities. Meanwhile, back in Bucharest, Lupescu's home was being inspected by the public at 10 cents a head, and it was reported that its furnishings were to be auctioned off for the benefit of the families of slain Iron Guardists. It seemed that for Lupescu and King Carol there was to be no second idyll.

Officially Lupescu was born in Jassy in 1904; actually she is probably well into her forties. So much about her is rumor and legend that it is difficult to separate fact from fiction. The one thing about her that is surely more than legend is the famous flaming hair that might have been painted by Titian.

It has been said that her father was a Jew named Wolff (keeper of an apothecary shop, innkeeper, junk dealer or money-lender) who had been baptized and had changed his name to the Romanian equivalent—Lupescu. It has also been said that Magda took the name Lupescu only after becoming Carol's mistress. Everyone seems to agree that her mother was a Viennese Catholic, an "Aryan"; but Magda herself has been variously described as born and brought up in both the Roman Catholic and the Romanian-Greek Orthodox Church.

European

MAGDA LUPESCU

John Gunther says that she did not even know of her Jewish blood until she was grown and already infected with anti-Semitism, and that the discovery resulted in a great deal of conflict in her own mind.

Magda was educated in a convent and afterward married an army officer named Timpeano. One story, highly improbable, says that even before her marriage she had done a little glimpsing of King Carol from afar and was already dreaming of greater things. Another story says that she eloped with a colonel not long after her marriage, repented, returned to her husband and bore him two children, both of whom died. She may or may not have been a stenographer at one time.

It was in either 1921 or 1923 that Lupescu first met King Carol officially—whether in the “glass-domed Officers’ Casino at Bucharest” or in Sinaia, the summer capital of Romania, seems unimportant. The heir apparent to the Romanian throne was married to Princess Helen of Greece (a previous marriage to Zizi Lambrino, a commoner, had been annulled). He promptly fell in love with Magda, she with him. She quietly divorced her husband; he not so quietly alienated his royal wife, his royal parents and a large part of Romania’s aristocracy by his scandalous attentions to the beautiful Jewess.

It has been often said, however, that Carol’s love affair, one among many in the youth of “the bad boy of the Balkans,” was not so much the cause as the excuse for his banishment from Romania in December 1925. Premier Bratianu was his political enemy, according to this version of the event. After attending a royal funeral, King Carol met Lupescu in Milan, where he received a message from his parents which had been inspired by the wily Prime Minister. It

told him to return immediately to Bucharest without Lupescu or forfeit the succession. Angry, he sent a refusal; Bratianu wangled the council into accepting his “abdication”; and five years of exile followed. Upon the death of King Ferdinand, Carol’s young son Michael ascended to the throne, and Princess Helen divorced Carol in 1928. In the meanwhile King Carol and “Bibi,” as he called Lupescu, were living happily in a garden-enclosed stone villa in the Parisian suburb of Neuilly.

In June 1930 came King Carol’s famous musical-comedy *coup d’état*. With the support of Premier Maniu and his Peasant Party the royal exile flew back to Bucharest in a plane chartered by Elsie De Wolfe, American actress, and, meeting no resistance and not much surprise except in the foreign press, proclaimed himself King. The chief political casualty was his mother, Chief Regent Marie, whom the Peasant Party was very glad to get out of the way. Supposedly King Carol was to renounce Lupescu, become reconciled with his former wife. But things did not work out quite like that. In spite of all Prime Minister Maniu could do, rumor soon had Lupescu back in the country, and fact soon had the long-suffering Helen packing up and leaving.

Madame Lupescu was living quietly in a red brick villa at No. 2 Alea Vulpache, in the residential outskirts of Budapest—a villa with a large garden and chicken coops whose pedigreed inhabitants she cared for herself. In the garden of the palace grounds, though situated on the main street of Bucharest, was a smaller cottage, and sometimes she stayed there, too. More often she was in Sinaia with King Carol. She was notoriously discreet, seen by no more than a handful of people, never mentioned by the press, always claiming to be utterly disinterested in politics. But there were those who claimed that in reality she was head of the palace *camarilla*, had her own secret service, chose the people who filled the big jobs, decided what could and could not be done by Romania’s Prime Ministers—that she was, in fact, more Romania’s ruler than Carol himself and that her influence was ruining the country. Maniu, her enemy, was supposed to have lost his position as Prime Minister on her account, and he and his Peasant Party remained her enemies. The Fascist-minded, violently anti-Semitic Iron Guardists were also sworn to drive her out of the country, although at one time she had supported and worked with them.

Early in 1934 her *camarilla* was broken up after the assassination of Prime Minister Duca by the Iron Guardists, Titulescu having demanded its abolishment as the price of his entering the government. A new *camarilla* speedily took its place. Next the Iron Guard put Madame Lupescu at the top of its list for assassination, No. 2 on the list being Titulescu himself; and in May 1934 more than 100 prominent men were arrested, involved in a fantastic plot for her kidnapping and murder. The following month Maniu

threatened a peasant revolt (which didn't materialize) against "sinister Jewish influence at the palace," and in September 1934 he proclaimed: "As long as Madame Lupescu remains in Romania, nobody will be able to accomplish anything good. Through her meddling in politics, thirteen Governments and four elections have followed on each other's heels. Madame Lupescu is responsible for almost every evil in this country."

Whether or not Lupescu went into hiding during this period, with King Carol dodging out of town incognito in a battered old car when he wanted to see her, it seems very unlikely that she became the "stricken, pale creature with a haunted look" that some correspondents wrote piteously about. It was true that anti-Semitism in Romania was steadily growing, and she was its chief target. She received threatening letters; there were demonstrations at restaurants when she appeared; students shouted insults at her garden gate; peasants whispered: "A red-headed witch lives in the palace and lives off gold plates. We cannot even find straw for our hungry children." But in 1938 she told a British correspondent firmly that she had no intentions of ever leaving Romania.

Early in September 1940 it was rumored that King Carol had finally yielded to pressure and agreed to her expulsion from the country, preparatory to placing dictatorial powers in the hands of General Antonescu, Iron Guardist sympathizer who is supposed to have resigned as chief of the general staff as the result of Madame Lupescu's influence. With the abdication and flight of King Carol himself a few days later the famous couple were united once again, at least temporarily.

King Carol once said of Lupescu: "The truth about my little friend is that she is the other half of my being, the other half of my brain. The story that I renounced my claim to the throne because of her is a lie. I was compelled to leave Romania for purely political motives, because I was the enemy of graft and bribery.

"She stood by me as nobody else did. Her sympathy and understanding was a thing I was entirely unable to do without." It was reported, however, that Carol showed himself markedly indifferent to his companion in exile in Spain, hardly speaking to her.

Madame Lupescu's devotion to King Carol has never been questioned. Neither frivolous nor avaricious, she has persuaded King Carol to save his money (she herself is reported to own considerable interests in Bucharest banks, in newspapers, and in a foreign motor car company), has never given him any illegitimate children, has always been "the soul of discretion." Growing a little fat these days, sometimes she has been described as neither beautiful nor striking. But a correspondent in 1938 could still write of her as "tall and of remarkable beauty," with "large green eyes, a small

straight nose, delicately bowed mouth, full lips and a Greek profile." She speaks fluent French and German and a little English and has been both credited with and denied remarkable intelligence. Among the few qualities which no one has denied her are the great personal charm and commanding personality that have more than once swayed the destiny of a Balkan kingdom.

MCCORMICK, ANNE O'HARE Foreign correspondent; member of the New York Times editorial board

Address: b. New York Times, 229 W 43rd St, New York City; h. 326 Cherry Dr, Dayton, Ohio

Anne O'Hare McCormick must surely be one of America's most modest women. She does not appear in the current *Who's Who in America* or in the numerous women's biographical publications, nor does her own paper, the New York Times, know much of her personal life. When she received the citation of "Woman of 1939" from prominent women's organizations in the country, such as the American Women's Association, the New York Career Tours Committee (a composite of many American women's organizations) and the National Federation of Press Women, she said with characteristic modesty:

"I think the emphasis was on the year rather than on the person. A newspaper woman who specializes in international affairs is chosen for this award rather than a more distinguished representative of some other career, because in 1939 the interest of the world is focused on news. I have been moving around among thunderous events, and I have stolen some of the thunder."

Anne Elizabeth O'Hare was born in Wakefield, Yorkshire, England in the '80s, the daughter of Teresa Beatrice O'Hare, poet. She was educated at private schools in this country and abroad and has a B. A. degree from St. Mary's Academy near Columbus, Ohio. The University of Dayton awarded her an honorary LL. D., as did Smith College in 1939 and Elmira College a year earlier.

She became associate editor of the *Catholic Universe Bulletin* before she began work for the New York Times. As the wife of Francis J. McCormick, an importer of Dayton, Ohio, she acquired the background for her journalistic career when she accompanied him on many trips abroad.

In 1921 she timidly suggested to the New York Times that she would like to become a free-lance contributor and send back articles from Europe if this would not conflict with regular foreign correspondents. The Times gave her permission. From Italy she sent back stories on the rise of Fascism and Mussolini. At that time she was perhaps the first reporter to see that a young Milanese newspaper editor, lantern-jawed, hungry and insignificant, would attain world importance. She became friendly with him and obtained dozens of stories.

Since that time she has interviewed De Valera, Blum (see sketches this issue), Hitler, Stalin, Venizelos, Dollfuss, Stresemann, Schuschnigg and most of the important national leaders in the United States. She has covered national conventions in the United States, has made campaign surveys all over the country and has been "on the spot" for most of the post-War revolutions in the proteanlike capitals of Europe.

In 1939, during five "hair-raising" months, she traveled in 13 countries to study conditions and to obtain firsthand information. While she generally saw the leaders, it was her plan to rove over the country, chatting with farmers, small shopkeepers, mechanics—the people who could give her a cross section of the life of a country.

A tumultuous climax to her journeying was the day in early March 1939 in Huszt, Carpatho-Ukraine, where in a period of 27 hours she lived under three flags. That day Huszt, a town whose location would probably stump the most famous student of geography, made world-wide headlines. Anne O'Hare McCormick saw history in the making that day as a newly-born republic perished before it could draw breath. Hour after hour she cabled home what she was seeing. And it made a story of international significance. In the first two

months of 1939, studying the date lines of Mrs. McCormick's stories is enough to make one dizzy. "Although some dates have been omitted, her schedule was approximately this: January 1, Cairo; January 6, Jerusalem; January 13, Rome; February 3, Budapest; February 10, Belgrade; February 12, Vienna; February 17, Berlin."

Now in her 50's, "energetic, sparkling, short, red-haired" Anne McCormick, "dressed not smartly but with taste and a sense of style," has managed to be in places where things were happening.

Practically every European chancellery has been invaded by the New York Times reporter. She is greeted by her colleagues with, "You're here again! What's going to happen now?" This question might well have been put to her on the day she was in Rome when Chamberlain came to see Mussolini—on the day she visited Parliament in London when Chamberlain, apprehensive over Germany's ominous attitude toward Poland, abruptly cast aside the "policy of appeasement."

"Crises were popping all over Europe at the time," explains the matter-of-fact Mrs. McCormick, "so it isn't strange that I bumped into a few." Her tramping over Europe has given her "greater knowledge of post-War Europe than almost any other woman possesses."

When asked about her rules for interviewing figures of state, she says that she never takes notes, as it might distract them. She treats important figures as human beings and does not expect information on their political views. If they have important statements they are not given to reporters, but rather are held for public speeches. The interview is valuable only for the opportunity to study personality.

Before she went to see Mussolini she read (in her halting Italian) the then new *Law of Corporations*, a thick and imposing legal volume. Mussolini asked her what interested her most in Italy and she replied: "The new law for the corporate state." When she admitted that she had read it, *Il Duce* smiled, extended his hand, rose and said: "My congratulations; you and I are the only ones who have!" Naturally there was no difficulty in seeing him after that.

Any woman has a difficult time becoming an outstanding journalist—for it is commonly supposed to be a "man's world." To become outstanding on the New York Times is even more difficult because that paper has "remained a man's preserve." In 1936 Anne McCormick attained a new high in feminine achievement by being made a member of the then eight-man board of the editorial writing staff, sitting in conference with the board which "decides the policy of America's most influential paper."

Mrs. McCormick has written *Hammer and the Scythe: Communist Russia Enters the Second Decade* (1928). It received excellent

ANNE O'HARE MCCORMICK

reviews. Dorothy Thompson (see sketch this issue) said of it: "Mrs. McCormick has an eager eye, a delightful talent for noting significant details, and an active intelligence which plays upon all that she sees."

In 1937 Anne McCormick won the Pulitzer Prize for European correspondence. She was the first woman to be awarded a major Pulitzer Prize in journalism. All these honors have left her still a very modest woman. Sometimes she appears on the lecture platform and on the radio. After journalism, her hobby is art. When she lived in Ohio years ago she was one of the directors of the Dayton Art Museum, a post she still holds, although Dayton has not seen this globe-trotter in some years. In New York she lives quietly at a hotel. Certainly a quiet place should appeal to a woman who remembers a tea one afternoon in Palestine with the District Commissioner of Jerusalem—a tranquil, beautifully served tea in the best British tradition. Afterward the official walked with her through the delightful garden to the road where her taxi was waiting. They stood on a low stone wall chatting, and then she took her leave. Twenty minutes later the wall was blown to bits by a time bomb set the previous night and ominously ticking away the minutes under her feet as she made her leisurely adieux.

MACCORMICK, AUSTIN H. Apr 20, 1893- Penologist

Address: b. Osborne Association, 114 E 30th St, New York City; h. 9 Gracie Sq, New York City

On January 15, 1940 Austin Harbutt MacCormick resigned from the position of commissioner of correction for the city of New York to become executive director of the Osborne Association, Incorporated, a privately supported organization whose aim is to promote more effective methods of dealing with adult criminals and juvenile delinquents.

He knows prisons and prisoners at first-hand and through long experience. In his last year at college he became interested in the work of Thomas Mott Osborne, advanced penologist, and wrote a commencement address on modern penology. Immediately after graduation he had himself locked up in the Maine State Penitentiary at Thomaston, booked as a forger. MacCormick picked half a dozen lifers, most of them in for murder, as his particular cronies and cultivated them assiduously. They were the aristocrats of the prison and had the most to offer an earnest young investigator. He stayed in prison a week, seeing everything there was to see, and when he came out described the prison as "a disgrace to the state" and declared that conditions were "worse than barbarous."

Again he served a voluntary prison sentence, this time with Thomas Mott Osborne, as a deserter. They were investigating the naval prison at Portsmouth, New Hampshire under the direction of the Secretary of the Navy. Shortly after they had made their report to Washington, the United States went into the War and MacCormick joined the Navy. After a commission as ensign he was assigned as executive officer to Osborne, then commander of the prison. From July 1917 until May 1921 they worked to make it the ideal expression of their theories, an institution without walls, one in which the inmates shared in the prison government.

Just before going to Portsmouth, MacCormick had married Gertrude Albion, daughter of a Universalist minister in Portland, Maine. He and his wife lived with Commander Osborne during the reformers' terms of duty there. "On and off duty, Osborne dominated their lives, talking about his theories, reading poetry to them, playing the piano to them. MacCormick regarded Osborne as his spiritual father, and considers himself today to be Osborne's spiritual heir and successor."

In collaboration with Paul W. Garrett, as field representatives of the Osborne Association, MacCormick visited all the prisons and reformatories in the United States except three, in 1927 and 1928. The two investigators reported their findings in the 1929 edition of *The Handbook of American Prisons and Reformatories*. The *Handbook*

includes complete descriptions and critical comments on all the institutions visited by the authors.

Going to the United States Bureau of Prisons as assistant director (1929), he assisted Sanford Bates in the introduction and initiation of programs of probation, parole, social service and education, including libraries, in all the Federal prisons. He made an outstanding contribution to penology, and during the period of his service the Federal prisons became models for all state prisons and reformatories.

The Education of Adult Prisoners, which MacCormick published in 1931, is a book that ought to be under every warden's pillow. In 1927 and 1928 he made a study of educational and library work in American prisons and reformatories. He found the educational work in the penal institutions to be so limited that he soon realized that the principal task was not to describe what was being done, but to formulate a workable program demonstrating what could be done with adequate financial support and competent personnel. There are chapters on the aim and philosophy of education for prisoners, the teaching of illiterates, vocational education, the library as an agency of education, health education, class rooms, shops and equipment, etc.

From the United States Reformatory at Chillicothe, Ohio, where he was on temporary duty reorganizing the institution, Mayor La Guardia (see sketch this issue) called Mr. MacCormick, then acting superintendent, to head the New York City Department of Correction in January 1934. Welfare Island, the city penitentiary, was notorious for gambling, vice, political control and narcotic smuggling. One observer described it as a "country club gangsters," ruffians who led lives of incredible luxury and power, usurping the hospital quarters from which they had driven the really infirm, regaling themselves with costly food and drink, waited upon by obsequious prisoners and prison officials.

On the day that the Commissioner "raided" the institution, less than a month after his appointment, the institution tension ran high. The prisoners had been locked in their cells, improper privileges were suspended and a search was being made for drugs, weapons and other contraband. Nerves were on edge.

Commissioner MacCormick, a small wiry man, "almost frail looking" according to the *New York Sun*, but "a bundle of nervous energy," moved about briskly, and his "cold nerve and complete mastery of the situation was demonstrated when 800 prisoners filed into the mess hall for the evening meal. After a turbulent day in which he had experienced at least one narrow escape from injury, the Commissioner astounded his associates by walking into the big mess hall alone, unprotected.

"The men were seated at their tables. A big, husky guard turned pale at the gills when he saw the little Commissioner.

There was an ominous silence. Slowly, with measured tread, Commissioner MacCormick continued down the long hall, unmindful of the angry glances of the prisoners.

"Then two convicts broke into a slow grin. They recognized and appreciated such nerve. Their grins eased the situation. Others followed suit, and soon all the prisoners were smiling. 'Hey, Commissioner, how do you like us now?' one of the prisoners called. This brought laughter. The Commissioner smiled and continued his inspection."

In 1937 the outdated prison at Welfare Island was closed and the population moved up the East River to a new and modern institution at Ricker's Island. There was developed a model city institution, the largest in the world, with an intake of 25,000 men annually—an institution well-run, up-to-date, free from political and boss control.

During Commissioner MacCormick's administration a number of improvements in the New York City prison set up were inaugurated: segregation of prisoners, system of classification, a well-rounded medical program and a complete educational service, including a library of 10,000 volumes with a trained librarian in charge. From its former scandalous condition the Department of Correction was raised to a high standard of efficiency and integrity.

In 1935 Commissioner MacCormick was a member of the faculty at Columbia University, lecturing on criminology. In 1938, Georgia, the state famous for its chain gangs, called him to aid in working out a new penal system. He has recently been invited by four different states to help on widely differing penal problems.

Mr. MacCormick is an indefatigable lecturer, delivers innumerable addresses to prison conventions and other conferences, advocating the use of socialized and educational techniques in the rehabilitation of prisoners. He has spoken to many organizations, clubs and colleges and contributed articles on prison education, medical service, libraries, discipline, food problems and on various phases of delinquency and crime to periodicals and journals. In 1939 he was president of the American Prison Association, and is either an officer or director of many other organizations.

Mr. MacCormick, a blue-eyed, dark-haired, dapper, young-looking man, was born in Georgetown, Ontario, Canada, April 20, 1893. He was brought to the United States by his parents, the Reverend Donald (Scotch Presbyterian Minister) and Jean (Green) MacCormick in that same year. After he had been graduated from Bowdoin College, Brunswick, Maine (1915), he was an English instructor at that institution (1916-17) and alumni secretary (1921-28). The college awarded him an honorary Doctor of Science degree in 1934. He received his Master of Arts degree from Columbia Uni-

AUSTIN H. MACCORMICK

versity in 1916 and the Honorary Doctor of Laws was conferred by St. Lawrence University, Canton, New York, in 1937. In 1928 he was assistant for one year to the president of Bennington College, Vermont, in charge of fund-raising in New York City.

Mr. MacCormick has two children, Joan, 18, and James A., 16. On January 6, 1936, after having been divorced by his first wife during the previous year, he was married a second time—to Mrs. Patricia Welling of New York City.

He takes his work—and himself—very seriously, and yet has a reputation as a humorous after-dinner speaker. His conviviality serves somewhat to disguise his real, evangelistic self, as does also his deadpan expression, which enables him to see everything while appearing not to see anything.

He places great confidence in prisoners, and has cultivated the ability to talk with them on an equal footing without letting them lose sight of the fact that he is not one of them. He is said to have talked with more prisoners than any other man in the country. Many of them look him up when they get out, and he does what he can to help them. He keeps his wardrobe thinned down to bare essentials, most of the time, by giving away suits and other clothing to ex-convicts who come to see him.

Many disillusioning experiences have not soured his faith in the ultimate success of rehabilitating prisoners: of making them over, to some extent at least, substituting decent for twisted viewpoints and ambitions by means of healthy activity, vocational training, education, work, reading, the careful segregation of the mentally and physically abnormal who need specific treatment, and case work with the families of prisoners.

MACCRACKEN, HENRY NOBLE Nov 19, 1880- Educator

Address: President's House, Vassar College, Poughkeepsie, New York

For over 25 years Henry Noble MacCracken has been the president of Vassar College. For over 25 years he has spread his doctrines of liberalism throughout the school he heads. To him any sort of ivory tower attitude is out of place on the campus: "the modern college must lead in defining moral and social objectives."

This college president who has done much in his life to further the causes of democracy believes that "it is the moral obligation of a college in a democracy to teach democracy." Since this can best be done through living, "the college becomes a laboratory for democracy, through conference, through discussion, through voicing its ideals and through organizing all activity in committees democratically formed."

Both the students and faculty have, in these many years, responded to Dr. MacCracken's ideas and ideals. Today Vassar is one of the leading liberal women's colleges in the United States. Today it is equipped to teach its students all those subjects which make for successful living in a democracy.

Students and faculty alike have responded, too, to the quiet charm of Dr. MacCracken's personality. It has been said that one of his most striking characteristics is "his capacity for understanding exactly how an

undergraduate feels." He is with these undergraduates a good deal. He likes to browse around the campus with them; he takes parts in their plays; he joins the faculty in baseball games against the students. After dinner in one of the campus houses he often reads poetry aloud; he goes with the Student Association on picnics and there cooks steaks and sings amusing songs in several languages. Dr. MacCracken is a rather shy man, but "despite his shyness there is a great deal of warm friendliness in his manner."

Dr. MacCracken's progressive ideas about women's education and his beliefs in equal opportunity for women, as well as his many publications, have made him one of America's outstanding educators. Yet he had no intention of becoming an educator at all, despite his family background. His father, Henry Mitchell MacCracken, was for many years Chancellor of New York University; his elder brother, John Henry MacCracken, was at one time president of Lafayette College.

Henry Noble MacCracken was born in Toledo, Ohio, the son of Henry Mitchell and Catherine (Hubbard) MacCracken, and almost from the time he could read "always wanted to be an explorer." When he was eight he won as a prize a copy of Nansen's book on the first crossing of Greenland, and his desire for travel and adventure was sharply stimulated. To prepare himself he studied many languages.

In 1900 Dr. MacCracken received his B. A. and a Phi Beta Kappa key from New York University and tried to get himself some sort of an exploring job, or a position with a scientific expedition. He was unsuccessful and as a sort of compromise went to the American College at Beirut in Syria to teach English. He stayed there for three years and while there wrote his first book, *First Year English* (1903). In 1903 he was offered the position of dean, but his health had been weakened by a bad bout of typhoid and his father came to take him home to regain his strength.

By the time he returned to America Dr. MacCracken had discovered that he loved teaching and that this, rather than travel, was going to be his life work. He went back to New York University to get his Master's Degree and then went on to Harvard, where he got both his M. A. (1905) and his Ph. D. (1907). He has since been awarded an LL. D. by Smith College and by Brown University.

Right after Dr. MacCracken got his Ph. D. he was married to Marjorie Dodd of New York and spent the first year of his married life as a John Harvard Fellow. Then, in 1907, he became an instructor in English at the Sheffield Scientific School of Yale University, staying there as instructor and assistant professor through 1913. During these years there appeared his second textbook, *English Composition in Theory and Practice* (1909), written in collaboration with others; he was author or

HENRY NOBLE MACCRACKEN

part author of *An Introduction to Shakespeare* (1910), *Minor Poems of Lydgate, Part I* (1912), and *The College Chaucer* (1913); and he edited *The Serpent of Division* (1911).

From 1913 until 1915, the year in which Dr. MacCracken went to Vassar, he taught English at Smith College. Here and since he has continued to publish books—in 1927 appeared *Ten Plays of Shakespeare* and *John the Common Weal*; in 1934 Part II of the *Minor Poems of Lydgate*. Always his main fields have been Chaucer and Shakespeare, though his interests have been as wide as literature and the world.

When, at the age of 35, Dr. MacCracken went to Vassar, the first question he was asked was: "Where do you stand on the issue of suffrage?" He answered calmly that he had no doubts that women should vote. In the same calm way he has continued to take the lead in the liberalization of women's education and in progressive teaching, changing the curriculum and the methods of presenting it whenever necessary.

Today Dr. MacCracken looks more like the head of a bank or a prosperous businessman than a scholar and college president. "He is tall and somewhat heavily built," and his manner is quiet and emphatic. "In conversation he talks freely with a smile in his eyes; often, but not always, in rather involved phrases. His writing, by contrast, is simple and direct."

Who's Who in American Education

MCCULLERS, CARSON Feb 19, 1917-
Author

Address: c/o Houghton Mifflin Co, 432
Fourth Ave, New York City

The most highly praised and widely discussed work in fiction to be published during the summer of 1940 was *The Heart Is a Lonely Hunter*, a first novel by a 23-year-old Southern girl. Critics in general agree that Carson McCullers, considering her youth, has written a remarkable story. Since it goes well beyond the "promising" stage of competent first novels, her future output will be watched with unusual interest.

Written with symbolic and realistic variations on the theme of human loneliness, *The Heart Is a Lonely Hunter* concerns a group of people in a small Southern mill town. The realism, natural and convincing, centers around Mick Kelly, tomboy girl in a down-at-heels family of several children. The girl's awkward, intense adolescence, her driving dream of being a musician and her healthy physical growing-up are handled with a tough-minded yet tender touch. The symbolism hangs upon the mystical deaf-mute, John Singer, whose Christ-like, apparent serenity invites the secret soul-confidence of the story's other characters. He is more of a focal-point than a personality; but his strange, maternal-like affection for another deaf-mute, the fat, greedy, mentally dull Greek, Antonapoulos, is strongly reminiscent of the relationship between Steinbeck's (see sketch this issue) George and Lennie in *Of Mice and Men*. Other characters in the book have come obliquely out of Faulkner or Caldwell (see sketch this issue).

The theme is the plot: the hungry search of these people for an escape from individual loneliness, for self-expression and for identification with what each most idealizes in human living. The author claims for her novel a larger intention: "The book is a parable in modern form, and the fundamental idea is ironic. Indeed it is a story of Fascism, but it must be understood that the word is used here in its very broadest terms and that it deals with the spiritual rather than the political side of that phenomenon." Very few readers will get any idea from the story that it is about a struggle between Fascist and anti-Fascist forces in the human soul. As Clifton Fadiman says in his review of the book: "On this level, it's a failure; Miss McCullers simply hasn't got what such a myth takes. On the simpler level, it's a story with an extraordinary obsessive quality, eerie and nightmarish, yet believable."

The author's style supports her realism, but is not adequate to the purposive symbolism. The book, she says, is a parable; and indeed the opening sentence is parable-styled: "In the town there were two mutes and they were always together." Beyond this, however, the writing is alien to that of the parable or myth. Nor does the narrative follow the direct narrative form the

CARSON MCCULLERS

parable demands. But as a whole *The Heart Is a Lonely Hunter* has a cool power and violence rare in so young a writer's work; it shows a precociously exact command of significant incident; and its characters as a group are much superior to the symbolic theme the author wishes upon them.

Carson McCullers was born in Columbus, Georgia on February 17, 1917, the daughter of Lamar and Marguerite (Waters) Smith. Her father's ancestors were French Huguenots who came to this country to escape persecution; her mother's people were from Scotland. "I have been writing since I was 16 years old," she says. "After finishing high school very early I loafed for almost two years before getting off to New York and to school again. I began to write at about this time. For several years before then my main interest had been in music and my ambition was to be a concert pianist. My first effort at writing was a play. At that phase my idol was Eugene O'Neill and this first masterpiece was thick with incest, lunacy and murder. The first scene was laid in a graveyard and the last was a catafalque. I tried to put it on in the family sitting room, but only my mother and my eleven-year-old sister would cooperate. My father, who was startled and rather dubiously proud, bought me a typewriter. After that I dashed off a few more plays, a novel, and some rather queer poetry that nobody could make out, including the author.

"When I was 17 I went to New York with the idea of going to classes at Columbia and at the Juilliard Institute. But on the second day I lost all my tuition money on a subway. I was hired and fired from various part-time jobs and went to school at night. But the city and the snow (I had never seen snow before) so over-

whelmed me that I did no studying at all. In the spring I spent a great deal of time hanging around the piers and making fine schemes for voyages. The year after that *Story* bought two of my short stories and I settled down to work in earnest."

She married Reeves McCullers in the fall of 1937, and before returning to New York she and her husband lived for two years in North Carolina. There Mrs. McCullers worked on *The Heart Is a Lonely Hunter* and for recreation took long walks in the woods or played the piano and listened to phonograph records. She and Mr. McCullers are now living in New York City in an apartment lined with books that reveal her tastes: Dostoevsky, Marcel Proust, James Joyce, Thomas Mann, Thorstein Veblen among them. She is much interested in the refugee problem, and feels deeply about the refugee children. "Although we have awfully little money," she says, "we talk about adopting a refugee child from France. We feel we should give one a home, if only for a few years, until the parents get a fresh start. Or perhaps one whose parents are lost." It is reported that Carson McCullers' new book on which she is hard at work will be about the refugees. During the summer of 1940 she was awarded a fellowship at the Bread Loaf Writers' Conference, Middlebury, Vermont. In August she sold a novelette to *Harper's Bazaar—Reflections in a Golden Eye*. After running serially it will be published in January 1941.

Carson McCullers has been told that she looks like a cross between Garbo and Slim Summerville, and she doesn't seem to mind.

MCDANIEL, HATTIE June 10, 1898-Motion picture actress

h. 2177 W 31st St, Los Angeles, California

In March 1940 Hattie McDaniel was given an award by the Academy of Motion Picture Arts and Sciences for her perform-

ance as Mammy in *Gone With the Wind*, the first Negro ever to win an "Oscar." She had wanted the part badly and when it came her turn to be tested she just "opened her heart and let the tears flow out." There were no more Mammy tests after that, for Selznick put her under contract at once.

Her latest rôle, in *Maryland*, confirms the fact that the Hattie McDaniel who once took in washing is in the movies to stay. She was the thirteenth child of a Baptist minister, Henry McDaniel and his wife, Susan (Holbert) McDaniel, born in Wichita, Kansas on June 10, 1898. While she was still a baby her parents moved to Denver, Colorado and she was graduated from the public school there and spent two years at the East Denver High School. It was in Denver that fame first came to her, when she was 17 and sang over the radio with Professor George Morrison's Orchestra. At 18 she won a gold medal from the Women's Christian Temperance Union for reciting *Convict Joe*.

Immediately she plunged into her stage career, playing the entire South for the Shrine and Elks Circuits. Then she got on the Pantages Circuit and headlined it in 1924 and 1925. They began to call her "the colored Sophie Tucker" and the "female Bert Williams." She was writing her own act, too. When bookings were slow she would get herself a job in somebody's kitchen until things picked up.

Things looked worst the time she arrived in Milwaukee, without money and with no prospects for a job. All she could get was a place as maid in the ladies' room of Sam Pick's Suburban Inn. But one night, after all the entertainers had left, the manager called for volunteer talent from the help. Hattie sailed right out of the ladies' room and launched into *St. Louis Blues*. She got herself a job starring in the floor show and stayed there for two years until she decided to try the movies.

In 1931 Hattie McDaniel arrived in Hollywood and began the rounds of the studios. She managed to get a few extra and atmosphere rôles, but not enough to keep going on, and in between she took in washing. But she didn't stop making the rounds of the casting offices. Finally she landed fairly good parts, the cooking and laundry jobs grew fewer and fewer and Hattie was seen on the screen more and more.

She appeared in *Judge Priest*, *The Little Colonel* and *Showboat*, in which she sang *I Still Suits Me* with Paul Robeson and another number with Irene Dunne. Work kept coming. *Saratoga*, *The Mad Miss Manton*, *Nothing Sacred* are only a few of the movies she was seen in. Meanwhile she got the rôle of Hi-Hat Hattie in a popular radio show and that of "Mammy" on the radio *Show Boat* coast-to-coast program.

Round-faced Hattie McDaniel has been married twice. Her first husband died and she was divorced from her second. Now,

HATTIE MCDANIEL

with her niece, she keeps house in Los Angeles.

MACLEAN, MALCOLM SHAW Jan 4, 1893- Educator

Address: Hampton Institute, Hampton, Virginia

The election of Dr. Malcolm Shaw MacLean as the sixth president (all have been white) of Hampton Institute, Negro educational institution, was announced May 7, 1940. Hampton Institute was founded in 1867 by the American Missionary Asso-

ciation which, being concerned with the fate of freed slaves, purchased a Civil War hospital in Virginia and with three teachers and fifteen students, started what was destined to become an outstanding college for Negroes. Today, with an endowment of \$10,000,000, Hampton Institute occupies 74 acres, has 139 buildings and an enrollment of 987 Negro students. It offers vocational courses in farming, business, teaching, homemaking and trades.

The new president, the son of Lester and Mary Dewey (Shaw) MacLean, was born in Denver, Colorado. He attended East Denver High School, then went to Hamilton College (1912-14) and received his B. A. from the University of Michigan in 1916. Immediately after graduation he married Marion Hastings Brown. Later he did graduate work, earning his Ph. D. from the University of Minnesota in 1929 and taking courses at Northwestern and Michigan Universities. But, writes Dr. MacLean: "A very large portion of my education has come from experience outside of the classroom as sheep herder, soda jerker, office boy, delivery boy, newsboy, librarian, tutor, sewer cleaner, gardener, carpenter and newspaper man."

Dr. MacLean's rise to fame in the field of education began as an English instructor at Northwestern University. After three years there he taught at the University of Minnesota for one year. Following an interval of newspaper work (editor *Laguna*, *California Beach Life*, 1920 to 1921, and successively copy reader, financial editor, night editor of the *Minneapolis Tribune* from 1921 to 1924) he returned to the University of Minnesota, staying for five years as student counselor and instructor. Then he became professor and later assistant director of the Milwaukee Center of the University of Wisconsin Extension Division.

In 1932 Dr. MacLean was appointed director of the University of Minnesota's General College, an experimental school for "misfit college students" once dubbed "Moron Hill" and "Capsule College" because it concentrated upon those students who were unable to meet the entrance requirements for other departments of the University and trained them in practical vocational fields. Under MacLean "The University of Tomorrow" has become one of the leading experimental colleges in the country.

In order to determine the effect of a college education Dr. MacLean made a survey, reaching the conclusion that: "It is appalling to discover that there are few, if any, observable differences, in other respects than earning power alone, between the graduates and non-graduates. . . They are culturally much alike: they listen to the same radio programs, read the same magazines, go to the same movies, feel much the same about their jobs and their families and their health, carry on the same, and for the most part, spectator types of recreations, and almost uniformly find democratic par-

ticipation in social and civic affairs dull as dishwater and comparatively unimportant."

From Dr. MacLean's work have come many publications. In 1930 he compiled *Men and Books* with E. K. Holmes, a collection of essays from various types of minds, on men and books as additional testimony to the use of reading. *Scholars, Workers and Gentlemen* (1938), an Alexander Inglis Memorial lecture delivered at Harvard, is a diagnosis of our educational ills which proposes cures and is "well conceived, rigorously and clearly presented" and "merits careful attention." Besides articles on college and adult education in periodicals, he has edited the *American General Education* series, including *Students and Occupations* (1937), *What About Survey Courses?* (1937) and *Income and Consumption* (1936 and 1937); and contributed to *Effective General College Curriculum* (1937), *The Rôle of the Library in Adult Education* (1937), *Write What You Mean* (1938), and other books.

Dr. MacLean is chairman of the National Committee on General Education; a member of the National Committee on Intellectual Freedom and Democracy; a member of the advisory board of the Institute of Propaganda Analysis; a member of the National Council of Parent Education, a member of its executive board (1936-40), vice-president (1938-39); Fellow of the American Academy of Political and Social Science.

Handsome, silver-haired Dr. MacLean is "sharp-eyed, square-jawed and dynamic." He writes us: "My hobbies are: first, fishing (my General College staff at Minnesota has just presented me with a magnificent deep-sea rod and reel to insure my recreation at Hampton Institute); second, gardening, with a particular passion for flowers in the blue ranges; photography, with a special bent toward what have come to be known as documentary pictures, particularly of human beings, supplemented by Kodachrome shots at great magnification of minute subjects (I have, for example, a shot of a mosquito on a house screen which, when projected, makes him six feet long in the body with a nine-foot wing spread and a business proboscis that looks like a canoe paddle); laying rock wall and doing stone masonry; and finally, reading vast quantities of detective novels. The only trouble with this hobby business is that I don't get time enough to do it. My chief business outside of education—particularly experimental education to try to make education make sense—is my home and family life with my three children and Mrs. MacLean. The eldest son is married to a lovely girl, has a small apartment in St. Paul, and is entering his sophomore year in medicine on his way to psychiatry. The second son is already a master photographer and is looking forward to getting his Ph. D in education, with training to enable him to be an interpreter to students of all the arts. My daughter, Mary Katharine, a sophomore at Stephens College, is putting in

Cheyne

MALCOLM SHAW MACLEAN

four or five hours a day at the piano. In consequence of all this, and particularly because he who experiments in education must work from dawn until dark and after six days a week, spend the seventh getting ready to work six more, there are not nearly enough hours in a twenty-four-hour day for all that I should like to do."

MACLEISH, ARCHIBALD (màk-lēsh')
May 7, 1892- Poet; head of the Library of Congress

Address: b. Library of Congress, Washington, D. C.; h. Farmington, Connecticut

Sometimes a writer or public figure who tries to keep his humanitarian outlook free of intellectual bias or partisanship becomes, ironically, the storm center of that partisan controversy he decries. This has happened more than once in the career of Archibald MacLeish. A poet who believes in public speech by poets, the head of the Library of Congress who believes that a library must in all ways serve the public, MacLeish found himself once again the subject of public attack following his address May 23, 1940 before the Adult Education Association.

This was a speech condemning the pacifist attitude of the younger generation in America, its lack of belief in the "final things for which democracy will fight," its apparent lack of conviction that "Fascism

Washington Press-Photo Bureau

ARCHIBALD MACLEISH

is evil and that a free society of men is good and is worth fighting for." The responsibility for this attitude MacLeish placed upon the writers of his own generation who knew the last War: books like Dos Passos' (see sketch this issue) *Three Soldiers*, Hemingway's *Farewell to Arms*, Aldington's *Death of a Hero*. These words against war, he said, were written by honest men with great skill, but they have borne "bitter and dangerous fruits." MacLeish, who himself felt as these writers did and wrote as they were writing, now feels that what they wrote "was disastrous as education for a generation which would be obliged to face the threat of Fascism in its adult years."

By many people this latest attitude of MacLeish is regarded as a startling about-face for the author of *The Fall of the City* (1937) and, particularly, *Public Speech* (1936); for the chairman of the 1937 Congress of the League of American Writers, a Left-wing organization; and for the active speaker in defense of Loyalist Spain. Most writers and critics agree that his attacks upon such books about the last War are unjustified. They feel that the widespread general skepticism among youth is not the result of reading Hemingway and Dos Passos (many of them never have done so) but derives from the same causes that produced the books in the first place; youth is by no means convinced that this time it would be fighting for a "free society." Ernest Hemingway replied to the attack by saying: "If the Germans have learned how to fight a war and the Allies have not learned, MacLeish can hardly put the blame on our books." Edmund Wilson represents a further viewpoint. At this moment of excitement, he said, it does not create reassurance to hear the Librarian of Congress

talking about "dangerous" books, saying that "certain kinds of writers should be discouraged from giving expression to certain kinds of ideas." And the League of American Writers has issued a protest stating that MacLeish's address, "however it was intended, does suggest censorship and censorship is an instrument of Fascism. Coming at this critical moment, it gives aid and comfort to those reactionary forces which sought to block Mr. MacLeish's appointment as Librarian of Congress."

MacLeish's speech was a continuation of an attack previously launched from another angle in a speech before the American Philosophical Society on April 19, 1940, printed in an article, *The Irresponsibles* (*The Nation*, May 18, 1940), censuring scholars and writers for their blindness, their failure to recognize the peril that is Fascism. This was later published in book form. Hitherto divided, scholars and writers must unite in one profession to "defend the disciplines of thought." Critics of MacLeish have replied that it is not the words of writers which have caused a revolution, or a Hitler; that the real failure of liberals and intellectuals has been their inability to unite on common ground in defense of the ideals of democracy: while they argue and disagree, a united Fascism conquers. The present quarreling and dispute over MacLeish's statements might be taken as a case in point.

MacLeish pursued the theme of the militant writer in the keynote speech made during October 1940 at the tenth annual New York *Herald Tribune* Forum. The rise of Fascism has made necessary the mobilization of all resources, material and spiritual, for the defense of democracy—it is a mobilization of which American writers and artists are a part. But their function is to defend themselves not by interrupting their lives but by fulfilling them through creating for the future.

When President Roosevelt, in 1939, decided to appoint Archibald MacLeish, whom he termed "a scholar and a gentleman," Librarian of Congress, MacLeish became the target of considerable controversy. The House rafters rang with opposition: he was known as a fellow-traveler of the Communist Party, had spoken on the same platform with Communists, had defended Loyalist Spain. To the attack leaped the American Library Association, headed by Milton J. Ferguson: the most important library in the world needed for its head an experienced library administrator, not a mere poet. But scholars and writers in general, and some librarians, applauded the appointment. Dr. Herbert Putnam, MacLeish's predecessor, warmly listed his qualifications: "There is first the Scot in him—shrewd, austere, exacting, but humorous. There is the poet in him—whose stuff is not made of mere dreams but of realities. . . There is the humanist, keenly sympathetic to all that calls for social sympathy. The lawyer—trained to analysis through deter-

mination of exact issues. The soldier—pledged to duty under discipline. The athlete—pledged to fair play. And finally there's the orator—capable of vivid and forceful speech."

Archibald MacLeish is not the man to take an important job on sinecure terms. He believes the burden of education has fallen upon libraries, and he has a dream of the library as a vast, popular, people's information service. Practically, his plans included the listing of some 1,800,000 unrecorded volumes in the main catalog of the Library of Congress; the creating of 50 new positions in the processing division; the getting of books at the copyright office at the time they go to reviewers; seeing about raising the disgracefully low salaries of library workers—under \$2000 a year—a reflection of the general salary level of librarians throughout the country. As head of the Library of Congress, MacLeish has thus far proved himself a man of energy, insight and real executive ability. But lovers of poetry—many critics consider him the most significant poet of our time—hope that he may also continue the work that he has temporarily been forced to put aside.

Archibald MacLeish was born May 7, 1892 in a wooden chateau overlooking the waters of Lake Michigan at Glencoe, Illinois, son of Andrew and Martha (Hillard) MacLeish. His father was a Scot born in Glasgow, one of Chicago's early settlers and a successful merchant; his mother was a Connecticut woman who taught at Vassar College. A normal, democratic American boy, "Archie" MacLeish hated the fashionable Connecticut preparatory school to which he was sent. At Yale he led an active undergraduate life. He was on the football and swimming teams (he was a water polo player and diver and still performs creditably on the springboard); he was editor of the *Literary Magazine* and made Phi Beta Kappa. He says he went to the Harvard Law School to avoid having to go to work: he led his class there, but never liked law. At Harvard, however, he won the lasting friendship and admiration of Felix Frankfurter. He married Ada Hitchcock of Farmington, Connecticut in 1916 while still in Law School.

During the War MacLeish was with the field artillery in France, later rose to the rank of captain at Camp Mead. He writes that in the War he won no distinction "but the fact that my brother, Kenneth, had been a great flier and had been killed." After the War he taught for a year at Harvard, then successfully practiced law for three years in Boston. But MacLeish never wanted to be a lawyer; he wanted to write poetry. So in 1923—the year he says his "real life" began—the MacLeishes went with their two children to live in France, in or near Paris. They also cruised for a time on the Mediterranean and spent one spring in Persia. MacLeish was greatly influenced, technically, by French poetry:

Laforgue, Rimbaud, Valéry. His earliest writing showed also the influences of Eliot and Pound. Between 1924 and 1928 he had published four books of verse. After his return to America he went, in 1929, to Mexico to gather background material for his long narrative poem, *Conquistador*, following by pack mule the entire route of Cortez to the Valley of Mexico. It was *Conquistador* that won for him, in 1932, a Pulitzer Prize.

In order to support himself and his family, MacLeish variously taught, lectured and took on jobs in journalism. In 1930 he began writing for *Fortune*. A writer-editor of *Fortune* has no easy task; but his associates on that magazine were amazed at MacLeish's energy and capacity for organizing his work. "He would come to the office in the morning at nine, get through a prodigious amount of mail, tell his researchers just what he wanted and where to get it and then write graceful, forceful prose until five in the afternoon." He wrote almost all of the Japanese issue of *Fortune* in two months' time; and every article save one collected in the book, *Background of War*, was written by him. From 1938 to 1939, prior to his appointment as Librarian of Congress, MacLeish was curator of the Nieman Collection of Contemporary Journalism at Harvard.

The head of the Library of Congress may find recorded in its catalogs some 15 books of his own verse. Critics of contemporary American poetry have been interested in tracing MacLeish's development from the personal or private in subject, romantically colored and highly imitative early work through a transition period in which he developed a more objective, historical outlook, to the later powerful lyrics and verse-plays with a keenly developed, critical social viewpoint. *The Happy Marriage* (1924), a sonnet sequence on marital love, in the romantic tradition, was followed by *The Pot of Earth* (1925), showing the marked influence of Eliot's *Wasteland*. *Streets in the Moon* (1926) was unimportant except for the notable long poem, *Einstein*; but in *New Found Land* (1930) MacLeish had perfected his own technique, best illustrated in the lyric, *You, Andrew Marvell*. This book brought him critical acclaim, and *Conquistador* (which he personally now likes least of his books) a much wider audience. It describes the conquest of Mexico as narrated by Bernal Diaz, an old fighter under Cortez, an epic of greed full of dramatic and colorful imagery. MacLeish's shift to the realism of social protest came in 1933 with the publication of *Frescoes for Mr. Rockefeller's City*, satiric poems on past corruption in American life and various aspects of the contemporary scene. MacLeish's humanitarian conscience was in evidence here; yet because the evidences of health in America that he saw and his ideals for it were apart from organized partisan movement, Michael Gold and other Communist critics bitterly attacked the

MACLEISH, ARCHIBALD—*Continued*

book. But MacLeish kept on the way that seemed right to him. He felt that he had something to say, but needed a larger medium than the lyric for saying it. Accordingly he wrote *Panic* (1935), a play in verse on the bank crisis, in which the rôle of the proletariat versus capitalism was shown. Produced three times, it received on its third night, from an audience of poorly paid clerks, laborers and unemployed, such an ovation that MacLeish said, much moved, "Now I have found my audience." He was convinced from then on that a poet must face the real world, that he cannot shut out public matters and concentrate on personal matters, that the significant poet is one who employs a "public speech." In his book, *Public Speech*, he projected his image of mankind:

"The brotherhood is not by the blood
certainly:
But neither are men brothers by speech
—by saying so:
Men are brothers by life lived and are
hurt for it."

Because he felt that the radio could be, for the poet, a means of reaching a great audience, MacLeish wrote *The Fall of the City*, first performed by the *Columbia Workshop* in 1937. This play against the coming of Fascism was followed in 1938 by *Air Raid*, less effective as poetry, but more strongly anti-war. *Land of the Free* (1938) was another experiment in media: the America of strikes, dust bowls, depressions, sharecroppers, told through a series of fine photographs with an accompanying verse-commentary. *America Was Promises* (1939), his most recent poem, is another "public speech," a call to Americans for action before the "others" (Fascists) take over. Leaner in effect, weaker as good verse than his previous writing, the poem at the same time forecast MacLeish's attitude as expressed in his speech before the American Association for Adult Education, condemning the pacifist stand.

John Chamberlain (see sketch this issue) has said that MacLeish may seem to have wavered between various Leftist ideologies, but he has never deviated from democratic and humanistic values. Independent, courageous, he is not easily influenced; as a man of great personal charm and conviction, he often influences others. His manner is quiet, forthright, wholly without pose or affectation. His voice, his quick, boyish grin, his crisp hair that shows little gray make him look much too young to have grown-up sons; his wife, Ada, blonde and vivacious, looks even younger. The MacLeishes like people and have varied friends and interests; but they like to spend as much time as possible on their farm near Conway, Massachusetts.

MCNARY, CHARLES LINZA (măc-nă'rē
lîn'zà) June 12, 1874- Senator; 1940 Republi-
can Vice-Presidential candidate

Address: b. United States Senate, Washington,
D. C.; h. Salem, Oregon

When Senator Charles Linza McNary, "best lubricator and trouble shooter in the Senate," was nominated by the Republican National Convention as Wendell Willkie's (see sketch this issue) running mate, he accepted the nomination philosophically: "I am grateful for the confidence reposed in me by the convention," he said, "but I wish they had imposed the chore on someone else. However, I am a good soldier and will do the best I can."

"Geographical considerations apparently played a major part in the decision of party leaders to pick me," he explained further. The tall, slender Senator from Oregon, representative of the West and farming interests, did, to the Republicans and much of the country, present a perfect complement to Mr. Willkie, representative of the East and business interests. Willkie is a public utilities man—not much of a recommendation in the West; McNary is against public utilities. Willkie is strongly for reciprocal trade treaties, McNary is against them; Willkie is weak in practical political experience, McNary, who has been in the Senate 23 years, is "serpent wise in politics."

Although there may have been occasional doubt whether the combination of Willkie and McNary was a correct one, there was complete unanimity on McNary's qualifications for the Vice-Presidency. In 1936 McNary was frequently mentioned as a Republican Presidential candidate and the late Senator James Couzens of Michigan offered to put up \$100,000 to start a campaign for him. But McNary scotched that idea. On the back of a Senate restaurant menu he scribbled a

message one day and sent it across to Couzens:

"The presidential bee is a deadly bug
I've seen it work on others.
Oh Lord protect me from its hug
And let it sting my brothers."

McNary was mentioned for the Presidency and nominated to the Vice-Presidency because of his enormous popularity—a press gallery poll once chose him as the most popular Senator—because of his liberalism, because of his pro-farmer activities, because of his political wisdom.

In his campaign speeches, McNary credited the Roosevelt Administration with "certain social gains" but attacked it for its defeatism, "stop-gap" farm legislation. He conceded defeat on the election night before his running mate did and promised to give "Mr. Roosevelt and his associates a worthy and vigilant opposition."

As minority leader of the Senate since 1932, Senator McNary has been called "the best political catalyst in the Republican ranks." In these years he has often strayed from the conservative fold, but he hasn't incurred the dislike of conservative Republicans. In early New Deal days his job was a hard one, for his party was divided and the voters back home wanted no party politics and little opposition to the President's program.

McNary tried to dissuade Republican headquarters from launching broadside attacks on the Roosevelt program and refused to participate in the 1934 Republican campaign because he considered it too anti-Administration in tone. From 1933 to 1935 he voted with the New Deal nine times and against it seven. He voted for the Wagner Act, the National Recovery Act, bills for additional funds for TVA, old-age pensions, additions to the appropriations for the Department of Agriculture. His only speech in the Senate in Roosevelt's first term was a 15-minute defense of the Social Security Bill, in which "he exhibited willingness to go further than Roosevelt had gone."

However, Senator McNary is a long way from going along with Roosevelt and at times has attacked his proposals strongly. It was he who moulded the Senate minority into a potent opposition and his strategy that handed the New Deal its most crushing Congressional defeat when the Supreme Court Reform Plan was introduced. Instead of rushing in to attack it, McNary withdrew to a secluded spot and imposed silence on his fellow Republicans—a tough job. "Let the boys across the aisle do the talking," he would say, "smiling dreamily as he shot his cuffs." The boys across the aisle did, and it was the Democrats who took the headlines in the Supreme Court debates and finally defeated the plan.

In 1938 McNary urged drastic revision of the Federal farm labor and social security statutes. He pleaded for government economy and the return of relief administration

CHARLES L. McNARY

to the states. In 1939 he took a leading part in the fight for cuts in the President's relief fund request. Always he has opposed revision of the Neutrality Law and has been firmly against Roosevelt's reciprocal trade treaty policies. In 1940 he went so far as to say that the New Deal had forced on the people "a temporary depression as a permanent way of life."

When the New Deal is working for the farmer, however, McNary is right along with it, for he is one of the staunchest supporters of agrarian interests in the Senate. Among the farmers he is said to have "a more genuine backing than any other member of his party." He first appeared as the hope of agrarian organizations in 1926 when he sponsored the McNary-Haugen Farm Bill which would have permitted the government to sign contracts with grain growers to sell abroad at lower prices than in the home markets and to receive recompense through an equalization fee paid out of a tax bill. This, the most radical measure to pass a conservative Congress, was twice vetoed by Calvin Coolidge.

McNary's belief that "substantial support must be given to the farmer," is only one plank in a program he advocated in 1938 for the Republican Party. He advocated, first of all, that it be "progressive," continuing many New Deal policies. He advocated more economy and decentralization in the handling of relief; clearer definition of the laws against monopoly; simpler forms of taxation; and a "conduct of international relations that will maintain American rights with a minimum of risk of embroilment in foreign wars."

Even though there are a few Republicans who don't go along with McNary in his ideas and proposals, he is still the most effective minority leader the Republican

MCNARY, CHARLES L.—Continued

Party has seen for many years in the Senate. "Mild and pleasant in manner, invariably cheerful and rarely losing his temper," he is no drill sergeant who maintains discipline by whipcracking methods. His cloakroom negotiations are always skillful—so skillful that he is often called into consultation by factions of the Democrats. After all these years he has many firm friendships which include "blown-in-the-bottle old line Republicans, rampant progressives, New Dealers and unreconstructed and bellicose Southern Democrats."

McNary, the "best-liked man in the Senate and its ablest parliamentarian," has been a Senator since 1917. He was born on June 12, 1874 on a farm near Salem, Oregon which his grandfather, an emigrant from Tennessee had tilled. When he was four his mother died and his father a few years later. His eldest sister Nina was left to rear a family of nine children.

After high school in Oregon, McNary entered Leland Stanford University in 1896, but left after only two years, in 1898, the year he was admitted to the Oregon Bar. He went into the law office of his brother, the late John H. McNary, and stayed there until 1913 when he was appointed a justice of the Supreme Court of Oregon to fill an unexpired term. In 1915 he stood for election to the Court but lost out by one vote. When his friends urged a recount, he said: "To hell with it."

The next two years McNary acted as chairman of the Republican State Central Committee and in 1917 was appointed to the Senate to fill a vacancy. In 1918 he was elected to a full term and has been re-elected every six years since then. In Oregon he has become a "political tradition," a man who was able to carry his state in 1936 when Roosevelt won the electoral college votes.

When sandy-haired, impeccably-dressed Charles McNary first came to the Senate in 1917 a curious reporter asked him what he was interested in. "Nuts," said the Senator. He meant filberts. He has twenty acres of them on his farm five miles north of Salem, Oregon, as well as extensive orchards of walnut, cherry and pear trees. Whenever he can get away from Washington Senator McNary hurries with his wife, the former Cornelia Morton, whom he married in 1923 (his first wife died many years ago) and his adopted daughter, Charlotte, to his farm, famous as a bird sanctuary, a laboratory for horticultural experiments and the home of the largest prune grown, the Imperial, which Senator McNary developed himself.

MACNEIL, NEIL Feb 6, 1891- Newspaperman

Address: b. New York Times, 229 W 43rd St, New York City

Neil MacNeil has found time to write a book on journalism despite the fact that he is in the hurly burly of active newspaper work. As assistant managing editor of the *New York Times*, MacNeil has put the paper to press five nights a week for ten years. He knows the business of putting out a newspaper from A to Z; he knows the problems of the reporter, the editor, the mechanical departments and the business office.

And he has explained them all in a remarkably clear and interesting book, *Without Fear or Favor*, published March 1940. To the layman the book performs a real service in taking him behind the scenes of a business that may seem complex and puzzling to him. To the student of journalism it should prove a valuable, informative handbook. For MacNeil knows whereof he speaks, and speaks honestly.

News background and news problems have been a life-time study to this "tall lantern-jawed Scot who looks like a football coach." He has a vast reading background of history, economics, sociology, government. He has studied news-gathering problems at firsthand on visits to most of the news centers of the world. Born in Boston, Massachusetts, February 6, 1891, he was graduated in 1912 from St. Francis Xavier University, Nova Scotia. Before coming to the *Times* in March 1918 he had already served as city editor for two Montreal newspapers (*Gazette* and *Daily Mail*), as well as serving during the World War in the trade test division of the personnel department of the United States Army. Since the fall of 1914 he has thus had a major rôle in the coverage of every important story, and he continued this while becoming, successively, assistant telegraph editor, head of the city copy desk, foreign editor, night city editor and in 1930, assistant managing editor of one of the world's most important newspapers.

In all these 28 years of experience, handling hundreds of thousands of stories, MacNeil is proud to be able to say that there has never been a libel action on any story written, edited or directed by him.

N. Y. Times

NEIL MACNEIL

MacNeil is proof of the fact that the modern successful newspaper man is not the whisky-guzzling, swearing "tough-guy" portrayed in popular movies and plays. As the author remarks in his book: "The city staff of the metropolitan newspaper is a smooth, fast-functioning machine, one of the most competent of this age of efficiency. The reporter and his city editor are quiet, capable and educated gentlemen."

The city staff of tomorrow's metropolitan newspaper will be an even more efficient machine, by the way, if a prediction made in MacNeil's book comes true. He forecasts two newspapers for every home, one carrying local news exclusively, the other a worldwide newspaper edited at one central office and transmitted by sound photo to key cities throughout the country for simultaneous distribution.

In addition to his regular newspaper work and occasional free-lance writing, MacNeil sandwiches in time somehow for his hobbies of walking, golf and travel. He is also a former governor of the New York Athletic Club, former president of the Clan MacNeil Association of America and a member of the Dutch Treat Club.

In 1920 he married Elizabeth Quinn. They live in Forest Hills, Long Island, and have three children Mary Rose, Nancy and Neil, Jr.

MCNUTT, PAUL VORIES July 18, 1891-
Administrator Federal Security Agency

Address: b. Federal Security Agency, Washington, D. C.; h. 3025 N. Meridian St., Indianapolis, Indiana

In 1925, when Paul McNutt was dean of the Law School of the University of Indiana, his cronies at card games frequently heard him say: "It would be kind of nice to be President of the United States, wouldn't it?" In 1940 the dream came close to reality as his backers got busy rounding up votes for the Presidential convention. McNutt's candidacy however hinged entirely on Roosevelt's decision about the third term, and in the middle of the convention he dropped out as a possible candidate with a plea for the nomination and election of President Roosevelt.

"Tall, tan, terrific" Paul McNutt, known as a democratic glamour boy, was born in a simple frame cottage at Franklin, Indiana, the son of John Crittenden and Ruth (Neely) McNutt, third-generation Indiana residents of Scotch-Irish descent. He was a delicate, only child whose mother liked to dress him in Lord Fauntleroy suits which promptly made him the target for the town's rougher boys. In high school at Martinsville, Indiana, he was president of his class, pitcher on the base ball team, organizer of a dramatic club and founder of a school publication. Entering Indiana University in 1909, he continued to exercise his amazing ability to achieve leadership by becoming editor of the campus paper, class president etc. It is interesting to note that his rival for campus leadership was a radical student named Wendell Willkie (see sketch this issue). As a student McNutt was conservative and "something of a snob."

After he received his B. A. in 1913 his family obtained a loan on their home in order to send him to Harvard to study law. His father, at 76, is still a lawyer at Martinsville and is a former state judge. For a few months after Paul received his degree from Harvard in 1916 he practiced law at home, but his keen eye was searching the horizon for more exalted work. In the summer of 1917 he enlisted in the army and emerged with the rank of major, although he saw no overseas service. He married Kathleen Timolat of San Antonio and they have one daughter, Louise, a student at Indiana University.

After the War McNutt became a professor at Indiana University in the law department, and was made dean of the law school at the age of 34—youngest dean in the history of the law school. While dean, McNutt showed an interest in the local American Legion Post of which he was a charter member. With his ability to organize and assume leadership, he won the post commandership, later the state command, and finally the national command (1928-29), although many of the delegates wanted a commander with overseas experience.

PAUL V. MCNUTT

As commander he became known in every state and especially in Indiana. Although a Democrat in a strongly Republican state, his American Legion experience pointed the way for the Governorship and in 1933 he was elected. As Governor he instituted progressive legislation and "plucked the state from a bad economic and civil crisis." He was appointed United States Commissioner to the Philippine Islands in February 1937, and left that post in 1939 to become Federal Security Administrator in Washington.

On December 3, 1940 he was designated by the President as "coordinator of all health, medical, welfare, nutrition, recreation and other related fields of activity affecting the national defense." The new duties will not affect his status as Federal Security Administrator.

Jack Alexander in an article in the magazine *Life* describes him thus: "He is conscious of his bodily grandeur—his six-foot-two of height, his 195 lbs., his pale blue eyes and umbrageous black brows—and has got more out of a head of platinum hair than any other American, barring possibly the late Jean Harlow. . . . He smokes menthol cigarettes, reads detective mysteries, drinks moderately, plays poker and shoots golf in the 90's. During a campaign he sleeps four or five hours a night and dozes sitting upright in an automobile speeding 75 m. p. h. from one engagement to another."

MALTZ, ALBERT (mältz) Oct 28, 1908—Author; playwright

Address: c/o Little, Brown & Co, 34 Beacon St, Boston, Massachusetts

The discipline of literary economy which the theatre imposes on the playwright has, presumably—and certainly this is true of the writings of Albert Maltz—a carry-over effect in the execution of a good short-story. Maltz is concerned with that one-third of a nation that is ill-fed, ill-clothed and ill-housed, and he proceeds with what Michael Gold calls the emotion of identity—"no mere slummer's pity . . . but a fraternalism that becomes an identification and a philosophy. . . . These are his people, and what happens to them also happens to him. . . ."

Albert Maltz was born on October 28, 1908, in Brooklyn, New York. His parents had come to America as immigrant children: his father, Bernard Maltz—who began as a grocer boy and became a contractor and builder—from Lithuania; his mother, Lenz (Sherry) Maltz, from Poland. He attended public schools and then entered Columbia, where he majored in philosophy, was elected to Phi Beta Kappa and was graduated in 1930. He studied playwriting (1930-32) at Yale under George Pierce Baker. And in October 1931 he and George Sklar, neither of whom had been able to ignore the social effect of the Tammany machine, were set upon turning out a play which would arouse intelligent indignation.

Their *Merry-Go-Round*, with a good cast, opened on the following April 22, at the Provincetown Theatre in Greenwich Village.

Soon outgrowing Macdougall Street, it was scheduled to open at the Avon on May 3. But the Commissioner of Licenses had informed the Police Commissioner that the Avon had no license (nor did 100 of the 166 theatres in the city). A week elapsed before four city department heads com-

Talbot

ALBERT MALTZ

pleted inspection—and approval—of the building.

Merry-Go-Round was an indictment—implicit but sharp—of city government in New York; and the revelations of the Seabury Investigation which was taking place at the same time only strengthened its innuendoes. The play ran until mid-June; screen rights (*Afraid to Talk*) were bought by Universal.

The Theatre Union took *Peace on Earth*, a Maltz and Sklar anti-war collaboration, for its first production (1934); and in 1935 staged *Black Pit*, the tale of a young West Virginia coal miner who is forced by exterior circumstances to become a stool pigeon and is eventually trapped. For concentration of motif and clarity of projection it was decidedly good theatre. The best of Maltz's three one-act plays, *Private Hicks*, won first prize in the New Theatre League Contest in 1935 (see *Best Plays of the Social Theatre*, 1939).

Meanwhile he was writing short stories, seven of which were later collected in 1938 under the title, *The Way Things Are. Man on a Road* (*New Masses*, January 8, 1935), said to have been reprinted in more labor journals than any other piece of American fiction, loomed into the forefront at the time of the silicosis investigations by Congress (January 1936), because of its startling resemblance to the testimony of the tunnel-diggers from Gauley Bridge, West Virginia; and *Season for Celebration*, a novelette laid in a Bowery flophouse on New Year's Eve, was included in *The Flying Yorkshireman*, a Book-of-the-Month Club choice for May 1938.

The Happiest Man on Earth, a study of unemployment's most corrosive effects on the morale of young men, brought Maltz first prize in the 1938 O. Henry Memorial

Awards. It moves with the same nervousness that underlies the central character's quiet but reckless eagerness to regain a few comforts for his family.

His first novel, *The Underground Stream*, was published June 26, 1940. It is a story about a Communist automobile worker in Detroit. "It might, with a few minor changes, have been about an early Christian martyr," according to Lewis Gannett.

Maltz married Margaret Larkin of New Mexico in 1937, and they live with their son Peter in New York City. He is an instructor of playwriting at the Writing Center, School of Adult Education, New York University, and is a member of the Council of the Author's League. He has taught at summer writers' conferences at Boulder, Colorado.

MANDEL, GEORGES (măn-děl) June 5, 1885- Former French Minister of the Interior

First on the list of civil trials at Riom in 1940 was the name of Georges Mandel, former French Minister of the Interior noted for his "deadly" efficiency. M. Mandel was charged with treason—plotting with Great Britain "against the security of France"—and with general guilt in having brought France into World War II. A further indictment accused him of "corruption in speculating in the value of the franc." Since the Riom prosecution would have very much enjoyed making an outstanding example of him, it must have been somewhat embarrassing for Pétain (see sketch this issue) that his enemy had already been acquitted of the treason charge before a military court at Meknes, Morocco, where he fled after the Armistice in an attempt to rally the Colonial Army in North Africa to continue the fight against Germany as Britain's ally. Rumors that M. Mandel had

Wide World

GEORGES MANDEL

sent bulging *dossiers* abroad with which he could "blow the lid off" the French situation could not have made the Vichy government more comfortable, either.

The man whom Clemenceau once called "not conspicuous, but very serviceable," was born in France on June 5, 1885. His name was originally Jeraboam Rothschild. The first anyone seems to have heard of him was when he appeared in the offices of Clemenceau's *Aurore* in 1904, "rather pale, with wide-awake, searching eyes, the nose of a gourmet or a hunter, and a thin, scornful mouth," and asked for a job on the newspaper. "You are an ugly rat," the Tiger is supposed to have said. "So I can see in that mirror," replied the stranger, pointing to the glass opposite Clemenceau. The latter, with his instinct for making use of other men's talents, eventually recognized in Mandel a "bloodhound, a conscientious agent, a Jack-of-all-trades," and hired him. He ended up by nicknaming him "mon ami Pierrot," telling him he would never learn how to write, but not to mind, just to remember: "A subject, a verb, a direct object. When you have to use an indirect object let me know."

For after all, if the "solemn, peremptory" Mandel couldn't write, there were other things he could do. Reporting on the Moroccan situation, for instance, he could collaborate with the more literary M. Albert, dictating to him "with the look of a chief mourner." (Clemenceau had told Albert jokingly: "Mandel, who would know everything if he knew how to write, will give you the ideas.") But it was really true that Mandel was as remarkable for his erudition as for his devotion to the Tiger. And although when Clemenceau became Minister he didn't make his protégé a member of the

Cabinet, Mandel served in Sarraut's Cabinet later, and after Sarraut's resignation his association with Clemenceau became permanent. The Tiger treated him roughly, made jokes about him, but never deserted him; Mandel in turn spent much of his time amusing himself sadistically by reading the most critical portions of Clemenceau's "press" aloud to his chief, but was unswervingly loyal.

During the First World War, when Clemenceau was made Premier, Mandel became his *chef de cabinet* (1917-20), and his power was almost unlimited. Leaving Clemenceau's mind free for matters more military and international, he virtually took charge of France's domestic policy during the War as well as preparing her post-War domestic policy of unity against Bolshevism—the elections of 1919 were his work—and, although dozens of deputies pleaded with the Tiger to get rid of him, the requests were always refused. Mandel also served as Clemenceau's private secretary with unusual powers, had his own secretary, a luxuriously appointed house.

In December 1919 Mandel was elected deputy and general counselor from the Gironde. He also ran for Mayor of Souillac, but when, in January 1920, Clemenceau was defeated for the Presidency, he renounced any career outside of Parliament. It had been generally (and often hopefully) hinted that Mandel would vanish when Clemenceau did, but instead he became "a sort of invisible Richelieu, an *éminence grise* behind the scenes," during the early '20s leader of the *Bloc National* and a bitter enemy of the Socialists and those Radical Socialists who had withdrawn from it.

He kept making enemies both Left and Right, however, by his manner—in public "peremptory, harsh and aggressive"—by his sharp and skillful tongue, his love of recrimination, his refusal ever to yield a point to an opponent, his infallible memory for everything others would prefer to forget. He in turn was as scornful of popularity as he was of criticism, made his way by will power, a quick intelligence notable for its clarity and logic, an unfailing instinct for making himself useful to great men and a love of complications for their own sake that sometimes passed for expert diplomacy and sometimes for complete lack of principles.

In 1924 Mandel was defeated for deputy and not re-elected until 1932, but this did not lessen his power. A word to the left, a word to the right, intervention from the Tribune of the Chamber, and Briand was overthrown through his influence; in 1930 he was reported, to be "the man behind Tardieu" and was surely "the most hated and most slandered person in France."

In 1932, when he was re-elected, he became president of the Independent Group in the Chamber, also president of the Commission of Universal Suffrage—an office which he had held before in 1929. By 1934

it was being said of him: "It is certain that in this period of Fascism he remains one of the most amazing Parliamentary figures. He loves Parliament in so far as he despises it and feels able to dominate it. But he loves it sincerely." And almost in the same breath he was still being called such names as a "jungle beast without heart or nerves," a "magnificent sadist."

Up to November 1934 he had steadily refused any formal office. When Flandin became Premier, however, he accepted the position of Minister of Posts and Telegraphs, and in the Bouisson and Laval (see sketch this issue) Cabinets of June 1935 and in Sarraut's of January 1936 he continued to hold this office. He could have the wires of both his political friends and enemies tapped indiscriminately, and there seems to have been little doubt that he did. Even Flandin, it was said, couldn't outwit Mandel's listeners; and although Mandel's information on the "secret life of the Third Republic" must already have been encyclopedic, it became even more formidable. No one has accused him of being inefficient, however. He went in for reform—removed the personnel of his department from labor union politics, took commercial advertising out of broadcasting, improved radio programs, encouraged progress in television, initiated a highly efficient information and messenger service for the benefit of telephone subscribers.

About this time, as Mandel himself put it, the Franco-Soviet Pact was creating alarm among many Nationalists because they feared it might encourage the French Communist Party. "Their hostility, which was shrewdly stimulated by foreign propaganda, grew more intense when the French Communists took steps to weld the Popular Front." As an Independent Republican in the Chamber, a former member of the commission investigating the Stavisky affair, Mandel had a certain prestige with the Rightists. He persuaded many of their most influential members that any attempt to introduce Fascism by a *putsch* would bring on civil war, with the masses in an anti-Fascist mood. In April 1938, when he became Minister of Colonies in Daladier's (see sketch this issue) Cabinet, he insisted that no commitments be made in London contrary to the Franco-Czech and Franco-Soviet Pacts. He had never been accused of any tendencies toward German appeasement, even though his sympathies during most of his career might have been said to be with the Right and at times he had even been suspected of authoritarian leanings; and as a Nationalist deputy he had exposed the secret rearming of Nazi Germany. Now he was counted by Hitler among the more notorious "Franco-Russes," assailed by certain factions on the Right as "a sinister devil in the pay of the Jews, seeking to erect a Jewish-dominated France on the ruins of the Fatherland."

As Minister of Colonies, Mandel created colonial armies in preparation for the conflict which he foresaw; united them under the first colonial chief of general staff; fortified French Indo-China with anti-aircraft guns, coastal batteries, improved harbors; initiated public works there; expanded the light industries and the production of coal, tin, rubber, iron and rice. He thought that Daladier was for a policy of resistance and was intending to get rid of Bonnet. But before Munich, in protest against French policy, he resigned from Daladier's Cabinet. Soon after Munich, Italy, with her eyes on the Suez Canal, was holding anti-French demonstrations. The Suez Canal Company adopted "an intransigent position." Announced Mandel, sardonically: "Now we can feel safe. The Suez Canal Company is going to save the honor of France—with dividends as usual, of course!"

Reinstated as Minister of the Interior in March 1940, after Reynaud (see sketch this issue) succeeded Daladier as Premier, Mandel worked for the fullest possible collaboration between France and England. He said: "France—the France of Richelieu, of Danton and of Clemenceau—has never failed in a test of will." In May he ousted many officials for the safety of the French State. When France seemed on the verge of defeat he was one of those who advocated the merged Franco-British State proposed by Churchill (see sketch this issue), and was one of the strongest opponents of Pétain's armistice decision—perhaps because he knew more about the potential military strength of the French Colonial Empire than any other statesman. During the first 24 hours of Pétain's rule he was arrested while sitting with a general and a lady in a Bordeaux café. He was charged with hoarding arms to overthrow the Pétain government. Although released a few hours later with apologies, he refused to shake hands with Pétain. Shortly afterward he escaped to Morocco on the steamer *Massilia*, and it was in Meknes, Morocco, that he was acquitted of the charge of treason. It was necessary to bring him back to Riom for the second trial, and in France the news of his previous acquittal was suppressed until October 1940. The more recent charges of "corruption" were possibly based on the rumor that "Rothschild's fortune and Mandel's wiles were pooled for their joint benefit." Mandel has no great fortune, however.

Georges Mandel is described as a "pale, slender man" with "a sharp profile, dangling arms and a generally well-groomed appearance." At the Château Chazeron he was described as complaining about the cold, about his teeth. Confinement is not good for his disposition.

MANN, ERIKA (män) Nov 9, 1905-
Author; lecturer

Address: b. c/o Farrar & Rinchart, Inc, 232
Madison Ave, New York City

Of all the political refugees from Hitler's Germany perhaps one of the most vocal and articulate is Erika Mann. From lecture platforms and in writing she has exhorted against the barbarism of the Nazi dictatorship and painted graphically the state to

which the Hitler régime has reduced the Germans.

The daughter of Thomas Mann, the famous novelist (Erika and her brother Klaus are sometimes called "the Mann brats"), Miss Mann was, like her father, expatriated for her frank criticism of the Hitler régime. After the fall of 1936 she made the United States her home and traveled the length and breadth of the land delivering lectures. In the summer of 1940 she was in besieged London, doing journalistic work, helping with the evacuation of refugees, and broadcasting to the German people through the BBC. She came back to the United States in October 1940.

Erika Mann's early ambition was to be an actress, and she was, in fact, on the stage until the advent of Hitler turned her mind toward politics and made her a crusader for freedom. She was born in Munich, November 9, 1905, the eldest of the six children of Thomas Mann and Katja (Pringsheim) Mann. Despite the poverty of the First World War years (she tells of going barefooted from spring to fall because there were no shoes) Erika had an idyllic childhood. She and her five brothers and sisters spent the summers at their Tolz house and winters in Munich. There were amateur theatricals with the children of Bruno Walter, who was the Mann's neighbor in Munich, and never-to-be-forgotten hours when their father read them stories and they heard the manuscript of *The Magic Mountain* and the *Joseph* novels as they were being written.

Erika remained in Munich until she finished school. First she attended the backward Bavarian high schools from which she and her brother Klaus (see sketch this issue) had to be transferred because their relations with anti-Republican schoolmates and teachers became so strained. Next she attended a progressive type of school near Heidelberg. But all through her school days she took no interest in politics. As Miss Mann told an interviewer in America: "I was of the mistaken opinion that politics was the business of the politicians and that people should mind their own business. A lot of us thought so; that's why Hitler came to power."

When she left school she went to Berlin to study for the stage under Max Reinhardt. After a year in Berlin she went to Bremen and later to Hamburg. On the stage in Hamburg she met a young Left-Wing actor, Gustaf Gründgens, whom she married. When Hitler began gaining power Gründgens turned about face and became a Nazi, and later was elevated to the managership of the Berliner Staatstheater. Although she was no Jewess, Miss Mann divorced him and returned home to Munich. She acted at the Staatstheater there.

Even while she was still on the stage Miss Mann's restless energy manifested itself in outside activities. She traveled around Europe in an automobile-driving contest, driving 1,000 kilometers (621 miles)

a day, completing the trip in 10 days and telephoning reports to the newspapers from all stopping places. She won first prize for Ford in the competition and got the car as a keepsake.

She was already writing little articles and stories at this time. *Rundherum* (1929) was a book which she and her brother Klaus had written recording their around-the-world journey. She wanted to act in plays she had written herself, and *The Pepper Mill* was an outgrowth of this.

The Pepper Mill, a political-literary revue which Miss Mann had founded and produced, had just opened in Munich when Hitler became Chancellor of the Reich. *The Pepper Mill* lampooned the Nazis, but nevertheless it was still playing to capacity audiences when the Reichstag was burned, and it stopped only when Hitler's regent, Von Epp, appeared in Munich and the Nazi flag was hoisted on public buildings. Erika had to flee.

The elder Manns were in Switzerland on a holiday, and the Mann children telephoned them advising them to stay a while longer because "the weather in Munich was unpleasant." The next day they left to join their parents. That was March 12, 1933, and except for one secret night Erika Mann has not set foot in Germany again.

She went back once secretly to rescue the manuscript of her father's novel, *Joseph and His Brothers*, which had been left behind when Thomas Mann thought he was merely going off for a few weeks' holiday. The Mann house was being watched and the Nazis had forbidden the transfer of any of the Mann possessions. But Erika, wearing peasant costume and dark glasses for disguise, stole into the house, spent a few hours inside in total darkness and stole out again with the manuscript under her arm. The manuscript was with the tools under the seat of her car when she crossed the German border.

After she left Germany Miss Mann took *The Pepper Mill* through Holland, Switzerland, Austria, Czechoslovakia, Belgium and Luxembourg. It had 1,043 performances before it was banned after German government protests and an organized gas bomb riot in Zurich. The theatrical venture cost her her citizenship, but she was already English through her marriage in 1935 to W. H. Auden, the British poet, who, like herself, was an ardent anti-Fascist.

When Miss Mann came to America in 1936 it was her second trip to this country. The first time she came in the winter of 1927-1928 she took the United States more or less for granted. When she came with her family in 1936 it was after their voluntary exile from their own country, and she saw the United States anew as an example of the democratic way of living.

Miss Mann has appeared on the lecture platform jointly with her father, who occupies a chair at Princeton University, and with her brother Klaus, and by herself.

ERIKA MANN

Tall, dark, with closely-cropped hair, she is a vital figure. Her charm, and her tact in handling questions endear her to audiences. If she has turned from acting to writing and lecturing, she has nevertheless brought something of the appeal of the stage to the lecture platform with her eager, intelligent and tremendously alive personality.

Although she had had her start as a writer in Europe and had just published a juvenile adventure story, *Stoffel Fliegt übers Meer* (1932), before she left Munich, her most effective writing has been done since she came to America and turned crusader for the cause of democracy.

Her *School for Barbarians*, published in October 1938, reported scathingly what was happening under Hitler to Germany's children and Germany's once fine educational system. The book was thoroughly documented and contained a preface by her father. When it was published she was in Prague ready to fight with the Czechs against Adolf Hitler's forces. By winter she was back in the United States again, telling her story from the lecture platform.

Her next book, published in 1939 with her brother Klaus as coauthor, *Escape to Life*, gave a picture of German emigration, not only that of the Manns, but of others who represented German culture in the pre-Hitler days.

Erika and Klaus Mann jointly published another book, *The Other Germany*, in January 1940, which was something of an apology for the German neglect of politics which the Manns declared made Hitler possible. But the Germany of Hitler, the authors declare, is not the real Germany. There is "The Other Germany," fighting and sabotaging under cover.

MANN, ERIKA—*Continued*

Miss Mann followed this with a book of her own published in the spring of 1940, *The Lights Go Down*, which tells in true-story form what happened to various German citizens under the Hitler dictatorship. As examples she uses a priest, a doctor, a mother, a sailor, a newspaperman, a storm-trooper, a tradesman and an industrialist, and shows sympathetically how their private lives are affected by the privations imposed on them by the Hitler government.

MANN, KLAUS (män) Nov 18, 1906-
Author; lecturer

Address: b. c/o Modern Age Books, Inc, 432 Fourth Ave, New York City; h. Bedford Hotel, 118 E 40th St, New York City

Although Klaus Mann has been writing since he was 17 years old and has published about 25 books, he is still referred to as Thomas Mann's son. He once told an interviewer that "the hyper-criticism with which people usually approach the son of a great writer rather hinders than helps him."

Klaus Mann, like the rest of his family, is an exile from Nazi Germany. But even before Hitler he lived abroad more than he lived in Munich, his birthplace, or in Berlin. From his earliest youth on, young Mann had Left-wing leanings. "Since I was 19 I have never ceased to protest—though with

too weak a voice and with inadequate arguments—against reaction, imperialism, militarism, against nationalism and exploitation," he has said. "Most likely the Nazis would have killed me if they could have [reached] me. I left the Reich on March 12, 1933 and have never set foot in it since."

Young Mann wrote for newspapers and was a dramatic critic for a Berlin paper before his first novel, *The Devout Dance*, appeared when he was scarcely more than 20. Before his voluntary exile he had published about twenty books in German, including seven novels, several volumes of essays, and short stories. He also wrote a play, *Anja and Esther* (1925), in which he acted with his sister Erika (see sketch this issue) and which had a long run in Hamburg. They went on tour together with his second play, *Four in Revue*.

When the Nazis deprived him of his citizenship Mann became a citizen of the Czechoslovakian Republic in the days before it fell under Nazi domination. He has also lived in France, Switzerland and Holland. From 1933 to 1935 he edited a literary monthly, *Die Sammlung*, in Amsterdam, Holland and tried to use it as a medium for continuing fine German literary traditions and for fighting Fascism. He was forced to suspend publication, however, when his father, still in Germany, was threatened by the Nazis.

In 1936 he came to the United States and has been lecturing and writing in this country ever since. He has contributed to various American periodicals, including the *Atlantic Monthly*, *The Nation*, the *New Republic*, *Survey Graphic*, *Common Sense* and the *Saturday Review of Literature*. He has lectured by himself and also with his sister Erika Mann, warning against Fascism and dictatorships.

His first book published in English was *The Fifth Child*, in 1927, shortly before his first visit to the United States. There followed a novel, *Alexander* (1929), based on the life of Alexander the Great. *Journey into Freedom* (1936) was his first book published in exile.

There followed *Symphonie Pathétique* in 1935, a novel based on the life of Tschaikowsky, and the two books in coauthorship with his sister Erika, *Escape to Life* (1939) and *The Other Germany* (1940), both of which received excellent reviews.

Klaus Mann is unmarried. He was once engaged to Pamela Wedekind, who is now a member of the Berlin Staatstheater and married to Carl Sternheim.

KLAUS MANN

MANNERHEIM, CARL GUSTAF EMIL, BARON VON June 4, 1867- Finnish statesman; military leader

Baron von Mannerheim, who, more than any other man, was responsible for the effectiveness of Finland's stand against Russia, has been called "ruthless", "a leader of truly heroic mold", "an individualist." Actually he is all of these.

Mannerheim was born in 1867 on his family's estate at Louhisaari, the third of eight children. The first Mannerheim of record was a Swedish merchant named Marheim who died in 1667. His grandson picked up a title and his son moved to Finland. The next Mannerheim was a judge and entomologist and the next one, Carl's father, started out as a spoiled intellectual rebel and ended up as a tycoon with a rich wife. In Carl himself was "a little of the tycoon, a little of the scientist, a great deal of the rebel."

The favorite story about Mannerheim's childhood, told by his family to point up his later success, is about a winter's day when he was eight years old. As he rushed across the city street leading his school-mates in a snowball battle, he was run down by a sledge which passed over his body. The driver, horrified, stopped and asked the little boy who he was. As young Carl struggled to his feet he replied with as much pride as haste allowed, "I am general of the third grade," and rushed off to continue the attack.

At the age of 14 Carl was sent to the Hamina Cadet School and shortly after to the Nikolaev Cavalry School in St. Petersburg, from which he left with the rank of second lieutenant. Two years later he wangled a transfer to the Czar's Chevalier Guard. With no money or family connections, unable to speak the Russian language, his rise was amazing. It was his "striking looks, his unique horsemanship, and his instant grasp of military tactics which sent him upward like a rocket in the court of decadent Czardom."

After his marriage to Anastasia, daughter of Major General Nikolai Arapov of the Czar's suite, advancement was even more rapid. Although Anastasia bore him two daughters, this marriage never was a success, partly due to her bad health, partly to the excessive demands made upon him by court and military life. In 1903 they separated and she took the children to the South of France, to live there the rest of her life.

In 1893 Mannerheim became a first lieutenant, in 1899 a second captain, in 1901 a captain of cavalry. In 1904, when the Russo-Japanese War broke out, he clamored for front-line service. He arrived just in time to have his prize steed shot from under him at Mukden, in one of the most disastrous routs of the War. Mannerheim spent the rest of the campaign covering retreats and returned to Russia a colonel, with three decorations.

BARON VON MANNERHEIM

His fame as a horseman and reputation for military judgment were so great that he was picked to head an expedition through Asia to Peking to gauge the effect of Russia's lost war on the nations and tribes and to pick up military data for possible future use. The Mannerheim party traveled 8,750 miles on horseback during two years. For the army Mannerheim brought back topographic maps and a detailed analysis of all the military factors encountered. On his own account he had extended the expedition to the scope of a scientific expedition as well.

In 1913 he rose to be commander of the Czar's Uhlan bodyguard, and when the War broke out he was a major general. His reputation as a tactician was born soon after the War started. When the division of which his brigade was a part was attacked by strong Austro-German forces, his general, Delsal, ordered him to cover the right flank. Major General Mannerheim retired to the left, guarded the only road of retreat and saved the division. He received the order of St. George for that, and a special citation for insubordination.

After the March Revolution in Russia (1917), Mannerheim was in a ticklish spot. According to some accounts "suffering from a broken ankle," and according to others "conveniently developing a sprained foot," he left the front. Since the independence of Red Finland had just been declared, Mannerheim started for home. There are many stories of how he got there. One version states that he wore his dress uniform and commandeered a train, another that he awed the Russian privates with his commanding presence so that they let him pass through to a train unmolested, another that he disguised himself as a porter.

MANNERHEIM, CARL—*Continued*

When he reached Helsinki he found the city, and Finland, in turmoil. There had been rioting since March, with a Red Guard supporting the Social Democrat Party which had just lost its majority in the Diet, and a White Guard in the process of organization. The White members of the Diet named Mannerheim "commander in chief." Mannerheim outfitted his army in discarded Russian uniforms, rushed a garrison to get arms and the war was on.

Meanwhile Germany's General Von der Goltz had landed in Finland with 12,000 Germans. They took Hanko for the Whites, moved on to Helsinki, took Viipuri, and the Reds fled into Russia. On May 16, 1918, Mannerheim rode into Helsinki in triumph.

There are many conflicting versions of the White Terror that followed the Civil War, but nobody denies that Reds were executed by the thousands. The Soviet press claims 30,000 were executed, the *Encyclopedia Britannica* says 15,000, the Finnish government puts the figure at 2,000 executions, 10,000 dead of the flu. Whatever the figure, the Finnish Workers' Republic was ended.

Shortly after this Mannerheim resigned: according to one version it was because he insisted on emptying the huge prison camps and putting the nation back to work, while Germany was more interested in keeping the Reds broken and behind bars than in the restoration of Finnish strength; according to another, because Mannerheim wanted to move on Petrograd with the British Murmansk expedition while his pro-German government vetoed any cooperation with England. In fact, through the Finns' invitation, the Kaiser soon proposed his brother-in-law for King of Finland, and the Diet elected him.

The end of the War found Finland in an unhappy position, starving and with a German King. The only man who could get Finland out of it was Mannerheim. He did. He gained diplomatic recognition from London and Paris, and food ships were on their way even before his return from abroad. It was his cousin, Jacob de Julin, who negotiated the necessary loan from the United States.

Mannerheim was made Regent of Finland in 1918 and remained Regent for six months, after which he ran for President. He was defeated. The people were tired of war and soldiers, tired of his insistence on vengeance against the Reds, and they elected Professor K. J. Ståhlberg President by 143 votes to 50 on a platform of amnesty for the Reds.

Mannerheim's first act as a private citizen was to found the Mannerheim Institute for the Care of Children, which he made within a year one of the strongest stabilizing influences in war-racked Finland. His most consistent work as a private citizen was to bring his country into a state of preparedness for war. He wrote four textbooks on

defensive tactics, he organized the Civic Guard 100,000 strong as a permanent reserve force, he urged the government into increasing its military appropriations each year. He picked out promising young officers in the army and had them sent to France and Germany to study military science.

In 1931 Mannerheim was made president of the Council of Defense and two years later became Finland's only field marshal. It has been said that he threatened to have nothing further to do with defense unless the government established conscription. It did. It was under Mannerheim's guidance that the now famous *Mannerheim Line* was built.

Before that fortification gave way, Baron Mannerheim declared: "We shall fight to the last old man and the last child. We shall burn our forests and houses, destroy our cities and industries, and what we yield will be cursed by the scourge of God." In 1940 the Finnish people are looking to him as their leader to bring reconstruction again, as he did in 1918.

In 1940 Baron Mannerheim is still fit for the task. He stands well over six feet. He still rides early every morning and there is no trace of gray in his jet-black hair. The Finns feel that he is equal to the task of reconstruction. To them he is still the "Liberator of Finland."

MANNING, WILLIAM THOMAS,
BISHOP May 12, 1866- Protestant Epis-
 copal bishop

Address: Bishop's House, Cathedral Heights,
 New York City

As long ago as 1930 Bishop William T. Manning of the Protestant Episcopal Diocese of New York criticized Bertrand Russell (see sketch this issue) in a sermon delivered at the Church Club of New York. On Easter Sunday, March 12, 1940, without mentioning Russell's name, he appealed to his congregation "to make an open issue" with college and university heads and others who were supporting the appointment of

Lord Russell as professor and head of the department of philosophy of the College of the City of New York.

Bishop Manning supplemented his remarks with two letters to the *New York Times*. The first, on March 1, charged that Bertrand Russell was a propagandist against religion and morality, and a defender of adultery. The second, on March 12, gave additional quotations from Russell's writings to substantiate these charges.

Bishop Manning's protests started a vigorous campaign against Professor Russell's appointment. The Board of Higher Education of New York refused to reconsider their decision, by a vote of 11 to 7. An injunction was secured, however, and on March 30th the appointment was revoked in a 17-page decision by Justice McGeehan of the Supreme Court. Professor Russell was declared unfit for the position because (1) "of his immoral and salacious attitude toward sex"; (2) he is not legally qualified, since he is not a citizen of this country; and (3) the New York State Constitution was violated because Mr. Russell was not subjected to competitive examination. Recently Bishop Manning took a stand on other secular matters by coming out for selective service and for aid to the British.

Bishop Manning, the son of John and Matilda Manning, was born in Northampton, England. He was 16 years old when his parents came to the United States and settled in Southern California. They sent him to the Sewanee, Tennessee Seminary to be trained for the ministry. He received the degrees of Bachelor of Divinity (1893) and Doctor of Divinity (1906) from the University of the South; Doctor of Divinity from the University of Nashville (1901) and Princeton (1919); Doctor of Sacred Theology, Columbia University (1905) and Hobart (1908); Doctor of Laws from King's College, Nova Scotia (1919) and New York (1922).

The Bishop's experience and progress in the ministry are almost as varied as the number of degrees conferred upon him. He was deacon (1899), priest (1891), and rector (1892) of the Protestant Episcopal Church of Redlands, California; professor of dogmatic theology at the University of the South (1893-95); rector of the Lansdowne, Pennsylvania Christ Church (1896-98); rector at Nashville (1903-08); vicar of St. Agnes' Chapel, New York (1903-08); assistant rector (1904-08) and rector (1908-21) of Trinity Parish, New York. On May 11, 1921 he was consecrated bishop.

On America's entrance into the First World War, Bishop Manning served as a volunteer chaplain in 1917 and 1918 at Camp Upton. In 1919 he received the Chevalier Légion d'Honneur from France and the Office Order of the Crown, Belgium.

While a young clergyman he married (1895) Miss Florence Van Antwerp, daughter of a well-to-do Cincinnati family. Their two children are Frances and Eliza-

Pach Bros.

BISHOP MANNING

beth. The latter, for awhile proprietress of a fashionable tourist agency in New York, is now the wife of Griffith Baily Coale of New York City.

Bishop Manning is constantly in the news. His sermons range from Pacifism to World Conditions. His office, says the *New Yorker*, "is one of the most august berths in the United States and one of the most difficult. Low-Churchmen rail at the Bishop for wearing a hat of High-Church block; the orthodox grumble at his failure to purge the diocese of scoffers in reversed collars. . . He is too high, too low, too broad, too middle, too arrogant, too meek, too adamant, too supple. He is courteous, approachable, genial, sympathetic; it is only under the compulsion of what he conceives to be sacred duty that he becomes the reproving, rebuking, admonishing, denouncing, pontificating prelate."

Uncompromising, Bishop Manning has never pursued ambition at the expense of principle. In 1915, as rector of Trinity Church, he took an unpopular stand in one of the church disagreements of the time and temporarily disbarred himself from advancement. Three years later he engaged in an odd crusade against textbook publishers. During the steel strike (1918) he recommended that churchmen interfere as little as possible "with definite political and economic issues as to which few representatives of the church are qualified to speak wisely." In the Bishop Manning-Judge Lindsey "brawl" he denounced Judge Lindsey's teachings, saying they were "immoral and destructive, foul and wicked; and his *Companionate Marriage* was one of the most filthy, insidious and cleverly written pieces of propaganda ever published in behalf of lewdness, promiscuity, adultery and unrestrained sexual gratification."

MANNING, BISHOP—*Continued*

Bishop Manning "will go down in history as one of the great cathedral builders," says the *North American Review*. He has been effective in raising funds for the Cathedral of St. John the Divine, started by Bishop Potter, a cathedral edifice a tenth of a mile in length, to soar to a height of 460 feet, and to be the longest and highest (exterior) cathedral in the world and in area the largest Gothic and the second largest cathedral in the world. The *Review* continues: "By his wise administration and his keen sense of justice he had already endeared himself to the great majority of his clergy and flock. And he enjoyed the confidence of the community as a whole. . . In his personal relationships he is definite and direct, but always sympathetic. There is nothing of good-natured heartiness or backslapping geniality about him. He is kindly and courteous, and surprisingly ascetic for a man so delicately attuned and responsive to the reality of the world about him."

 Who's Who in America

MANSHIP, PAUL Dec 25, 1885- Sculptor
Address: 319 E 72nd St, New York City

Among the works that had aroused the most comment at the now defunct New York World's Fair are three groups by Paul Manship. His *Moods of Time* and *Time and the Fates of Man* on Constitution Mall and his *Celestial Sphere* in the Court of States held sight-seers spellbound with admiration or curiosity. And when these visitors would stop in New York to see Rockefeller Center, Manship's *Prometheus* Fountain in the lower plaza was the first of the many imposing sights they saw.

Paul Manship, who has been called "the most hopeful figure in American sculpture," is represented by works in many of the world's famous places. The New York Metropolitan Museum of Art, the Washington, D. C. Post Office, the New York Zoological Park, the American Academy in Rome, the Musée de Luxembourg in Paris, are only a few of the important spots where Manship's work can be seen. "Possessed of seven-league boots," Manship has produced "a galaxy of contemporary masterpieces sufficient for seven sculptural lives."

Most of these masterpieces are varied. Manship is a medalist of rare power and precision. He has done bronzes, "small and exquisite, admirable *objets d'art*." He has done gigantic memorial gates, 36 feet high and 42 wide. He has done portrait busts

and terra-cotta flower boxes, a *Centaur and Driad* and a portrait of his daughter *Pauline*. But versatile as his production is, most critics agree that Paul Manship belongs in "the true line of descent from Greek archaic art." He has been called a "true academic," with "academic" defined as "having qualities which are derived from a study of accepted or approved styles and methods."

According to one commentator, Manship, "without a halt even at Paris, jumped straight from Minnesota to Rome and then with all possible speed to Greece." He was born in St. Paul, Minnesota on Christmas Day 1885, the son of Charles Henry and Maryetta (Friend) Manship. Unlike a good many so-called "American" artists, he is native to the core. His ancestors arrived before the Revolution; his father fought in the Confederate Army.

Manship started early to be interested in art, but intended to become a painter or commercial artist. With this thought in mind he became a student at the Art Institute of St. Paul, Minnesota, but found out rather soon that his interests didn't lie in painting. He decided on sculpture and began to study under Solon Borglum. Soon he left Borglum to enter the Pennsylvania Academy of Fine Arts in Philadelphia, where he worked under Charles Grafly and Isadore Konti.

In 1909 he won the much-coveted award of a fellowship at the American Academy in Rome. There he "learned no more and no less than he required." In Rome and in Greece his gleanings and assimilation of the works of bygone ages and his original development of their antique essence became part and parcel of his sculptural development. He would make his own the message portrayed in some bit of modeled ornament from Pompeii or Herculaneum or he would avidly seize upon the stylized figures from the best of the painted Greek vases.

When Manship returned to New York after three years in Rome, he had already hit his stride. An exhibition of his bronzes, the result of his Rome activities, scored an instant success and induced Herbert Adams, president of the National Sculpture Society, to write to La Farge, then secretary of the American Academy in Rome: "It seems to me that here is a man, who, if given a chance to work out his natural bent may do American art an incalculable good. . . It is not impossible that this man alone may be worth to American art all the effort the American Academy in Rome has cost!"

A list of the honors and awards Paul Manship has received is evidence that Mr. Adams' prophecy has been fulfilled. In 1913 Manship received the Helen Barnet Prize, National Academy of Design; in 1914 the George D. Widener Gold Medal, Pennsylvania Academy; in 1915 the Gold Medal, San Francisco Exposition; in 1921 the Gold Medal of the American Institute of Archi-

fects. He has received numerous other medals and awards, was made a member of the French Legion of Honor in 1929, was the first American whose works were exhibited at the Tate Gallery in London in 1935.

Critics are agreed on the originality of his conceptions and of his combinations. In *Girl Dancer and Gazelles* he uses a feminine form from East Indian art, but he clothes her in archaic Greek drapery and conceives the whole in the Hellenic mode. His *Air* is a compilation from a dozen different styles, and his *Centaur and Driad* is archaic in part while the effect of the whole isn't archaic Greek at all.

Critics do not agree, however, on the essential meaning behind what he has done. "All that manner, style and taste—added to superlative craftsmanship—can do may be enjoyed in Manship's work," says one, "but there is no meaning inside of it, the pieces are all outsides." "An exhibition of his work creates a curious indifference in the beholder, like a plethora of jewels." On the other hand it has been said that from his study of the work of sculptors of other ages Manship has "formed a powerful and intensely personal style which never diverges one inch from the standards set up by his predecessors."

Critics have argued, too, about his individual works. It's perfectly true that his "creations have been the topic of more discussion than those of any other sculptor of recent times." According to one critic, the reason for this lies in the fact that he is a "curiously unequal" artist, some of whose exhibits (*Nude Reclining*, for instance) are about as bad as sculpture can be, while others are superb. Other critics disagree about individual works. Manship's bust of Rockefeller has been called "faithful without brutality, simple without extremity of formalism, true to life as well as to character," and it has also been questioned: "The nicety of handling rather belittles the power of our famous plutocrat. Where is all the fabled ruthlessness?" The Rockefeller Center *Prometheus* Fountain has probably come in for more criticism than any other piece he has done. Probably one of the kindest things any adverse critic said was: "You'd think the bringer of fire would have sense enough to stay away from the water."

The public, however, has, by its purchasing of Manship's work and by its viewing of it, shown its approval or at least interest in it. Henry McBride of the *New York Sun* wrote after he saw an exhibition of the sculptor's works: "The cultured people of this generation almost instantly recognized Mr. Manship to be their sculptor. They get from him what they would get in surgery from the best surgeon of the day, in engineering from the best engineer, and so on. . . . The American people did not wait for European approbation before adopting Mr. Manship. They joined forces with him

PAUL MANSHIP

the moment he swam into their ken. It was a case of instinct, and instinct is always swifter and more unerring than intellect."

Paul Manship is "a short, unassuming, serious-looking man" who "might be mistaken for a broker or a prosperous operator in real estate." He lives a quiet life wholly devoted to sculpture and his family: wife (he married Isabel McIlwaine), three girls and a boy.

MARBLE, ALICE Sept 28, 1913- Tennis player

Address: c/o Radio Station WNEW, 501 Madison Ave, New York City; h. 457 Arden Blvd, Los Angeles, California

On November 12, 1940 Alice Marble, holder of the women's amateur tennis crowns of the United States and England, announced her decision to join the professional ranks. She will tour 50 United States cities, and for her first year is guaranteed \$25,000 and a cut of the gate. In the fall of 1940 Alice Marble had won the women's national singles tennis championship for the fourth time. "The greatest of all

Harold Stein

ALICE MARBLE

women players," Miss Marble has been winning championships since 1930.

Alice Marble started to play tennis when she was 15, after her family decided she was spending too much time on baseball. This was in San Francisco. She was born in Plumas County, California, the daughter of Harry Briggs Marble, a cattle rancher, and Jessie (Wood) Marble. It was while she was attending the Polytechnic High School of San Francisco—she was graduated in 1931—that Miss Marble first began to realize that tennis wasn't a sissy's game.

When her masculine type of game first began to be noticed, Eleanor Tennant, former national ranking player, took her under her wing. It wasn't long before Alice became Miss Tennant's secretary and most promising pupil, and it was only two years later, when she was seventeen, that Alice Marble won the California junior tennis championship. From that time on her career has been one of successes on the courts. In 1931 she won the national girls' doubles championship at Philadelphia and narrowly missed winning the singles.

The next year she won the California women's championship and rose to No. 7 in national ranking, and one year later, in 1933, she had forged ahead to No. 3 behind Helen Wills and Helen Jacobs. In 1934 Alice Marble had her first setback. She and five other girls went to Paris to play international team matches. At the beginning of the first match she swayed, turned halfway and crumpled on the court in a heap. The doctor diagnosed sunstroke and Alice was rushed off to the hospital in an ambulance. Two weeks later she was sent back to the United States on a stretcher, warned by the doctors that she should never play tennis again.

Two years later she won the national women's singles from Helen Jacobs. A doctor had diagnosed her trouble as secondary anemia and had proceeded to cure it. From then on tennis meant triumphs for Alice Marble, in the United States and at Wimbledon, England. Among other championships, she won the national singles and the national doubles in 1938 and 1939; the Wimbledon mixed doubles in 1937 and 1938; the Eastern grass court feminine championship in 1938.

After she had won the 1938 singles Alice Marble capitalized on her pleasant contralto voice and made her debut as a professional supper club singer at the Sert Room of the Waldorf Astoria Hotel in New York. Since then she has also sung over the radio, designed tennis clothes, endorsed advertisements, lectured at women's colleges and clubs. In 1940 she got herself a new job as staff sports announcer for New York's radio station WNEW and began her career with programs devoted largely to predictions of college football games. She says cheerfully: "You know football isn't as difficult a game to play as tennis."

In all these activities Miss Tennant, "one of the shrewdest managers in the business," has been Miss Marble's constant coach, friend and adviser. It was she who had much to do with shaping Alice's game—with developing her twisting service, her powerful forehand and backhand drives—with developing, too, Alice's mental attitude. Today Miss Marble's greatest assets for her smashing play are her assurance and her ability to withstand the strain of tournament competition.

This lithe, blonde Californian who has been called a "glamour girl" as well as "a natural athlete," has not only been voted the outstanding woman athlete in this country by an Associated Press Poll in 1939, but was also selected by *American Women* as one of the 10 most outstanding women of 1938.

MARKHAM, EDWIN Apr 23, 1852—Mar 7, 1940 Poet; lecturer

Famed for his poem, *The Man with the Hoe*, Edwin Markham, called by many "the Dean of American Poetry," died at his home in Staten Island, New York City, March 7, 1940. He would have been 88 years old on April 23rd.

Edwin Markham was born in a log cabin in Oregon City, Oregon, April 23, 1852. His parents, excited by Frémont's vision of the great Northwest, had sold out their establishment in Michigan and trekked with an ox team westward, eventually opening a store in Oregon City. When Edwin was about five years old his mother, still filled with the pioneer spirit, left her husband to tend his cattle range, and with her children went to California. She bought a wheat and sheep ranch in a valley near Sacramento, later went in for cattle. Young Markham learned to sow and plow wheat, and to care for the cattle.

Up to his fifteenth year he had had little more than a year of schooling and was eager for more. In the autumn of that year a new teacher came to the school which young Edwin was attending. He became interested in the boy and listened to his descriptions of the things he had observed while herding cattle. He decided there was a real vein of poetry in the boy and told him about the great poets, quoting from their work. There were no books of poetry in that whole region. Young Markham plowed rough farm land, at a dollar an acre, so that he could buy the poetry of Tennyson, Thomas Moore and Bryant, and a dictionary. The discovery of Byron opened a new world to him, and under his inspiration he began to write.

The young poet wanted to go to the San Jose Normal School, but his mother wanted him to become a prosperous farmer. So, packing his few possessions, he rode northward on horseback in search of adventure and learning. After he had been gone for some months, his mother discovered his whereabouts and decided to help him get to college. Then one day, while digging for soaproot, he found a bag full of gold pieces, presumably buried long before by some miner. His schooling was assured, and in 1872 he had his diploma, ready to teach.

Clara E. Sipprell

EDWIN MARKHAM

Markham's first position was in a remote California mountain settlement, where he helped build the rough schoolhouse. In 1880 his first poem to appear in print, in a California magazine, was *The Gulf of Night*. Years passed while he moved from one place to another, teaching and writing poems. At the age of 34 he came across Fourier's *Social Science*. This, together with his own experience of years of hard work, made him determined to write an epic of labor.

In 1897 Markham married Anna Catherine Murphy, who died in 1938; their one son, Virgil, survives his father.

When Markham was 47, head of the Teachers Training School in Oakland, he went to see Millet's famous painting, *The Man with the Hoe*, then on exhibition in San Francisco. "For an hour I sat enthralled in front of it, and when I left I was like one under a strange enchantment. It was as though this awe-inspiring shape, full of terror and mournful grandeur, had risen before me from Dante's dark abyss; yet at the same moment I was filled with exaltation as though the heavens had opened and given me a message for mankind." Immediately after, Markham wrote *The Man with the Hoe* (1899), the poem for which he became famous. First printed in the San Francisco *Examiner*, it was reprinted in many other papers throughout the country, editorials were written about it and its subject, lecturers took it up. Publishers besought Markham to bring out a book of his verse. The poem was translated into several languages, and also adopted by labor groups.

Markham claims to have been equally inspired on the occasion of composing his *Lincoln, Man of the People*. It was written to be read at a banquet given to celebrate

MARKHAM, EDWIN—*Continued*

the first Lincoln's birthday anniversary of the twentieth century.

With the success of these two poems, Markham's financial future seemed assured. From 1900 to 1905 he made some \$10,000 a year writing; the sales of *The Man with the Hoe* mounted continuously. But through a number of unfortunate financial investments Markham lost his money. In 1912, at the age of 60, he had little left. He began lecturing and giving readings to support himself, which was a handicap to his output. But he found time each year to work on his ten-volume anthology, *The Book of Poetry*, consisting of thousands of notes and pages of selections from the poets of all time.

His first book of poems, *The Man with the Hoe*, was published in 1899. Shortly after came a series of articles on the problem of child labor, called *The Hoe Man in the Making*. Among his other books are: *Lincoln and Other Poems* (1901); *California the Wonderful* (1915); *Gates of Paradise* (1920); *Ballad of the Gallows Bird* (1926); and *Eighty Poems at Eighty* (1932).

Markham was inclined to attribute his success to good fortune rather than genius. But he had his own theories of what poetry should be. Of the test of greatness in a poet, he said: "Sublimity is the test. Very few poets have it—Homer, Aeschylus, Dante, Shakespeare—that's about all. Americans, on the whole, are too much taken up with material concerns to make poets. They are too much devoted to the dollar hunt, and yet there is a great future for American poetry." On another occasion he said further: "A true poet is both born and made. One can acquire by study and observation much that is needful for this career; yet, unless he has been endowed from on high with an intangible lyric spirit at birth, he will never write great poetry."

Edwin Markham came to settle in the East when he was an old man, first living in Brooklyn, New York, then on Staten Island in a little house overlooking the Lower Bay. His later work was not accorded the wide attention of his earlier poetry, but several literary honors were given him. Since 1928 he has won a number of contest prizes; and in 1936 the Academy of American Poets announced that it had made a "special prefatory" award of \$5000 to him for his poetry. In his later years he was given special honors on his birthdays. In 1930 his birthday was proclaimed a holiday on Staten Island, and hundreds of school children took part in a pageant in his honor.

On the day of his eightieth birthday, when his *Eighty Songs at Eighty* was published, he spoke on his work to a large audience at Carnegie Hall: the proceeds of the evening were used to send him and his wife on their first trip abroad. On February 12, 1940 the Staten Island Chamber of Commerce presented on the radio the voice of Markham reciting *Lincoln, Man of the Peo-*

ple. In addition, it presented nine of his poems about Lincoln, which he wrote in 1925, read over the air by his son Virgil.

Critical estimate of Edwin Markham's work have been many and varied. Benjamin de Casseres said of him: "Edwin Markham is the *Blessed Damozel* of American poetry... He is really Mrs. Grundy riding Pegasus, the veritable Pegasus, for Edwin Markham is a real poet, sometimes a great poet, but always a poet. He has proved that Demos and Prometheus are not enemies."

On the publication of his *Eighty Songs at Eighty*, William Rose Benét wrote: "Markham has retained unusual vigor both in his personality and in his writing. He has always been a dogmatic poet, but with a great liberality of spirit and an accomplished knowledge of versification. He has never surpassed his *Hoe* and *Lincoln* poems. They were the work he was primarily born to do."

MARQUIS, FREDERICK JAMES, 1ST BARON WOOLTON See Woolton, F. J. M., 1st Baron

MARSHALL, GEORGE CATLETT Dec 31, 1880- Chief of staff of the United States Army

Address: b. War Department, Washington, D. C.

General George Catlett Marshall is one of the people most likely to be glimpsed if you do much wandering around the corridors of the United States Capitol, for in these days the chief of staff is much

in demand. President Roosevelt may be calling on him to ask about the progress of rearmament; the Defense Advisory Council may be wanting his advice on production schedules; or the Congressional Appropriations and Military Affairs Committees may be asking that he do a little explaining about the army's expenditures.

General Marshall, the sixth chief of staff who isn't a graduate of West Point, was promoted to his present top-ranking army position over the heads of twenty major generals and fourteen brigadier generals who were his seniors in rank because the President decided that here was the man most capable of peacetime planning for what the army will do and how it will do it. (In time of war the field commander of the armies will probably top him in rank.) Marshall's is the desk across which flow all the army's plans for national defense, and it's up to his office, under Secretary of War Stimson (see sketch this issue), to develop and execute them. Naturally this doesn't mean that national defense is a one-man job. On the contrary, there are five divisions of national defense experts under the general—the army's War Plans, Personnel, Military Intelligence, Operations and Training and Supply Departments—but it is Marshall who must coordinate their work in such a way that the result is a "steady, dependable and rapid increase in military power." With the formation of the new War Department General Headquarters, Marshall now holds a post combining functions usually held by two officials: chief of staff of the army and field force commander.

George Catlett Marshall was born on December 31, 1880 in Uniontown, Pennsylvania, the son of Laura (Bradford) and George Catlett Marshall, a great-grand-nephew of Chief Justice Marshall. There wasn't any great military tradition in his family aside from his father's service with the home guard of the Union Army when he was 16, but George's older brother attended Virginia Military Institute and George followed in his footsteps after trying in vain to wangle a West Point appointment. He entered V. M. I. in 1897, "a clumsy, unpromising recruit, ill-looking upon by the exacting faculty of the ancient institute," and was graduated in 1901 with the highest military rank in the cadet corps in addition to the honor of having been an all-Southern football tackle. He was promptly commissioned a second lieutenant of infantry.

Early the following year young Marshall married Elizabeth Carter Coles of Lexington, Virginia, and shortly afterward was assigned to the thirtieth infantry in the Philippines, where he remained only until 1903. In the course of his career he was to change his address more than 20 times—from the Philippines to Oklahoma, Kansas, Massachusetts, Arkansas, Texas, California, New York, France, China, Georgia, South Carolina, Illinois, Washington, and finally

U.S. Army Signal Corps

GEORGE C. MARSHALL

Washington, D. C. But to an army man "home is where you hang your hat." In 1907 Marshall was an honorary graduate of the United States Infantry-Cavalry School; the following year he finished the course in military theory for officers given at the newly-established Army Staff College at Fort Leavenworth, Kansas; from 1908 to 1910 he was an instructor there; and by 1913 he was back in the Philippines again, this time as a lieutenant of infantry.

It was in the Philippines that Marshall first showed something of his genius for organization. Manila's defenses were being tested, and he was merely assisting the adjutant of the "defending" forces in routine duties when the chief of staff was suddenly taken ill. Someone remembered Marshall's training and sent for him. Asked the commander: "Lieutenant, do you know how to draw up a field order?" "Yes, I think I do," Marshall replied. "Well, go ahead and draw one up," he was instructed. He did. Having learned the positions of the "defending" and "attacking" troops, calmly and without hesitation he dictated orders which disposed of the men, brought up supplies and started an immediate counter-attack in such a way that the departmental commander afterwards described his as the best plan for Manila's defense that he had ever seen. "Keep your eyes on George Marshall," he said, "he is the greatest military genius of America since Stonewall Jackson."

When the United States entered the First World War in 1917 Marshall went from the Philippines to France as a captain on the general staff of the first division, and in a year was promoted to the rank of colonel. He participated in the battles of Cantigny, Aisne-Marne and St. Mihiel. Then, in September 1918, he found himself chief of

MARSHALL, GEORGE C.—*Continued*

operations of a section of the first army at the time when a large part of the American force had to be transferred from St. Mihiel for the Meuse-Argonne offensive. It took him only about two weeks to arrange and manage the transfer, to organize the supplies and lay out the attack positions, and it is greatly to his credit that the offensive was "smashingly successful." One British newspaper called his one of the finest pieces of work of the World War.

Later Marshall was promoted to be chief of staff of the eighth army corps with the rank of brigadier, but when he returned from France in 1919 as aide to General John Pershing he reverted to his pre-War rank of captain.

After the War the president of a large corporation is said to have remarked: "A man with an organizational brain like his would be worth \$20,000 a year. I'd like to see him and make him an offer." When the remark was repeated to Marshall he replied: "I am a soldier. My country trained me as a soldier. There is not much advancement ahead. I'll stick to the service."

Until 1924 Marshall served as Pershing's aide, but rose slowly in the military hierarchy, not achieving the rank of brigadier again until 1936. From 1924 to 1927 he saw service in China; in 1927 he was an instructor in the Army War College at Washington; from 1927 to 1932 he was assistant commandant of the Infantry School at Fort Benning; in 1933 commander of the eighth infantry; from 1933 to 1936 senior instructor to the Illinois National Guard; from 1936 to 1938 commanding general of the fifth brigade. His first wife had died in 1927, and in October 1930 he married Katherine Boyce Tupper Brown of Baltimore, Maryland, who had three children by a previous marriage: Molly Pender, Clifton Stevenson and Allen Tupper.

From July to October 1938 Marshall was chief of the War Plans Division of the general staff, and then in October General Craig brought him to Washington, D. C., to be deputy chief of staff. In May of the following year, as chief of a military mission to Brazil, he made trips to inspect strategic areas such as the Natal District of Brazil, and to exchange views with ranking military men of other American nations. Finally on July 1, 1939, after General Craig's retirement as chief of staff, Marshall moved into his big, gray-paneled War Department office to be acting chief of staff, with the rank of major general. It was not until he took over the post of chief of staff, on September 1, 1939, that Marshall acquired the rank of general.

When General Marshall took office he brought about a minor revolution. It had been years since army men had had experience vaguely resembling actual wartime duty. Marshall changed that. In the winter of 1939 seventy thousand men were put in the field for mass maneuvers, and mimic

warfare was waged through the South. At the same time he was pessimistic about the state of military preparation of the United States, in his "dry, impersonal voice" telling reporters who attended his weekly press conferences: "We are not ready for war. We are not even ready for defense." He complained of the smallness of military appropriations in the years since the First World War and urged that a sizable army be maintained even in peacetime.

By the summer of 1940 Marshall was even more urgent. On June 4 he predicted trouble in South America "within the next month or so." A week later he was telling the graduating class of V. M. I. that the next few days would probably be "the most fateful in history." In testimony before the Senate Appropriations Subcommittee General Marshall stated that "we cannot at present expand beyond a force of 1,200,000 without destroying our present organizations." This he considered a reasonable minimum to discourage anyone from attacking the Northern Hemisphere or the Caribbean area, but did not find it adequate for complete hemisphere defense, which, he claimed on August 20, might require between 3,000,000 and 4,000,000 men. Nevertheless on conscription his viewpoint was: "No one can say with certainty, the way things are going abroad, that we won't need the additional man power without delay. Time is the dominant power, and time is fleeting." On several occasions he described the situation facing the United States within the next six months as "critical."

The chief of staff is described as a "rangy, lean six-footer in negligently neat mufti, a field soldier with reflective blue eyes, a short, pugnacious nose, broad, humorous mouth, a stubborn upper lip." He never appears hurried, but is actually "streamlined and speedy"; he is a strict disciplinarian, yet, some say, the best storyteller in the army. Something of an athlete and even more of a perfectionist, he plays tennis, rides, dances, gave up golf only because he didn't have time to play it "as well as he should," tries to get some hard exercise every day even though there is little time now for anything but work. His reading consists mostly of military science and history. On duty, he and his wife live at the chief of staff's big house at Fort Myers, but they also have a summer home on Fire Island, New York, where the General likes to go surf fishing. An Episcopalian and a member of Kappa Alpha fraternity, he possesses the United States Distinguished Service and Victory Medals and decorations from the French, Montenegrin, Italian, Panamanian and Brazilian governments.

General Marshall once commented during the First World War that "the principles of war are unchanging." He still thinks so. While some of his predecessors believed that success in warfare depended upon such factors as individual heroism or great man power, his faith is in organizational perfection plus the infantryman, who collectively wins a

war." To him "the German success was in the coordination of all branches, thorough training, skill, and in the remarkable way the staff was able to keep in touch with all the new and old arms of battle to insure teamwork." He doesn't say a democracy isn't capable of as great organizational perfection, but does deplore the democratic habit of telling military secrets in peacetime. "We're playing poker with everyone looking at our hand," he says.

MARTIN, JOSEPH WILLIAM JR. Nov 3, 1884—Chairman of the Republican National Committee; Republican leader of the House of Representatives

Address: b. House of Representatives, Washington, D. C.; h. 54 Grove St, North Attleboro, Massachusetts

When Wendell Willkie (see sketch this issue) chose Representative Joseph Martin to head the Republican National Committee in July 1940, he picked a man who "walks on sure political feet," a man who knows how to set up political organizations and "get out" the vote. As leader of the Republicans in the House of Representatives, Joe Martin is thoroughly familiar with the nation's problems, district by district; no backslapper, he still knows the first names of the men who make the local organizations tick, and he knows how to set them in motion.

Since 1912 Joseph Martin has been active in Republican politics; since 1924 he has been a member of Congress. The "stocky, bright-eyed, black-browed," Scotch-Irish Representative from Massachusetts was born in North Attleboro, Massachusetts, the son of Joseph William and Catherine (Katon) Martin. His father was a blacksmith and Joe the eldest son in a family of eight children. That meant he had to go to work early, and when he was only six he was peddling newspapers. Later he worked in jewelry shops and as night telephone operator in the North Attleboro exchange.

In high school Joe distinguished himself as a baseball player—in his senior year he was captain of the team—and known as an all-round athlete. When he was offered a scholarship to Dartmouth, he declined and went to work instead. Many years later he sent his two youngest brothers through Dartmouth. Joe's first job was as reporter on the North Attleboro *Evening Leader*; his second as reporter on the North Attleboro *Sun*.

After he had worked as a newspaper reporter for five years, Joe found he had one thousand dollars saved up. He persuaded several local citizens to go in with him to buy the North Attleboro *Evening Chronicle*, and in 1908, at the age of 24, Joseph Martin was the youngest newspaper publisher in the country. The paper prospered, its daily circulation rose from 800 to 2,800, and before many years Martin bought up the shares of the other partners and became majority stockholder. He still publishes the *Chronicle*, now edited by his brother Charles.

In 1912, "with a sudden passion for politics," Joseph Martin got himself elected to the Massachusetts House of Representatives and stayed there until 1914, when he was elected to the State Senate. While in the legislature he served as secretary of the Joint Rules Committee under Senator Calvin Coolidge and also acted as chairman of the Republican Legislative Campaign Committee.

Greystone

JOSEPH W. MARTIN JR.

Martin retired from politics in 1917, intending to devote himself to business, but in 1920 he was a Republican Presidential elector and in 1922 he was drafted by Massachusetts Republican leaders to consolidate and harmonize party factions. He was made executive secretary of the Republican State Committee and in that same year directed the campaign that saved Henry Cabot Lodge's Senate seat. In 1924 he ran his own campaign and went to Congress in 1925 by a plurality of 9,600.

For many years after his election Martin was "only a rear-row private in the ranks of the army of smug Republican leaders who marched invincibly through the '20s." His first assignment was to the Committee on Foreign Affairs, his next, in 1929, to the House Rules Committee. In 1933 he was assistant to the Republican floor leader and in 1936 he began to emerge from the ranks of Representatives. In that year he was Landon's floor leader at the Republican Convention and later his Eastern campaign manager. Two years later Martin, who had always been liked for his warmth and directness and respected for his political acumen, began to be known as a good "political mechanic." As chairman of the Republican Congressional Campaign, "shrewdly and tirelessly he combed the field for able new candidates, concentrated his funds and fire in districts where the Republicans had at least a fighting chance to win, swung around the country and chatted with candidates by long-distance telephone about the problems of their campaigns." It was his skill that helped get 80 new Republicans elected to the House.

In 1939 Martin was made minority leader in the House, his job to direct his party group's machinery of committees and con-

ferences, to decide its floor strategy, to unify it in shaping and agreeing on party policy. Immediately he proceeded to whip a "frazzled minority into a tough opposition." He enlarged the Republican steering committee; he initiated regional Republican conferences to discuss legislation and general policy; he set up committees to study special pieces of legislation. So informed, disciplined and effective a body of legislators did he form that in cooperation with varying groups of Democrats they were able to pass the arms embargo, revise the WPA, put through the Hatch Bill, start an investigation into the National Labor Relations Board and bury the President's spend-lead plans. Martin has gone along with some of the New Deal's reform measures, but on the whole he has been "quite vehemently against it." As he puts it: "What we were seeking was not Utopia, but a sane revival of old-fashioned Americanism."

As a boss, however, Martin is "probably the most democratic floor leader either party has possessed in long years." He urges every Republican Congressman, even the greenest, to air his views and take part in discussion and decision. "The boys like it," he says. "It gives them a feeling of pride and responsibility. They get enthusiastic." Picked as the ablest Representative by a Washington correspondents' poll, there's no doubt that he "plays the rough and tumble game of politics hard, but nobody has ever accused him of playing it unfairly or dishonestly and he is known as the man without a single Congressional enemy."

Representative Martin is of medium height, dark-haired, smooth-faced, "a bit on the homely side" and scarcely a dandy. When the Congressional reception committee went to meet the King and Queen of England, it was a state occasion. Joe Martin made the concession of wearing morning clothes, but wore a derby on his head. And all his clothes are "comfortable, rather than costly or well valeted."

Joe Martin's home is still in North Attleboro, where he lives with his invalid mother, a widowed sister and a brother. He has never married. Between sessions of Congress he drops into his newspaper office every day to talk with cronies and callers, and spends most afternoons riding around his district to find out what his constituents are thinking about. "If you met him walking down the street in North Attleboro," according to a *Life* correspondent, "you could hardly mistake him for anything but what, at base, he is: a plain, sober, hard-working, successful, popular, businessman-politician of a type to be met on almost any Main Street."

In Washington he has a two-room apartment in the Hay-Adams House. He doesn't drink, smoke, golf or dance and his only real passions outside of politics are attending games of the Washington American League baseball team, reading history and

biography, especially political biography, and walking in the rain.

MARTLAND, HARRISON STANFORD
 Sept 10, 1883- Physician

Address: b. City Hospital, Newark, New Jersey; h. 180 Clinton Ave, Newark, New Jersey

The medical life and training of one "of the most colorful personalities" who has reached a high place among medical investigators and leaders of the country has been a comparatively simple one. Dr. Harrison Stanford Martland, the son of Dr. William Henry and Ida (Carlyle) Martland, was born in Newark, New Jersey. After receiving a B. A. from Western Maryland College in 1901 he says that, because his father had been a doctor and because there was nothing else to do, he, too, decided to become a doctor.

He attended the College of Physicians and Surgeons in New York City and after graduation in 1905 interned for 18 months at New York City Hospital on Welfare Island. Then he spent a period of two years in pathology and bacteriology at the Russell Sage Laboratory. In 1908 he returned to his place of birth to be the pathologist at the Newark City Hospital, and except for a period of service during the First World War has held that position ever since.

Dr. Martland entered the army in 1917 as a member of the Bellevue Hospital Unit. His services were so distinguished "that he was made a colonel in the reserve corps in 1919, and the Rockefeller Foundation desired him for the directorship of the Institute of Hygiene to be established for the government of Mexico." But it was too hot even to consider going to Mexico and when the War was over he resumed his post at the Newark City Hospital.

Dr. Martland's pathological museum at City Hospital, which was built up mostly through his own efforts, has come to be known as one of the best in the country. In the museum he does all his work himself, including the making of his own draw-

ings and illustrations. In his laboratory, whose atmosphere is more like that of a university than a city hospital, he demonstrates an ability to explain things clearly. He is described as an "outstanding teacher, not given to formal methods—informally he is always teaching—in his laboratory, with exhibits, etc." He spends most of his time in the laboratory. It is the best place to find him, especially late at night. Here he is an unceasing worker, making "no difference between weekdays and Sundays."

Until 1916 Dr. Martland worked and studied: he soaked up information at firsthand, both in his laboratory and at the post-mortem table, and expanded his interests to include morbid anatomy, pathological histology, forensic medicine, bacteriology and clinical law. Then in 1916 he began to write for publication. Since then he has written more than 50 medical papers. Original works include *Punch Drunk* (1928), a medical analysis of that "goofy, cuckoo slug-mouth condition" in prize fighters, and *Dr. Watson and Mr. Sherlock Holmes* (1939), a history of medical techniques in detective fiction.

As chief medical examiner of Essex County (appointed 1925) Dr. Martland has been able to develop his interest in criminology. His most famous court appearances and research came in the case of the investigation of radium poisoning of five women workers in watch factories. He proved that the luminous paint which these women used in painting the dials caused their deaths—and possibly the deaths of many other workers. He also published a series of articles showing the results of occupational poisoning in manufactures of luminous watch dials, with a general review of the hazard caused by ingestion of luminous paint, with especial reference to the New Jersey cases.

Dr. Martland was appointed assistant professor and shortly afterward, in 1935, made professor of forensic medicine at New York University College of Medicine. In the same year, at the age of 52, he received an honor that usually does not come during a doctor's lifetime: The Essex County Anatomical and Pathological Society established the Harrison Stanford Martland Lectures.

Besides his extensive court work, numerous papers and appearances at medical meetings and crime conferences, Dr. Martland finds time to participate in gratis duties at the New York Academy of Medicine. There he directs the scientific exhibits of the Graduate Fortnights.

Dr. Martland is heavy but distinguished looking, with hazel eyes and black hair that has a bit of gray in it. He generally works in his shirt sleeves, sans tie, and characteristic photographs show him smoking a cigarette while performing an autopsy. Besides criminology, he is interested in Chinese checkers, string quartets and photography. His wife, Myra C. (Ferdon)

MASSINE, LEONIDE 1896- (mās-sēn' lā-ō-nēd) Choreographer; dancer

Address: c/o Hurok Musical Bureau, 30 Rockefeller Plaza, New York City

The Russian Ballet is no longer a foreign institution. Theatres in New York and points West, North and South are packed to the rafters when the *Ballet Russe de Monte Carlo* comes to town. Even its financial backing is now American. In the "dancing talent, creative gifts and executive ability" of Léonide Fedorovitch Massine "American millionaires have invested a small fortune." And Léonide Massine rides around America in a trailer.

Former ballet master at Roxy's, student in the Imperial Theatre in Moscow, creator of some of the most popular modern choreography, Massine is now the *Ballet Russe's* artistic director, choreographer, ballet master and principal dancer.

Massine, whose genius has been universally acclaimed, was born in 1896 in Moscow, the son of a musician and an opera singer. He gave his first performance at

the Imperial Theatre School there at the age of 12. When Léonide was 17 Diaghilev, the famous ballet impresario, saw him carrying a ham on a tray across a stage during a performance of *Don Quixote*. He liked him. He liked his elegant carriage and his "deep burning eyes in a face already touched with melancholy, like a Tolstoy hero."

Diaghilev took Massine back to Paris with him. He placed him under the tutelage of Cecchetti and taught him music, painting, sculpture. Within a few months, in 1914, Massine made his Paris debut in *La Légende de Joseph* and in 1915, when he was just 18, was entrusted with the choreography of a ballet, *Le Soleil de Nuit*. His first important work was *Les Femmes de Bonne Humeur*, "a sparkling dance comedy" based on a play by Goldoni and danced to the music of Scarlatti. In 1917 Massine collaborated with Jean Cocteau, Erik Satie and Pablo Picasso in the concoction of a curious hodgepodge called *Parade*, a cubist ballet given at a time when cubism was the last word in art.

An early work of Massine which still remains immensely popular is *Le Chapeau Tricorne* (*The Three-Cornered Hat*), produced in 1919 to music by De Falla and décor by Picasso. This is a ballet which Massine dances "with an electrifying intensity which grips an audience and holds it spellbound, and then sweeps it into hysterical enthusiasm." *La Boutique Fantasque*, Stravinsky's *Pulcinella*, *Chant du Rossignol* and *Sacré de Printemps* are others of his works composed during the years of his association with Diaghilev.

Early in 1921 Massine left Diaghilev. He felt he was grown-up and needed freedom. With a company of his own he toured South America and other countries and didn't return to Paris until 1924. In that year he created the very popular *Beau Danube* and rejoined Diaghilev to stay with him intermittently as choreographer until Diaghilev's death in 1929. From the day when Diaghilev first saw the 17-year-old Massine until the day he died, his admiration for Massine never dimmed. "He has that keen intelligence," he used to say, "that understands things before one says them."

For three years, from 1927 through 1929, Massine was premier danseur and ballet master at Roxy's in New York. Diaghilev almost had a stroke when he heard Massine had taken the job and, as an English critic put it, "slaving in such an environment . . . must have been distinctly irritating to one of his tastes." But there are others who feel that at Roxy's Massine learned a number of things Diaghilev never heard of. "He learned the art of American showmanship and he learned to work fast. He also learned how money is made in American show business."

Early in 1932 Colonel Wassily de Basil and M. René Blum formed a ballet company at Monte Carlo with George Balanchine as ballet master. Léonide Massine was invited as guest choreographer to stage *Jeux d'En-*

fants to the music of Bizet, and the next year succeeded Balanchine as principal choreographer of the De Basil Company. At this time he began his first experiments in symphonic ballet, the form in which he has made his most important contributions to the dance. *Les Présages*, based on Tschai-kowsky's *Fifth Symphony*, was his first symphonic ballet and this paved the way for *Choreartium*, which received its first performance in London on October 24, 1933. Many musicians had protested when Massine proposed to dance Tschai-kowsky's *Fifth Symphony*; when he dared to lay hands upon Brahms and "desecrate" the *Fourth Symphony* itself they declared it was blasphemy. Hector Berlioz' *Symphonie Fantastique* was his third symphonic ballet, and his transcription of Beethoven's *Seventh Symphony*, in 1938, his fourth.

During the years of his association with the De Basil *Ballet Russe* Massine devoted his best energies to his experiments in the symphonic ballet, but he also created several other works of varying interest. *Union Pacific*, given in 1934, was the first ballet on an American theme to be presented by a Russian company. The scenario, written by Archibald MacLeish (see sketch this issue), told of the completion of the first trans-continental railway. His attempts to use American themes have, however, not been too successful. His *New Yorker*, to the music of George Gershwin, produced in 1940, was, according to a critic, "cursed with bad choreography, poor dancing and feeble music."

In 1937 Massine and De Basil parted company, and their separation was taken into an English law court, with Massine maintaining that he had exclusive rights to all the ballets for which he had designed the choreography. The Honorable Mr. Justice Luxmoore held that property rights can be claimed in the dance steps of a ballet and granted exclusive right in some of his ballets to Massine, while allowing De Basil to have an option on those created while Massine was in his employ.

Just about this time Julius Fleischmann, of the yeast Fleischmanns, and some other American businessmen were looking around for an artistic venture in which to invest. They chose Léonide Massine and created an organization called Universal Art, Incorporated, which has already put vast sums into new ballet productions and plans to continue to do so as long as Massine continues to create them. They know him to be "the completely unrivaled stylist of our time, the greatest force in ballet today."

When the *Ballet Russe de Monte Carlo* is in New York you can find Massine in the twilight backstage of the theatre, "a slight man, fortyish, his black hair thinning, with enormous deep-set eyes in the thin face of an athlete trained fine." In worn costume trousers and an old sweater he is

Maurice Seymour

LEONIDE MASSINE

doing leg stretches and knee bends. "Slick, wire-taut muscles slip under his wet shirt."

An hour later he is on the stage in a dashing hussar's uniform, leaping and stamping and swinging a ballerina to his shoulder in a spirited Strauss waltz. And after that he can be found soothing a temperamental ballerina or a sulking male dancer, or severely dressing down an imperfect performer. "On the stage he is a panther; in rehearsal he is a roaring lion."

Massine now keeps records of his ballets on moving picture film and uses the film to settle disputes and to refresh his memory. He consults them even for his own solos. "At 44, which is considered an age for slippers and easy chair among dancers, he is still unrivaled in rôles ranging from the cancan and the cakewalk to St. Francis of Assisi. Electric, vibrant, smooth as a cat, he flashes through his solos leaving an incandescent trail of excitement."

MAURIER, DAPHNE DU *See* Du Maurier, D.

MAX, ADOLPHE Dec 31, 1869—Nov 6, 1939 Burgomaster of Brussels, Belgium

Burgomaster Max, last of the great Belgian war figures, who had refused a Baronetcy and declined a Premiership ("I would rather be Burgomaster than Premier"), died in Brussels, November 6, 1939, of pneumonia.

Max entered Brussels University at sixteen, got his law degree four years later, wrote copiously for the press, became one of the heads of the Liberal Party, and in 1909 was made Burgomaster of Brussels. The dramatic episodes surrounding his resistance to German troops during the World War have become a part of military legend. He was arrested in September 1914 for his "irreconcilable attitude" and was not released until the month of the Armistice.

"Our Max" was slight of build, had brown hair and a short-pointed beard. Laurels of various kinds were conferred upon him, among which was the Grande Croix de la Légion d'Honneur, an award usually reserved for heads of states.

MAYNOR, DOROTHY Sept 3, 1910—Negro soprano

Address: c/o Columbia Concerts Corp, 113 W 57th St, New York City

There is a decidedly Horatio Alger or Aladdin's Lamp cast to the story of Dorothy Maynor, newly-discovered Negro soprano who made her debut in New York on November 19, 1939.

Dorothy Maynor was born in Norfolk, Virginia, the daughter of the Rev. J. Mainor (the spelling was changed for professional reasons), who was a Methodist minister. Her only early musical training was singing in the choir of her father's church. At 14 she entered Hampton Institute, there received her first formal voice instruction,

and in 1929 toured Europe with the Institute's famous choir. Shortly afterward she entered the Westminster Choir School of Princeton, New Jersey, intending to become a teacher of voice. On the advice of friends she came to New York in 1936, studying first with Wilfred Klamroth and then with John Alan Haughton, her present instructor.

In August 1939 she went to the Berkshire Music Festival near Stockbridge, Massachusetts, with only a thin hope of getting an audition with Koussevitzky (see sketch this issue). She had it, and on the day following she sang everything from Negro spirituals to Wagner at Koussevitzky's private picnic, to which members of the orchestra and hand-picked critics had been invited.

She returned to New York, where she lived in an upper West-side apartment, and began practicing for her debut recital. Her success was almost unqualified. In February 1940, by unanimous vote, she was selected as the winner for 1940 of the Town Hall Endowment Series Award. The award is made each season to the artist under 30 years of age whom the New York music critics and the Town Hall music committee consider to have given the outstanding performance of the year at Town Hall. Her recital in October 1940 showed, according to Olin Downes, "an impressive advance. The glorious voice has now filled out and come under finer control."

Miss Maynor is four feet ten inches, warm-smiling, buxom, and disturbingly modest about her own accomplishments. And it was Koussevitzky who called her voice a "musical revelation."

With the aid of her patroness (Miss Mary Hayden of Boston) she is "now in the bank-account class." She has appeared with four symphony orchestras, New York Philhar-

De Bellis

DOROTHY MAYNOR

monic, Boston, Philadelphia and Chicago. She has engagements in twenty-seven states and is making two cross-country tours during the 1940 to 1941 season.

MEAD, MARGARET Dec 16, 1901- Anthropologist

Address: b. American Museum of Natural History, New York City; h. 43 W 93rd St, New York City

Margaret Mead has found that to be an anthropologist involves "not only scientific research but the practice of rough, tropical medicine, care of children, organization and maintenance of camps in the bush, cultivation of rapport with primitive peoples and many varieties of writing necessary to record the results." Since 1925 Dr. Mead has been roaming over much of the world and studying its peoples. New Guinea, the Admiralty Islands, Bali, Samoa are some of the places she has visited and studied.

From her travels and studies have come books and articles. Her first two, *Coming of Age in Samoa* and *An Inquiry into the Question of Cultural Stability in Polynesia*, were published in 1928; in 1930 came *Growing Up in New Guinea*; in 1932 *The Changing Culture of an Indian Tribe*; in 1935 *Sex and Temperament in Three Primitive Societies*. Miss Mead's latest book, *From the South Seas* (1939), is a reprint of three of her earlier books and warmly recommended by the critics to "anybody with an inquiring mind and a philosophical interest in the human race."

Margaret Mead was born in Philadelphia, Pennsylvania, the daughter of Professor Edward Sherwood Mead of the University of Pennsylvania and Emily (Fogg) Mead. During childhood she wanted to be a portrait painter; in college she majored in English. Her first year of college, from 1919 to 1920, she spent at De Pauw University; her next three at Barnard College, from which she was graduated with a Phi Beta Kappa key in 1923. From Barnard she went to Columbia and received her M. A. in psychology in 1924.

The year after she received her Master's Degree Dr. Mead received a National Research Council Fellowship and was able to spend six months studying adolescents in Samoa. A later fellowship for one year (1928-29) from the Social Science Research Council enabled her to continue her studies. Much of her work in the years after Columbia (she received a Ph. D. from the University in 1929) was concentrated on children and on studies in sex. In New Guinea, for instance, Dr. Mead studied three tribes "to discover to what degree temperamental differences between the sexes were innate and to what degree they were culturally determined." And from her studies she has drawn scientific conclusions on many phases of cultural life all over the world—her latest conclusion is that warfare is "an

MARGARET MEAD

invention like any other of the inventions in terms of which we order our lives, such as writing, marriage, cooking our food instead of eating it raw, trial by jury or burial of the dead, and so on."

From 1928 to 1933 Dr. Mead's New Guinea studies were made in collaboration with Dr. Leo. F. Fortune. During this period Dr. Mead studied four New Guinea tribes, living in native villages, participating in the community life and speaking the native languages. In 1936 Dr. Mead was married to Gregory Bateson, English anthropologist of St. John's College, Cambridge, England, and they have one daughter, Mary Catherine, born in December 1939. Her last expedition, in collaboration with Mr. Bateson, was to Bali and New Guinea from 1936 to 1939.

Since 1926 Dr. Mead has been an assistant curator of ethnology of the American Museum of Natural History in New York and in 1940 was appointed a visiting lecturer in child study at Vassar College. Her latest trip was to Bali and to New Guinea—she went there in 1936 and returned in 1939. For her contributions to anthropology, in discoveries, in books and articles, in her teaching and museum work, she received in June 1940 the annual National Achievement Award of Chi Omega Sorority.

Youthful-looking, small, dark-haired Miss Mead has discovered in these years of work that anthropology is a completely satisfying study. "The study of human culture," she says, "is a context within which every aspect of human life legitimately falls and necessitates no rift between work and play, professional and amateur activities."

American Men of Science Who's Who in America

MEARNS, HUGHES (mûrns hūz) Sept 28, 1875- University professor; author

Address: b. School of Education, New York University, New York City; h. 531 W 124th St, New York City

Besides being a teacher and author of wide reputation, Professor Mearns is known for the authorship of a nonsense quatrain which was sweeping the country as a "hit parade" popular favorite in early 1940. He was born in Philadelphia, Pennsylvania, the son of William Hughes and Lelia Cora (Evans) Mearns. He studied at the School of Pedagogy, Philadelphia, and in 1902 received a B. A. from Harvard. For the next five years he studied at the University of Pennsylvania Graduate School. Even with all this pedagogical training, Mearns had no idea of becoming a professor.

He wanted to write, for the stage preferably, but he needed money to live on, so he accepted a teaching job in Philadelphia which paid \$1,000 a year. In 1904 he had married Mabel Fagley of Philadelphia. They have one daughter, Emma. Professor Mearns had always been extremely fond of children. He determined at the Philadelphia school to try experimenting with the creative processes of children. He would gather the children around him on the lawn, and, as he says, "began by quietly exploring outside of school classes the creative possibilities of children from three to eight years old." He "came upon a hidden individual spirit of surprising keenness and of stubborn honesty." He typed notes of their conversations; he learned how to make them forget an adult was around; never asked them questions and never showed surprise no matter what they did or said. His method was good, for he found children had amazingly acute observation, were completely selfish and merciless to each other. While some parents think children speak too freely, Professor Mearns has the opposite idea—he feels that children's individualities, the source of their creative efforts—are smothered because parents and teachers try to mold them into prissy little ladies and gentlemen.

From 1905 to 1920 Mearns was a professor at the Philadelphia School of Pedagogy. The Rockefeller Foundation became tremendously interested in the kind of creative work he was doing and they asked him to start a five-year experiment at the Lincoln School, Teachers College, Columbia University. In 1925 during intervals away from his young charges, he "dashed off" his widely acclaimed book, *Creative Youth*, which established him as one of the leading progressive educators of the country and won him a post at New York University.

Since 1926 Professor Mearns has been Chairman of the Department of Creative Education at New York University. He dislikes

scholarly formality, says: "Imagine calling another man 'Professor' with nobody else around!" His classes are conducted without the solemnity common to many university classes in education. He teaches no less than 1,000 students, mostly adults, each term by a method he calls "education by exposure." At first he found it an almost unsurmountable difficulty to get people to be themselves, but he has convinced himself and them that "every man has the machinery for a full, honest and individual life within him if he will but throw off the shackles of artificiality. He tells them of a clubwoman at a meeting who astonished her hearers by saying candidly: "I never liked Wordsworth, and now, for the first time in my life, I'm going to say so." Then he reminds them of Robert Benchley's review of the play, *Strange Interlude*, by the idolized Eugene O'Neill. No one at the time had the effrontery to utter a word against that figure of perfection. Benchley, however, complained of the play's length, then quickly, in parentheses, wrote: "All right, Jove, strike me dead!"

"There has always been a danger in placing the artist in a special class," says Professor Mearns. "It turns us all into foolish worshipers instead of independent fellow craftsmen; we are then too easily satisfied with the American picture of a few highly-paid professional performers before a nation of mutes. Admitting the excellence of the experts, we do not need to be dumb before them. We have our own excellences."

In 1929 he wrote *Creative Power*, in which he tells how, "in his free school, he encouraged the creative activity of apparently ordinary children." He includes many illustrations of the poetry and prose which the experiments brought forth in children. In 1940 he published *Creative Adult*, which explains the work done in his classes in strengthening the native cultural gifts of adults. Professor Mearns feels that many adults cannot truly be happy because they are fettered by mediocrity, and too ready to conform to "the mores and the folkways of the masses."

In 1938 in the Wrightstone Survey of 200 years of educational reform in America and Europe, Professor Mearns is named among the 10 "most notable contributors," in a list which includes Adler, Parker, Hall, Cattell, Thorndike, Terman and Dewey.

Professor Mearns, a "tweedy, loquacious educator, boyish, despite his 64 years, and unbowed by his ponderous scholastic title" does not feel that he has suffered any loss in prestige by being known as the author of *The Little Man Who Wasn't There*. The quatrain has been set to music by two Broadway songwriters, Harold Adamson and Bernard Hanighen, and was known as the number one rhythm song, tagged as a "hit parade" tune on the radio. In 1910 Professor Mearns composed it as part of a play, *The Psycho-ed*, which he wrote for a group of theatrical

HUGHES MEARNS

amateurs calling themselves *Plays and Players*. The quatrain goes:

"As I was walking up the stair
I met a man who wasn't there.
He wasn't there again today.
I wish, I wish he'd stay away."

In the drama in which the ditty appeared, a psychology student sang it to a ponderous professor who analyzed it at great length. Professor Mearns, without a trace of bitterness, tells people that the authorship of the ditty has been ascribed to "nearly every modern writer except George Bernard Shaw, whose mind would presumably never run in such channels." Even his students have from time to time brought the ditty to him as their own—"a plagiarism he always condones." Far from being proud of it, Professor Mearns waited until 1921 to have it printed, and then it appeared in F. P. A.'s *Conning Tower*.

When the song writers wrote the song they assumed the verse was anonymous and in the public domain. However, the music company found out that Professor Mearns was the author, and they offered to pay the startled educator one cent per copy for sheet music plus one third of the royalties on recordings. So far the song has sold 35,000 copies in sheet music and 165,000 in recordings.

Mearns is also the author of many light novels, the first, *Richard, Richard*, written in 1916. They sell well in England. One, *The Vinegar Tree*, is popular, he says, among 16-year-old girls. He confesses that he has also written innumerable one-act plays, all of which he has destroyed.

MEREDITH, BURGESS Nov 16, 1907-Actor

Burgess Meredith knocked around in a surprising number of odd jobs before he decided to become an actor. A year of working his way through Amherst College, washing dishes, tending furnaces, having no money for recreation or social life, left him with debts and no taste for a higher education. He didn't even have enough money to leave Amherst at the end of the year. But he heard of an annual declamation contest, hastily memorized the last scene of *Cyrano de Bergerac*, shouted it at the judges and won the \$50 prize. Then he departed from Amherst to make his mark in the world. This was in 1928.

There followed about a year and a half during which Meredith went from job to job with rather lightning rapidity as he was fired, or just moved on. He turned up during the Christmas rush at a New York department store selling neckties; found himself behind a complaint desk in a Fifth Avenue shop; sold or rather tried to sell vacuum cleaners from door to door; sold roofing, toilet articles—all very unsuccessfully, throughout various cities. For two months he was a runner in Wall Street. He lived with other impecunious young men, a week here, two weeks there, always from hand to mouth. Once he lived for a week on free samples of breakfast food.

Meredith ended this "commercial" career with a voyage—definitely not of the de luxe kind. He shipped as a seaman on a tramp steamer, and made one trip uneventfully. The food was regular, so he made a

second trip, but got himself into trouble. He overstayed his shore leave in a South American port, and made the voyage back in the ship's brig under arrest. The story goes that he relieved the tedium of the voyage by reciting out loud everything he could remember. He was so pleased with his voice that he decided to become an actor.

His desire to go on the stage was not without precedent in his family. Although he did not know it at the time, his mother had been in stock. Going through an old scrapbook of his mother's after her death, he found she had not only been on the stage, but had received rather good notices in her short career. The daughter of a Methodist revivalist, she had run away from home, and spent 10 months in stock before she was brought back home by the pleas of her irate preacher-father.

He had an uncle in vaudeville, and a brother in a jazz band for a short time, but otherwise young Meredith had no encouragement to follow a stage career.

Meredith was born November 16, 1907, the son of Dr. William George and Ida (Burgess) Meredith, in a suburb in Cleveland where his father was a doctor. As a boy he sang solos in the Methodist Church, and at the age of 11, over 75 competitors, won a scholarship in vocal training at the Paulist Choir School in New York. The Methodist tradition was too strong in his family to allow his entrance into a Catholic choir school, so instead he was sent to New York to enter the choir of the Cathedral of St. John the Divine.

In 1923 when he was no longer a plausible soprano he was sent to the Hoosac Preparatory School at Hoosick Falls, New York. There he distinguished himself by editing the school paper and by leaving it in the red financially. At the Christmas Yule Log Festival he always played the jester. He also won the David Brook Anglo-American Prize essay cup for his essay, "The Benefit to Christian Civilization From a Complete Understanding and Friendly Relationship between the United States of America and the British Empire."

His father was obliged to retire in 1926 and there was no further money for Meredith's education. With the help of a scholarship and aid from an uncle he entered Amherst College in 1926. He came too late to get any work, however, and left after a few weeks to return the following year.

At Amherst between tending furnaces, washing dishes and trying to get an education, Meredith didn't find life very satisfactory. He tried out for the dramatic club and won, but his scholarship, according to the dean, was such that he was ineligible for extra-curricular activities. Determined to act, he went to Northampton, Massachusetts to play Sir Toby Belch in *Twelfth Night* for the Smith Dramatic Club, and was nearly dismissed when the Dean heard about it.

When Meredith decided to embark on a dramatic career, he was not discouraged by the fact that young men seem to have a pretty hard time getting on the stage unless "they have been on the stage before." He wangled a letter of introduction to Eva Le Gallienne from a kindly man in the theatre. On the strength of the letter which praised his qualifications without saying exactly what they were, Meredith, in December 1929, became an apprentice without pay in Miss Le Gallienne's Civic Repertory Company. He lived with his married sister in East Orange, New Jersey and awaited developments in his stage career.

The ambitious young student finally got one line to say—the part of the servant to Juliet's nurse in *Romeo and Juliet*. From that he progressed to bit parts and by spring was making \$20 a week. For the next two years he alternated between summer stock and Miss Le Gallienne's company. When in the fall of 1931 Miss Le Gallienne left the stage for a year Meredith had no rôles except for a short appearance in *People on the Hill*.

It was at this stage in his career that a clerk in some casting office summed up Oliver Burgess Meredith's (he has dropped the Oliver) qualifications on his application card thus: "young, homely, large head, blond." Nevertheless Meredith had already attracted some attention in the summer theatres. In the summer of 1930 a White Plains reporter, seeing him as Marchbanks in George Bernard Shaw's *Candida*, wrote with frantic enthusiasm: "A young man of remarkable genius walked out on the stage last night and began creating a Marchbanks that became one of the most beautiful and poetic things seen in the theatre anywhere and at any time."

During the "no rôle" period Meredith and a roommate tried to organize an acting company, operating on a profit-sharing basis, but failed. Meredith went back to stock in 1932, and between performances married Mrs. Helen Berrien Derby, ticket-taker for the company, on the stage of the summer theatre at Cape May, New Jersey. They were divorced in September 1935 just when Meredith began his part in his great success, *Winterset*.

Meredith went back to the Civic Repertory Theatre in the fall of 1932 when Miss Le Gallienne reopened it, and played in a variety of small parts. At one period he even had three animal parts in *Alice in Wonderland*. He left in the middle of his career in the animal parts for his first Broadway play, *The Three Penny Opera*. It lasted one week.

Meredith made his first impression on Broadway in the spring of 1933 when he played the part of Red Barry in *Little Ol' Boy*, the Albert Bein play of reform school life. The play brought him a rather stupefying (after the

BURGESS MEREDITH

\$30 a week in the Civic Repertory Theatre) three-figure-a-week salary, and was a huge critical success. One critic wrote of Meredith that his performance "was as near perfection as could be imagined" and that what he achieved "was worth a hundred performances up and down town." The play, however, lasted only nine days.

Although Meredith had flops after that, he was never without rôles again for any length of time. He next appeared on Broadway in *She Loves Me Not*, a prodigious success which won for him acclaim as an actor of robust comedy parts. His success in *She Loves Me Not* under Howard Lindsay's direction brought him to the attention of radio and gave him the part of Red Davis, a typical American boy in a program sponsored by a chewing gum company, for 40 weeks at \$350 a week.

His greatest success came while he was working under the direction of Guthrie McClintic. McClintic drew out in Meredith those qualities which led the actor to be dubbed by a press agent "The Hamlet of 1940." McClintic directed him first in a small rôle in Miss Cornell's revival of *The Barrets of Wimpole Street*, then again with Miss Cornell in *Flowers of the Forest*, where Meredith, according to critics, "came near walking away with the production."

It was under McClintic's direction, too, that Meredith appeared in *Winterset*, the Maxwell Anderson play that won the Critics' Award, and the following year in another Anderson play, another Critics' Award prize play, *High Tor*.

Meredith's success in *Winterset* somehow guaranteed him stature and importance in the theatre. He took a house at Sneden's Landing on the Hudson. It was while he was living

MEREDITH, BURGESS—*Continued*

there that he met Margaret Perry, a young divorcee who also had a home there. They were married January 10, 1936, and although the marriage seemed a happy one at first, they were divorced July 20, 1938.

Meredith also played in the movies the part of Mio in *Winterset*, which he had interpreted so beautifully on the stage. His eight-year movie contract calls for a picture a year at a time to be chosen by him, and started with \$1,500 a week to be raised so that he will make \$3,500 a week when the last picture under the contract is made. In addition to *Winterset* Meredith's movies include *Of Mice and Men*, *Spring Madness*, *There Goes the Groom* and *Idiot's Delight*.

His most recent plays were *Star Wagon* and the revival of Molnar's *Liliom* in which he played in 1940. At 32 his place in the theatre is assured. His acting has been described as brilliant, impressive, heartbreaking, sinewy and sensitive.

Meredith has not become brash with praise. "I am sure I never would have had any success if I had not been lucky enough to play under excellent direction both in New York and summer stock," he says. "Directors, I don't mind saying, made me. The actor's opportunity to learn his craft lies in the chance to work under a good director."

About five-feet-seven inches tall, Meredith has a pointed face that might "reasonably belong to a jockey," and ginger-colored hair. His friends call him "Buzz" or "Bugs," and the name seems to suit him and his offhand, crumpled clothes.

He has served as vice-president and president of the Actor's Equity. On March 18, 1939 Amherst, which he left so disillusioned in 1928, honored him at the dedication of the new Kirby Memorial Theatre at the college by presenting him with an honorary Master of Arts degree.

MESSERSCHMITT, WILLY 1898- Aircraft designer; manufacturer

Hanson Baldwin of the *New York Times* wrote in December 1939: "At present Germany is probably stepping up her airplane production faster than Britain, France and the United States combined." The man who is mainly responsible for the growth of the Nazi plane industry and for the lethal speed of Nazi pursuit planes is Willy Messerschmitt.

Willy Messerschmitt is a "sharp-nosed, sandy-haired citizen of the placid medieval town of Augsburg, Germany." He was born in 1898 in Germany and was educated at the Munich Technical High School. He started flying when he was 15 and designed his first plane in 1916. In 1923 he founded the firm of Messerschmitt; while its director, he was also chief engineer, specializing in speed, for the Bayerische Flugzeugwerke, until it amalgamated with the Messerschmitt works in 1938. He was made chairman of the German Institute for Research in Aviation in 1936, was awarded the gold medal of the Association of German Engineers in 1937 and the Lilienthal Prize for Research in Aviation in the same year. In 1937, too, he became a member of Germany's Council of War.

Willy Messerschmitt, member of Hitler's Council of War and inventor of his pursuit planes, was reported in December 1939 to be missing. One rumor had it that he had fled to the Netherlands; another that he "hadn't been out of Germany since the War

MERRILL, JOHN DOUGLAS 1865—Jan 9, 1940 Editor of *The Harvard Alumni Bulletin* for 37 years; political reporter for the *Boston Globe* for 50 years

Newsphotos

WILLY MESSERSCHMITT

started." There still is some question in the minds of foreign correspondents as to his present whereabouts.

There is also a good deal of question in the minds of airplane experts as to the exact efficacy of the Messerschmitt planes. In April 1939 one of the Messerschmitts set up an absolute record of 469 miles per hour, with the ship "undoubtedly stripped and 'souped up' for the test." In combat with United States Curtis fighters which hit a top speed of about 330 miles per hour, "Messerschmitts," with their long, flat, square-tipped wings, have been proved "lacking in maneuverability and rate of climb," however.

It is possible that the lessons that Germany is learning in warfare now are being incorporated in new designs, for experts agree that so far as airplanes are concerned, "new types, new maneuvers, new designs will determine balance-of-power in the air rather than sheer quantitative production." It is to improve the designs of German airplanes, so vital in the War, that Willy Messerschmitt comes in, "if he hasn't gone out."

International Who's Who

MESTROVIC, IVAN (mesh'trô-vich) Aug 15, 1883- Sculptor

Address: Mletacka ul. 8, Zagreb, Yugoslavia

Ivan Meštrović whose fifty-seventh birthday came on August 15, 1940, has been internationally renowned as a sculptor since 1911, when one of his large-scale conceptions dominated the Serbian Pavilion at the International Exhibition in Rome. Represented at the

Brooklyn Museum, the Art Institute of Chicago, the galleries of Detroit and San Diego and the museums of Vienna, Budapest, Paris and Rome as well as by the Canadian War Memorial, he has had the honor of exhibitions at great public galleries like the Victoria and Albert Museum, the Tate Gallery in London and the Musée du Jeu de Paume in Paris.

Art critic André Michel once described Meštrović as "the only Serbian artist having a European reputation," and as long ago as 1915 Sir Michael Sadler, British scholar and connoisseur, began a movement to raise a fund for the national purchase of one of his pieces. As one French commentator wrote: "He is great because he pursues a higher reality showing through appearances and makes of every work at once an affirmation of the present, an appeal to the future and an aspiration towards the divine."

Meštrović was born at Vrpolje, Slavonis, the son of a small builder whose home was at Otavitz, on the Dalmatian plateau overlooking the Adriatic Sea. The family was very poor, and the village primitive and entirely devoted to agriculture. Ivan tended sheep in the mountains, was 15 before he saw anything of the life of a town and 16 before he walked on the streets of a great capital city. His education he got from his father, who taught him to read and write and encouraged him when he started to carve bits of wood and stone. Some of these carvings aroused comment in a local paper, and as a result some neighboring monks commissioned him to make a devotional carving, offering him a *florin* for the job. Meštrović held out for three and got his price.

When he was 15 a retired officer, Captain Grubišić, started a collection at Drniš to cover his higher training. Ivan's father sent him to Spalato for a year's apprenticeship to a master mason, after which Captain Grubišić was able to finance him for an attack on the wider world of Vienna. In 1902 he arrived there, poor, raw and bewildered. He found humble lodgings with a Czech family and went round to various schools and teachers, trying in vain to get taken on as a pupil. One pompous art master greeted his efforts with: "We want no Balkan prodigies here."

Finally he got his lessons, first from O. König and then from E. von Hellmer. At the same time his general education was continued by an official of the department of fine arts. When Meštrović had been in Vienna a year, with Hellmer's help he was able to enter the Kunstakademie and win a stipend for his lessons there in open competition.

After Vienna Meštrović's first important move was to set up a studio in Paris in 1907. He had already participated in the Vienna Secession Exhibitions and held one-man shows at Belgrade in 1904 and Zagreb in 1905. Now, in Paris, he was able to meet sculptors like Rodin, Bourdelle and Maillol,

Clara E. Sipprell

IVAN MESTROVIC

who taught him much without in any way changing the proud nationalistic spirit which had already shown itself in his work. Various visits to Italy likewise failed to turn him from his personal style. From 1907 to 1908 he was working on a huge scheme for a temple at Kossovo, its theme medieval Serbia in the grip of Islam. The temple was never built, but the model, exhibited in Rome at the International Art Exhibition of 1911, created a profound impression.

From 1911 to 1914 the sculptor lived in Rome, where he studied the sculpture of Michelangelo and the style of the archaic Greeks. From there he went to England, where prominent critics praised his work, where exhibitions were held, where Meštrović was commissioned to execute portrait busts of such important people as Sir Thomas Beecham and Lady Cunard. Part of the period of the First World War Meštrović spent at Geneva and at Cannes. And as stone became more and more scarce, he turned increasingly to wood sculpture, in which he became a master.

When the War was over Meštrović went back to his native country (now the principal constituent of an enlarged Yugoslavia) and in 1922 was given the post of rector of the School of Fine Arts at Zagreb, a post which he still holds. Many commissions and honors came to him and continue to come to him.

Meštrović is both a carver and a modeler. He works in wood, stone and bronze and in addition to his sculpture practices painting, engraving and lithography. He has tackled practically every kind of sculpture—from portrait busts to huge architectural schemes. But no matter what he does he impresses on it the mark of a virile intelligence and a far-reaching imagination. During the years

he has varied his style a good deal, sometimes, as in *Virgin and Child*, showing Byzantine feeling, sometimes being at once dramatic and realistic, as in *The Indian*, and sometimes showing a vein of tenderness, as in *The Artist's Mother*.

Most commentators divide his work into three classes. There are the "heroic" sculptures, designed to illustrate Yugoslavian history or legend, or created under the violent stimulus of the wars in which Serbia had been continuously engaged from 1912 to 1918; there are his studies in form "in which his strong originality in composition is pre-eminent particularly in female figures"; finally there are his "exquisite and rhythmic reliefs carved in wood or in a similar technique in stone, with two simple planes of relief." His *Bishop Nin*, *Widows* and *Maiden of Kossovo* all illustrate the first and earlier style; *Girl with a Guitar* shows the second; *Christ and the Woman of Samaria* is an example of the third.

Meštrović is married. He is a member of the Roman Catholic Church, and has executed a number of devotional works. He is short, stocky and dark, with piercing eyes and what has been described as "an attitude of restrained friendliness." He is not given to writing or speaking much about his art, but a significant phrase occurs in a short monograph which he wrote on Michelangelo. "The artist must have a profound and slowly ripening conviction," he wrote, "and no work of art can live without some remote religious conception."

METAXAS, JOHN (mēt-äks'-äs') Apr 12, 1871- Dictator of Greece

Address: 150, Od Patissiou, Athens, Greece

One small European country after another has been drawn into the orbit of the current War. In October 1940 Greece became another battleground. Accused by Italy of maltreating Albanian minorities and of murdering an Albanian "patriot" and faced with an ultimatum demanding virtual surrender of Greek independence, Greece and John Metaxas, her dictator had been compelled to go to war against Italy, whose armies attacked as soon as the ultimatum expired. Metaxas' firm stand has helped to increase his popularity among his subjects.

Greece and her harbors are important strategic points in World War II. Today they serve as shelters for British convoys and keep open for Britain communications in the East Mediterranean. In Italian hands

these harbors could serve as valuable bases against Egypt and the Levant.

Ideologically and economically the sympathies of John Metaxas, dictator of Greece who is officially Greece's Premier and Minister of War, Marine, Air and Education, had been previously on the side of the Axis. For many years Germany has been the greatest consumer of Greek agricultural products and minerals, and the Nazi influence has been strong in radio, consumers' goods, railroad supplies and armaments. Metaxas himself, who attended military school in Germany and supported Germany in the First World War, is considered by some Germanophile and is also supposed to have understudied Mussolini and to have set up his own state "on strictly Fascist lines."

When Metaxas came to power on August 4, 1936 as the result of a *coup*, he immediately proceeded to reorganize Greece according to the examples set him by Hitler and Mussolini. In September of that year the secret police arrested more than 4,000 Liberals, Communists and Republicans and herded them into penal colonies. Arrests and deportations continued; and Metaxas went so far as to exile a young barber for "excessive and dangerous politeness, provocative of Communism."

Books were burned, the universities were purged, castor oil treatments were frequent, censorship was "clamped down." Editors were sometimes given even the headlines to use on the government propaganda articles they printed. Metaxas explained this to the British press when there was criticism: "England," said he, "can afford the luxury of a free press. Greece cannot afford to offend her neighbors." And he explained to the newspaper editors how they must follow him like soldiers in battle, "never consulting the general, nor criticizing him, nor exchanging opinions with him, but always having confidence in him."

Reforms, however, were established. A minimum wage was set up, an eight-hour day was declared, some of the debts of small landowners were canceled, workers were given medical care and vacations. Metaxas was and still is proud of these reforms and the support he thinks they have brought him. "I have raised the burden of debt from the small landowner. I have increased wages. I have trebled the minimum wage. Is it likely that my work is not appreciated? My government is directed toward bettering the lot of the poor. I feel that they are with me."

Many observers think that Metaxas deceives himself and that "a vast majority of the population is opposed" to his dictatorship. Actually, rising prices have offset any rise in wages; the minimum-wage laws are generally ignored; the medical care is almost non-existent; complainers are sent to prison; the eight-hour day is ignored "by most factories." But though "a dictator without popular support until the outbreak of the war between his country and Italy,

Associated Press

JOHN METAXAS

Metaxas has continued in power for four years because he has been supported by the army and by the King.

John Metaxas was born in Cephalonia, the son of Panaghi and Helene (Trigoni) Metaxas, and is the descendant of a long line of military and governmental officials. Almost from birth he was intended for the army. He went to the Military School of Greece and in 1890 was made an officer. His first battle came in 1897 when he fought against the Turks. Always impressed by German military methods, he then went to the Kaiser's Military Academy at Potsdam in 1899 and stayed there for four years. The German professors, impressed by his brilliance, used to call him "Little Moltke" after the hero of the Franco-Prussian War.

From 1903 to 1912 Metaxas served in the Greek Army and in 1912 was active in the war against the Turks and Bulgars as assistant chief of staff. In 1915 he became chief of staff and military adviser to the former pro-German King Constantine of Greece. It was partly on Metaxas' advice that Constantine supported Germany in the War. But Constantine abdicated, Greece joined the Allies and Metaxas was dismissed from the army and exiled to Corsica in 1917.

In 1921 Metaxas was back in Greece and a supporter of King George II. The Republic was established in 1924 and in 1926 Metaxas was made Minister of Communications in the coalition government. He continued active though not prominent in politics until 1934, when he started a Fascist-Monarchist party of his own which was severely defeated at the polls. In 1935, when George II was restored to the throne, he was made Vice-Premier and War Minister though his party had only six seats in Parliament. In April 1936 he was made Premier.

METAXAS, JOHN—*Continued*

At the time when King George returned, the country had been in great confusion, its treasury empty, its political parties constantly feuding, its people discontented. The King tried to restore order but wasn't too successful. In August, on the eve of a general strike, in order to combat "political divisions and the menace of Communism," Metaxas staged a *coup d'état* and declared himself dictator. Demoralized by years of parliamentary squabbles, the Republican and Monarchist parties accepted his proposal that he rule until some agreement was reached, and plump, bespectacled, shabbily-dressed Metaxas declared: "I shall become a sort of modern monk. I shall renounce everything in the world and shall live only for Greece." After four years, he is still dictator in his own country but surrounded by the dictators of larger nations: the Fascist country he has built up is now threatened by the Fascist countries he admired and copied.

MICHELSON, CHARLES (mī'kēl-son) Apr 18, 1869- Director of publicity for the Democratic National Committee

Address: b. National Press Bldg, Washington, D. C.; h. The Westchester, Washington, D. C.

Charles Michelson, who has been handling Democratic publicity since 1929, is "the greatest silent orator in America." Those Democratic speeches in an election year which seem to come from Senators, Cabinet members, Governors or local spellbinders usually find the source of their eloquence in the typewriter of Charley Michelson—"puppet master to a troupe of Democratic politicians," is what the Republicans call him. Some politicians will take a speech from him and not even bother to read it until they get to the microphone; others will bring their own ideas into headquarters to get them "polished, perfumed and packaged."

As public relations and publicity man for the Democrats, Charley Michelson has more to do than to write speeches. He has to process the news, explaining away or minimizing unfavorable events and playing up the favorable ones. Much of this he does in his weekly column sent out free to the newspapers of the country. It is called *Dispelling the Fog* and is devoted to proving that the "Republican elephant is no more than a mouse with a snout." He also has to confer almost daily with party leaders, plan policies and advise on strategy, and he works very closely with Roosevelt and Flynn (see sketch this issue). When Roosevelt holds his press conferences, "Charley sits off to one side, looking gloomy, dreamy and abstracted, but missing no phrase or intonation. One day when the reporters filed in the President said there was no news 'except that Charley Michelson needs a haircut.' Charley stirred from his abstraction. 'Somebody's got to economize around here.'"

Charley Michelson was born in the little silver mining camp of Virginia City, Nevada in 1869, the son of Samuel and Rosalie

Michelson, who had migrated there a few months before he was born. His is a distinguished family. His sister Miriam was the author of *In the Bishop's Carriage*, a very popular novel of 35 years ago; his brother A. A. Michelson became a famous physicist, won the Nobel Prize and conducted experiments in the speed of light on which the Einstein theory was largely based.

But Charley had a prejudice against scholarship and because his family insisted on educating him, ran away from home at 13 and went to Arizona where he became a shepherd, a miner and a driver of 40-ox teams. His brother-in-law, owner of the *Virginia City Chronicle*, liked the letters Charley wrote home and offered him a job as a reporter. He accepted, and when he got a chance at a \$7 a week job with the *San Francisco Post* he knew he was going to be a journalist. He started as a reporter by chasing horse-drawn fire engines and Barbary Coast desperadoes.

He reached fame with the Hearst papers. The *New York Journal* sent him in 1896—the year he was married to Lillian Sterrett—to Cuba where the Spanish-American War was brewing. The Spaniards threw him into jail in Morro Castle for a while, but let him out in time to cover the War. After the War, Michelson stayed with Hearst as managing editor and editorial writer until 1913 when he began writing scenarios for Essanay. In 1917 he was put in charge of the Washington Bureau of the *New York World*. Here his “crackling reportorial style and ungloved handling of men and events put him in the forefront of the correspondents.” There was one time when he approached Coolidge at a reception and said: “I don’t think you know me, Mr. President. I’m Michelson of the *World*.” “I know you,” the President replied. “Wish you were a Republican.”

In 1928 Charles Michelson was put in charge of publicity for the Democratic Party. John J. Raskob, manager and “angel” of the Democratic Party, was smarting from the 1928 defeat. “I have never been connected with an enterprise that was a failure,” said he, “and I’m not going to this time.” As a first step he hired Charley at the unheard of sum of \$20,800 a year (since raised to \$25,000) and gave him an entirely free hand. He hired him because he was a “crackerjack reporter, a shrewd and witty commentator and an old student of politics and politicians.”

Michelson had hardly started when the stock market crash and the depression came along. “Charley joyfully proceeded to hang that depression right around President Hoover’s neck.” “Hundred-tongued Charley” put attacks into the mouths of Democratic bigwig Senators or Governors whose names would carry the headlines. Republicans became able to identify his speeches. If a Senator made a dull one, it was probably his own. If the Hoover Administration was “picking splinters out of its skin for a week afterwards, it was a Michelson speech.” The Republicans cried out against his job as “one

CHARLES MICHELSON

of the most infamous incidents in American political history,” but Charley’s “Smear Hoover Campaign” went right ahead.

From the moment he was hired, ignoring the publicity man’s usual system of “canned handouts” which reporters throw in wastebaskets, “his high powered press agency laid the groundwork for the Democratic landslide which put Franklin D. Roosevelt in the White House.” But after the 1932 elections Michelson insisted: “We performed no miracles. The table was spread and there was nothing to do but eat the meal.”

This “gray haired, round-shouldered, pleasantly homely little man” whom everybody calls Charley found one of his main jobs in 1932 was to act as sharpshooter against Raskob, Al Smith and the others who had originally hired him when they became leaders of the anti-Roosevelt Liberty League. It wasn’t long before the country had a picture of them as a lot of silk-hatted old plutocrats warring on the common people; it wasn’t long before Charley had looked up all Al Smith’s old speeches and found a good many contradictions and one amazing phrase—“put the Constitution on the shelf”; and it wasn’t long before Michelson had succeeded in converting the enmity of the Liberty League into a Roosevelt asset.

As press agent for the Roosevelt Administration, Charley really shone. He delivered blows and he parried them. He expertly smothered bad publicity with good—for instance, right after it was announced that the air mail was going back to civilians, a defeat for Roosevelt, he told the country that Mellon and others were to be investigated on income tax charges. He was tremendously useful in advising the Administration on what to ignore, with prophetic

MICHELSON, CHARLES—*Continued*

powers to estimate the developments which look big and menacing today but are forgotten by next week if left alone.

In 1933 Michelson was sent into the Treasury Department. There he "insisted that the Treasury's intricately worded statements be reduced to language which he could understand; then he gave them to the press." From the Treasury he switched to the CCC which was just being organized, but within a short time was sent to another "hot spot in the New Deal's press relations"—the London Economic Conference. He had been credited "with getting the American delegation on through its severe ordeal with far less loss of prestige than might have been the case without his ministrations."

After the Economic Conference there was a little trouble with the NRA, so Michelson was appointed its Director of Public Relations. He was behind all its publicity and behind its eventual smooth running. "The wise Ulysses," wrote General Hugh Johnson (see sketch this issue) later, "who kept my erring feet on the path when he could reach me was Charley Michelson. As long as I was where Charley could edit my speeches or manage NRA publicity, I never made any very bad blunders."

By 1936 the Republicans began to regard the little man with gray hair, clothes and complexion with a "kind of superstitious dread." They had felt the burn and sting of his phrases. They saw him as a Machiavelli behind all the Democratic successes. "If we only had a Michelson," moaned the Republican leaders. They hired Franklyn Waltman to do for them what Charley had done for the Democrats. Charley greeted him nicely in his column. He pointed out that Waltman had once been a Democrat but said he was no doubt "true to the code of the honest soldier of fortune who fights his best under the flag of whatever cause engages him."

In 1937 Charley stirred up quite a rumpus in both his own party and in the Republican when he accepted a post as publicity director of the Crosley Radio Corporation along with his Democratic job. His own party thought it unwise because party strife was still echoing over the Supreme Court plan's defeat, and the New York *World-Telegram* solemnly warned: "The New Deal can't afford this. . . It is not illegal but it is certainly improper."

An insatiable worker, Charley paid no attention and kept right on writing speeches and press releases, conferring with Democratic leaders. To the casual eye, however, he always seems to work very little. "He seems to spend a large part of every day in the back room of the press club playing dominoes or chess with his old newspaper cronies." But some say he "can think out a whole speech while pondering over a chess move." And when he does write he turns out fast and polished copy.

Now over 70, Charley Michelson is "stooped and frail and looks as if the wind would blow him away." But he conceals an unexpected spryness and goes around the golf course in the 90's. He likes hunting and fishing, too, and once said, his "small countenance seamed, lined and puckered into an expression of boredom and gloom" with only the eyes showing the sharp wit beneath, that he would like to be appointed minister to some small state where there would be nothing to do but to go fishing.

MILLER, MAX Feb 9, 1901- Author; journalist

Address: h. La Jolla, California

When Max Miller, in 1936, found himself "sitting in a Hollywood studio with five new pencils, three different colored stacks of paper and a well-oiled typewriter, wondering what to do about a girl and boy in the United States Coast Guard," he knew he had met the fate that comes to well-known authors whose auto needs a new top or whose roof needs creosoting. But his stay there, described wittily and bitterly in *For the Sake of Shadows* (1936), was short.

He had been many places before then and his 10 books tell 'a good deal about them. He was born in 1901 in Traverse City, Michigan, but, as he says, "this makes no difference, as the earliest place I can remember is Everett, Washington." In time his family moved to "Montana to take up a homestead 18 miles Northeast of Conrad,"

and his life there is described in his third book, *The Beginning of a Mortal* (1933).

Max Miller's first newspaper job was in Everett, Washington, where he worked on the old *Tribune* to get through grade and high school. He left because "the War seemed an easier career, so, though underage and under-weight, the Navy let me in after I filled up on lemonade before standing on the examining scales." After the War he attended the University of Washington for the "customary four years" and from there went to Australia, the Solomon Islands and New Guinea, paying his way by doing newspaper copy.

I Cover the Waterfront (1932) was Max Miller's first book and, perhaps, his best known one. He says that it is "merely my own story of trying to reconcile myself to failure somehow, for every time I attempt to put my neck up my ears are slapped back," but the critics found these sketches of life along the San Diego waterfront "tragic, touching and strange," and the public read them widely.

The philosophical cast to *I Cover the Waterfront* is the mainstay of a good many of Max Miller's books. *He Went Away for a While* (1933), which contains the quiet thoughts of days by the sea, *The Second House From the Corner* (1934), which gives sketches of his own life and the life around him, and *The Man on the Barge* (1935) are all the results of his thoughtful consideration and thoughtful reporting of what he has seen, felt or known.

In *The Great Trek*, published in 1935, Max Miller first appears as a travel reporter. This account of the five-year drive of a reindeer herd through the icy wastes of Alaska to northern Canada and his later *Fog and Men on Bering Sea* (1936) have the sort of vivid realism that caused one critic to say of *Fog and Men*: "It makes one see and hear and smell the coast of Alaska and the Bering Sea." This book is Max Miller's account of his own adventures, of adventures past and present, true and legendary, along the northern coastline.

Mexico Around Me (1937), like *Fog and Men*, is no conventional guide to a country. It tells about the "Land of No Tourists" in the extreme southern part of Mexico and about Mexico City and without being a tourist's book, "sums up Mexico completely." Even those who call it "self conscious" and "occasionally tedious" agree that it is one of the best travel books on Mexico.

In all these travel books is evident Max Miller's strong love for this continent. As he puts it, "I dislike every American who puts on an European swish to sniff: 'Pffff! and what is a desert?'"

MAX MILLER

A Stranger Came to Port, which appeared in 1938, was Max Miller's first novel, the story of a tired business man who suddenly disappears from his family and his business and lives for a year alone on a houseboat, his only friends fishermen and beachcombers. This book is a mixture of story telling, reporting and moralizing, whose best parts, all agree, are the descriptions of tuna fishing. *Harbor of the Sun* published in October 1940 is a "rather easy-going history of San Diego, oldest port on our West Coast."

Max Miller is now living in La Jolla, California. He has traveled widely; he has tried the Orient, the Arctic, Australia, Alaska and Mexico—and there has come to him finally the idea of staying home.

MILLES, CARL (mil'is) June 23, 1875-Sculptor

Address: Cranbrook Academy of Art, Bloomfield Hills, Michigan

Carl Milles has been hailed as the greatest fountain sculptor in the world. His latest masterpiece, however, attracted public attention not only because of its beauty but because it was the center of an art controversy in a city famous for its art squabbles. The fountain in question was his *Wedding of the Rivers*, erected on Aloe Plaza in St. Louis as a memorial to Louis P. Aloe, merchant and alderman. The 19 heroic nudes which depict the meeting of the male Mississippi with his coy bride Missouri, attended by a troupe of playful naiads and tritons, were viewed askance by the Board of Aldermen, as a "convocation of Nordic Monsters" and a "wedding in a nudist colony." The statues were duly unveiled, however, and Milles in his dedication speech archly urged "boys and girls in the pool" to "behave well . . . enjoy life but remember that at every sunrise you have to be here."

Carl Milles was born on June 23, 1875 at Lagga, Sweden, the eldest son of Lieutenant Emil (or Mille) Anderson and his wife Walborg (Tissel) Anderson. Carl's father was a picturesque figure, a veteran of the Franco-Prussian War, so well-known and liked in the vicinity that his first name was gradually adopted as a surname instead of Anderson for his children, who were generally known as "Mille's children." Carl was a delicate and rebellious child with a great love for the countryside. He missed it sorely when he was sent to the Jacob School in Stockholm at the age of 10. He developed a passionate love for ships and wharves to compensate for his lost fields and forests and when he was 14 unsuccessfully tried to run away to sea.

Since it was obvious by that time that the boy hated going to school, his father decided to apprentice him to a cabinetmaker as a disciplinary measure and also because he had shown unusual manual skill since early years. Young Carl did not neglect his wood carving. He attended evening classes in the Technical School, won a scholarship in the more advanced grade, where he received instruction in carving and ornamental modeling. At that time, too, he decided that he was going to be a sculptor like the famous Johan Börjeson whose workshop was across the street and whom the youngster worshiped. In 1897 he was awarded the Swedish Arts and Crafts So-

ciety Pride of 200 *kroner*. With this modest prize he set off to Chile, where he hoped to make a living teaching Swedish gymnastics in a school run by a friend.

Milles never did get to Chile. He stopped off at Paris and was so enchanted with it that he decided to stay and follow his ambition to become a sculptor, whatever the cost. The next few years he led the traditional existence of a starving genius. He did a few odd jobs here and there: worked for a coffinmaker who allowed him to sleep in the shop in his own handiwork, was a waiter in restaurants and clubs, worked for a firm of Italian ornament makers. Yet he somehow found time to attend a few classes at the Academy Colarossi and to take a thorough course in life drawing and in anatomy. He also found time to visit the *Jardin des Plantes* to study plant forms and make sketches of animals. By 1900 he was beginning to be known: his marble *Hylas* got honorable mention at the *Salon des Artistes Français* and his study of an adolescent girl received a silver medal at the Paris World Exposition. That year, too, he first met the great sculptor Rodin, who conceived a great liking for the talented young Swede and for whom he worked for a while as an assistant in his studio at Meudon. His poverty was somewhat alleviated by orders of small bronzes by the firms of A. Collin and Blot.

Recognition came when he was awarded fourth place for the Sten Sture monument in Upsala. The award was later changed to first place on demand of the student body. Because of disagreements and lack of funds the completion of the monument was postponed until 1925, but young Milles' reputation in Sweden was made. During the next two years he made a series of notable animal groups and rounded off his stay in Paris with sculptural designs for the new Dramatic Theatre in Stockholm. Then, tiring of Paris with its exclusively impressionist preoccupations, he went to Munich in 1904, where he married Olga Granner, a young Austrian artist. Soon after his marriage, years of strain and overwork took their toll. Milles was ill for several years and it was only in 1908 that he was able to come back to his native land and settle down near Stockholm. He began at that time to build his famous villa near Lidingö, which was to house his rapidly accumulating works and to become known throughout Sweden for its exceptional charm as well as its embodiment of his art theories. In 1914 his achievements were recognized by a special exhibition of his works at Malmö.

In 1917 such a radical change had taken place in Milles' concepts that he actually felt it necessary to destroy the major part of his earlier work. He suddenly threw off the shackles of academism that had bound his earlier work to some extent, and his work of the period that followed is marked by individualism and unconventionality. His highest tribute to impressionism had been

his monument to Schéele, erected in the city of Köping. The following years brought works so different that many critics objected. The first was a gigantic figure of Gustavus Vasa, rich and solid, made of polychrome wood—a medium that Milles used again in his wood relief in the Time and Life Building, Radio City, New York.

During the next decade he began and completed eight monumental projects, in addition to many minor works. Among the former are his Halmstad *Europa*, a ruggedly rhythmic work, his marvelous *Rudbeckius* monument, a massive gothic figure with a chubby sprite perched humorously on its shoulder, the *Folkunga* fountain, with the sardonic figure of the legendary King, Folke Filbyter, on a horse. Perhaps the most remarkable thing about Milles' work aside from his versatility is his sense of site, of placing. This is particularly visible in his fountains, in which water becomes an essential part of the sculptural concept and lends a dynamic quality to the sculptured form. The works of his later period are remarkable, too, for their exuberance and rugged humor. Milles uses the Greek myth freely but imparts to it a vivid Gothic quality. Such is the sly, sharp face of the god Poseidon over his dripping classic body; a homely pungent quality is added to the whole fountain by the treatment of the eels he holds in his rugged hands. Or observe the original treatment of the young Diana, a sleek stripling who tiptoes through the forest teeming with lurking beasts.

In 1920 Milles became professor of modeling in the Royal Academy of Art in Stockholm—a position in which he found himself increasingly at odds with the academic world around him because of his new stylistic development. However, in spite of criticism of his later work, he was gaining an ever-increasing recognition in Sweden and abroad. In 1923 his new works were given a prominent place in the Tercentenary Exhibition at Gothenburg. In 1926 his works were exhibited at the Tate Gallery in London—a signal honor and his first showing outside of Sweden.

In 1929 came his first visit to the United States in order to design a fountain on the same theme as his *Diana* fountain in the court of the Swedish Match Company Building in Stockholm. Thereafter he agreed to spend at least a part of every year teaching in the Cranbrook Academy of Art and in 1931 he left his lovely villa at Lidingö and took up permanent residence at Cranbrook, where he now teaches and which is the source of all of his latest designs. His first years in the United States were occupied with the completion of his fine *Orpheus* fountain (1936), commission for which was given to him in 1926 and which was set up in Stockholm. Other works were the whimsical *Jonah* fountain and the *Peace Monument* in St. Paul, Minnesota, a great opalescent monument in white onyx, on the Indian theme of the Great

MILLES, CARL—*Continued*

Spirit. In 1939 Milles was given a prize at the Golden Gate Exposition. Two of his statues, the monumental and savage *Astronomer* and the highly stylized *Pony Express*, were shown at the New York World's Fair. Among other recent works wrought at his Cranbrook studio are his *Monument to Genius*, a tragic and powerful winged figure reminiscent of his demonic *Orpheus*, plucking at a vast harp, and his *Nature and Man*, wood reliefs for the Time and Life Building.

Carl Milles is a handsome man, of typically Swedish appearance, blond, apple-cheeked and stocky, with a wide, smiling face and a soft voice. He has a tremendous capacity for work, as the long roster of his sculptured figures indicates, and is content to live up to the motto on the gates of his Lidingö home: "Let me work while the sun endures." He likes gardening, is fond of flowers and animals, and has made many interesting and vital studies of animal life, replete with exuberance. His views on art can be summed up in his own words: "Nothing," he said once, "is ugly save stupidity." And on another occasion: "Art is not decorating nor is it literature. It is the ultimate desire of the eye."

MILLIKAN, ROBERT ANDREWS (mīl'ī-kān) Mar 22, 1868- Scientist

Address: b. California Institute of Technology, Pasadena, California

Chance made a physicist of Dr. Robert A. Millikan. One of the world's greatest scientists might have been a teacher of Greek or mathematics if a vacancy had not occurred in the science department of Oberlin College during his junior year. Young Millikan was working his way through college, and was majoring in Greek and mathematics when he was asked to teach a class in elementary physics.

He knew little about physics, but he boned up on it, and managed to keep one jump ahead of his class. He made such a good record as president of his class, mem-

ber of Phi Beta Kappa and teacher that when he was graduated from Oberlin College he was given a job as instructor of physics at \$600 a year.

Thus started his interest in science. With characteristic thoroughness and industry, Millikan set about making himself proficient in the profession into which chance had thrust him. He continued his studies at Oberlin College and two years later was awarded a fellowship at Columbia University for graduate work. Here he came under the influence of Michael Pupin, eminent scientist, who encouraged him to go on with his studies.

After taking his Ph. D. in 1895 at Columbia University, Dr. Millikan studied in Berlin and Göttingen. Soon after his return to America he took a teaching position at the University of Chicago, where he became assistant to Dr. A. A. Michelson, the world-renowned scientist who perfected an instrument for astronomical measurements. Dr. Millikan remained at the University of Chicago for 25 years, doing the research which led to the measurement of the electron there. He left in 1921 to become director of the Norman Bridge Laboratories at the California Institute of Technology and chairman of the executive council of the Institute, positions he still holds.

For almost 20 years Dr. Millikan has worked on the mysteries of the cosmic rays. He has carted balloons through the Andes and the Rockies, has had airplanes take electroscopes up at various heights to learn something of those mysterious cosmic rays which seem to be constantly bombarding the earth. Dr. Millikan was the first to name them "cosmic" rays.

Even now, in his 70's, he still is on the field for every detail of his research on cosmic rays, besides carrying out his strenuous duties as head of the California Institute of Technology, writing and teaching. In the summer of 1939 when he might have been taking a long vacation he and two young assistants went to Tasmania to send up balloons carrying electroscopes which would measure minute amounts of electricity emanating from cosmic rays. In June, 1940 he has disclosed in his annual report "a promising" new attack by science upon cancer.

In the field of practical science, Millikan was one of the group which developed the three-electrode telephone relay and speech amplifier which now underlies much of the science of communications as well as of talking pictures. He worked for six exhausting and patient years on the experiment of measuring the electron, one of the fundamental physical and chemical constants.

His capacity for work is amazing. An interviewer wrote of him: "Apart from his inherent ability, Millikan's greatest strength, it seems to me, lies in his habits of work, apparently so easy and effortless, yet withal so steady, devouring and persistent." During one of the stages of his cosmic rays ex-

periments, when army planes were carrying electroscopes to various heights in a 72-hour continuous test, Millikan and his assistant would check the electroscopes every hour, day and night. Between times, Dr. Millikan would lie down on a cot and take a nap. At the end, when the other workers were near the breaking point, he seemed as fresh as when the ordeal started. He will get up several times in the middle of the night to check experiments and then quickly go back to sleep. After dinner or an evening out, he goes back to the laboratory for several hours' work. "This tireless quality is due partly to his powers of relaxation."

Dr. Millikan learned habits of industry and thoroughness at an early age. The son of a Congregational minister, the Reverend Silas Franklin and Mary Jane (Andrews) Millikan, he was born in Morrison, Illinois in 1868, and when he was seven years old moved with his family to Maquoketa, Iowa. The Rev. Millikan believed in hard work and education. Young Millikan and his brothers raised chickens, tended cows, mowed lawns. It may be partly because of his early training and the years in which Millikan supported himself through school that he is now probably one of the best salesmen among scientists. He has been to sell the value of scientific research in universities to millionaires and to raise the budget for the California Institute of Technology.

Dr. Millikan's early religious background, too, colored his life. He has maintained that there is no real conflict between religion and science. "New discoveries in science are to him but further indications of the wonders of God's creation." But his religion has nothing in common with the Fundamentalists, the dogmatists of religion. His is a broad and liberal faith based upon the Golden Rule and the Sermon on the Mount.

The mature thinker, he believes, finds that science does not disturb the inner spirit of a man's religious faith. He quotes Einstein's statement: "It is enough for me to contemplate the mystery of conscious life perpetuating itself through all eternity, to reflect upon the marvelous structure of the universe, which we dimly perceive, and to try humbly to comprehend even an infinitesimal part of the intelligence manifested in nature." "I myself," Millikan says, "need no better definition of God than that."

Dr. Millikan is a small, sturdy man with white hair, blue eyes and a sunburned complexion. He looks younger than his years and more like a business man than a scientist. Despite all his work, he has time for a devoted and comfortable family life. He tries to get in golf once a week, and he and Mrs. Millikan lead a fairly busy social life. They also take an active interest in church work. They have three sons.

ROBERT ANDREWS MILLIKAN

For his scientific work, 22 colleges and universities have given Dr. Millikan honorary degrees. Various societies and organizations have given him prizes and gold medals. He holds 15 medals, including the 1923 Nobel Prize in physics. He has written more than a dozen books on scientific subjects, among them *Elements of Physics* (1917); *Science and Life* (1923); *Evolution of Science and Religion* (1927); *Science and the New Civilization* (1930); *Cosmic Rays* (1939), and numerous papers and lectures in scientific periodicals, all in a field which he entered by chance.

He explains it thus: "If chance thrusts you into work apart from your inclination or training, you need not necessarily be a misfit. It really doesn't matter a whole lot what line of work you happen to fall into so long as you follow through to the limit, with the individual abilities God gave you."

MILLIS, HARRY ALVIN May 14, 1873—Chairman of National Labor Relations Board
Address: b. National Labor Relations Board, Washington, D. C.; h. 5729 Kenwood Ave, Chicago, Illinois

It seems that in Chicago whenever A F of L or CIO members or their employers had a dispute that needs settling the man they were most likely to pick out to settle it was "tall, burly, square-jawed, deaconesque" Harry Alvin Millis, who, since 1916, had been professor of economics at the University of Chicago. In October 1940 he took a position as permanent referee between the General Motors management and the CIO's United Automobile Workers, but had been General Motors' man for only six weeks before he was called to head the National Labor Relations Board, succeeding J. Warren Madden. He will serve for a five-year term ending August 27, 1945.

Little criticism of Dr. Millis' appointment was heard even from the most conservative employers. He is known as a "confirmed, but minimum" liberal—neither pro-labor nor pro-employer—and as a friend of William M. Leiserson, leading Right-wing member of the National Labor Relations Board, though himself a member of no faction. Primarily an arbitrator, Dr. Millis belongs to the school of thought which believes there are few labor problems which cannot be solved if employer and employee can be brought together. And "racketeering by union leaders usually appears in conjunction with racketeering by employers," he says. One of his first pronouncements after his appointment was that although he believed in the 40-hour work week, it would be lengthened if necessary in the interests of national defense. He did not see any such necessity in the near future, however, while there are still millions unemployed.

Millis was born in Paoli, Indiana on May 14, 1873, the son of John and Maria (Bruner) Millis. He took his B. A. at Indiana University in 1895, dividing his time between baseball and more serious matters, took his M. A. a year later, and by 1899 had his Ph. D. from the University of Chicago. His first teaching job was at the University of Arkansas in 1902, where he was professor of economics and sociology. The year before he had married Alice M. Schoff of Cincinnati, Ohio. (There are now three children: Savilla, John S. and Charlotte Melissa.)

The young couple next made their home in California, for in 1903 Millis was offered a position as assistant professor of economics at Stanford University. He was an associate professor before he left in 1912 to become professor and head of the department of economics at the University of Kansas, and when in 1916 he joined the staff of the University of Chicago as professor of economics he apparently decided to settle down. He remained at Chicago until 1940, and in 1928 was made chairman of his department.

While in California Dr. Millis had worked as director of investigations in the Rocky Mountain and Pacific states for the United States Immigration Commission for two years (1908-1910), and after coming to Chicago served as director of investigations for the Illinois State Health Insurance Commission from 1918 to 1919. Material for *The Japanese Problem in the United States* (1915) and *Sickness and Insurance* (1926) was doubtlessly collected during these periods. Then from 1919 to 1923 he served as chairman of the trade board and later chairman of the board of arbitration for the men's clothing industry, bodies which keep the peace between Chicago clothing manufacturers and the Amalgamated Clothing Workers of America; at that time he formed a friendship with Sidney Hillman (see sketch this issue). Since 1923 he has been a member of the arbitration panel maintained by the American Newspaper Publishers' Association and the International Printing Pressmen's Union; he settled a great many railroad labor disputes; and from 1934 to 1935 he was a member of the old NRA National Labor Relations Board. He is also an active member of the American Economics Association, of which he was president in 1934, of the American Association for Agricultural Legislation and of the National Tax Association; and in 1938 he was on a three-man Emergency Board which presented a report to President Roosevelt against a cut in rail wages. His study, *Labor Economics*, written with R. E. Montgomery, two volumes of which were published in 1938, speaks with considerably more than academic experience.

Though he likes golf, Dr. Millis seldom gets time to play it; and though he has been planning a vacation with his wife for some time, that probably won't materialize either. But Dr. Millis is in the habit of working a seven-day, 84-hour week (most of the time with his pipe in his mouth), and is no doubt resigned to no play. He looks on the NLRB appointment as in the nature of a "draft."

Dr. Millis' popularity as a labor arbitrator was probably a little disconcerting at times. He couldn't ever be sure exactly what all his obligations were. It wasn't until June 1940 that he learned that he had been appointed in May to arbitrate charges arising from the settlement at Chicago between the Hearst papers and the Newspaper Guild, and would automatically be called upon to settle an argument if either the A F of L or the CIO thought it was being discriminated against. He was usually good-natured about things, though. There is a story that he got a call one day from a total stranger. "Come on down and arbitrate," said the voice. "We're in a deadlock with our employer, and so it's up to you."

"What have I to do with it?"

"You're our arbitrator."

"Who says I am?"

HARRY ALVIN MILLIS

"Why, it says so right in the agreement that was signed 10 years ago and renewed every year since then. It's printed right here in the book, Rule No. 6. How soon can you get here?"

"Oh, hell," Millis grumbled. "If it's printed in Rule No. 6, I guess it's up to me. The arbitration hearings will open next Tuesday at 10 a. m."

It is reported that Dr. Millis is the man who was offered the vacancy on the National Labor Relations Board which has existed ever since Chairman Madden's term expired.

MIRO, JOAN (mī-rō' jhō-än') Apr 20, 1893- Spanish artist

Address: c/o Valentine Gallery of Modern Art, Inc, 16 E 57th St, New York City

It is difficult to believe that there is no way of deciding when a painter is a surrealist painter and when he is not. Some of the critics, including those who viewed his five paintings in the Spanish show at the Valentine Galleries in New York City April 1 to 27, 1940, say Joan Miró used to be a surrealist but can no longer be given that name; some call him a "non-conforming surrealist," a neo-surrealist, or make up an interesting new ism for him, such as "plastic lyricism." Some years ago Miró informed his public: "It is very difficult for me to talk about my own painting, because it is always conceived in a state of hallucination created by a shock either objective or subjective, for which I am utterly irresponsible." This certainly didn't help the controversy very much.

Probably less well-known to the general public in this country than Salvador Dali (see sketch this issue), their names are often linked together—not so much because of their similarity as because of their different approaches to what is generally agreed to be the same problem: the expression of the subconscious on canvas. Dali's dream-language contains objects that are familiar enough, only his grammar is startling. In contrast, Miró's is a "pictographic language of the subconscious," a kind of shorthand in which objects in the familiar world are seldom referred to at all except by subtle suggestion. In any comparison Dali usually comes out a bit battered by the critics, one of whom called him "a sort of ten-cent store version of Miró." Another said: "If Dali is the Courbet of the dream-world, then Miró is its El Greco, or better its Picasso." Miró himself thinks Dali's work over-representational, literary, while Dali calls Miró, simply, "a failure."

Whether it is necessary to define Miró's work in order to enjoy it seems doubtful. Even in his most abstract fantasies audiences seldom fail to appreciate Miró's gaiety of patterning, his imaginative use of color, his unfailing sense of design—above all, the indescribably witty something that is conveyed by his assemblages of little forms resembling nothing exactly and to the obvious-minded suggesting nothing so much as sunbursts, stars, fish, insects, microbes. Critics, of course, find deep significance in these same symbols. One French critic says, pictorially: "Here is where the comma falls in love with the period." A Freudian states that Miró's "expression of the subconscious in symbolical terms" is closely related to prehistoric rock drawings, and shows a flight to the caveman, pure and simple. Another more poetic critic speaks of his "romantic, poetic disposition which probes the apparent, the 'real' for the 'unreal,' the infinite mysteries which lie hauntingly beneath the seen, as beneath the ocean or the canopy of the sky." Still another critic sums up his artistic credo in a sentence: "All painting to Miró is lines, areas, and interceptions." Henry McBride

Balthus

JOAN MIRO AND DAUGHTER
DOLORES

of the New York *Sun* was particularly impressed with his sincerity and assured his readers that Miró was "as honest as death."

Although he is now in middle-age (he was born in Barcelona, Spain, on April 20, 1893), Joan Miró achieved recognition when much younger. At 14 he was attending art school in Barcelona. He was temporarily forced to leave school and take a job as clerk in a store, but by the time he was 18 he was again studying art—this time under Gali, who taught a sense of form by having his pupils draw objects which they knew only by touch, and model in clay. By 1918 Miró was ready to exhibit in Barcelona, and when his first show was successful he began looking for a wider horizon. For the young artist there was only one—Paris. The next year he found himself in Montparnasse, not much more financially secure than any of its struggling geniuses, but distinguishing himself from the rank and file by "his tidy, carefully brushed clothes and well-groomed hair and nails"—and by a talent which was easily recognized.

Miró's painting was at this time more or less naturalistic, even imitative. The influence of the academics was strong as well as the later influences of Van Gogh, Matisse, Picasso. But when he exhibited for the first time in Paris in 1921 he found other artists already willing to acknowledge him as a genius. Picasso bought a self-portrait. Picabia, Léger, Matisse and Braque were kind to him. And not least important among others who helped him was André Breton, the poet, editor of *La Révolution Surréaliste*, the literary organ of the surrealist movement.

As Breton says, this was a time when "painting was forced to beat a retreat and to retrench itself behind the necessity of

expressing internal perception visually." The surrealist movement courted such painters as Picabia, Picasso, Chirico, Max Ernst and Paul Klee, and many artists whose work was afterward to develop along more independent lines were at this time flirting with automatic painting, the exploration of the subconscious and of the night world of dreams and insanity.

In 1922 Miró painted what some critics still regard as his masterpiece, *The Farm*. A daydream of his ancestral farm in Tarragona, it had taken him nine months to paint, and was an odd mixture of the old and the new—for details were realistic, the pattern of the whole was at least partially cubistic, and yet the barns of the picture were laid open as if X-rayed. It was acclaimed as a surrealist *chef d'oeuvre*, and when in 1924 the surrealist school felt itself well-enough organized and defined to publish its manifesto, Miró was hailed as the painter who best conformed to its specifications, with Max Ernst, possessor of "the most magnificently haunted brain of them all," as his chief rival.

But any painter of integrity has a horror of repetition. One critic has said that "the painting of Joan Miró manifests a progression, or series of progressions, from that of the poet-painter to that of the painter-poet."

Thus, although Miró's earliest work was largely "literary," a matter of images described in paint, imitative of actual objects, his canvases gradually became less and less crowded, more simplified, his color and color contrasts increasingly intensified, until by 1927 he was painting almost complete abstractions. In 1926 came *Dog Barking at the Moon*, which is much more representational than many of his works of the same period (its fantastic forms are easily identified as dog, moon, ladder, though as simplified as a nursery rhyme), but which nevertheless illustrates the trend of his development. Herbert Read has described his more typical work of the period as "a single sensitive line exploring a field of pure color."

By 1928 Miró had gone so far in this one direction—he was beginning to be accused of sterility, of painting by formula—that some revitalizing influence was required. He found it in a temporary return to observation—not observation for the sake of photography, but for the suggestions implicit in the forms of natural objects. A visit to Holland in 1928 and the influence of Vermeer were the sources of *The Potato*, a painting which reveals Miró's "subconscious reactions to the suggestions which spring from the vegetative outgrowths of the potato." At about the same time Miró began to re-experiment with color. He had been known for his fresh, clear colors, sparingly used—pastel combinations, primary colors, large divisions of blacks and whites and earth tones; his colors were often more angry, more violent

now. His objects became generally larger, more recognizable, though never really representational.

His was a "spiral" development rather than a reversal, however, for this second phase of observation also reached a more abstract conclusion, and again Miró began to simplify, to search for a shorthand which could express symbolically what he had to say without becoming a "mere calligraphic scribble."

Still best-known, perhaps, for the whimsically mystic mood of such pieces as *Dog Barking at the Moon* and *Mrs. Mills in 1740 Costume* (the latter shown in the recent New York show), Joan Miró is able, "by adroit turns of composition and tone, to conjure up an emotional sequence ranging from laughter to horror." In 1937 one critic commented on his *Still-life with an Old Shoe*: "For morbid, gangrenous coloring and generally stomach-turning qualities in purely abstract form . . . (this picture) takes all prizes for the (1937-38) season." Perhaps it is not unreasonable to suppose that events in Spain made Miró unwilling or unable to express anything less "morbid" and "gangrenous"; if so, his ability to produce such revulsion in the spectator by purely abstract form seems as much a proof of the communicativeness of his symbols as his ability to amuse.

Like his countrymen, Pablo Picasso and Juan Gris, whose canvases appeared in the Spanish show along with his, Joan Miró has lived the larger part of his artistic life in Paris, with frequent visits to his farm in Spain. In his cramped studio in Paris it is probable that he continues to paint, concerned with more important issues than varied reports as to exactly what he is painting. In the early '20s he married a native of Mallorca and is the father of a daughter, Dolores.

MOLOTOV, VIACHESLAV MIKHAILOVICH (möl'o-tōf vyä-che-slav' me-khī'lo-vich) 1890- Russian Premier; Foreign Commissar

Address: The Kremlin, Moscow, U. S. S. R.

Viacheslav Molotov, Russia's Premier and Foreign Commissar, has played an important part in Europe's intrigues during 1940. It was he who in the first months of the year was his country's spokesman for the Finland-Soviet warfare and he who, in November, created world-wide speculation by his visit to Berlin.

Officially the conferences which took place were described as aimed at developing a long-range program of Soviet-Nazi co-operation. What actually transpired is, in December 1940, still a mystery. Probably Turkey, the chief obstacle to a Nazi *Drang nach Osten*, was a main topic; the Balkan states were at least talked over; the Sino-

Japanese situation may have been considered. In any case, Britain took a gloomy view of the meetings. "The fact that the visit comes so soon after the American elections is not encouraging," said the London *Daily Mail* which also pointed out that a new phase of the War seemed to be starting.

The trip to Berlin was the first journey outside of Russia of Russia's Foreign Minister and Premier who was born Viacheslav Mikhailovich Skriabin, the son of a low salaried clerk. He was educated at the St. Petersburg Polytechnic School and was an early worker for Communism. He took the name of Molotov when he took the oath of loyalty in 1906.

For the past 19 years he has been Premier of Russia. In May 1930 Foreign Commissar Maxim Litvinov, suddenly pleading ill-health, resigned, and since then Molotov has filled the position of Foreign Commissar in addition to his duties as Premier. Some European circles profess to believe that Litvinov's resignation was not because of ill-health but because Stalin did not agree with Litvinov, an "experienced diplomat who did his own thinking." These critics maintain that Stalin wanted a "yes man" and chose Molotov, his immediate assistant, and "one of his most trusted aides."

Since the Russian Revolution a number of prominent Soviet men have disappeared, been executed or exiled. Molotov has been one of the few who remained in a trusted position. Lenin called him the "best filing clerk in the Soviet Union."

Molotov has held a number of government posts, among them President of the Council, Secretary of the Communist Party of the Ukraine and since 1921 Secretary for the whole U. S. S. R.

In 1935 he aided in drafting reforms in the Constitution. Although he has not had the foreign experience of his predecessor, he has for many years helped in establishing the foreign policy of the Soviet, and as President of the Council he was for a time Litvinov's superior.

Now middle-aged, there is a strong supposition in Europe that some day he might succeed Stalin. A writer describes him as "broad-shouldered, bushy-mustached, pincenezed" . . . resembling "the late Theodore Roosevelt." The pince-nez, his clothes and manner give him a certain elegance, rather English, which distinguishes him from his colleagues. In 1936 his wife visited the United States. Favorably impressed, she influenced him in our favor although since then he has not tried to maintain the best relations between this country and his. In August 1940 he said to the Russian Parliament: "I will not dwell on our relations with the United States, of America if only for the reason that there is nothing good that can be said about them." Most of the statements on the United States and foreign

VIACHESLAV MOLOTOV

affairs in general have been made by Molotov.

Molotov stutters badly. It is said that in 1937 when he addressed the highest legislative body in Russia, the Soviet Congress, he "made three great efforts before his speech impediment would permit him to utter the most important cry in Russia: 'Long Live Comrade Ssss. . . Long Live Comrade Sttt. . . Long Live Comrade Stalin!'"

During his busy days he has found time to write a number of books in Russian including *The Party's Policy in the Villages; Elections to the Soviets* and *On the Lessons of Trotskyism*. Translations in English have been made of *Second Five-Year Plan* (1936); *Soviet Prosperity* (1935) and *Tasks of the Second Five-Year Plan* (1934).

MONTESSORI, MARIA (môn'tès-sô-rê)
 Aug 31, 1870- Educator

On August 31, 1940 Dr. Maria Montessori, the great Italian educator now interned in India as an enemy alien, celebrated her seventieth birthday. Since 1909 Dr. Montessori's name has been a household word and though the effectiveness of her educational method has occasionally been challenged, no history of modern education would be complete without some account of it.

The central ideas of the Montessori method are that children are best educated by allowing them to find things out for themselves; that training of the sensory faculties by handwork is of prime importance; that the teacher or parent should not impose his own personality on the child; that rewards, marks and punishments should be abolished; and that discipline should be entirely free and self-imposed. This tripartite method (The Doctrines of Freedom, Auto-Education, Sense Training) has been used all over the world—in America Douglas Fairbanks Jr., and the grandchildren of Alexander Graham Bell are products of it.

Maria Montessori, the first Italian woman to be awarded the degree of Doctor of Medicine, was born at Chiaravalle, Ancona, Italy, the only daughter of Chevalier Alessandro Montessori and Renilde Stoppani. She attended the University of Rome, where she studied both medicine and literature.

MARIA MONTESSORI

After taking her M. D. degree she became an instructor in the psychiatric clinic of the University, her main field the training of mentally defective children. From the cretins and morons in the clinic she learned that if a child has something to touch or twist with his hands, his brain will function responsively. In 1898 she gave a lecture on the sensory training of defectives at the Turin Educational Congress. This was heard by the Minister of Education, who was so impressed by her arguments that he appointed her in that same year directress of the Scuola Ortofrenica, an institution devoted to the care and education of retarded children.

Dr. Montessori might have had a much easier life as a university instructor, but this appointment was a chance to try out those theories in which she firmly believed. She proceeded to enter several eight-year-old defectives for the State examinations in reading and writing and achieved what has been called "the first Montessori miracle." The defectives not only passed, but passed higher than the "normal" children.

In 1900 Dr. Montessori left the Scuola Ortofrenica and went back to the University of Rome to take courses in philosophy and experimental psychology. She also spent much time visiting the principal European schools, making extensive notes on how (in her opinion) they were failing to secure the best educational results. Her idea was that complete equipment in medicine, psychiatry, psychology and practical pedagogy was necessary for a new educational method.

Early in 1907 Maria Montessori got her big chance. The filthy and overcrowded Roman slum region of San Lorenzo was taken over by the Istituto di Beni Stabili. The entire population was rehoused and to

MONTESSORI, MARIA—*Continued*

each block of houses was added a *Casa dei Bambini*, or children's house, which took in all children between three and seven while their parents were out at work. Dr. Montessori was put in charge of one of these houses and proceeded to apply to these poor but normal children the methods she had successfully used with defectives. She gave these children objects to handle, encouraged them to express themselves, never hurried them or punished or rewarded them. The results were excellent.

Dr. Montessori's experiments aroused interest and comment and in 1908 the Humanitarian Society of Milan decided to follow her method. In 1909 Dr. Montessori published her *Metodo della Pedagogia Scientifica*, which was hailed by educators as a highly important document and which, with many of her later works, was ultimately translated into most of the principal languages of the world.

For two years more Dr. Montessori headed her *Casa dei Bambini* and then spent her time mainly in writing and in wide organizing activities connected with the spreading of her principles all over the world. In 1911 many of the Swiss state schools for infants introduced her method and in 1913 she gave a theoretical and practical course in Rome, which brought together students of 17 different nationalities. The serious press of France, Great Britain and the United States hotly canvassed the merits and demerits of the Method—it was and is a highly controversial subject—and books on it began to appear, the first important one *From Locke to Montessori*, published in 1914 by Dr. William Boyd.

With the First European War Dr. Montessori's propaganda and experimentation were slowed down, but even in that troubled period neutral Spain established a research institute in Barcelona in 1917. After the War, in 1919, Dr. Montessori gave the first of many training courses in London and a British Montessori Society was founded; a few years later schools for teachers were established in Rome and in London. In 1922 Dr. Montessori was made a Government Inspector of Schools in Italy, but after the Mussolini régime was established she became "so impatient with government indoctrination" that she soon left for anarchist Catalonia with her adopted son Mario (the Dottorissa is unmarried), for she had heard there was no government there at all.

Since 1931 annual congresses have been held and Dr. Montessori, now "a dumpy old lady," has continued to travel pretty well all

over the civilized world, lecturing on her method and organizing new centers. She has continued to write—*The Secret of Childhood* (1939) is her latest book—and has continued to receive honorary degrees and membership in scientific academies in many countries.

There are some educators who feel that the Montessori Method has passed its heyday and is now overshadowed by the system of Froebel and the Dalton plan. There are educators, too, who feel that it lays too much stress on manual training, to the neglect of the intellect and imagination. But it was and is an experiment of great importance which, directly or indirectly, has had a vital and salutary effect on educational practice all over the world, even in quarters where the teaching profession has by no means been prepared to swallow it whole.

MOREHOUSE, WARD Nov 24, 1897—Newspaper columnist; playwright; motion picture scenarist

Address: c/o The Dial Press, Inc, 432 Fourth Ave, New York City

Ward Morehouse does not look like a glamour boy, being about five-feet-six, on the plump side, chestnut-haired and devoted to horn-rimmed glasses. But to the prosaic "leg" and "rewrite" reporter he is a glamour boy of journalism because he has been for almost two decades an outstanding Samuel Pepys of the nighttime doings of Fifty-second Street and Broadway in New York, Sunset and Vine Streets in Hollywood, and the West End and Piccadilly Circus in London.

The theatre is one of the earliest memories of Mr. Morehouse, who was born in Savannah, Georgia, and began to write plays practically as soon as he could hold a pencil. Instead of a long apprenticeship and desk drawers filled with unproduced manuscripts, his two dozen plays were early discovered by amateur and semi-professional groups of his state. Student life at Georgia College, Dahlonega, Georgia, had no lure for the stage-struck boy, and at 17 he joined an itinerant professional Shakespearean reader for a tour of Southern towns and hamlets. At Roanoke, Ward amiably parted company with his partner and got a job on the Savannah *Press* as reporter and sports writer at \$9 a week. Then he went to the Atlanta *Journal* in 1918. Atlanta, he says, "was a good theatre town; it had always been a good news town right on through Sherman's time to the Leo Frank case and the furor over the Ku Klux."

He married the best Latin scholar in the history of her college, a Georgia girl, niece of the jurist who presided over the trial of Leo Frank. His thoughts turned to New York just as had those of other distinguished reporters on the *Journal* before him—Grantland Rice, Ward Greene, Don Marquis, Keats Speed, Laurence Stallings, Bill Farnsworth and Harold Ross.

When he had sold three short stories and "run his savings up to \$750" he came to New York, found a job on the *Tribune* as rewrite man and later as assistant night city editor, then went into the theatrical department, writing stage news and second string reviews. At this time he refuted the legend of the lazy, slow, shuffling man of the South by undertaking the herculean task of two daily full-time jobs! As he tells it, he had a friend on the *Tribune* called "Fitzgerald, the Man Who Never Sleeps," a copy-

WARD MOREHOUSE

MOREHOUSE, WARD—*Continued*

writer rated "as one of the best" who worked a full day shift on the *Brooklyn Times* and an eight-hour shift on the *Tribune*. He persuaded Morehouse to do likewise. The job in Brooklyn was kept by Morehouse off and on for five years. "In those days I used to have endless vitality," he explains.

In 1926 he was fired from the *Tribune*, which was undergoing a series of volcanic eruptions. He joined the *New York Sun*, and is still there conducting his nationally famous *Broadway After Dark*. Anyone reading his columns can see that the term "glamour boy" is applicable to a newspaperman who has as intimate friends such personalities as Helen Hayes, Lunt and Fontanne, Jed Harris, Tallulah Bankhead, the late Percy Hammond, Edna Ferber, Maxwell Anderson, the late Jeanne Eagels, Katharine Hepburn, Peggy Wood, Darryl Zanuck. In theatrical and newspaper circles, both national and international, he knows nearly everyone worth knowing.

After a divorce from his first wife some fifteen years ago he married Jean Dalrymple, theatrical agent. They were divorced three years ago. He has written his column in many parts of the world—in remote hamlets in the United States, in European capitals, Egypt and the Near East. When asked in 1931 if he would like to undertake the dangerous flight around the entire South American continent, he replied that he was ready as soon as he could pack a bag. In France in 1930 he had a widely-quoted interview with Eugene O'Neill. He is the author of the Broadway success, *Gentlemen of the Press*, which might have been a smash hit if it hadn't unfortunately been produced at the same time as *The Front Page*. He also wrote *Miss Quis*, and is coauthor of *For-saking All Others*. *Gentlemen of the Press* and five other scripts he wrote have been made into motion pictures. His book, *Forty-Five Minutes Past Eight*, published by Dial Press in late 1939, has been called "a list of names; a gay, gleeful, slightly bewildering and just a little too vociferous roll call of celebrities." "A history of his world and its people seen through a wine glass lightly, during the roaring '20s and staggering '30s," says another critic.

In the fall of 1940 he has completed a new play, *U. S. 90*, which is under option to Guthrie McClintic.

Who's Who in Journalism

MORGENTHAU, HENRY JR. May 11, 1891- United States Secretary of the Treasury

Address: b. Treasury Dept, Washington, D. C.; h. Hopewell Junction, New York

Building up our national defenses is an expensive proposition, and the man who must

find the money has one of the hardest jobs in the administration. Henry Morgenthau Jr., Secretary of the Treasury, has, during the summer and fall of 1940, drafted a program together with spokesmen of industry for increasing plane production; obtained from the British the American rights for the manufacture of Rolls Royce airplane engines; asked the machine tool builders "How can you give us for national defense what we want when we want it?"; presented a new tax bill which institutes for five years a supertax, boosts income and excise levies 10 per cent and lowers exemptions to \$2,000 for married and \$800 for single persons.

Without doubt Henry Morgenthau is one of the hardest-working men in the administration, but there are widely differing views as to his actual effectiveness. One commentator called him "probably the best organizer and administrator in the New Deal," and there is a consistent body of opinion which believes that it is he who "has done more than any other Cabinet member or high official to keep the administration's financial feet close to the ground." On the other hand, it has been said that "personally he does little." Henry Morgenthau "is no more Secretary of the Treasury than Max Baer. His duties are to see that the work is done and that the will of the Leader is carried out. Henry is nothing more than a glorified foreman," said one critic.

The opinion that much of the country holds, however, is probably that "in no sense has he been a brilliant Treasury head, but neither has he been a flop." Secretary Morgenthau has done a better-than-average job of managing his department and he has carried out the financial policies of the administration efficiently. Under him the Stabilization Fund, a wholly new instrument, has been developed into a permanent part of the Treasury's equipment. It is he who "superintended the transfer from Wall Street to Washington of the financial capital of the United States," he who helped stabilize the silver market here and in 1936 the franc abroad. Under Morgenthau an "almost unbroken record of financing successes and lower Federal interest rates" has been established.

It is true, on the other hand, that under Morgenthau the national debt of the United States has increased—because of a number of circumstances—and that the government has become involved in a policy of gold buying to which objections have been raised. "Inherently a conservative," it is probable that Henry Morgenthau may not always have acted as he himself would choose, but he has defended the administration's policies with vigor, which may be more ammunition for those who believe he is the willing instrument of the President.

Their real ammunition, though, comes when Mr. Morgenthau steps out from his office to face the public. At press conferences he "fidgets, squirms and gives the

impression of being extremely pained." His "shy taciturnity"—President Roosevelt playfully calls him "Henry the Morgue"—makes him uncertain in public speeches and "it is a happy day for the hyenas on Capitol Hill when they can call the young secretary to the witness stand to challenge his monetary policies." Observers say that recently his manner has become more comfortable.

Before Henry Morgenthau was appointed Secretary of the Treasury, there was little in his career which seemed to have fitted him for the position and its duties. He was born in New York City on May 11, 1891, the son of Josephine (Sykes) and Henry Morgenthau, our Ambassador to Turkey under Wilson. Morgenthau Sr. was a lawyer who made most of his money in real estate: "his real estate dealings were so widespread that eventually nearly every piece of property in The Bronx passed through his fingers at one time or another." He also invested heavily in the Underwood Typewriter Company.

Henry Jr.'s youth was uneventful. He went to private school not far from home and then to Exeter, where he stayed three years. He left when he was 16 and spent the next two years "vegetating." In 1909 he entered Cornell University to study architecture as training for the taking over of his father's real estate business, but he didn't like it and didn't stay. He got a job as timekeeper on a construction job and kept it for about six months; then he became a machinist in the Underwood Typewriter Company.

While there Henry got typhoid and went to Texas. He was then 18. When he came back he knew he wanted to be a farmer, but Henry Sr., had other ideas for him. For a while he worked in his father's office and later in a banking house, but then went back to Cornell to study farming. He didn't take a degree, but left in 1913 to engage in practical farming. His father bought him 1,400 acres of rich land back of Fishkill Hooks, near the Hudson, in New York State, which he converted into a farm, the chief product of which is apples. Henry still makes a profit on the farm and has made one every year even during the depression. In 1916 he married Elinor Fatman of New York, "the charming and intelligent woman whose wisdom and knowledge of the world are still great props to him."

Morgenthau's farm is about 15 miles from the Roosevelt estate. Morgenthau met Roosevelt shortly after he started to cultivate it; their social acquaintance developed into close friendship and eventually into political association. During the First World War Roosevelt gave Morgenthau a position in the Navy Department after Henry's faulty eyesight disqualified him for active service. When Roosevelt was nominated for the Vice-Presidency in 1920 Morgenthau was in charge of the notification ceremony.

HENRY MORGENTHAU JR.

In 1922 Morgenthau bought the *American Agriculturist*, a farm journal, and "immediately breathed life into the paper, removing the more highly scientific articles and replacing them with homely hints for good pies and sewing circles." The magazine prospered and its circulation grew. He kept it until 1933.

When Roosevelt campaigned for Governor of New York State in 1928 Morgenthau was business manager of Roosevelt's campaign tour. When Roosevelt got in he appointed Morgenthau to organize an Agricultural Advisory Commission. Morgenthau got together important farm leaders and experts and for four years served as chairman of the commission which drafted a broad program for farm relief in New York State. In Roosevelt's second term as Governor, Morgenthau was made Commissioner of Conservation and played an important part in the \$2,300,000,000 state reforestation program.

During his 1932 campaign for President, Roosevelt used Morgenthau to maintain contact with the farm organizations throughout the country. Morgenthau wanted to be made Secretary of Agriculture when Roosevelt was elected. Instead he was made Chairman of the Farm Board and given the job of consolidating the government's nine agricultural credit agencies into the Farm Credit Administration and of applying the \$2,300,000 farm mortgage relief program.

As governor of the Farm Credit Administration, Morgenthau was frequently called on to give advice and execute commissions entirely outside of the duties of his position. He played an active part in the early trade negotiations with Russia and assisted in developing the administration's gold purchase policy. Morgenthau didn't stick to

MORGENTHAU, HENRY JR.—*Continued*
his Washington desk, but traveled from the Atlantic to the Pacific explaining in simple language the New Deal in agriculture. No orator, the farmers and businessmen seemed to understand his simple language and the "result of his trips was a better comprehension of the President's plans."

In 1933 Morgenthau was made acting Secretary of the Treasury and on New Year's Day 1934 he was made Secretary, an appointment which was the "culmination of years of devotion to and adoration of his New York neighbor." When he took over the Cabinet position there was reason to believe that it would prove to be "a brief and probably an unfortunate appointment." Nothing in his record, except a brief excursion into gold purchasing policies, had prepared him for the duties of this office and so far as anyone knew he had never shown any particular aptitude in the field of finance.

His start was inauspicious. He immediately ordered that all publicity should pass through the hands of his personal publicity assistant, Herbert Gaston, and that no one should discuss official business with outsiders unless Gaston gave permission. "This is not a censorship," he said, "but I'm used to running my own shop. I want to know what's going on in it and what is going out from it." His motive was unimpeachable—to stop leaks to Wall Street and elsewhere—but his approach was clumsy, and "groans and hisses" greeted the order, with vague mutterings about freedom of the press. The policy was continued, however; and since press conferences have been held twice a week "correspondents volunteered that they have been obtaining more information than they had before."

His next order also aroused ridicule. He ordered the Treasury guards to stand at attention, to dress neatly and to speak courteously. Then the tall and serious Secretary proceeded to organize his department efficiently. Bureau heads were called in and ordered to pay no attention to political influences from either party. Weekly conferences were set up, in which each bureau chief had to read a report of the week's work in his bureau. The Internal Revenue Bureau was prodded to collect some \$800,000,000 in income tax deficiencies. Morgenthau had a review prepared of each large tax case pending and passed on it himself and put an end—for the time being at least—to the custom of settling these cases in court at a big loss to the government. The whole office began to run, and continued to run, like clockwork. Anyone with an appointment seldom has to wait longer than 30 seconds, and when his time is exhausted Morgenthau stands up and out the visitor goes.

Morgenthau's work is his whole life. He plays no golf and accepts none but official invitations. His main pleasures are taking care of his farm, riding and playing tennis

there and going on picnics with his wife and three children. He presents a neat figure, his pince-nez worn with an intellectual air. His voice is low and rather nervous, he "occasionally stutters and is always forgetting names." He is devoted to President Roosevelt, whom he calls "the Boss," and says that the two men who have influenced him most are "Dad" and "the Boss."

MORRISON, HERBERT STANLEY Jan 3, 1888- Home Secretary and Minister for Home Security; leader of the London Labor Party

Address: 55 Archery Rd, Eltham, S. E. 9, London, England

An ex-errand boy and ex-telephone operator who became Leader of the London County Council, ruling the social service of a community of some eight million people, Privy Councillor and architect of the modern British system of traffic regulation—that is Herbert Morrison, the erstwhile Minister of Supply, who has been given in October 1940 the vital task of commanding the London front line as Minister for Home Security. In his first statement he rejected the idea of deep raid shelters, but hinted that London's entire subway system might be taken over for that purpose.

A forceful, logical speaker who can elucidate the fine points of a complicated measure, lightening his discourse from time to time with a Cockney wisecrack, Morrison has long been one of the outstanding personalities in the British Labor movement. He is known in the United States, too, for he traveled widely in this country in 1936 and 1937, and in the spring of 1938 was invited by the American Labor Party to give his advice on its reorganization on national lines.

He was born at Brixton, a London suburb, the son of Henry Morrison, a policeman, and an ex-housemaid; and within three

days after his birth suffered an eye injury which has always necessitated his wearing glasses. No special signs of cleverness appeared at his primary school (which he left at 14); and indeed it took long years of self-education to release his potentialities. He was first a shop boy, running errands, then an assistant in a shop, and then a telephone operator at a brewery. But while other youths of his age and class were reading novelettes and trying to find the winner of the "three-thirty," Morrison was turning his mind to the apparently arid, but highly important, subject of municipal organization.

He became especially interested in the ideas of Sidney and Beatrice Webb, joined the Social Democratic Federation, and began to contribute articles to the Labor press (then small and uninfluential). He next joined the Independent Labor Party, which thirty years ago was regarded as the fighting force of the movement, but which has now shriveled to a little group of three men. He progressed from the chairmanship of his local branch to become secretary for South London, and then chairman of the divisional council covering London and all the southern counties.

In 1913 Morrison got his first chance of paid work in the Labor movement (though the pay was nothing much). A paper called the *Daily Citizen* was founded, and he was taken on its circulation staff. In 1915 he was receiving \$5 a week as part-time secretary of the newly formed London Labor Party; in 1919 he was promoted to full-time secretary; from 1920 to 1921 he was Mayor of the London borough of Hackney and was one of the London Labor Mayors who pursued Mr. Lloyd George up to Gairloch in the wilds of Scotland to ask what he proposed to do about unemployment. In 1922 he was elected to the London County Council, the authority responsible for the local government of the huge district of Greater London, comprising twice the population of Switzerland. A year later he was elected to Parliament as member for South Hackney, but his stay there was brief, for he failed to hold his seat in the 1924 election.

Five years passed before Morrison appeared again in Parliament, but they were years of intensive and able work in the background which had a great part in increasing his party's influence in the country and the municipalities. He became chairman of the National Labor Party in 1928, presided over its annual conference in 1929 and in the same year was re-elected to Parliament for his old constituency.

Labor was now entering on its second period of administration, as the largest party at the polls, though it held office only by sufferance of the Liberals. Morrison was awarded the post of Minister of Transport, and at once set in motion two measures of the greatest importance. The first of these was the Road Traffic Act. Road casualties and congestion had long been a problem, and there were many anomalous conditions. The

HERBERT STANLEY MORRISON

Act made third-party insurance compulsory, forbade the over-working of long-distance lorry-drivers, raised the speed limit from 20 to 30 miles per hour and introduced a whole series of safety regulations comprised in a "highway code."

The second enactment was the London Passenger Transport Act, which coordinated a number of separate bus and subway undertakings and placed them under one authority run as a public utility company responsible to Parliament. Morrison went out of Parliament again in the Labor debacle of 1931, before the Act had gone through all its stages, so that when it eventually became a law some of its provisions had been altered.

Morrison was again returned to Parliament for South Hackney, London, in 1935, and has remained there ever since. He has been an unsparing critic of the Chamberlain administration on grounds of both home and foreign policy. His municipal work has continued with unabated vigor, and it is in the sphere of local government that he has made his most solid reputation. When a London Air Raid Precautions Committee was set up he became its chairman, and it was his organizing genius that was mainly responsible for the smooth working of the evacuation scheme at the beginning of this War, when some 750,000 school children were sent out into the country without mishap of any sort.

When Mr. Chamberlain resigned in May 1940, in favor of Mr. Churchill (see sketch this issue) and the obstacle to Labor's collaboration in the government was removed, it was almost inevitable that Morrison should be offered a portfolio. As Minister of Supply he had applied to a severe national task his characteristic qualities of drive, organization and imagination.

MORRISON, HERBERT—*Continued*

Morrison is a clear, logical, persuasive speaker, but no emotional ranter. Work rather than words has been his way of furthering social amelioration. It has been Morrison, for example, more than any other, who has pushed on the important project of preserving a Green Belt around London; and he has done notable service in the demolition of slums and the reconstitution of obsolete schools.

He is a constitutionalist, and as such anathema to the small but vociferous Communist Party, which constantly attacks him. He is quite capable, however, of giving as good as he gets in any kind of debate. He is a stickler for party discipline and is no friend to Liberal or Tory converts who refuse to adapt themselves full-bloodedly to the Socialist program.

Morrison is no "boiled shirt Socialist," but remains in habits and demeanor a simple working man. He pays little attention to clothes; he is no social climber; and he takes his holiday with his wife (he married Margaret Kent in 1919) and daughter, at some watering-place under the auspices of the Workers' Travel Association. Despite his commanding personality he is not a grim, apocalyptic figure like the late Lord Snowden, but is friendly, charming and humorous in his dealings. He has been a prolific journalist for many years (when not in office) and has written *Socialisation and Transport* (1933) and *How Greater London is Governed* (1935). He is a "hot tip" for the Premiership some day, if ever Labor comes back.

MOSES, ROBERT Dec 18, 1888- New York City park commissioner

Address: b. State Office Bldg, New York City; h. 25 East End Ave, New York City

"The park that flanks the Hudson is
A veritable bed of roses

It fills my heart with pride that this
Is Gotham. Glory be to Moses."

This is the song that Margaret Fishback sings, and most New Yorkers pay spontaneous tribute to their energetic, La Guardia-appointed park commissioner, Robert Moses. Thanks to him New York City's parks and parkways, products of a genius for planning with an eye to beauty plus utility, rank with skyscrapers as things visitors simply must see. Thanks to him numerous beaches within the metropolitan area have been built and rebuilt, Jones Beach in particular made a show place to challenge the Riviera. And it was Mr. Moses who chose the site and cleared and filled in Flushing Meadow for the New York World's Fair. The park commissioner was not exactly interested in the Fair. What he foresaw on this site was the conversion of the exposition grounds into a fine, modern recreation development.

The National Institute of Arts and Letters will present the recently created Order of Merit to Park Commissioner Robert Moses on January 18, 1941.

The man who has made public service his career was born in New Haven, Connecticut, December 18, 1888, son of Emanuel and Bella (Cohen) Moses. His parents were of Spanish-Jewish descent, but not orthodox;

Blank—Stoller

ROBERT MOSES

his father was the proprietor of a prosperous department store. The boy was sent to the Mohegan Lake Preparatory School at Peekskill, New York, where he remained an unhappy cadet until graduation. He entered Yale, where he won a victory over Walter Camp in the matter of pooling athletic funds so the profits in football would take up the deficits in other sports. He was graduated in 1909, a member of the Senior Council and with Phi Beta Kappa honors. Going on to Oxford to continue his studies in jurisprudence, he became captain of the swimming and water-polo teams and was the first American to be president of the Oxford Union, a debating society. On his return to this country he went to Columbia to get his Doctor's degree (1914), his thesis being *The Civil Service of Great Britain*.

His first job was with the Bureau of Municipal Research, studying city governments. In New York, while assisting John Mitchell's Fusion régime in budget-making, he met Mary Louise Sims of Dodgeville, Wisconsin, then secretary of the Bureau. They were married August 15, 1915 and spent their honeymoon mountain-climbing near Lake Placid. They have two daughters, Barbara and Jane.

In 1919 Governor Smith appointed Moses secretary of his non-partisan State Reconstruction Committee to study and revamp outmoded state government machinery. Moses' reports and recommendations are regarded as classics in state papers. His association with Governor Smith was an auspicious one: Smith admired him to the point of awe, and it is said that Moses wrote most of the Governor's speeches and fathered his social policies. In 1924 he became chairman of the State Council of Parks and began his parkway system along Lake Ontario and the Niagara Frontier program.

MOSES, ROBERT—*Continued*

For four years he was a member of the State Fine Arts Commission. When Franklin D. Roosevelt became Governor of the state in 1928 he and Moses clashed from the start: Roosevelt forced Moses from his position as Secretary of State. But he did approve in 1929 his investigation of the collapse of the City Trust Company; Moses' report on banking abuses has been described by Walter Lippmann (see sketch this issue) as the best government report of its kind ever written.

Robert Moses continued his work on the development of State parks and in 1933 hoped to be New York's Fusion nominee for Mayor. He threw his support, however, to Fiorello La Guardia (see sketch this issue), who, when elected, let Moses name his choice of city jobs. Moses promptly chose to be Commissioner of Parks. Of all his numerous offices (he has a comfortable private income and salary is not essential), it is the only position for which he receives a salary—\$13,000 a year. Without pay, he is chairman and chief executive officer of the Triborough Bridge Authority, chairman of the State Commission of Parks, head of the Henry Hudson Parkway Authority, chairman of the Jones Beach State Parkway Authority, chairman of the State Emergency Public Works Commission, Civil Works Administrator for Long Island Parks.

Under La Guardia, Moses wasted no time before undertaking the much-needed reorganization of the City Parks Department. His first step was to eliminate the five Borough commissioners and their pensioners so that he might be sole boss and coordinate park enterprises. He brought his own staff of engineers and experts, and soon had some 70,000 PWA workers employed. By 1937 he had increased the number of playgrounds from 119 to 362—the number since raised to 420—all newly equipped. Swimming pools, tennis courts and golf clubs for adults were built. Central Park itself got a fine new zoo, a big restaurant, a new children's playground. Decorative and play areas were constructed along such new highways as the Henry Hudson Parkway. Fort Tryon Park at the north end of Washington Heights, accessible by subway, is sixty acres of wooded slopes providing a lovely framework for the famed "Cloisters" of the Metropolitan Museum.

For the establishment and extension of several new parkways, along with the parks themselves, Commissioner Moses spent in five years some three hundred million dollars, two-thirds of which came from Federal funds for work relief. He built Grand Central Parkway and extended the Bronx Parkway up the Hudson River. Connecticut's admirable new Merritt Parkway is an extension of Moses' own Hutchinson River Parkway through Westchester County. Around the southeastern rim of Long Island he has been building the Circumferential Parkway. One arm sweeps eastward to connect with the parkway lead-

ing off The Bronx-Whitestone Bridge. Another arm reaches around the tip of Brooklyn to come within swimming distance of lower Manhattan and Brooklyn, the whole project—33 miles of parkway and 69 bridges—to cost \$28,000,000. He and Manhattan Borough President Stanley Isaacs share supervision of the park and drive under construction along the East River. As a member of the Triborough Bridge Authority Moses supervised the construction of this great traffic-facilitating enterprise, which has a capacity of as many as 80,000 cars daily. Though its cost was \$61,000,000, it has since been refinanced by a private bond issue at a profit to the Federal government. At its inception, however, the New Deal tried to oust Moses from his Triborough post, but finally backed down.

Moses' proudest achievement is his Long Island park project, a model of planning which he began some 15 years ago. He viewed the whole of Long Island as a possible gigantic city playground: the entrenched aristocracy, however, considered it their private property. With them the undaunted commissioner began a real battle: he sliced through red tape, begged, bought and condemned land. It took five years to build the admirable Jones Beach: with thirty-eight million cubic yards of sand artificial dunes were built, on which the WPA workers even planted sand grass. Everything was made immaculately shipshape, from the sailor-garbed attendants to the old ships' funnels used for refuse. Its 78 acres of parking space take care of the thousands of people who proudly drive there for Sunday outings.

Robert Moses' one departure from park building was essayed in 1934 when he ran as a candidate for Governor of New York. Fortunately for the future of the City's parks and highways, candidate Moses was soundly defeated, free to go back to his 1,800 planned projects for the city, all of which have, to date, been started or finished.

The man whose works have made him a municipal Aladdin has been called a human firecracker, "a persistent hell-raiser who combines intelligence with the temper of a wounded lion." It has also been said that Moses would cross Fifth Avenue on a tight wire if he were sure of a row on the other corner. He has vast vitality and enthusiasm; his ruthless, high-pressure methods of getting things done have won him the admiration of many. His "arrogance and intolerance of contradiction" have made enemies: the editor of the *Babylon*, Long Island paper, who doesn't like him, calls him Lord Moses or Mussolini. La Guardia, who respects fighters, has nevertheless often clashed with his commissioner, though admitting the soundness of his projects. Every once in a while Moses gets a note from the Mayor saying, "Dear Bob: You're right—" adding plaintively, "you always are."

Moses, who usually gets in his punches first, "talks forcefully, sometimes eloquently,

and as often as not in barnyard idiom." He is "firm-jawed, with a large, straight, executive nose; he has a generous mouth, his strong white teeth affording a striking contrast to smooth olive-hued skin, sombre eyes and heavy black eyebrows. . . His large strong hands, with tapering fingers, suggest a sculptor." It is said that his one financial problem is to remember to carry enough change to pay cab fares, and that the only person he can't get tough with is Tammie, the family Scottie.

A planner for the future whose public spending is thoroughly New Dealish, Moses is something of a political paradox. He is an old-guard Republican who has worked best with Al Smith and La Guardia—the latter anything but a devout Republican. He has kept politics out of his own enterprises, however: his Long Island park supervision is run on a strict non-partisan basis. In spite of his political fiasco in 1934, many who know Robert Moses believe that when he finally steps out of public service he will go into politics. He likes a fight, win or lose, as much as he likes to get things done.

MOSLEY, SIR OSWALD ERNALD

Nov 16, 1896- Former Member of Parliament; leader of the British Union of Fascists

On May 23, 1940 Sir Oswald Mosley, leader of the British Union of Fascists, was arrested. Mosley and his followers formerly had been allowed to agitate against the government in favor of peace with the enemy without molestation, and, in fact, the police frequently arrested hecklers who tried to break up their meetings. But with the Germans just across the Channel, all this changed. The British government cracked down on all suspected enemies within its gates, and Mosley was taken into custody.

The British government has reason to suspect him, for Mosley's creed derives much from Hitler's and Mussolini's. It is strongly anti-Semitic, strongly in favor of the corporate state—"a mixture of Italian castor-oil economics with a still more concentrated dose of German politics." Even the salute of his group is "Mussolini via Hitler." And Mosley has or had a group of militant, devoted, well-disciplined follow-

ers whose numbers at one time were estimated as high as 500,000.

Ever since the British Union of Fascists (known also as the British Union) was formed in 1932, Mosley has argued for its truly British character. He used to assure his audiences that his Blackshirts would never resort to force, that Fascism meant peace, not war, that he would never tamper with the monarchy (he closed his meetings with *God Save the King*) and that a corporate, self-contained England with a legislature composed of experts, instead of the present House of Commons, was the solution to a stronger, more powerful England and a more prosperous people. Yet the phrases he used had a familiar sound; the black shirts of his followers and the fasces they used as a symbol were certainly not original with him; the tune of the Union's marching song was the tune of the Nazi *Horst Wessel*; the tactics of provocation when Mosley and his army descended into the heart of London's Jewish and anti-Fascist East End were the usual tactics.

Mosley himself comes from impeccable British ancestry, the sixth baronet of a title created in 1781. His schooling was impeccably British. He was educated at Winchester and at the Royal Military College, Sandhurst. During the First World War he fought as a cavalry officer and as an aviator.

Right after the War, in 1918, when he was only 22, Mosley entered Parliament as the conservative member for Harrow. Since then he has been an "ex" almost everything—an ex-conservative, an ex-independent, an ex-Socialist and an ex-leader of his own New Party. "A lone wolf, it has been said that on a fox hunt he would side with the fox." With every quality for political leadership "except judgment," his impatience has carried him from party to party, from rôle to rôle.

When he entered Parliament, he was immediately conspicuous. He was rich, he could speak, he was one of the best fencers in England, he belonged to the aristocracy and he married (1920) Lady Cynthia Curzon, daughter of the former Viceroy of India. In the Conservative Party he was singled out as of Cabinet caliber. But in 1923 he left the Conservative Party to become an Independent. As an Independent he impressed the country with his ability to win an election solely on the basis of his energy and platform ability.

In 1924 Mosley switched again—this time to the Labor Party, but was defeated in the elections by 77 votes. For two years he was out of the House, but he stayed in the public eye. He made speeches on the general strike, on India, on Anglo-Chinese relations. He traveled to other countries, including the United States. In 1926 he was returned to Parliament as member for Smethwick, Birmingham and held this seat in 1929 when he went into the Ministry as Chancellor for the Duchy of Lancaster. In

SIR OSWALD MOSLEY

the Labor Party, Mosley was a protégé of Ramsay MacDonald and even as late as 1931 he was told he was certain to be the next Labor Prime Minister if he would merely work and wait. But he wouldn't. In February 1931 he founded his own party, the New Party.

The New Party had among its adherents such Socialists as John Strachey and Oliver Baldwin, and its platform stressed the need for economic planning, for housing reform, for unemployment relief. Its weekly paper, *Action*, was edited by Harold Nicolson. Yet, on October 1, 1932, after a pilgrimage to Rome, Mosley organized the British Union of Fascists.

In all these years of changing politics Mosley's wife, Lady Cynthia Curzon, was by his side. With Sir Oswald she was active in labor politics and as a Socialist member of Parliament was close to Ramsay MacDonald. Together they enjoyed politics eleven months a year and then spent one month on the French Riviera. It was partly his wife's money that helped finance the British Union of Fascists in its hard, early years—her mother was the daughter of the multimillionaire Chicagoan, Levi Z. Leiter. She used to say: "I was one of the lucky ones. I could have had a good time and just enjoyed myself in life, for it happened that under this system I would never have had to work. But I could not get it out of my head that there were millions of mothers who would have their babies and then face years and years of gray dreariness." In 1933 she died, leaving three children. Mosley moved into a two-room flat, declaring: "I hate the junk of modern civilization with which bourgeois people litter their lives and rooms." But in 1937 he married Mrs. Diana Guinness Mitford, third daughter of the second Baron Redes-

dale and sister of Hitler's former friend, the notorious Unity Mitford-Freeman.

The start of the British Union of Fascists in 1932 was inauspicious, and at the beginning the adventure seemed doomed. Mosley dickered for help from Hitler and Mussolini, but got none. His street meetings were booed, minor street fights were a nightly occurrence and Mosley and his wife were often close to physical mauling. His book, *Greater Britain* (1932), was practically ignored.

Then, on January 15, 1934 Lord Rothermere, newspaper owner, announced his conversion to Fascism. He hailed Mosley and his movement as the only alternative to the menace of Socialism and the impending dictatorship of "hooligans and riff-raff." He urged young men earnestly to join and save England from the "hidden hand of Bolshevism." For three months Lord Rothermere's press supported and publicized the British Union of Fascists.

The Blackshirts began to attract attention. Mosley capitalized on economic discontent, on the proved impotence of the Labor Party, on the plight of the middle class. "Next to Winston Churchill (see sketch this issue), the finest orator in England," Mosley's speeches drew crowds. They were pure propaganda, dogmatic and bombastic, but they were fire. He could wheedle and coax and woo large audiences as few men can. To each meeting he gave an atmosphere of drama, a sense that great things were about to happen.

Blackshirt headquarters sprang up all over, and in 1934 there were over 200 official centers in Great Britain. The members were given instruction in boxing, jujitsu and fencing. An air training school was run for them and there were special summer training camps. The Fascist center in London housed treasury, research, publicity and legal departments, all the principal officers and a defense force. Fifteen to twenty headquarter propagandists were always on tour.

On June 7, 1934 a Fascist mass meeting turned into a wild riot. Uniformed Blackshirts "mercilessly" beat and kicked listeners for breaking into Mosley's speech and over 50 people needed medical attention. There was a debate on this in the House of Commons, but little came of it. The legions continued to parade through Jewish districts carrying anti-Semitic banners. And Mosley worked like an ox to achieve his ambition of a Fascist Britain. He never took a vacation; his social life was almost non-existent. He said, then, that he disliked cards, detested "irrelevant conversation," loathed dinner parties and social fawning and hated "entrenched old age whether it is sitting on a parlor sofa or in a Parliament seat." He kept himself in crackerjack condition to give the 200 or more speeches a year he made. He ate sparingly, drank nothing except a little beer and relaxed occasionally with some tennis or swimming or championship fencing.

In the winter of 1937 there was one especially violent sally on London's East End. After this "Bloody Sunday" laws were finally

passed forbidding the wearing of political uniforms and placing Mosley's marches and provocations under scrutiny by the police. Mosley continued to wear his uniform, trying to goad the government into arresting him, but instead police squads were sent to protect him. Then he changed it. Dressed completely in black suit, tie, shirt, socks—in the words of John Gunther "like a skating champion"—solidly built and rather handsome, with a short, black moustache and intense, dark eyes, he used to create a striking picture as he carried on his work in the years before the second World War.

But the British Union of Fascists never again reached the flowering of 1934. In 1939 it still drummed up crowds at its meetings, but was given very silent treatment by the press and orthodox politics. Typical of its own reactions was the meeting addressed by Sir Kingsley Wood, Air Minister (see sketch this issue), in 1939. A group of the Union tried to stop the meeting and there was much rioting. Then Sir Kingsley Wood stepped forward, started *God Save the King*. The Fascists stood at attention and joined in the anthem until the police came and threw them out.

With Mosley and eight of his lieutenants in custody; with Britain making a concerted drive on all suspected enemies of the state, on all who would interfere with the most successful conduct of the present War, the outlook for the British Union of Fascists is not a cheerful one. Admirers of Hitler and Mussolini are not exactly *personae gratae* in England these days, and the chances of Mosley's being the first dictator in the English-speaking world look exceedingly slim.

Address: c/o Wm. Morrow & Co, 386 Fourth
 Ave, New York City

"We met in a railway carriage, without benefit of introduction." This is how Lilian T. Mowrer begins *Journalist's Wife* (1937), the story of the 20-odd full and hectic years she spent with Edgar Ansel Mowrer, correspondent for the *Chicago Daily*

LILIAN THOMSON MOWRER

News, Pulitzer Prize winner and author of *Germany Puts the Clock Back*.

It was in 1911 and she was on her way from London to Liverpool after years of study in Paris to become a speech specialist. A young man sat down beside her. "You interest me very much," he said. "May I talk to you?" Before the train reached Liverpool she and Edgar Ansel Mowrer were fast friends.

Five years passed before they were married, in February 1916. From their wedding day, when they were detained by the secret service in spy-ridden France, every period of the Mowrers' life "has been touched by the thrilling uncertainty of human history in the making." Rome, Edgar's first assignment, seemed remote from the War, but Mrs. Mowrer was in Venice when the city was bombed. With the Armistice she was nursing her husband, delirious (in three languages) from the effects of influenza. She observed the Supreme Council of the Allies at San Remo and witnessed the Fascist march on Rome. She lived in Italy until the "last hopes of a wholehearted Italian cooperation in international reconstruction and reorganization grew dim" and it became increasingly difficult to circumvent the censor.

With Diana Jane, their daughter, who had been born in May 1923, the Mowrers set out in March 1924 to "cover" Germany. In Germany, Lilian Mowrer, whose greatest interest since her student days had always been the theatre, decided it was absurd "to live in a country with the best theatre in the world and not have money enough to go as often as I like." She sought and found a job as German dramatic critic on the old *London Referee* and for years acted as critic for the important plays throughout the country.

Lilian Mowrer was interested in Germany's theatre, but she was even more vitally interested in Germany itself. She saw the Germany of the tolerant Weimar Republic fade into the despotism of Adolf Hitler's régime. She was a witness of the "brutality" and "terror" of the days that followed the Nazi rise to power. Edgar Mowrer's book, *Germany Puts the Clock Back*, published in December 1932, annoyed the Nazis. The German government went to his paper with a "mixture of argument and veiled threats." In August 1933 his chief wired him to leave Germany immediately, and the American Embassy was informed by the German government that it "simply couldn't guarantee his safety." The Mowrers left for Paris.

In Paris, in 1934, Lilian Mowrer heard men on the boulevards shout themselves hoarse against someone called Stavisky. She saw the growth of the Front Populaire and its defense of French democracy. In November 1936 she went to Russia, where her husband was covering the adoption of the new Soviet Constitution, and left it "a little baffled by that strange phenomenon."

Lilian Mowrer, who "can be as much at home in Tirana or Vienna as in her native London or her husband's Chicago," has won a reputation as writer, dramatic critic and lecturer. She lectures about Hitler's War, the European Theatre and about her own experiences. And the summation of this last is: "It has been a wonderful life so far. For a journalist these days knows no tranquility. And we wives sit around in strange countries, waiting till the assignment is finished and our men come home. The suitcases are hardly unpacked but they must be dragged out again; the welcome has not died on our lips and we must whisper goodbye. Then the old excitement flares, there is the rush to get everything ready; always improvising and adapting, always working against time—(can I possibly get the laundry back?)—but we don't have a dull life."

MUCK, KARL Oct 22, 1859—Mar 4, 1940
 Symphony orchestra conductor

Dr. Karl Muck's meticulous, copperplate-like reading of Wagnerian scores, and his striking resemblance to the great composer (especially in profile) combined to make him one of the most effective interpreters of Wagnerian music both in America and in Europe. He was the favorite conductor of Wagner's widow, Cosima, and conducted the Wagner Bayreuth Festivals for 30 years.

He was not a brilliantly popular conductor in the sense that he could sweep an audience off its feet emotionally. But to the musically-elect and initiated, his impeccable taste,

his strict adherence to score gave him the reputation of one of the greatest interpreters of classical music.

This precise, distinguished musical genius became a central figure in the anti-German hysteria that swept America during the World War. Dr. Muck had conducted the Boston Symphony Orchestra in 1906 and 1907 on the invitation of its founder and director, the late Major Henry L. Higginson. His exact genius suited Boston, and he became permanent conductor of the Boston Symphony in 1912.

The tide of war-time hysterical patriotism found its first mark in Dr. Muck in the fall of 1917 when a patriotic group had requested that *The Star-Spangled Banner* be played at an appearance of the Boston Symphony Orchestra in Providence, Rhode Island. For some reason the anthem was not played. Dr. Muck afterwards explained that a symphony orchestra was not a military band, and that *The Star-Spangled Banner* was not a suitable vehicle for it. Major Higginson exonerated the German conductor, declaring that the request had been received too late, and that Dr. Muck had heard of the plan only as the orchestra was entraining for Providence, and that there had been no time for rehearsal. Subsequently *The Star-Spangled Banner* was played by the Boston Symphony at concerts in the East. But it was too late. Dr. Muck's lack of tact had brought down a thunder of extravagant denunciation. He was called "an alien menace," and "pro-German." The affair finally resulted in his resignation from the orchestra, and his internment as an enemy alien on March 26, 1918 at Fort Oglethorpe, Georgia. Major Higginson, who had supported Dr. Muck throughout the entire name-calling frenzy, promptly resigned from the orchestra. Without its chief patron, and its conductor, the Boston Symphony fell on lean days, and almost passed out of existence. It was not to regain its prominence as one of the world's great orchestras until 1924, when Serge Koussevitzky (see sketch this issue) took over the baton.

Back in Germany after the War, Dr. Muck conducted in various cities until 1922 when he became conductor of the Hamburg Philharmonic concerts, which he raised to a high artistic standard. Many rich offers were made to bring him back to the United States, but no power on earth could drag him back, so embittered and hurt was he at his treatment during the War. Reports that he was at odds with Hitler arose from his resignation from the Hamburg Orchestra in 1933. However, Dr. Muck declared that he had resigned as conductor because of the Hamburg Senate's decision to merge the Symphony Orchestra with Hamburg's Municipal Theatre. This was borne out by the fact that Dr. Muck was decorated on his last birthday by Hitler himself with the Order of the German Eagle, highest honor for culture in Germany.

KARL MUCK

The famous conductor's last public appearance as a national music figure was during the Leipzig observance of the fiftieth anniversary of Richard Wagner's death in February 1933. He had promised Cosima Wagner he would always help her son, Siegfried Wagner, with the Bayreuth Festivals, and he kept his word, conducting the festivals almost uninterruptedly from 1901 to 1930 when Siegfried Wagner died. He had shared the conductor's podium with Arturo Toscanini from 1927 to 1930. And in 1933, although he was very ill, he returned to conduct once more.

The last years of his life were spent at the home of Baroness von Scholley in Stuttgart where he died. The Baroness was the daughter of a former German Consul General in New York, who had been one of Dr. Muck's oldest friends and his former prison mate at Fort Oglethorpe. His was a lonely, ailing old age. His wife had died in 1921. Their only child, a son, died in 1881. Partially paralyzed from nicotine poisoning, said to be the result of his consumption of about 100 cigarettes daily over a long period of years, Dr. Muck immersed himself in Oriental philosophy and rarely left the house the last three years of his life.

He had lived through three phases of German life—the pre-War monarchical days when he won fame; the Weimar Republic in which he sought refuge after his humiliating experience in America during the War; and the totalitarian world of Adolf Hitler's Germany. He was born October 22, 1859 in Darmstadt, the son of a councilor of the government of Bavaria, which was then not part of the German Empire. A musical prodigy, he made his first public appearance when he gave a piano solo at a chamber music recital at the age of 11 years. He

MUCK, KARL—*Continued*

also played the violin with a local symphony orchestra as a boy. At 16 he entered Heidelberg University, one of its youngest pupils. A year later, he entered the University of Leipzig. While there he studied music at Leipzig's famous conservatory and made his solo debut as a pianist in Leipzig at the age of 20, the same year he took his degree of Doctor of Philosophy.

In 1880 he became choirmaster of the municipal opera in Zurich. Later he conducted opera in Zurich, Salzburg, Brünn and Graz. He became conductor of the Deutsches Landestheater in Prague, where he attained nation-wide fame, ranking with Hans Richter and Felix Weingartner as Germany's finest conductor. He toured Europe with the Prague orchestra, playing before Kaiser Wilhelm in Berlin, the Russian Court at St. Petersburg and the wealthy burghers at Hamburg. He conducted the Wagner *Ring* performances at St. Petersburg and Moscow in 1889, succeeding Seidl as conductor of the traveling Wagner theatre.

Still further musical honors were bestowed on him in 1892 when he became conductor of the Berlin Royal Opera, and conducted the symphony concerts of the Royal Orchestra under the patronage of the Kaiser. In 1899 he conducted the Wagner performances at Covent Garden in London and toured widely as a guest conductor. He was offered the Metropolitan Opera House podium at a reputed \$27,000 a year, but for some reason refused. In 1901 began his long association with the Bayreuth Festivals, where he always conducted *Parsifal*. From 1903 to 1906 he alternated with Mottl as conductor of the Vienna Philharmonic Orchestra. He was the general music director of the Berlin Royal Opera when he was given leave in 1906 and 1907 to conduct the Boston Symphony, which he joined permanently in 1912. From May 14 to 26, 1915, he conducted the orchestra in 13 concerts of music of all nations at the Panama-Pacific International Exposition in San Francisco. He kept the already great Boston Symphony at its high level, winning over New York critics as well as Boston. Dr. Muck steered clear of strange or inner meanings in scores, preferring to think "that a dotted eighth note was a dotted eighth note without any secret significance," and insisted on the quiet, precise interpretations that made him so beloved by those who knew music well.

MUMFORD, LEWIS Oct 19, 1895- Author

Address: Amenia, New York

Lewis Mumford, social philosopher and architectural authority, first sounded his summons to action in 1938 when in *A Call to Arms*, published in the *New Republic*, he advocated a policy of militancy by the United States to safeguard this country against the "imminent onslaught of Fascism." He followed this, in 1939, with a demand that *Men Must Act*, in which he denounced the Chamberlains and Daladiers whose policies of appeasement "we must regard with extreme skepticism, not to say hostility," and proposed that America engage in a policy of non-intercourse with the Fascist states, while beginning to "build up our own defenses." In September 1940 he published his *Faith for Living*, "a call to imperative action."

In *Faith for Living* Lewis Mumford warns us that the present victories of the Fascist powers so threaten our civilization that, unless we devise and translate into action a faith for living, all of us will revert to barbarism. Addressed to the liberal intellectuals, the conservatives and the militant radicals of this country, the book proposes a program with three main points: restoration of the family; re-establishment of ties with the soil; the development of personality. Calling it both "a moving sermon" and a "piercing shriek," critics have disagreed heartily on its merits, on its message, on its meaning for our times. And Mumford has been called, because of this book, a "warmonger" and "a prophet in the land."

This is certainly not the first time that Lewis Mumford has stirred up a row among the intellectuals and the liberals. Early in June 1940 he upset them when he resigned from his 13-year-old post as a contributing editor of the *New Republic*, disgusted with the magazine's slowness in rallying to the cause of all possible aid to the Allies. Two months before, in an article called *The Corruption of Liberalism*, printed in the *New Republic*, he had soundly

spanked the liberals for "their unwillingness to defend civilization" when "confronted with the imminent threat of a world-wide upsurge of barbarism," and it was clear that the rift was inevitable. He created another stir that same spring when he resigned as vice-chairman of the American Artists' Congress because it refused to condemn the Soviet Union's policy toward Finland.

Sturdy, sun-tanned, brown-eyed Lewis Mumford was born on October 19, 1895, the son of Lewis and Elvina (Baron) Mumford, into a home of extreme poverty. He spent his boyhood experimenting with the wireless and in his early teens wrote articles on radio telegraphy for electrical magazines. He attended Stuyvesant Technical High School in New York in order to become an electrical engineer. There he came into contact with various socioeconomic schools of thought, and occasional hints of such new ideas in science as relativity and the electronic theory of matter. He also attended Columbia University, the City College of New York and New York University.

The most important influence of his young life came to him, in 1915, in a book written by Patrick Geddes, a Scottish biologist who had trained under Thomas A. Huxley. Geddes had turned to sociology and to the study of Edinburgh and other cities. Mumford followed suit by becoming a student of New York City. Within the next few years he covered the city systematically on foot, studied architecture, learned to tell the approximate date a tenement was built from a glance at the fire escape or the cornice. Mumford maintained a long correspondence with Geddes until 1932, when the scientist died.

"Dislike of mathematics and a youthful love affair caused him to decide to be a writer," and in 1919 he began contributing reviews to the *Dial*, of which he became associate editor. In 1920 he was acting editor of a British publication, the *Sociological Review*.

From the late '20s on Mumford was able to combine his knowledge of New York City and its architecture with his desire to be a writer in the column called *The Sky Line*, which has been a frequent feature in the *New Yorker* and has been called "the most perceptive, severe and expert column of architectural criticism in the United States." Mumford notes in it the erection of New York's new apartment houses, office buildings, bridges and tunnels. He also wrote articles for the *New Republic*, the *Freeman*, the *American Mercury*, *Harper's Magazine* and for architectural journals. He collaborated with Paul Rosenfeld, Alfred Kreymborg and Van Wyck Brooks on *The American Caravan* (1927-36), a volume published annually in which they attempted to give a broad perspective of contemporary American writing.

Helen Post

LEWIS MUMFORD

Education has always been one of Mumford's greatest interests. For a short period he taught at the New School for Social Research in New York, and from 1931 to 1935 he was professor of art at Dartmouth College. From 1935 to 1937 he was a member of the Board of Higher Education of New York City, and is today a member of the Commission on Teacher Education, of the American Council on Education, and a member of the Commission on Resources and Education of the National Educational Association and the Progressive Education Association.

In 1939 Lewis Mumford wrote the narrative for *The City*, a documentary film shown at the City Planning Exhibit of the New York World's Fair. To him the city is not only a form of life, but is, through its layout and architecture, a form of art, "potentially the form of forms."

Mumford was married to Sophia Wittenberg in 1921; they have two children, Alison and Geddes. Among Mumford's most important works are: *The Story of Utopias* (1922); *Sticks and Stones* (1924), a study of American architecture and civilization; *The Golden Day* (1926), a study of American experience and culture; *Herman Melville* (1929), "an exhaustive criticism of the great imaginative American writer"; *The Brown Decades* (1931), a study of the arts in America from 1865 through 1895; *Technics and Civilization* (1934); *Culture of Cities* (1938); *Men Must Act* (1939).

Who's Who in America**MUNCH, EDVARD** (mōōnk) Dec 12,
1863- Artist

Address: Ekely, Norway

At Ekely, near Oslo, a grand old painter, Edvard Munch, is spending the last days of what should be an honored old age. It is to be hoped that the German occupants of his country pay him due respect, for his work, though international in repute, belongs especially to the Germanic school and was in its day a vital influence on the modern Expressionist Movement. In the words of Herbert Read, he "occupies in modern Germany a position comparable to Cézanne's in French painting. He saved German art from a slavish following of the Post-Impressionist School and returned to a form of expression more consonant with the Nordic genius." He has done big stage settings and murals and is a lithographer of note. Some of his lithographs have a power that is almost terrifying. It may not be fanciful to see in his productions an affinity with the stark drama of his compatriot, Henrik Ibsen, and to detect in it also the pervasive loneliness and grandeur of his native landscape.

Edvard Munch was born at Loten, Norway, son of the physician Christian and his wife, Laura (Bjordal) Munch. His family had already produced a genius before him—A. P. Munch, an eminent Norwegian historian. Edvard was possessed of a true artistic temperament from his youth: he was a delicate, nervous boy. His parents intended him to be an engineer, but his artistic capacities had become apparent so early that in 1882 he was sent to the School of Arts and Crafts at Oslo. There he studied under Hans Heyerdahl and Christian Krogh, the greatest representatives of the Impressionist Movement in Norway. He paid a brief visit to Paris in 1885, staying long enough to become a devotee of Velásquez. It was, however, a sojourn in the Norwegian summer resort of Aasgaardstrand that had started him on his characteristic landscape style. He became known for his landscape studies of the Arctic summer nights.

The following year, which he himself regards as a decisive one in his life, he won a state scholarship which enabled him to study in Paris; he stayed in Léon Bonnat's life class for four months, saw the great

French paintings of the century at the *Exposition Universelle*, and made friends with prominent painters like Claude Monet, Camille Pissarro and Denis Seurat, being especially interested by the *pointilliste* technique of the last. Canvases like *Rue de Rivoli* (1891) and *Gaming Room at Monte Carlo* (1892) show that he did not remain insensible to Impressionism, though the influence was not abiding.

Munch followed his Parisian stay by a period in Berlin from 1892 to 1895, though he continued to spend his summers at his favorite Aasgaardstrand. During that time he exhibited by invitation at the Association of Berlin Artists, precipitating a scandal of proportions by the daring of his subjects. The show had to be closed and the Association itself split into two warring sections. After that he exhibited in other cities with similar sensational results. During that period he also painted a number of portraits including *Strindberg* and *Ibsen*, and began to produce the wild, tormented, highly subjective lithographs like *The Cry*, *Melancholy* and *Death Room*, which remain his best-known works.

The next few years were spent in extensive travel. Restlessness has always been a characteristic of Munch's personal life. He traveled from Berlin to Lübeck and Thüringen, from Paris to Italy, Paris and Berlin being his main headquarters. In Lübeck he stayed with Dr. Max Linde, a collector, who had written a book about him (1902) and commissioned him to paint portraits of his four children. Count Harry Kessler, considered one of Europe's notable collectors, commissioned a portrait in 1906. In the same year Munch designed settings for Ibsen's *Ghosts* at Reinhardt's Deutsches Theater and in 1907 finished his big *Frieze of Life*, which was never placed in a building but broken up in 1912 and distributed among the Kronprinzenpalais, Berlin, the Lübeck Museum, and the Rode Collection, Oslo.

During that time Munch became the center of a group of German painters who called themselves *die Brücke* (the Bridge) and acknowledged Munch as their source of inspiration. From this group "originated that much wider movement in modern German art known as Expressionism"—not to be confused with the French variety. It remained a most active influence in German art until it incurred the disapproval of Herr Hitler on his accession to power. At about that time, too, Munch's style of painting became marked by Neo-Impressionistic traits—intercrossing lines of pure color. On the whole, however, one may say that Munch has sacrificed tone to line. Huneker wrote of him: "He distorts, deforms, and with his strong fluid line modulates his material as he wills, but he never propounds puzzles in form, as do the rest of the experimentalists."

In the autumn of 1908 Munch became seriously ill. During his long stay in a sanatorium at Copenhagen he made many

Soibelman Syndicate

EDVARD MUNCH

portraits of doctors and nurses and did a series of animal lithographs. In 1912 he decided to abandon town life for a while and settled at Kragerö, where he painted a fine set of murals for the aula of Oslo University and executed many landscapes. His animated studies of galloping horses belong to that period. He moved to Moss in 1913 and spent his summers at Hvitsten, a seaside village on a fiord. His paintings of that period deal with rural subjects. In 1918, apparently tired of being too far removed from city circles, he took a house at Sköien, a suburb of Oslo. An important commission came to him in 1922—for murals in the Freia chocolate factory at Oslo.

During the last 30 years there have been several important exhibitions of Munch's work. Zurich showed him in 1922, Manheim in 1926, and in 1927 there was a great show of 244 works at the Kronprinzenpalais, Berlin. He was first shown in an extensive London exhibition as late as 1936. His works have been bought by public collections chiefly in Nordic cities—Basel, Berlin, Bergen, Bremen, Stockholm, Copenhagen, etc.—although they can be seen also in Moscow, Prague and Tokyo. In the United States he is represented in Detroit.

Munch has been living quietly at Ekely for some time now. A series of self-portraits done at various phases of his life show him changing from an extraordinarily handsome stripling to a majestic old Viking. He is indeed Norway's "grand old man."

MURPHY, FRANK Apr 13, 1893- United States Supreme Court Justice
Address: Department of Justice, Washington, D. C.

President Roosevelt's latest appointment to the Supreme Court, his good friend and ardent New-Deal supporter Frank Murphy, took the oath of office February 5, 1940. The naming of Murphy clinched a five-man liberal majority control over the nine-man tribunal: it is assumed that the new Justice, according to behavior in his career to date,

FRANK MURPHY

will be watchful of the rights of minorities and legislate against all forms of racketeering, and at the same time can be counted upon to do his own thinking. In April 1940 he was the one to write the Supreme Court decisions invalidating antipicket laws. But since his appointment, observers have deduced that Frank Murphy cares not too much for his Court position, and liked much better his man-of-action job as Attorney General.

One of the most dynamic figures in contemporary political life, Frank Murphy has combined in his career the characteristics of a Blitzkrieg Galahad and a mailed-fist aesthete. Tall, lean, red-headed, with shaggy eyebrows that rival those of John L. Lewis and John N. Garner, he was born of Irish-American parents—John F. and Mary (Brennan) Murphy—at Harbor Beach, Michigan, April 13, 1893. As a boy his work in a local starch factory gave him a lasting hatred for "industrial slavery," conditioned him for his defense of the underprivileged. His mother was his idol. She gave him a *Bible* when he was graduated from the eighth grade which he carries with him wherever he goes, and on which he has taken more than one oath of office. She also got him to promise, at the age of 12, never to drink alcohol in any form. He never has. Neither does he use tobacco, and it has been said he is a vegetarian. His mother also taught him to love all races and peoples alike—and that teaching he also strictly followed.

Murphy worked his way through the University of Michigan Law School. It is said he rounded up backsliding Catholic students and got them to attend Mass; but his best friend at Ann Arbor was a Jew, and he wouldn't join a fraternity because this friend was barred from it. After his graduation he became a law clerk at \$5 a week in Detroit,

teaching night school on the side. When the First World War started he enlisted in the army, was sent to France, promoted to the rank of captain there and sent with the army of occupation to Germany. At the close of the War he studied law in London and at the University of Dublin. Back in Detroit he became assistant United States Attorney and for three years never lost a case.

In 1924 he became Judge Murphy in Detroit, handling criminal cases. His political career really began when Senator Couzens backed him to run for Mayor of Detroit in 1930, and he was elected. Fortunately he was one of the early supporters of Franklin Roosevelt at the Chicago convention; like the elephant, Roosevelt never forgot. He appointed Murphy to the Philippines as Governor General in 1932. The up-and-coming Murphy did this job well, and on his return became in 1936 Michigan's Governor. Here he ran into a career crisis. At the very time of his inauguration the General Motors employees were holding the largest and most dangerous sitdown strike in the State's history. General Motors obtained a court order to compel the strikers to quit the company's plants. This order Murphy refused to enforce because he feared it might cause bloodshed. In a talk with union men he did, however, threaten to use troops. The strike was settled the next week, and Murphy for his stand won the adulation of liberals. But he lost the support of Michigan politicians (and of a good many workers also) and suffered a defeat in the 1938 election. It is now said by some that Murphy received his orders on handling the strike situation from Roosevelt. But he still blames his defeat in re-election on the work of the Dies (see sketch this issue) Committee, which accused him of being a Communist in cahoots with the CIO. Since this was an affront to his staunch Catholicism, Murphy remains bitter about it.

The setback, however, was a stepup: it was Roosevelt's turn to come to the aid of Murphy. Of four posts offered him, he chose that of Attorney General, which Homer Cummings was quitting. Just the thing for a born crusading spirit, the position suited Murphy exactly. Many opposed the appointment on account of his "strike condoning," but apparently the Democrats needed someone to offset the works and growing popularity of Republican racket-buster Thomas Dewey (see sketch this issue). Murphy went immediately into gang-smashing action. He forbade his subordinates to make press statements regarding this action, which cut off J. Edgar Hoover (see sketch this issue) from an adoring public. But Murphy soon began making airplane raids around the country, crashing down on local political racketeering—and Hoover was with him, very much in the picture again. The ruthless war was on; and among those brought down during Murphy's crusade were Kansas City's Boss Pendergast. Later he indicted Philadelphia's Moe Annenberg

for income tax evasion, prosecuted Federal Judge Martin Manton for "selling justice" in Manhattan, proceeded against Louis (Lepke) Buchalter and other lesser big shots. All in all, Murphy's idealism manifested itself in a fairly thorough cleanup. One of his last acts as Attorney General was to have 16 alleged Communists and fellow-travelers indicted in Detroit for having recruited volunteers for Loyalist Spain. Liberals throughout the country protested. It was Murphy's successor, Robert Jackson (see sketch this issue), who ordered dismissal of the indictments. But Earl Browder, general secretary of the Communist Party, was found guilty of a passport fraud, and scores of indictments were made against union labor leaders.

Not in 15 years had the Department of Justice been so active as under Murphy. It is small wonder, observers feel, that Murphy does not relish the comparatively cloistered atmosphere of the Supreme Court Bench. But for all his delight in racket-smashing, Murphy's manner is quiet, his speech soft, unctuous. His deliberate, soft "purr" at first irritated the hard-boiled Washington newspapermen, who called him "Holy Joe, the Airedale Angora." But because of their newsiness and calm courtesy, Murphy's press conferences soon became second in popularity in Washington to the President's. His sister, Mrs. Margaret Teahan, is still kept busy denying that she ever said, "he looks more like Jesus every day."

Although his pious upbringing and his asceticism are well publicized (too well, his best friends think), men who meet Murphy for the first time are said to be astonished: that a man could actually be so good seems incredible, almost unhealthy. It is a goodness bolstered by an earnest lack of humor. He says solemnly that he seldom reads novels because "no novel could be so exciting as my life." But he likes to dance, he is the fashion plate of the Administration, and can be most charming to women, although he is still unmarried.

Thomas Corcoran (see sketch this issue) says Murphy is the modern counterpart of the fighting abbots of the Middle Ages. Frank Murphy's own motto is: "Speak softly and hit hard." What he dislikes most is to have political phrasemongers call him "New Deal Glamour Boy No. 1." Of his own aspirations he recently said: "I should like to belong to that small company of public servants and others who are content to do some of the homely and modest tasks of perfecting integrity in government and making government more efficient and orderly."

NEWALL, SIR CYRIL LOUIS NORTON Feb 15, 1886— Newly-appointed Governor General of New Zealand; Marshal of R. A. F.

December 1940 Bulletin: In February 1941 Sir Cyril Newall will take up his post as Governor General of New Zealand. He will relinquish the position of chief of the air staff of Great Britain to Sir Charles F. A. Portal. He will be promoted to Marshall of the R. A. F.

From August issue:

With the British left to face alone the full fury of the totalitarian states it seems safe to say that no head in this world bears a more terrible weight of responsibility than that of Sir Cyril Newall. For the moment the British Army must take a secondary position in the defensive system while the brunt of the work must be borne by the Navy and by the Royal Air Force. And

the Air Force must not only repel bombers and carry on with the protection of shipping, but repeatedly attack military objectives in German territory. Luckily for Britain, the head that has to bear this load is a cool one, well supplied with brains of proven quality.

Newall is little-known to the British general public. There are almost no "personality stories" about him, except that he is an enthusiastic gardener, for he shuns publicity and is reputedly difficult to approach. His record, however, shows him to be not only a bold and resourceful officer but a far-sighted administrator who has devoted the whole of his adult life to the adaptation of flying to warfare.

Born at Mussoorie, United Provinces, India, he is the son of the late Lieutenant Colonel William Potter Newall, of the Indian Artillery. As with most English boys born in India, he was sent home for his education, going to Bedford School and to the Royal Military College, Sandhurst. In the summer of 1905 he was gazetted to the Royal Warwickshire Regiment as second lieutenant and returned to India for service. Some three years later he had his first experience under fire, in a minor frontier brush with the Zakka Khels tribesmen. In September 1909 he was raised to lieutenant and transferred to the 2nd Gurkha Rifles.

Toward the end of 1910 the British and Colonial Aeroplane Company arranged a flying demonstration in India. The young subaltern saw immense possibilities for the use of airplanes in war; and when he went home on leave the following summer spent almost his whole furlough learning to fly. Having no means but his pay, he had to raise the funds for his instruction from his lawyer. In those days of canvas "box-kites" and 50-horsepower engines, to fly at all was a great adventure, and there were heavy casualties among learners; but without mishap Newall duly qualified from the Bristol School of Aviation and received Royal Aero Club certificate No. 144.

Returning to India at the end of 1911, Newall could think and talk of nothing but aviation. "Flying had gone to his head like champagne," said a brother officer. He badgered his superiors persistently until at last they sent him back to Upavon, Wiltshire in 1913 to take a special course in flying instruction. On the completion of this he went back once more to India, won promotion to the rank of captain, and transferred to the Sirmoor Rifles.

When the War broke out in 1914, Newall at once took ship for England to serve in the newly-formed Royal Flying Corps. He was appointed a flight commander and carried out the organization of a squadron from very puny resources in men and material. During 1915 he rose quickly to be squadron commander and wing commander and by September 6th of that year had the No. 12 Squadron in France ready for the Battle of Loos.

SIR CYRIL NEWALL

In January 1916 Newall won his first decoration for an act of great gallantry. At St. Omer a warehouse containing some 2,000 bombs caught fire while the door was locked. With the help of three others Newall first poured water through a hole made by the flames; and then, when the key was obtained, went inside and succeeded in putting out the fire, even though incendiary bombs were furiously burning and many of the wooden cases were charred to a cinder. Since military decorations may be awarded only for action in the face of the enemy Newall was awarded the Albert Medal of the First Class.

Newall did little or no actual flying in France. His skill in organization and in training was far too valuable for that risk to be taken; but he spent much of the War period at the front. In February 1916 he was sent back to England to help Brigadier General Salmond with a scheme for the better training of pilots. At the end of the year he was in France again in command of the Ninth Wing; and early in 1917 he organized some of the earliest successful low-flying attacks on infantry.

The frequent raids on London had by this time determined the British High Command to institute reprisals against German industrial targets. The 41st (Bombing) Wing was formed for that purpose, with Newall in charge. From October 1917 to June 1918 it carried out 57 raids on such towns as Karlsruhe, Mannheim, Cologne, Mainz, Stuttgart, Coblenz, Thionville and Saarbrücken. Whether it was this or the improvement of anti-aircraft measures that caused the Germans to abandon air attacks on English open towns is not clear, but they were abandoned from May 1918 to the end of the War.

NEWALL, SIR CYRIL—*Continued*

At the end of 1917 Newall became a brigade commander with the temporary rank of brigadier general and as commanding officer of the Eighth Brigade did splendid work under Sir Hugh Trenchard. His War honors comprised three mentions in dispatches, the C. M. G., the military C. B. E., the Belgian Croix de Guerre and the rank of officer in the French Légion d'Honneur, the Italian Order of the Crown and the Belgian Order of Leopold.

Although on August 1, 1919 Newall reverted to rank of wing commander on taking up a permanent commission in the Royal Air Force, he became a group captain a week later and was made deputy director of personnel at the Air Ministry. This post gave good scope for his already well-tryed ability in the organization of large-scale training schemes, and he had much to do with the establishment of the R. A. F. Cadet College at Cranwell in 1920, the Staff College at Andover in 1922 and the Halton School of Technical Training for Boys, which insures that all air mechanics shall become highly trained craftsmen sure of ready absorption into industry when their period of service is over. From June 1923 until the end of 1924 Newall acted as Air A. D. C. to the King, after which he was promoted to air commodore and placed in charge of the Special Reserve and the Auxiliary Air Force—the latter a body of "week-end" airmen, some of whom have already rendered distinguished service in the present War.

For the first two months of 1926 Newall was on special duty with the League of Nations Disarmament Committee and shortly afterward became director of Operations and Intelligence and deputy chief of the air staff at the Air Ministry. At the beginning of 1930 he was raised to the rank of Air Vice-Marshal and co-opted as an additional member of the Air Council. There followed a period of eight months in command of the Wessex bombing area, which allowed of the fullest study of home defense problems, and some three years in charge of the Middle East command.

Recent years have seen the rapid continuance of Newall's steady rise in rank and responsibility. In January 1935 he was appointed again to the Air Council, as Air Member for Supply and Organization. By July he was Air Marshal; by April 1937 he was Air Chief Marshal, and in September of that year he became Chief of the Air Staff. He has thus had about four years before the outbreak of war in which to work out a complete system of defense for the British Isles. The balloon barrages and the blackout (on the rigorous observance of which he has insisted, in spite of the appalling automobile casualties which have ensued) are parts, and essential parts, of this defensive system; so are the escorts for convoys and the "security patrols" in the neighborhood of Norderney and Sylt.

Newall also believes in vigorous attack as a concomitant of defense and day after day there comes news of night attacks by the R. A. F. on enemy oil storage tanks and railroad yards with disastrous effects. Newall's cultivation of individuality rather than uniformity in his officers seems to have led to their fighting with brains as well as with bombs and machine guns.

Newall has a real and close link with the United States in that he married Olive Tennyson Foster, daughter of Mrs. Francis Stores Eaton, of Boston, Massachusetts. They have a boy and two girls. Newall is of medium height and build, ruddy of complexion, gray-haired. It is recorded that when Sir Kingsley Wood (see sketch this issue) was Air Minister, Newall once flashed a torch from the Ministry steps to guide him as he left his car in the blackout. Sir Cyril just escaped a reprimand from an air raid warden!

The "Sir" came about in June 1935, when Newall was created a Knight Commander of the Order of the Bath. He has since gone up a step in the Order, to Knight Grand Commander.

NICOLSON, MARJORIE HOPE Feb 18, 1894- Educator

Address: Columbia University, New York City

For a woman who believes that it is "easily possible to be a scholar and a gentleman, but it is hard to be a scholar and a lady," Marjorie Hope Nicolson has done rather well along both lines. She has been nominated president of the United Chapters of Phi Beta Kappa, and is the first woman to head the distinguished honorary scholastic fraternity since it was founded at William and Mary College in 1776. The first of the Greek letter societies, Phi Beta Kappa was originally social and secret, but evolved into the nation's No. 1 honorary society, choosing its members on the basis of scholastic merit.

Since nomination is equivalent to election, in September 1940 Dean Nicholson became the head of the 132 chapters of Phi Beta Kappa, and leader of the army of 86,000 members who wear the gold keys of academic wisdom. She heads a group that includes such notables as Franklin D. Roosevelt, Henry L. Stimson (see sketch this issue), Bruce Barton, John D. Rockefeller Jr., Charles Evans Hughes and Pearl Buck, and is composed of about one-third women and two-thirds men.

In an interview following her nomination as president of Phi Beta Kappa, Dean Nicholson explained that women's failure to find high places in music, mathematics, philosophy and religion boiled down to the fact that it was hard for them to be both

scholars and ladies—"they have no wives to look after social contacts and to perform the drudgery for them."

And, opined Miss Nicolson, an absent-minded professor may be picturesque, but a lady with unkempt hair and undarned stockings is definitely not picturesque. But darning stockings takes time from more important work.

If Dean Nicolson has had to put in the usual allotment of time on the equivalent of darning stockings, she has nevertheless found time to attain a full measure of scholastic honors. She holds honorary degrees from colleges, has written and edited half a dozen books, and has contributed to philosophical and literary periodicals in addition to her teaching.

Yet she is in no sense a blue stocking. At 45 she has a full, winsome face, blue eyes and dark auburn hair, and a youthful spirit undulled by 26 years of teaching. She likes to read detective stories and "sweet love tales" for relaxation, and her conversation ranges from "Galileo to Gulliver, from Milton to the movies." Her speech before 2,000 best brains of the country at the second annual dinner of the United Chapters of Phi Beta Kappa in New York, when she appeared as the body's presidential nominee, was witty and non-academic.

Her contention that "too little attention to duty makes some men playboys, all work and no play make Jill a dull girl" has kept her from falling into the dull Jill class. She agrees, however, that women do not carry their learning lightly.

The daughter of Charles Butler and Lissie Hope (Morris) Nicolson, she was born in Yonkers, New York, February 18, 1894, and received her early education in Halifax. She attended the University of Michigan, received her B. A. degree there in 1914, and started her teaching career the same year at Saginaw University during this period. In 1926 she taught in the Detroit public schools, and took her master's degree at the University of Michigan. She took her Ph. D. at Yale University in 1920.

After receiving her doctor's degree at Yale, she went to the University of Minnesota as instructor of English, later becoming assistant professor. She left in 1923 to become assistant professor at Goucher College and remained there until 1926, taking graduate work at Johns Hopkins University during this period. In 1926 she won a Guggenheim Fellowship, and spent a year in Europe, browsing in libraries and discovering old letters and pictures. On her return to this country Miss Nicolson was appointed associate professor of English at Smith College, and in 1929 was appointed professor and dean.

Dean Nicolson holds an honorary degree of Doctor of Letters from Mt. Holyoke College awarded in 1933, and another Litt. D. from the University of Michigan, awarded in 1937. She has served as a member of the committee on awards of the

MARJORIE HOPE NICOLSON

John Simon Guggenheim Foundation from 1930 to 1935 and again from 1936 to 1937; as vice-president of the Modern Language Association of America in 1937 and 1938; and as senator and vice-president of the Phi Beta Kappa.

Her elevation to the presidency of Phi Beta Kappa is not her first trail blazing for women. She was the first woman to win the John Addison Porter Prize awarded by Yale University for original work. She received that award in 1930, and, in 1938 one of her pupils was the second woman ever to receive it.

Dean Nicolson was also the first woman to hold the office of vice-president of the Modern Language Association of America. The organization which gives recognition for distinguished scholarship in English and modern languages has never had a woman president.

She will also be the first woman to hold a full professorship on Columbia University's graduate faculty when she takes up her duties there in February 1941. Her appointment as professor of English was announced by Nicholas Murray Butler (see sketch this issue) in May 1940.

In addition to her teaching and research she has had another occupation, a sideline she engaged in during the early days of her career. It was newspaper work. She grew up in a newspaper family. Her father was editor in chief of the *Detroit Free Press* during the First World War, and later Washington correspondent for the paper. Dean Nicolson got her first newspaper experience writing dramatic reviews for the *Detroit Free Press*. Later she worked with her father in his Washington Bureau, once, during the Harding Administration, running the entire office when her father was ill for three months.

But newspaper work was merely a sideline. Teaching and research have always remained her first loves. She considers it fun to go to the library and "work like a dog." Her particular field of research has been in English literature, primarily the 17th century, and the influence of science on literature.

Her books include: *The Art of Description* (1926); *Conway Letters* (1930); *The Microscope and English Imagination* (1935); and *World in the Moon* (1937). She has edited *Selections from Shelley and Keats* (1923) and *Selections from Tennyson* (1923). In addition she has contributed to various scientific and philosophical periodicals, and to the *Atlantic Monthly* and the *Yale Review*.

NIJINSKY, WASLAW (nē-jīn'skī vās'lāf)
Feb 28, 1890- Dancer

Address: c/o Emilia Markus, Budapest, Hungary

A mild, shy, bald-headed man whose reputation "as the supreme male dancer" once jammed theatres was in the summer of 1940 at the home of his mother-in-law in Budapest waiting for permission to come to the United States to continue his treatments for dementia praecox. Nearly 20 years ago Vaslav (as his first name is usually translated) Nijinsky was pronounced incurably insane and has spent most of the years since in a Swiss sanatorium. Two years ago insulin shock treatments brought marked improvement and enabled Nijinsky to leave the sanatorium and live a more normal existence in Adelboden, Switzerland. Dr. Manfred Sakel, who administered the insulin, is now in New York City, and the Nijinskys wish to follow him for further treatment.

Madame Nijinsky has sold the motion picture and play rights to *Nijinsky* (her account of their lives, published in 1934) to pay the cost of the trip; the United States Labor Department has indicated that Mr. Nijinsky would not be barred because of insanity; a former associate, Mr. Anatole Bourman, now conducting a dancing school in Hartford, Connecticut, has offered the invalid a home and has offered to finance medical treatment here. But on May 9, 1940 the American Consulate at Zurich refused a six months' visitor's visa because the spread of the war might prevent Nijinsky's return to Europe. The Washington authorities were reported on July 28 to be reviewing the case, but a visa was finally refused.

Vaslav Fomitch Nijinsky was born at Kiev, South Russia on the 28th of February,

1890. The date is agreed upon, but not the profession of his parents. Madame Nijinsky has described his parents as of Polish origin: his mother Eleanora (Bereda) Nijinsky was a former student of the Imperial School of Ballet in Warsaw and danced up to within an hour of the birth of Vaslav, her second son. His father, Thomas Nijinsky, was a "first-rate exponent of classical ballet and also an excellent character dancer. His grandparents were dancers before them."

Others report that the parents were connected with the circus and that an uncle still works in "some circus show or other." The exponents of the latter belief explain Nijinsky's extraordinary physical gifts by this circus lineage: "the generations of acrobats back of him. His lightness which was beyond all technique, his renowned elevation ... his natural and inherent physical gifts were due to and sprang from the circus."

A delicate child, "awkward, temperamentally backward and slow thinking," Vaslav was admitted to the Imperial School in St. Petersburg when he was nine. His first teacher, Nicholas Legat, had noticed the extraordinary development of the muscles of his legs and his ability to jump. At the school Nijinsky literally leaped into fame. In his leap he didn't seem to jump, but to rise effortlessly, describe a long parabola of flight and finally descend slowly and lightly to the ground. He is said to have twice done 10 *entrechats*, not on the stage, but in his classroom. Few living dancers can do eight, and when more than four are done they are rarely cleanly performed.

In 1907 Nijinsky made his debut in Mozart's *Don Juan* at the Maryinsky Theatre, St. Petersburg. Still a pupil, he "eclipsed other members of the ballet, including his teachers." At his graduation performance in May 1908 he danced a *pas de deux* with Ludmilla Schoolar in a ballet arranged by Fokine, and after graduating became a partner of Mathilda Kchessinskaia, sometimes dancing as the soloist, although he was only a member of the *corps de ballet*.

During his first season with the Imperial Ballet he met Serge Diaghilev, and their acquaintance continued over a long period of both enmity and friendship. Two years later Nijinsky was dismissed from the ballet for wearing an improper costume in the presence of the Dowager Empress. Responsibility for this accident has been attributed to Diaghilev, who, it is said, "wished to assume full control of Nijinsky's career." Whether or not the incident was planned it had that result, and was the cause of the establishment of the Diaghilev Ballet and of bringing Nijinsky to the Western world.

The Diaghilev Ballet opened in Paris in 1911. One of Nijinsky's principal rôles was in *Le Spectre de la Rose*, in which he "not only was as light as a rose petal itself, but brought to it something of the gentleness of a moonlit night," and it created quite a stir. A favorite

Wide World

WASLAW NIJINSKY

portrayal of Nijinsky's was that of *Petrouchka*, a tragic puppet with the soul of a man, which revealed as much acting as dancing ability. Nijinsky's first composition as a choreographer, to Debussy's *L'Après-Midi d'un Faune*, was an immediate success and was followed by *Jeux* and Stravinsky's (see sketch this issue) *Le Sacre du Printemps*.

Nijinsky lived for his work. "In the theatre he was untiring; never ceasing to work; practicing, practicing, on the stage, in the rehearsal room, wherever he could find space." Off the stage he presented a colorless figure: "pale face, high cheekbones, small and slightly Mongol eyes, with thin hair nondescript in color—taciturn, glum and a little bewildered." As soon as he approached the stage he became the character he was to portray and his concentration upon his rôle was so intense that he seemed to walk in a dream.

In the summer of 1913 the Diaghilev Ballet sailed for a tour of South America, leaving its director in Europe. It was the first time Nijinsky had been separated from Diaghilev since the beginning of their association. The director had exercised a "tremendous influence over the dancer and protected him from all the unpleasantness of life; he had sincerely tried to educate him and to develop the cultural side of his existence; but he had also monopolized him to an abnormal degree." Once free of the immediate presence of Diaghilev, Nijinsky proceeded to do the one thing which destroyed their friendship and all hope of future collaboration between them. On September 10, 1913, in Buenos Aires, he married Romola de Pulszky. She was the daughter of Emilia Markus, a famous Hungarian actress, and had studied and joined the ballet for the express purpose of following Nijinsky, with whom she was infatu-

NIJINSKY, WASLAW—*Continued*

ated. (Their daughter, Kyra, born in 1914, has achieved some distinction as a dancer.)

Diaghilev was exceedingly displeased and dismissed Nijinsky by cable. When he returned to Europe Nijinsky organized a small troupe and secured an engagement at the Palace Theatre in London. But he had small talent for business affairs, and in spite of a weekly salary of \$5,000 was forced to close in two weeks.

Internment in an Austrian prison camp at the beginning of the First World War prevented him from joining the first American tour of the Diaghilev Ballet after he and Diaghilev had settled their quarrel. "Under prison surveillance he fretted himself ill because he could not dance; planned ballets, worked on an intricate system of dance notation, to help him keep his balance." In 1916, largely through the efforts of Diaghilev, he was released and came to America. He made his American debut at the Metropolitan Opera House.

During his tour of North and South America the persecution complex which had clouded his actions became intensified by financial worries. Nijinsky made his last appearance on the stage in Montevideo at a benefit performance of *Les Sylphides*. Returned to Europe and making his home at St. Moritz, Nijinsky was planning a new system of dance notation when his illness became acute and it was necessary to place him in a sanatorium. An exhibition of his drawings, paintings, water colors and pastels done while in the institution was presented by the London Group Theatre in 1937 to raise funds for the Nijinsky Foundation.

NORMAN, MONTAGU Sept 6, 1871-
Governor of the Bank of England

Address: b. 37 Grace-Church St, London, England; h. Thorpe Lodge, Campden Hill, W. 8, Kensington, England

No one could look and act less like the conventional idea of a great financier and banker than Montagu Norman, Governor of the Bank of England since 1920. There's nothing about him of the large, clean-shaven, heavy-jowled, portly, brusque and tough figure occupied only with money that the movies have made recognizable to most Americans. Instead, he is like nothing so much as a Velásquez portrait, with his thin, sensitive hands, his high forehead, his keen, slightly ironical eyes and his well-trimmed, pointed, white beard. Nor does Mr. Norman drive up to his bank in a long black limousine. As often as not he uses the subway. What is more, he is an art connoisseur whose home is on Campden Hill, Kensington, where many of England's famous artists live, and whose close friend is Augustus John, the portrait painter.

His manner is one of distinguished courtesy, not only when he deals with individuals but when he is carrying out matters of large policy. The late Lord Snowden, a Socialist, had a high opinion of him. "I never hear uninformed remarks about the callousness of international finance," he said, "but I think of the injustice done through ignorance to the high and unselfish motives of the Governor of the Bank. No man with great responsibilities ever tried more faithfully to discharge them with the single aim of promoting national and international well-being. It took but a short acquaintance with Mr. Norman to know that his external appearance was the bodily expression of one of the kindest natures and most sympathetic hearts it has been my privilege to know."

At the same time, however, because of his position which has given him a hand in almost every major European financial crisis of the past two decades and because of his passion for privacy, a large body of legend has grown up around Montagu Norman. A quip once current in banking circles said that Mr. Norman enters his office unseen, "disguised as a Bank of England note." Everyone does not share Lord Snowden's unreserved admiration. Hugh Dalton, Under-Secretary for Foreign Affairs in the second Labor government, once complained that Norman pursued a foreign policy of his own based on the premise that "unless Germany is economically strong and prosperous, it is impossible to balance the one-sided political strength of France on the Continent." Harold Laski thinks that England has been conquered not once, but twice, by the "Normans," and chafes under the yoke.

The Bank of England, which he heads, is a private body which belongs to the owners of stock, its management in the hands of a governor, a deputy governor

MONTAGU NORMAN

and a court of directors. Although it is not controlled by the British government, it is banker to the government; it is the center for the issue of bank notes, it handles the daily operations of the government, manages its stocks and bonds, issues new government loans and advises the government on problems in which public policy is related to business and finance.

For his tremendously important position Montagu Collet Norman is fitted by background and experience. He was born at Moor Place, Much Hadham in Hertfordshire, the eldest son of the late F. H. Norman, a partner in the banking house of Martin's, a powerful and independent concern. His grandfather, George Warde Norman, had been a director of Brown, Shipley and Company, and of the Bank of England, and his grandmother had been a Miss Stone, daughter of a partner in Stone and Martin, bankers. Montagu was sent to Eton College and from there went to King's College, Cambridge. He stayed only a year and left without a degree, though he has since been given an honorary one.

Out of the university, Norman joined the firm of Brown, Shipley and Company and spent some time in America with their associated house, Brown Brothers (now Brown Brothers, Harrison and Company) of New York and Philadelphia. In 1900 he was made a director of the firm. He took a leave of absence that same year to fight in the Boer War, in which he was mentioned in dispatches and won the Distinguished Service Order and the Queen's Medal with four clasps.

There is an informal understanding that a director of Brown, Shipley should be on the board of the Bank of England, and Norman was elected to it in 1907. Eight years later he left the private banking

NORMAN, MONTAGU—*Continued*

house to become deputy governor of the Bank of England, serving under Lord Cunliffe. When Cunliffe died in 1920 Norman was elected to the governorship. Before his election it was customary to elect a new governor every two years, but Montagu Norman has remained in office for twenty years, his last unopposed reappointment being in April 1940.

Soon after the First World War Mr. Norman put England back on the gold standard and has argued strongly for it. Since England left the gold standard in 1931 (it is reported that he fainted when it did), his activities have done much to prevent inflation. Although there is disagreement about the measures which have been taken under his régime, there is no difference of opinion as to his intelligence and banking knowledge. In 1930 Mr. Norman became a director of the Bank for International Settlements.

Montagu Norman remained a bachelor until quite late in life. In 1933 he married Priscilla, daughter of the late Major Robert Reyntiens of the Belgian Artillery and Lady Alice Josephine, daughter of the seventh Earl of Abingdon.

NOVOTNA, JARMILA (nō-vāt'nā jar-mē'lā) Opera singer

Address: c/o The Metropolitan Opera Co, Broadway and 39th St, New York City

A beautiful young Czech singer, as Violetta in *La Traviata*, received an ovation at New York's Metropolitan Opera House

February 7, 1940. Critics acclaimed her the greatest Violetta in 20 years. In addition to her beauty and the excellence of her voice, the young soprano also set a new standard for acting at the Metropolitan.

Born in Prague, the daughter of a banker, Jarmila Novotna studied music privately for a few years, since she was too young to study at the Conservatory in Prague. At 17 she made her debut in *La Traviata*. In her first year at the National Opera House of her native Prague, her repertory included the heroine rôles of *Eugene Onegin*, *The Magic Flute*, *The Barber of Seville* and *La Bohème*, all sung in Czech, although she later sang some of these rôles in both Italian and German.

Among her first successes was the title rôle of *The Bartered Bride*, a leading favorite in Bohemia and in Vienna, where during one season she sang Marie to the Hans of Richard Tauber. It is this part which Edward Johnson of the Metropolitan assigned to her for the 1939 to 1940 season's revival in German. She has also sung *The Bartered Bride* in a European film version, although she never saw the finished product of her work. In the film the hero was transformed from a farmer's son to a position, riding from town to town; otherwise Smetana's opera was treated with respect.

The young soprano soon extended her career beyond her native country. Franz Schalk advised her to continue her education in Milan, where she worked with Tenaglia. Her Italian debut was as Gilda in *Rigoletto*, singing opposite Lauri Volpi, in Verona. She was later introduced to Neapolitan audiences, and sang Antonia in a performance of *Tales of Hoffmann* at the Florence May Festival.

Madame Novotna received most of her acting experience under the direction of Max Reinhardt, and became known in Europe as an actress and film star as well as an opera singer. She has often been a guest artist at the State Opera in Berlin, where she sang in *Die Fledermaus* under Reinhardt's direction. Toscanini was impressed with her singing at Salzburg in 1937. She calls "the most beautiful time of my life" a performance of *The Magic Flute* there, in which she sang Pamina under his direction. "He made everything clear, like a picture," she says, "and in spite of what people say, he was not at all strict." At another Salzburg performance came an opportunity to sing Eurydice opposite Thorborg's Orfeo, under Bruno Walter.

Having been chosen by Toscanini to sing the heroine of *La Traviata* at a special season planned for the World's Fair in the spring of 1939, Jarmila Novotna came to this country. But the contract failed to materialize. Her disappointment, however, was offset by her activities in various opera rôles in the autumn. In San Francisco she made an excellent impression in the title rôle of *Madame Butterfly*. She was assigned to several famous rôles during the

JARMILA NOVOTNA

1939 to 1940 Metropolitan season, and has also fulfilled radio engagements.

In private life she is the wife of Baron George Daubek and the mother of two children. While in New York City, she keeps house in a duplex apartment on Park Avenue. When not busy in other countries with her art, she has in previous years found rest and relaxation in the garden of her 6,500-acre baronial estate at Liten, outside of Prague. Here she and her husband, when he was able to take time from his industrial and agricultural interests, had profited from the seclusion of their country place. There was swimming in summer, excellent shooting and freedom for the amusements of the children.

OBOLER, ARCH (ō'bōl-ěr) Dec 1909-
Radio dramatist

Address: b. c/o Leland Hayward, Inc, 9200
Wilshire Blvd, Beverly Hills, California

From 1938 on Arch Oboler has been writing and producing a weekly half-hour program series of dramas for NBC. In the spring of 1938 he came from NBC's Chicago studio to New York with the recorded script of his play, *The Ugliest Man in the World*, and so impressed was NBC's production manager that *Arch Oboler's Plays* were launched. The dramas may be comedy, realism, fantasy, satire or tragedy, but are marked always by their originality and skilled direction. Oboler is credited with having developed the monologue and the stream-of-consciousness story for radio use. One of his plays, *Alter Ego*, starring Bette Davis, was chosen as the best original air drama of 1938.

Arch Oboler, the son of Leo and Clara Oboler, grew up in Chicago; and his boyhood ambition was to be a naturalist. So the bedroom of his home became a zoo of turtles, frogs, tortoises, salamanders, snakes, scorpions and other members of the animal kingdom. The zoo gave him the idea for a story which he wrote, and sold, at the age of 10. He was fascinated by the world of science in high school; and he enrolled at the University of Chicago for its course in electrical engineering. He always liked to write, however, and he wrote a lot. While still a student he submitted to NBC a fantasy called *Futuristic*. It was so striking a work that they bought it and used it as a salute program in ceremonies attending the opening of Radio City in New York.

That was in 1934. Since then Arch Oboler has written 400-odd original dramas. In 1935 he turned out playlets for the *Grand Hotel* program, and began writing sketches for such personalities as Don Ameche, Henry Fonda, Joan Crawford, Walter Huston and Edward G. Robinson, who were glad to appear on his program even at the minimum union rate, \$21. In 1936 he began to write for *Lights Out*, an after-midnight spooky horror series of dramas. Unable to top his own horrific thrillers, he quit after two years; but learned a great deal about radio technique while producing the flesh-creepers. During this period he married Eleanor Helfand, a University of Chicago student. For their honeymoon they went on a tour of all the haunted houses in New England.

Oboler made a hit in 1936 with *Rich Kid*, starring Freddie Bartholomew on the Rudy Vallee Hour. Vallee repeated the sketch three times, adopted the author as his protégé, and has since presented many Oboler plays. A high point of achievement for Oboler in his *Plays* weekly series was a full hour special broadcast in 1939 of a dramatization (*The Lonely Heart*) with the Russian actress Alla Nazimova as star, and the use of the NBC symphony orchestra.

Ernest A. Bachrach

ARCH OBOLER

It was the story of the strange relationship between Tchaikowsky and his patron, Nadejda von Meck.

In October 1940 Arch Oboler's first commercially sponsored series of half-hour plays began—Oxydol's *Everyman's Theatre*, which can be heard every Friday evening. Mr. Oboler also has a three-and-one-half-year contract as author-director in Hollywood (he was responsible for the script of *Escape*), and a collection of his scripts, *Fourteen Radio Plays*, was published late in 1940 by Random House. *Ivory Tower*, a collection of three radio plays, limited to a thousand signed copies, appeared in November 1940. He is kept busy.

Dark-haired, energetic, half-pint size Arch Oboler likes to wear polo shirts and unpressed bags in correct Radio City. As a hangover of his early scientific interests, he once kept a horned toad in his studio, but it died of overindulgence. He has a pet rabbit named Flopsie at home—an old brownstone house with a fine library. In California Frank Lloyd Wright is building him another, far less conventional house, which will hang over the side of a mountain and have a brook trickling right through its living-room. Arch likes to wear old clothes and prowls around odd parts of New York City in search of plot material. He uses a dictaphone in getting his plots into shape; and it is said he names characters after friends, enemies or the heroes and heroines of books. He puts on earphones and directs his production (standing on a table where he can be seen) from the studio itself rather than the control room. He says he has dreamed some of his plays, and that he gets inspiration for others by listening to the music of great composers.

OLSEN, JOHN SIGVARD Nov 6, 1892-
and **JOHNSON, HAROLD OGDEN** Mar
5, 1895- Actors

Address: Winter Garden Theatre, 1634 Broad-
way, New York City

Since 1914, when they first met, Olsen and Johnson have been getting laughs. All they want to do is to make people laugh. "Here are two comics," says Ole, "who don't want to play Hamlet." "That's a lie," Johnson says, "I'd love to play Hamlet. Think of the fun we could have with you as the Dane and me as the ghost."

"It's belly laughs" that Olsen and Johnson want, and it's "belly laughs" that they have been getting. Their *Hellzapoppin*, in the two editions New York has seen so far, has been one of Broadway's biggest hits. The "strictly screwball doings" of this revue include a woman who wanders up and down the aisles yelling for Oscar, a man who keeps coming in to deliver a plant, which before the curtain goes down, has grown into a full-sized tree, people trying to sell tickets to other shows, and volley after volley of shots ringing out offstage and on. The critics didn't like it—they thought it "vulgar", "rowdy and confused." Only Walter Winchell found it "wildly hilarious" and plugged it. But it didn't make much difference what the critics said or thought. The first night had three solid hours of laughs and every night since the first one has been a box-office success. It will be filmed in 1941, and a third edition will also appear on Broadway in the fall of 1941.

"Vaudeville has been dead for a decade," said one commentator, but Olsen and Johnson "have never known enough to lie down." It's vaudeville which they present in *Hellzapoppin* and it's been vaudeville which they have been presenting profitably for the last 25 years. Olsen, called Ole, has always been the straight man, preparing the way for the laughs his stooges get. Johnson, called Chic, takes it away. He's the fatter one, with "a wide, lardy, fat-man's face with bulging eyes that resemble poached eggs with pale blue yolks."

OLSEN AND JOHNSON

From almost the beginning of their career Olsen and Johnson have been sure-fire between Cleveland and California. They both started out to be musicians; when Ole was a boy in Peru, Indiana he intended to be a violinist; Chic, who comes from Chicago, was sure he was going to be a pianist. When they met Ole had been graduated from Northwestern University (1912) and was playing the violin with the "College Four," singing with illustrated slides and offering a little ventriloquism to fill in now and then. Chic was advertising himself as the greatest ragtime pianist in the Midwest and was doing an act in small-time vaudeville. He says "Olsen was a funny looking guy with big yellow shoes." Ole says, "Chic didn't even have shoes when I met him."

Within a few weeks Olsen and Johnson were a team. Chic played and Ole sang. They got jobs in beer halls and finally worked up to Mike Fritzel's *Frolics*. From there they went to vaudeville. They first really caught on at the Majestic in Milwaukee. The two actors before them sang a song called *Rolling Stones*. Once, during a dull matinee, Olsen and Johnson came out and rolled two stones across the stage as they started to sing. The audience howled and from then on things were different. Olsen and Johnson would sing a comic song dead-pan and clown a serious one; they would do silly, unexpected things, always aiming for the "belly laugh."

They got on the Pantages circuit, where they were considered "vaudeville at its best," and stayed there for five years. By then they had four stooges working in the audience and using all the props they could get, from elephants to doves, from air-planes to toy autos. From Pantages they went to the Orpheum circuit, "the Big

OLSEN, JOHN and JOHNSON, HAROLD—*Continued*

League" of vaudeville, and were making about \$2,500 a week. They were the originators of the "after piece" idea in which all acts on the bill would get together for a general jamboree at the finale.

The first revue of their own was *Monkey Business*, presented in Los Angeles in 1926. It was in that year that they went to Australia for a ten weeks' booking and returned after two years. They toured all over the United States and Europe and were always top-notch successes. That is, until talking pictures came in and vaudeville died. When trouble came they left the circuit, organized a show of about 40 people and toured the country with it. The show lasted about 70 minutes and was played as a unit.

It wasn't in one of their own shows, however, that they first appeared on Broadway away from vaudeville. They appeared at the end of the Broadway run of *Take a Chance*, and were told by the critics that they were "as broad as some of their scenes seem long." But audiences laughed, and they went on the road with *Take a Chance* after the show closed in New York. In 1936 they were introduced to a radio audience by Rudy Vallee and presented *Comedy News* over WABC. Their jokes, some commentators felt, were hackneyed and laughed at too much by Olsen and Johnson themselves. They got in the movies, too, and were seen in *Fifty Million Frenchmen*, *O Sailor Behave* and *Gold Dust Gertie*.

Then they went back to their road shows, among them one called *Hellzapoppin*, named after a festival (spelled with one l) they had clowning for in Buckeye, Arizona. Lee Shubert went to Philadelphia to see it and suggested that it be enlarged and brought to his 46th Street Theatre in New York. While this was happening Johnson was fishing in Canada. He got a wire from Olsen by Indian runner which said: "Phone me right away." He walked to the nearest phone, which was 16 miles away. "Lee Shubert wants us to do eight shows a week," yelled Olsen. "If it's eight, take it," said Johnson, brought up on the "five-a-day." With sets from old musicals and secondhand costumes *Hellzapoppin* opened in September 1938. It was soon shifted over to the Winter Garden to accommodate the crowds and has stayed there.

Off the stage, except for playing occasional practical jokes like rounding up a lot of seedy bums to bring to a party when asked to bring their friends in the show, both Olsen and Johnson are serious men. They save their money and are well off. Olsen has a home at Brentwood, California and another at Malverne, Long Island; Johnson has a house at Santa Monica, California and a farm at Libertyville, Illinois, which he uses mostly for hunting and fishing. Both men are devoted to their families. Mrs. Johnson is the woman in *Hellzapoppin* who pursues "Oscar" up and down;

her daughter June is an actress in Hollywood. Olsen has three children and one of them holds cakes of ice and lets off pistols in the show. He went to Ohio State University and the University of Southern California, in order, his father says, "to wind up as a shot offstage."

OROZCO, JOSE CLEMENTE (ō-rōs'kō hō-sā' klē-mēn'tē) Nov 23, 1883- Artist
Address: Av. Alvaro Obregon 290, Mexico City, Mexico

In July 1940 José Clemente Orozco completed his mural, *A Dive Bomber and Tank*, for the Museum of Modern Art in New York City as part of its "Twenty Centuries of Mexican Art" Exhibition. During the painting of the fresco visitors were allowed to watch its progress, and there was a good deal of speculation, particularly since, as Orozco says, the six detachable panels on which it is painted can be shown right side up or upside down with any two or three shown together in any order.

According to most critics *A Dive Bomber and Tank* isn't intended to be a realistic picture of a dive bomber, but was painted to convey primarily a sense of the power of a machine monster of modern war. Orozco himself insists that there is no political significance at all in the selection of the subject. He wished merely to paint an aspect of modern life. "That is what modern art is, the actual feeling of life around us or the mood of whatever is just happening."

In his "slashing, dynamic mural style" Orozco has never been interested in recording facts but "in communicating his emotional reaction to them." On the walls of Mexican and American buildings he hasn't painted merely external clashes—the violence and bloodshed of the Revolution—but "the spiritual clashes of a race he loves and understands."

This painter, who with Diego Rivera has gone "a long way towards rescuing the mural from the degraded existence it has led since the Renaissance," is represented in the United States by murals at Pomona

College, Claremont, California; at the New School for Social Research and the Museum of Modern Art in New York City and at Dartmouth College, Hanover, New Hampshire. In Mexico many important public buildings have been decorated by him. Orozco has done much other work, but he prefers murals. To him they are the most disinterested form of painting; they are all for the people.

Orozco was born in Zapotlán, Jalisco in 1883, the son of Ireneo and Rosa Flores Orozco. He was graduated from the National School of Agriculture in Mexico City in 1900 and later studied mathematics at the National University of Mexico and architectural drawing at the Academy of Fine Arts. Eager to be an architect, it wasn't until 1909, when he was 26, that Orozco got around to art. Before then he had worked for a time as an architect's draughtsman.

When he started painting, Orozco was intolerant even then of the pretty, sunlit school of painting. He "expressed his contempt by painting prostitutes and used dark, lurid colors. To this day he has never painted landscape." In 1913 he painted a canvas in the former Museum of San Juan de Ulua in which he depicted the retreat of the Spanish Army in 1882. About the same time he published in several magazines some caricatures "which strike the eye at once with their originality, vigor and ferocity." He was beginning to be known and his first exhibition in Mexico City in 1915 was a success. He continued to paint, traveling around Mexico and to California where he spent two years.

In 1922 Orozco joined the Painters' Syndicate and was appointed to decorate the National Preparatory School. In 1923 he married Margarita Valladares of Mexico City. They have three children—Clemente, Alfredo and Eugenia. A little later he received a commission to decorate the Industrial School of Orizaba. In 1927 he went to the United States where, in spite of the Revolutionary politics that colored his works, he was welcomed. Several exhibitions of his work were held and he received a commission for the murals at Pomona College.

In 1932 Orozco made his first trip to Europe, but nothing he saw there nor anything he saw in the United States "has had any effect on his work." It remained and it remains completely indigenous. Orozco "still lives in the sun and shadow of his native land: the types and symbols, the physiognomies of his people, remain, as in his Mexican pictures, unaltered and unalterable." It was this fact that caused most of the stir when Orozco began to decorate the Baker Library at Dartmouth in 1932.

The subject of the murals was the rise of civilization in America, portrayed largely through themes from ancient Mexican culture. Not only were the frescoes called "hideous" and "grisly" but it was asserted

Paul Hansen

JOSE CLEMENTE OROZCO

that such frescoes, themes and such an artist did not belong to the New England tradition. In reply came the even firmer assertion that the "spiritual vitality of genuine New England is better embodied in Orozco's murals than in any amount of local history tamely recorded by local artists," and a Dartmouth professor added that Orozco's work "has many of the qualities that we like to associate with the college. It is forthright, unmannered and contemporary. It is democratic and deeply concerned with social values." After the shouting died down perhaps the most pertinent comment was that of E. M. Benson: "I relish the sweet irony of events which made it possible for a college originally founded for the purpose of converting the heathen Indian to be converted, in turn, by one."

In April 1934 an exhibition of the greater part of Orozco's work was held in the civic auditorium of La Porte, Indiana which "definitely established him as one of the greatest painters in America." Right after it Orozco returned to Mexico City, where he decorated one of the wings of the great hall in the Palace of Fine Arts. Here he developed the theme of war in a way that led Antonio Castro Lean, then head of the Mexican Department of Fine Arts, to declare: "If there are other Mexican painters who have succeeded in portraying with art and vigor the revolutionary ideas of present Mexico, it is unquestionable that no one has expressed as Orozco the eternal, tragic and human aspect of our civil and social struggles." In 1936 Orozco decorated the University at Guadalajara and after doing other commissions for the Mexican government was commissioned in the spring of 1940 by President Cárdenas to take charge of the decoration of the new

OROZCO, JOSE CLEMENTE—*Cont.*

building under construction for the Mexican Supreme Court.

"A slight, gentle, bespectacled man with about 20 teeth, Orozco . . . has no left hand, no hearing in his left ear and very poor eyesight. His disabilities have always been supposed to have been the result of a chemistry laboratory explosion in his teens, but Orozco says: "I was just playing in the street with some powder. It was just an ordinary explosion." Orozco has been having a fine time in New York doing his latest murals. He says: "The whole life is very amusing," and is corroborated by John Abbott, vice-president of the Modern Museum. According to Mr. Abbott, "Orozco has a great grasp of night life from Harlem to the Battery. He talks knowingly of floor shows all over town."

PAGE, MARIE DANFORTH 1870—Mar
3, 1940 Artist

Marie Danforth Page, who had won
numerous honors and prizes for her por-
traits, died March 3, 1940 in Boston, where
she was born 70 years before. Mrs. Page,
who was the daughter of John Nourse and
Hannah Marie (Rhodes) Danforth, studied
at the Gannett Institute and at the School of
the Museum of Fine Arts. She received
an honorary M. A. from Tufts College in
1933. In June 1896 she married Calvin Gates
Page, Boston physician, and they were the
parents of two daughters.

Mrs. Page was awarded a bronze medal
at the Panama Exposition in 1915, the Rich-
ard S. Greenough Memorial Prize of the
Newport Art Association in 1919, a medal at
the Sesquicentennial Exposition in Philadel-
phia and numerous prizes of the National
Academy of Design, to which she was elect-
ed in 1927. Mrs. Page, who was an Episco-
palian, was a member of the Connecticut
Academy of Fine Arts, the Guild of Boston
Artists, the Grand Central Galleries.

PALEY, WILLIAM SAMUEL (pā'li)
Sept 28, 1901- President of the Columbia
Broadcasting System

Address: b. 485 Madison Ave, New York City;
h. 29 Beekman Pl, New York City

When radio network officials began fret-
ting over the Federal Communications Com-
mission's unfavorable monopoly investiga-
tion report on networks made in 1940, Wil-
liam S. Paley, president of the Columbia

Broadcasting System, was the first to voice his objections to the report. In a letter to affiliate stations he described it as error-laden and biased. And as chief of CBS Paley's opinion bears more than a little weight.

Paley is both the oldest and youngest chief of a huge radio network—the oldest because he has been president of CBS since September 25, 1928, and youngest in point of age. He took office as president three days before his twenty-seventh birthday.

Paley is an example of a rich young man who has made good. Born in Chicago on September 28, 1901, the son of Goldie (Drell) and Samuel Paley, he attended Western Military Academy at Alton, Illinois and went to the University of Chicago for one year before he had his first fling at business. His father and his uncle, Jacob Paley, had a cigar factory in Chicago. When they had labor troubles they decided to open a branch in Philadelphia, and Samuel Paley went there, taking his son with him.

Young Paley had already spent two vacation periods working around tobacco in Havana in preparation for entering his father's business and he was apparently just gaining more experience that summer in Philadelphia. But when the elder Paley was called back to Chicago by his father's death young William took over. Just then the Philadelphia workers decided to walk out on strike. William had the whole thing settled and the factory running before his father returned.

He went back to school, however, in the fall, this time to the University of Pennsylvania, from which he was graduated in 1922. After graduation he entered the cigar business in earnest and soon was made vice-president in charge of advertising and production.

The story is that while he was abroad in the summer of 1927 his father and uncle negotiated a \$50,000 advertising contract for their Congress Cigar Company without consulting their young vice-president. The contract called for 13 weeks of radio broadcasting over the newly-formed Columbia Broadcasting System. The elder Paley is supposed to have called the signing of the contract "the biggest mistake I ever made."

When young Paley got back from Europe the Congress Cigar Company's La Palina cigars were on the air and sales were jumping. Paley found his attention fixed on radio and became tremendously interested in it. The Columbia System was then owned by Jerome Louchheim of Philadelphia, a friend of the Paleys. Louchheim's major interests were elsewhere and he found the broadcasting business more than he cared to handle. The upshot of it was that young Paley, with nothing more substantial as a guide than his own faith in the future of radio, bought Louchheim's holdings.

Paley was brilliant and anxious to show he was more than a young man with a lot of money to play with. When he took

WILLIAM S. PALEY

office as president of CBS on September 25, 1928 the system had 19 stations in the Northeastern part of the United States. By January 8, 1929 Paley had completed negotiations for 22 more stations. Today Columbia has 121 stations in the United States, Canada, Hawaii and Porto Rico on its network.

The young president of CBS stuck to his desk nine or ten hours a day, called up with suggestions and orders at all hours of the night, and made a name for himself with some of the policies he initiated. In the mushroom radio field of those days and under Paley's aggressive leadership, Columbia grew "like a dream." Rival motion picture interests went after Paley with offers to buy the network, and Paramount-Publix Corporation offered \$1,500,000. Paley refused to sell. Nine months later, on June 15, 1929, he sold Paramount-Publix a half interest for \$5,000,000. Within three years he bought back the half interest for \$5,200,000.

Back in the early days of his presidency irreverent young employees called Paley "Pale Billy" (purely a trick of transposition, for Paley is anything but pale). Six feet tall, heavy-set, handsome and usually well-tanned, Paley is capable of the greatest excitement over either business or fun. He likes to deal with men of his own age and has surrounded himself with a group of sprightly young executives. Paley moves fast and bothers little with details.

He rushes at both business and hobbies with zest. He has run through water-color painting, oil painting, motorboating and photography in quick succession. In business his impetuosity is deceptive because "it breaks down into shrewd caution whenever necessary." He chooses his words with astute grace when anything important is at

PALEY, WILLIAM S.—Continued

stake, but usually prefers the extravagance of mixed metaphors.

Under Paley's direction Columbia has pioneered in many radio ventures. One of Paley's chief concerns is news, and even in the early days of newscasting CBS sacrificed paid advertising programs to put on the air events of international significance. Technical problems of transmission have been overcome. Columbia has covered the abdication of King Edward VIII, the Austrian *Anschluss*, the Czech crisis, the dismemberment of Czechoslovakia. Columbia, too, organized its own news-gathering service, the Columbia News Service, when the radio stations began to have trouble with newspapers over the broadcasting of news. Many newspapers refused to run listings of radio programs, but before the newspaper-radio feud gathered much momentum, Paley, together with officials of NBC, made their peace with the newspapers. Paley had to give up his news service, and an arrangement was made in 1933 whereby the networks had use of newspaper wire services.

Another CBS venture close to Paley's heart was the *American School of the Air*, which, through daily programs with the cooperation of the United States Department of the Interior, made radio education available to school children. It was started in 1930. On October 7, 1940 the *School of the Air* was extended as an educational project for the entire Western Hemisphere, serving an audience of school children estimated to number more than 15,000,000.

An outstanding scientific achievement in the art of visual broadcasting was demonstrated in September 1940 when Columbia introduced its color television.

Paley's musical interests (he was a promising pianist as a child and gave a concert at 11) were instrumental in bringing to Columbia the great symphony orchestras, and at one time four nationally-known orchestras were heard on CBS stations each week. President Paley takes credit for bringing important operatic programs to CBS and for discovering Kate Smith (see sketch this issue), Morton Downey and Bing Crosby. He is proud also of the dramatic program, *Columbia Workshop*, and the station's spot-news coverage. It was Paley who in 1935 started a program which broke radio's political neutrality and a radio tradition. It was *America's Hour*, which editorialized on current conditions by dramatized programs of the kindly-employer-and-faithful-worker combination and denounced radicals who preached discontent.

It was the first time a great network had thus editorialized. A CBS spokesman said: "Mr. Paley felt it was our responsibility to take people who can't see further than

their noses and make them realize they have in America something to be proud of."

Despite his achievements, Paley is inclined to be self-effacing. Once after he had made a speech before the Academy of Political Science he swore he wouldn't make a speech again. And at least once he suffered a bad case of microphone fright. It was in April 1938 when he put his annual stockholders' report on the air in direct competition with Kay Kyser's dance orchestra on the NBC network. He read quickly and nervously: "The broadcasting industry should unite on a definite program of service, of progress and of protection... The newly organized National Association of Broadcasters... may well be the instrument."

One reason for Paley's perturbation was the fact that the Federal Communications Commission had just begun an investigation of radio and had appointed a committee to look into charges of monopoly. The National Association of Broadcasters, organized the previous week, was a self-regulating, self-censoring body.

Paley, in addition to the presidency of the Columbia Broadcasting System and the position of chairman of the boards of several broadcasting stations, is a director of the Museum of Modern Art, a director of the New York World's Fair, the Pan-American Airways Corporation and the Philharmonic Society. He is a member of the Lotos, the Sands Point, Turf and Field, and Rockefeller Luncheon Clubs.

He was married in 1932 to Miss Dorothy Hart Hearst of Los Angeles, California. They have one son, Jeffrey, and one daughter, Hilary.

PAPE, WILLIAM JAMIESON Dec 1, 1873- Publisher of the Waterbury (Connecticut) *Republican and American*
Address: b. 61 Leavenworth St, Waterbury, Connecticut

As the result of a campaign in the Waterbury (Connecticut) *Republican and American*, Mayor Frank Hayes of that city and 19 colleagues were convicted in August 1939 of the operation of an eight-year conspiracy which plundered the municipal treasury of more than \$3,500,000. The public service rendered by the newspaper has been recognized by the 1939 Pulitzer Gold Medal given to the paper, whose editor is E. Robert Stevenson (see sketch this issue). As publisher of the Waterbury paper, William J. Pape has also been honored.

He was born in Liverpool, England on December 1, 1873, the son of Robert and Martha (Burnett) Pape. At the age of 14 he came to the United States and became a naturalized citizen eight years later. The Pape family lived in Passaic, New Jersey, and young William had his first newspaper experience there. After he was graduated from the Passaic High School in 1890 he became a cub reporter on the Passaic *Daily News*, and sped straight up the newspaper ladder, from city editor in 1892 to business manager in 1895 to editor in 1897. In 1898 he married Julia E. F. Bolton of Passaic. He remained editor for four years, and then bought his own newspaper, the Waterbury *Republican*, in 1901, consolidating it with the Waterbury *American* 21 years later.

William Pape demonstrated his "ability as an organizer and his bulldog tenacity" by turning the *Republican*, "the weakest of run-down newspapers" when he bought it, into one of the most substantial newspaper properties in New England and a powerful organ of public opinion. He has always fought courageously against machine politics, and has been out of its good graces for a long time. In 1913 he began a persistent fight to divorce the utility companies from Connecticut politics with an attack on J. Henry Roraback, railroad lobbyist and successful candidate for chairman of the Republican State Central Committee. Mr. Pape's argument was that "a man cannot simultaneously serve a favor-seeking corporation and the voters of a major party," and over a period of time a good many Connecticut editors came around to his way of thinking. In 1930, seventeen years later, with Mr. Roraback political dictator of Connecticut and president of the Connecticut Light and Power Company, Mr. Pape himself sought the Republican nomination for State comptroller, though unsuccessfully.

Mr. Pape is prominent in newspaper circles. He is a member of the New England Daily Newspaper Association and was its president, 1926 to 1927. He has been a director of the Associated Press since 1937. A Republican and an Episcopalian, he belongs to the Rotary Club as well as other

clubs, and has a strong interest in the little theatre movement. He was with the Yale School of Drama (1925-27), organized the Waterbury Little Theatre in 1929, and was president of the local theatre group in 1932.

Mr. and Mrs. Pape have four grown children: three sons and one daughter.

PARRAN, THOMAS Sept 28, 1892- Surgeon General of the United States

Address: b. Bureau of the Public Health Service, Washington, D. C.; h. 3734 Oliver St N W, Washington, D. C.

Public health preparedness, according to Dr. Thomas Parran, Surgeon General of the United States, must become a vital part of the national defense program. "The rearmament program envisioned by the President," he said, "means vast concentration of workers in communities, many of which as yet are not prepared with needed sanitary safeguards to insure against disease spread." Also, he pointed out, "history shows that war breeds epidemics. We must guard against the spread of epidemics from the war-torn areas to this hemisphere."

National defense and the War abroad are merely two more reasons why we must defend and preserve the health of this nation. To Dr. Parran public health should always and must always be one of the main concerns of the government and its people. For years he has urged funds for public health and bitterly contrasted the millions of dollars spent on the control of hog cholera, the boll weevil, the tick and the fruit fly with the beggarly thousands contributed by the Federal government for the promotion of health work among human beings.

Dr. Parran, "dark, dynamic and a good deal of a zealot," has been "the nation's family doctor" since 1936. Tuberculosis, syphilis, cancer and other diseases; research into mental diseases and drug addiction; into the causes and prevention of disease; the supplying of adequate hospital and medical facilities for the country; the spreading of information about germs and disease into millions of homes—these are only some of the concerns of the United States Public Health Service under Dr. Parran.

It was Dr. Parran who was the man behind the crusade in 1936 to take the prudery out of the war against social diseases, and it was and is Dr. Parran who, with his staff, is working with "high and burning purpose" to tackle syphilis scientifically and wipe it out of this country. When the campaign against syphilis began Parran stated that "if all conditions due to syphilis were

Bachrach

THOMAS PARRAN

reported as such, it would be found the leading cause of deaths in the United States. It is responsible for 10 per cent of all insanity, 18 per cent of all diseases of the heart and blood vessels, for many of the still births and deaths of babies in the first weeks of life. Syphilis has always seemed to me the mad dog of the communicable diseases and needs swift action to control it."

Before the campaign, the subject was taboo. There could be no reference to it on the screen; the Columbia Broadcasting Company wouldn't permit the word "syphilis" to go out over the air from its stations; newspapers, when they printed the word, which was seldom, printed it usually in the smallest possible type in the most inconspicuous place. Now, due to Dr. Parran's crusade, there has even been a motion picture on the subject—*Dr. Ehrlich's Magic Bullet*; radios are freer; and the newspapers no longer consider the topic taboo. Due to Dr. Parran's crusade, major universities have been persuaded to open classes for physicians unfamiliar with the latest methods of treating social diseases.

In the same way Dr. Parran has attacked the problem of cancer research and education. After the National Cancer Institute Act was passed in August 1937 the government's buying of radium, training of doctors and education of the public was under his jurisdiction. In the same way he has campaigned for more hospital facilities. In 1939 and 1940 his staff conducted a painstaking county by county survey of hospital facilities in the 48 states. A plan was evolved under the Wagner health bill for little one-story hospitals, each planned to house 100 beds and to cost about \$150,000 apiece, including X-ray equipment, surgical

instruments, laboratory machinery—everything but bed linen.

On any matter of public health Dr. Parran shows the same direct enthusiasm that was his when he once milked a cow on a city street to boost milk consumption. Almost all his working life has been spent in public health service. Dr. Parran was born in St. Leonard, Maryland, son of Benjamin and Mary (Latimer) Parran, in a glazed brick house which a Parran had built in 1655. He went to St. John's College, Maryland and was graduated in 1911. In 1915 he received both his M. A. and his M. D.—his M. A. from the University of Maryland and his doctor's degree from Georgetown University.

Dr. Parran entered the health service of the United States in 1918 and never left it. In that year he was married to Angela Bentley Vandoran and in that year he began working at Muscle Shoals. There, where government men were working to build a dam, 10,000 men were sick with influenza. They were dying in improvised barracks that looked like emergency hospitals in a battle zone. Parran was in charge, and to his frantic wires for supplies no answers came. He had no sheets, bandages, medicine. When he went to the railroad yard to see if anything had arrived he found a trainload of army supplies destined for a camp. He thought of court-martial and of his influenza sufferers and stole the supplies. Instead of being court-martialed he was promoted.

In 1919 he became the executive officer of the medical division of the War Risk Insurance Bureau and after that director of the Tri-State Sanitary District. From 1921 to 1923 he was director of the rural sanitation division for the Missouri Board of Health and from 1923 to 1925 director of county health for the Illinois State Department of Public Health. In 1926 he got his first job working directly against the venereal diseases he fights so vigorously as Surgeon General—as chief of the division of venereal diseases in the United States Health Service. He stayed there until 1930, when he was made commissioner of the New York State Department of Health.

The year Governor Roosevelt called him to that position he, a widower with four sons, married Buda Carroll Keller. They all took a big white farmhouse in the hills at Castleton, New York overlooking the Hudson, 10 miles south of Albany. There he could ride, train setters, split firewood, bake waffles and on Sundays go decorously with his whole family to Mass in the Roman Catholic Church in the village. Dr. Parran hated to leave it when President Roosevelt appointed him Surgeon General in April 1936, at a salary of \$9,800 a year (he had been getting \$12,000 in Albany).

Middle-aged doctors "were generally opposed to Dr. Parran's appointment," for Dr. Parran believes strongly in "socialized medicine, with free drugs and hospital service to

every inhabitant of the United States who cannot afford them." As far as the practice of doctors is concerned, he would permit the private system to continue, would have private practitioners dispense the free drugs and assign patients to the free hospitals. With this plan, thousands of the 170,000 doctors in this country would have to take jobs with city, state or federal medical agencies. But because the opposition to Parran and his view was "politically unfocused," it fizzled out and the Senate quietly confirmed his appointment.

Dr. Parran is a member or fellow of most of the medical societies and has been honored time and time again for his excellent work. In December 1939 he was awarded the Sedgwick Memorial Medal "for distinguished service in public health."

PARSONS, LOUELLA Aug 6, 1893- Motion picture columnist

Address: 619 N Maple Dr, Beverly Hills, California

Every day in more than 400 newspapers in this country, France, England, Canada, China, Egypt and India appears Louella Parsons' column devoted to news of motion pictures and motion picture stars. From it fans all over the world can find out who is going to marry whom, what 20th Century-Fox's latest acquisition wore at the Brown Derby on Wednesday, what MGM's latest production plans are and how air conditioning is going to be used when filming desert scenes.

Louella Oettinger Parsons, who has been in Hollywood for 15 years, gets her information from the producers and stars themselves—it has been said that stars who don't keep her informed of their private lives find themselves let in for "petty sideswipes." She gets it, too, from her two paid assistants and hundreds of "volunteer scouts and spies." Despite the variety of her sources or maybe because of it, Miss Parsons' information is called by critics "consistently inaccurate." The picture, *The President Vanishes*, for instance, appeared in her column first as *The Vanishing American* and later as *The President Disappears*.

G. Maillard Kesslère

LOUELLA PARSONS

The first literary effort of Miss Parsons on record was a high school essay entitled, *When is Rebellion Justified?* She wrote it in Freeport, Illinois, where she was born on August 6, 1893, the daughter of Joshua and Helen Ida (Wilcox) Oettinger, third generation German-Irish stock. While still in high school Louella branched out into newspaper work. She became the dramatic editor and assistant to the city editor on the Dixon, Illinois *Morning Star*, for \$5 a week.

In 1910, when she was 17, Louella married John Parsons, whose business was real estate, and went with him to Burlington, Iowa. When he died four years later, leaving her with her three-year-old daughter Harriet, Louella packed, went to Chicago and landed a job on the *Tribune* at \$9 a week. While she was still a reporter, in 1912, Louella made her first movie contact. She sold a script called *Chains* to the old Essanay Company for \$25. After this was made into a one-reeler starring Francis X. Bushman, Louella was hired at \$18 a week as story editor.

The response was merely mild when Miss Parsons started a movie column in the Chicago *Record-Herald* in 1914, and when Hearst took over the paper in 1918 she found herself out of a job. Undaunted, she and her daughter went to New York, where she became movie critic on the old *Morning Telegraph*. It wasn't long, particularly after she had praised Marion Davies in a review, before Hearst was trying to get her back. After a good deal of bargaining back and forth she got a three-year contract at \$250 a week. Louella Parsons had been shrewd, but Hearst had been shrewder: the contract stipulated that she had to turn over one-third of all she made on the side to Hearst, while he could syndicate her material without paying her anything extra.

PARSONS, LOUELLA—*Continued*

However, it all seemed at an end in 1925. Miss Parsons had a bad case of tuberculosis and was told that she had about six months to live. She decided to spend these last months in California. At the end of them she was flourishing and a short time later, at Hearst's suggestion, was writing her column there. Her salary was raised to \$350 a week and in 1929 to \$500. Today she is getting \$600 a week for her column. In Hollywood, in 1931, she was married to Dr. Harry Martin, who has worked as technical medical adviser for the films, and has become a member of the civil service commission and chairman of the State Boxing Commission. Louella, in private and in public, calls him "docky-wocky."

Miss Parsons, who has achieved part of her fame on the radio, first appeared before the microphone in 1928 and interviewed movie stars. When this didn't work out she explained that some of the "guests" couldn't even speak English "and I don't mean the foreign importations." Five years later she tried again, again unsuccessfully, but in 1934 she came through with her *Hollywood Hotel* program. During the years she put it on for Campbell's soup, Campbell's Crosley rating jumped from 39th to 10th place and "something like \$2,000,000 worth of moving picture talent" appeared gratis in her company. All the guests received was a case of soup. On return engagements they were allowed to specify the kind of soup they preferred.

On the *Hollywood Hotel* program current pictures were dramatized and Miss Parsons, "the first lady of Hollywood," selected and sponsored them. A picture presented on her program usually came through at the box office. As a result Louella found herself winned, dined and loaded with gifts. When there was a problem, "producers would say 'Give Lolly a ring and see what she thinks about it.'" Louella even crashed the movies when *Hollywood Hotel* was made into a film in 1938.

All this radio success ended when the Radio Guild, in the summer of 1938, set out to stop all free talent broadcasts and Louella's main drawing card was gone. The program went on without her, and she went back to her column, her features, her outside writing.

Three secretaries help her. They arrive at 10:30 and immediately the three telephones start ringing and never stop. Miss Parsons' material goes by teletype direct from Hollywood to the Los Angeles *Examiner* and from there is dispatched to New York for distribution. She's always in a hurry, "being about 20 minutes late mentally from the time she rises until the time she reaches her bed again."

In the autumn of 1940 Louella was traveling all over the country pretending the stage of various theatres was her office at the Los Angeles *Examiner* and shaking a couple of rhumba rattles besides. The audiences loved her.

Known as a lavish party thrower and generous giver of gifts, Miss Parsons admits she has "312" friends. At premières, parties, night clubs and the race track she is a familiar figure. "Plump and breathless, she has dark hair, hazel eyes and an expression of blank bewilderment that no longer fools anybody."

PATRI, ANGELO (pă-t-rē') Nov 1877-Educator

Address: b. P. S. 45, 2502 Lorillard Pl, The Bronx, New York City; h. 601 E 170th St, New York City

For almost 40 years Angelo Patri has been a teacher and principal in New York City's public schools, and as a teacher, as a writer, as the author of a syndicated column, *Our Children*, he has made, according to Dorothy Canfield Fisher, "one of the finest contributions to civilized life in our nation."

Since 1913 Angelo Patri has been principal of Public School No. 45 in The Bronx, New York, a pioneering school in liberal education. In this school little emphasis is placed on book learning; here pupils are encouraged to develop whatever talents they have. Open to them are many shops and studies in which they can model in clay, paint, draw, write, work in wood or metal, sew, weave, play in an orchestra, plant fruit or vegetables, and every child is able to develop his creative powers while he studies the fundamentals of reading, writing and arithmetic. That this unusual school exists at all is in large part due to the persevering leadership of its principal.

Angelo Patri was born in Italy and came to this country in the '80s with an almost uneducated father and mother. Until he was 12 life here was very much like that in Italy. His family lived in close-knit clannishness with other Italians in Little Italy in New York City, and it wasn't until he went to school that little Angelo began to realize that he was living in America. A "pale, delicate, Italian boy," he found school hard at first, but eventually became acclimated. From New York's public schools he went to the City College of New York, from which he was graduated in 1897.

Patri was 20 when he left City College. At 21 he found himself a teacher in the New York public schools, bewildered and ill-prepared. Most difficult was the problem of discipline, for his superiors insisted on the most rigid standards of behavior. Difficult, too, was the system of teaching "methods," which meant that a prescribed program had to be followed in what Patri felt to be nothing but a "deadly mechanical grind." He became discouraged and decided to study pedagogical principles and methods further. In his first year at Columbia University he discovered nothing new. In his second he discovered John Dewey's *Ethical Principles*, in which it was stated that conduct was "the real test of learning. The teacher must watch and guide, he could not force." Fortified with this knowledge and a Master's degree which he received in 1904, Patri went back into New York's public schools.

In his first school after Columbia, Patri's supervisors objected to his use of Dewey's principles. Patri changed schools and found a principal whose motto was "serve the children." Everything was all right then. In 1908 he became principal of P. S. No. 4

G. Maillard Kesslère

ANGELO PATRI

and five years later of P. S. No. 45. One of the first things Dr. Patri did when he became principal was to build up a relationship between the school and the children's parents. He started after-school activities for the pupils and got their parents interested in what was happening to the point where a Parents' Association was formed. He began holding assemblies where folk tales were acted out, where there was dancing and singing. Most important, he began to take a special interest in children who were above or below the normal level of accomplishment.

Children who failed were examined carefully to find out the cause of the trouble—their eyesight and hearing were tested; their teeth and tonsils examined; their home life looked into; their interests discovered. There was the boy who came to P. S. 45 after seven years of failure. "I can't learn anything," he said doggedly. "My father says I'm no good. I gotta low I. Q. The quicker you put me out of here the better." Yet after a year that boy had done a wood carving that made both the principal and the boy's father proud. Children brighter than usual, too, were given special attention, placed in special classes, given special work and liberty of action.

Out of Dr. Patri's school have come many people famous today as sculptors, etchers, doctors, lawyers, writers. John Garfield, the actor; Joy Davidman, the poet and novelist; John Amore, winner of the Prix de Rome in sculpture; William Hassler, the scientist, are only a few of the graduates of whom P. S. 45 and Angelo Patri are proud.

In this large, plain school, whose walls are decorated by pupils' work, whose books have been rebound by pupils, it has always been emphasized that the teacher

PATRI, ANGELO—*Continued*

must continually ask the child, that the teacher must know the child, that "the school must stop doing things for the people and get the people to doing for themselves by putting the work before them in such a way that they will be able to do it."

Many of the principles by which Angelo Patri guides his school have been presented to a wider public than the pupils of P. S. 45 through his syndicated column and through his books. His column, *Our Children*, has, Dorothy Canfield Fisher says, "uplifted family life in countless American homes." Years ago President Eliot of Harvard said: "Whatever else Patri does, he must never stop those irreplaceable talks to teachers and parents in the newspapers." Many parents feel exactly the same. Together with his wife, Dorothy C. Patri, whom he married in 1910, Dr. Patri is a consulting educator, concerned with the problems of children.

Dr. Patri's first book for parents and teachers, *A School Master of the Great City*, was published in 1917. *The School That Everybody Wants* and *Child Training* followed in 1922. In 1925 came *School and Home*; in 1926 *Problems of Childhood* and *What Have You Got to Give?*; in 1930 *The Questioning Child*; in 1940 *Parents' Daily Counselor*. There were, too, books for children, including a translation of *The Adventures of Pinocchio* (1937), *Pinocchio in Africa* (1911) and *Pinocchio in America* (1928); *White Patch* (1911); and *Spirit of America* (1924).

PATTERSON, ELEANOR MEDILL Nov 7, 1884— Editor; publisher

Address: b. Times-Herald, Washington, D. C.; h. 15 Dupont Circle, Washington, D. C.

A red-haired woman editor who dictates newspaper policies by whims and changes her mind between editions sounds like something out of a scenario writer's imagination. Employees of the Washington, D. C. *Times-Herald* know these things can happen in real life, though, for their editor and publisher, Eleanor Patterson, probably outdoes all fictional editors, male or female, in unexpected and sensational moves.

Eleanor Patterson is the only woman editor-publisher of a large metropolitan daily in the United States. Wealthy, society-bred, she does not try to follow any conventional pattern in her work. Flanked by her three French poodles, which have the run of the office, she may sweep into the office in riding habit or in evening clothes. So much firing and rehiring has this mercurial lady editor done that she had seven news editors in the first decade of her editorship.

But even her enemies—and she can make bitter enemies—acknowledge that she is a good newspaper woman. She took over Hearst's moribund morning newspaper in Washington, the *Herald*, with a circulation of 60,000, and in several years had raised it to the 115,000 mark, with the Sunday edition at 225,000. Later she took over the Hearst evening paper, the *Times*, and now runs both combined in the *Times-Herald*, with morning and evening editions.

When she bought the papers in 1939 veterans of the newspaper business wondered if she could make them pay in the competitive and hard-to-get advertising revenue field of Washington. They wondered, too, if the newspapers were not just another whim of Eleanor Patterson's that she might decide to change at any moment. But in 1940 she told an interviewer the papers were beginning to pay. Deficits were being cut, and "dashes of black ink were appearing on the ledgers."

Whether "Cissy" Patterson, as her friends know her, continues to run the papers or not, she will have given Washington gossip-lovers some exciting moments. The *Interesting, But Not True* box which appeared on the *Herald's* front page soon after Mrs. Patterson took over its editorship in 1930 is now Washington newspaper history. The report was that Mrs. Patterson's cousin, Ruth Hanna McCormick, was to run for the Senate and that Alice Roosevelt Longworth would campaign for her. Mrs. Patterson denied the report in a brief item signed by her and headed *Interesting, But Not True*. She wrote: "Mrs. McCormick takes no advice political or otherwise from Mrs. Longworth. Mrs. Longworth gives no interviews to the press. Mrs. Longworth cannot utter in public. Her assistance, therefore, will resolve itself, as usual, into posing for photographs."

Washington loved this sort of thing, a revival of a girlhood feud between Alice Roosevelt and Mrs. Patterson, just as it loved Mrs. Patterson's other sharp forays. The *Herald's* circulation boomed.

"Cissy" Patterson comes by her interest in newspapers naturally. Her grandfather, Joseph Medill, moved from Cleveland to found the *Chicago Tribune*, and laid the basis of a distinguished family with it. One of Medill's two daughters, Elinor, married Robert Wilson Patterson, a Chicago reporter who rose to a high position on the *Tribune*, succeeding his father-in-law as editor. The Pattersons had two children, Joseph Medill Patterson and "Cissy." Joseph Medill Patterson became founder and publisher of the *New York Daily News*, and Cissy, always an admirer of her brother and her father, was also bitten by the newspaper bug. Her mother's sister had married Robert S. McCormick and their son, Colonel R. McCormick, became the publisher of the *Chicago Tribune*. Another son was the late United States Senator, Medill McCormick.

"Cissy" was born in Chicago, November 7, 1884, and her mother planned a brilliant social career for her. After Miss Hersey's finishing school in Boston there were debuts in Chicago and Washington, where the family maintained a huge, pretentious house in Dupont Circle. Eleanor married when she was 19. Her husband was Count Joseph Gizycki, a handsome, dashing young Polish cavalry officer whom she had met abroad and who had pursued her from continent to continent.

The marriage was unhappy from the beginning. The Count's castle was heavily mortgaged, and apparently he regarded his wife as another chattel. Cissy stuck it out for three years and then in 1907 left with her baby daughter. The Count followed her to England, abducted the child, hid her in a convent in Austria, and there ensued some of the most sensational stories of the decade. American newspapers railed at "foreign fortune hunters," letters passed from President Taft to the Czar of Russia, and wire-pulling at the Russian court by the McCormick family went on at top speed as the search for the baby continued. Finally the Countess recovered her child and arrived in New York in 1908, heartbroken. It still was not the end of the marriage. "Cissy" was unable to get a divorce until 1917, and the Count, it was said, "came out of the affair about half a million dollars richer."

Mrs. Patterson married again, a month after her daughter Felicia's marriage in 1925. Her second husband was Elmer Schlesinger, New York lawyer and United States Shipping Board counsel. In 1929 he died suddenly on a golf course of a heart attack, and "Cissy" found herself alone again. She had been drifting aimlessly for almost 20 years. She was well known in New York and Washington society, had

S. J. Woollt

ELEANOR MEDILL PATTERSON

spent years on a ranch in Wyoming, hunting and riding, and had done some writing. She had published two novels under the name of Eleanor M. Gizycka—*Glass Houses* in 1926 and *Fall Flight* in 1928, the first having thinly-disguised Washington personages as its characters.

But she had a hankering for the newspaper business. In 1930 she persuaded William Randolph Hearst, an old friend, into letting her try her hand at editing his *Washington Herald*. That same year she thrust aside the names of Countess Gizycka and Mrs. Schlesinger and had her name legally changed to Mrs. Eleanor Patterson.

William Randolph Hearst probably thought the publicity of Mrs. Patterson's name would be worth her \$10,000-a-year salary. But she went into the work with all her tremendous energy, put all her wit and emotion into it. She was not too proud to go out on stories herself. When unemployment was running high in Washington, Mrs. Patterson disguised herself as "Maude Martin," a penniless woman in search of food, shelter and a job, and spent three nights in Salvation Army headquarters and days in employment agencies, later writing the story of her experiences.

She walked into Al Capone's guarded mansion and got a story from the bootlegger. She started a campaign to get hot lunches for children. And she was quick to recognize the importance of society news in Washington, printing pages of it while other papers were using columns. She tackled the business end, too, getting after the shopkeepers with whom she traded for ads and using her imposing residence to give parties for prospective advertisers who might be flattered by invitations from the social Mrs. Patterson.

PATTERSON, ELEANOR—*Continued*

By 1937 she was so absorbed in her newspaper career that she leased the *Herald* from Hearst and also his evening paper, the *Times*. When Hearst's competitor in the morning field, Eugene Meyer, publisher of the *Post*, began dickering for the *Herald*, Mrs. Patterson bought it together with the *Times*. Mrs. Patterson's feuds with Meyer over circulation and talent have made another picturesque chapter in her newspaper career. After Mr. Meyer won a court battle for the use of the comic strip, *The Gumps*, Mrs. Patterson sent him a pound of raw meat, neatly wrapped, with the implied message that he could have "his pound of flesh."

Mrs. Patterson says she plans to carry on, "make the paper soundly profitable and then divide up some of the shares with the employees." The red-haired lady newspaper publisher needn't worry about not having enough left for herself. Her holdings in the New York *Daily News* and Chicago *Tribune* will keep her comfortably even if she should decide to give up her *Times-Herald* or at least part of it.

PAUL, ELLIOT Feb 13, 1891- Author
Address: Hotel Lafayette, 9th St and Univer-
sity Pl, New York City; Pumpkin Hill Farm,
Brookfield, Connecticut

When Elliot Harold Paul published a highly successful mystery novel in 1939, *The Mysterious Mickey Finn*, many people wanted to know if this was the man who also wrote that best-selling novel, *The Life and Death of a Spanish Town* (1937). He is the same Elliot Paul; and in 1940, as successor to his first mystery venture, appeared a second, *Hugger Mugger in the Louvre*. Like *The Mysterious Mickey Finn*, subtitled "Murder at the Café du Dôme," the scene of the new story is Montparnasse in Paris during the expatriate heyday. Mr. Paul knows well the Paris of these years through his journalistic work there, and his editorship with Eugene Jolas of *transition* brought him in contact with the literary and art movements of the time. In addition to its hilarious and breath-taking merits, *The Mysterious Mickey Finn* notably involved a millionaire art collector, several French artists and American celebrities, the sleuth being talented young Homer Evans. Its lack of traditional formu-

la, its clever satire on art and on the general antics of expatriates were further distinguishing features. In the book, *Hugger Mugger in the Louvre*, Homer Evans is again on hand, as are also some of his friends of the Mickey Finn events. The story begins with the theft from the Louvre of a valuable Watteau, companion piece to one not stolen. An art museum as a crime scene has unique possibilities, not excluding mummy cases; and a copy of Joyce's *Ulysses* adds sophistication to the local color. While *Hugger Mugger in the Louvre* has a smaller quota of corpses than its predecessor, a taxidermist, a sharp-shooting gal from Montana, an American bottle-and-jar satrap and a Marchioness function as living thrill-producers.

Mayhem in B-Flat, described by the *Saturday Review of Literature* as a "sizzling concoction of murder, merriment and madness, which, this time, gets slightly out of control—if you care to notice it," also appeared in 1940. So did *Fracas in the Foothills*, the fourth in the series of Homer Evans which brings many of the familiar characters to the badlands of Montana. *The Death of Lord Haw-Haw* (1940), written under the pseudonym of Brett Rutledge, is another mystery in which an English-speaking Nazi radio spieler located in Manhattan is "scotched by a Yankee-born French intelligence department ace." This one wasn't so favorably received by reviewers, however: the New York *Times* reviewer reported that "the total effect of the book is something like reading a mystery story while listening to the War news over the radio."

Elliot Harold Paul, the son of Howard Henry and Lucy Greenleaf (Doucette) Paul, was born in Malden, Massachusetts, in 1891. After being graduated from high school, he left comfortable New England for the American Northwest to join his brother Charles, a hydraulic engineer, on irrigation work in Idaho and Wyoming. After long days at surveying and timekeeping, he returned to Boston and took up newspaper work, until he went to France during the War with the 317th Field Signal Battalion of the A. E. F., serving as private and sergeant. He covered the French and Belgian occupation in the Ruhr, and as a newspaper correspondent traveled extensively in European countries. His journalistic affiliations have been with The Associated Press and the Paris editions of the Chicago *Tribune* and New York *Herald*.

Elliott Paul's published works include three early impressionistic novels—*Indelible* (1922); *Imperturbe* (1924); and *Impromptu* (1923)—and in the past few years, *Low Run Tide* (1929); *Lava Rock* (1929); *The Amazon* (1930); *The Governor of Massachusetts* (1930); *Concert Pitch* (1938); and the Book-of-the-Month Club selection, *The Life and Death of a Spanish Town*. With Jay Allen he also wrote in 1939 *All the Brave*.

Until Paul and his second wife (he married Flora Thompson Brown April 15, 1935) and her small son were rescued by a German destroyer, *Die Falke*, in September of

1936, he spent five years in the little town of Santa Eulalia, on the Island of Ibiza, in the Balearic group bordered by Spain and Africa and Sardinia. Here he became part of the village life, settling down to tranquil days among the islanders—fishermen, storekeepers, café owners, mechanics, farmers, priests and military officers—they who in days to come were to divide their last *pesetas* and red wine and beans and gay spirit with him. He loved them all—their docile beasts, the shadows of trees making Picasso-violet shadows on their white houses. . . . “I was proud of Eulalia, and of the Spanish Republic, and of so many good men and lovely girls for whom vistas were opening.”

The simple village folk took him to their hearts and called him “Xumeu” (Bartholomew), affectionate name for friends and friendly strangers. With Pep Torres, farmer and town wag, Paul organized an orchestra which was much in demand for weekly dances and feast days, and especially for weddings and rural pig-slaughters. Pep exercised his colorful tenor voice and was responsible for violin and trumpet accompaniment, while Paul played the accordion and an antiquated piano lent by the proprietors of the local theatre. Others played the lute, Spanish mandolin, guitar, castanets, tambourine, chimbumba and triangle. Besides Spanish favorites, Paul arranged American dance tunes—*Tammany*, *Harvest Moon* and *It Ain't Goin' to Rain No More*, which were always encored again and again and earned the players glasses of cognac. Later, during menacing revolutionary days, Pep and Paul kept up their spirits by collecting Ibicenco music and preserving it in various forms on paper. Apart from his activities in the musical life of the village Paul also organized a daily class in English for the young girls and boys.

In *The Life and Death of a Spanish Town* he captures the spirit of the happy island people as they were before the merciless invasion of civil warfare. His friends were shot, 400 of them herded together and mowed down by Italian and Rebel machine guns and most of the hospitable houses crushed by alien bombs.

Now Santa Eulalia is a dead village and Paul is left with memories of the tranquil, enchanted days . . . “whenever I think of the slopes and woods and acres under cultivation, the shapes of my favorite trees and the smell of rosemary and laurel, the gait of the peasant girls and the greetings of the peasant men, I cannot forget the produce. Perhaps that was most beautiful of all. I am in the stores of Santa Eulalia, or the market place in Ibiza, Valencia, Palma, Barcelona, Alicante, Madrid. I shall not say Ninevah because I was never there. As a child I regretted lost cities, but what need have we of such reminders now?”

Leaving the tragedy of a dead Spanish village, Elliot Paul in his next novel returned to the American scene. *The Stars and Stripes Forever*, published early in 1939, is a

Libsohn-Ehrenberg

ELLIOT PAUL

swiftly paced strike novel laid in a Connecticut manufacturing town and based on documentary material. Showing the class division of forces over the issue of the right to organize and bargain collectively, it contains the typical strike ingredients: picketing, labor spies, committees, arrests, finks, lockouts, state troopers. But in Paul's book the situation has a new slant because the story is told by the factory owner's brother-in-law, who sympathizes with the strikers and works with them. The novel also excellently portrays the effect of strike warfare on the town itself, combatants and non-combatants alike. Critics in general, however, are of the opinion that Paul wrote less convincingly of the life and death of an American town than he did of the life and death of a Spanish town.

Since 1925 Elliot Paul has lived most of the time in Europe, and his literary career has been that of an expatriate who has written much about Americans, but with less success than about Spanish characters. His recent mystery stories have a foreign setting, and a mixture of foreign and transplanted American types. Though Paul lately made a return trip to Paris, he is at present making his home in the United States.

Who's Who in America

PEABODY, ENDICOTT, REV. May 30, 1857- Former headmaster of Groton School
Address: Groton, Massachusetts

After 55 years as headmaster of Groton School, which he founded (with Sherrard

S. J. Woolf

REV. ENDICOTT PEABODY

Billings and William A. Gardner) in 1884, the Reverend Endicott Peabody retired in June 1940, in his 83rd year. The school which he founded "for manly Christian development" is considered exemplary among American secondary institutions. Many of its 1,400 graduates, including President Roosevelt and his sons, are famous; and probably to all of them Dr. Peabody is looked upon with respect and awe as "the greatest natural force in the United States, with the possible exception of Niagara Falls and the Mississippi River." Dr. Peabody was succeeded by the Rev. John Crocker.

Endicott Peabody was born in Salem, Massachusetts, May 30, 1857, the son of Endicott and Marianne (Lee) Peabody. He was sent to England to be educated and was graduated from Cheltenham College, England, in 1876. He received from Cambridge an LL. B. (1880) and an LL. M. (1884). His father at that time was a partner in the British branch of the House of Morgan. On returning to the United States, Dr. Peabody studied theology, taking a Bachelor of Divinity degree at the Episcopal Theological Seminary, Cambridge, Massachusetts. Since 1885 he has been a priest of the Protestant Episcopal Church.

He was 27 years old when he and his friends built the first school building, Brooks House, in the little town of Groton, 45 miles from Boston. A year later (1885) he married Fannie Peabody of Danvers, Massachusetts. They have six children: Malcolm Endicott, Helen (Mrs. R. M. Sedgwick), Rose (Mrs. W. B. Parsons Jr.), Elizabeth Rogers, Margery, Dorothy (Mrs. F. T. Davison).

For his excellent work in education, Dr. Peabody has received honorary degrees from Harvard and Yale Universities. In 1935 he was given an honorary L. H. D.

by the University of the State of New York. At the dinner on that occasion, President William M. Lewis of Lafayette College praised Groton above other secondary schools. Groton boys use excellent English, their manners are flawless, and their record as public servants is unique among graduates of swank schools.

From the beginning Groton has been a school for the upper class. Among its first pupils were Higginsons, Whitneys, Harrimans, Rogers, Morgans. Theodore Roosevelt sent his three sons there. Groton is an "inbred" school: out of a student body fixed at 180 boys, 94 are sons of alumni. Ten boys are given scholarships each year by competitive examination. Among its famed alumni are, besides Franklin D. Roosevelt, Joseph Clark Grew, Bronson Cutting, Robert McCormick, Payne Whitney, George Whitney, Ellery Sedgwick, Arthur Train, Sumner Welles (see sketch this issue), E. Roland Harriman, Dean Acheson, Junius S. and Henry S. Morgan, Oliver La Farge.

Groton is modeled much on the English public school system. The boys dress for dinner, aid in the choice of a senior prefect and play "fives," a game which originated at Eton. To outsiders Groton is snobbish; within, its discipline is democratic and somewhat Spartan. Endicott Peabody, who was a great oarsman at Cambridge, believes in rigorous exercise and encourages the rougher team sports, as well as tennis and golf.

One Grotonian, George Biddle, in an autobiographical essay (*Harper's*, August 1939), *As I Remember Groton School*, speaks with high praise of Dr. Peabody, "the Rector," as the boys called him. Though Groton had a distinctly English ring, he made several innovations that included breaking down the wall that had separated boys and masters, the introduction of the honor system, and a modification of the English fag and hazing traditions. The Groton code, Mr. Biddle says, was snobbish rather than military; precise and socially conservative, it exacted, first of all, obedience. It seems that the Rector had a way of winning the liking and respect of each boy individually. One of the boys once said of him: "You know he would be an awful bully if he weren't such a terrible Christian." His "look" is famous; of it, there has come down through the years the story of a first-former's comment: "Did you see the way the rector looked at that cat? And the cat—why, the cat just kept on going."

Mr. Biddle says of him: "Dr. Peabody is not a scholar himself. He is a great administrator and a warm Christian. I should define his Christianity as an unshaken faith in his particular God and a fervent wish to keep physically fit, sexually clean, morally honest, and—in every sense of the word—a gentleman. I fancy he dislikes a dirty collar as much as a dirty word, and is

shocked by an East Side accent as well as by outspoken Atheism."

Franklin D. Roosevelt, class of 1900, has always been an admirer of Dr. Peabody. He has said: "As long as I live, his influence will mean more to me than that of any other person next to my father and mother." And Mr. Biddle tells the story of how, at a Union Club dinner (where Roosevelt had been roundly condemned) the Rector loyally defended his former pupil as "a gallant and courageous gentleman."

Dr. Peabody, though retiring at the age of '83, is tall, fit, pink-cheeked, with twinkling blue eyes and a quick wit. As every boy and master knows, he still misses nothing. His favorite sports are bicycling and horseback riding, and he hopes to devote much of his time henceforth to these. Handsome Mrs. Peabody often rides with him.

Who's Who in America
Who's Who in American Education

PEATTIE, DONALD CULROSS (pē-tē)
June 21, 1898- Botanist

Address: 224 Buena Vista Rd, Montecito,
Santa Barbara, California

A botanist with a poet's inspiration, a naturalist with a philosopher's insight, Donald Culross Peattie has won high critical acclaim for his several books on plant life and nature. His *Flowering Earth* (1939), called the best horticultural book of the year, was awarded a silver medal on June 11, 1940 by the Commonwealth Club of California.

Flowering Earth demonstrates Mr. Peattie's equal love for the world of flowers and the world of words: a fine lyric touch distinguishes a prose style pervaded by a continuous sense of beauty. A story of the miracle of plant life written for lay readers, it has been said of *Flowering Earth* that it does for the plant world what Alexis Carrel (see sketch this issue) has done for medical research. The book is not burdened with chemical formulas and it has no formal botanical glossary; but it is a complete, vital story of chlorophyll and of protoplasm, of algae and seaweeds, conifers and cycads. Mr. Peattie describes in terms of human behavior what plants have done; he gives a convincing sense of nature's oneness in Illinois, in California and in the South as he has seen and felt it.

Donald Culross Peattie was born June 21, 1898 in Chicago, Illinois. His father was Robert Burns Peattie, journalist and wit; his mother, Elia (Wilkinson) Peattie, a

Ward Wicart

DONALD CULROSS PEATTIE

novelist, essayist and for many years literary critic on the Chicago *Tribune*. Young Peattie was graduated from the Chicago University High School in 1916 and was a student at the University of Chicago from 1916 to 1918. He received his B. A. *cum laude* from Harvard in 1922, where he specialized in the natural sciences. In that year he also won the Witter Bynner Poetry Prize.

Between 1918 and 1919 he was a publisher's reader for the George H. Doran Company; but immediately after being graduated from college took a position in the Department of Agriculture as botanist in the office of foreign seed and plant introduction under Dr. Fairchild. From 1922 to 1923 he worked with J. Arthur Harris in Miami, Florida on frost resistance in tropical plants.

Peattie married the novelist, Louise Redfield on May 23, 1923. They have three children: Malcolm Redfield, Mark Robert and Noel Roderick. Mrs. Peattie collaborated with her husband in the writing of two of his earlier books.

After the publication of his first book, *Cargoes and Harvests* (1926), Peattie left the Department of Agriculture to freelance in his own field and began a nature column in the *Washington Star* which ran for 10 years. In 1928 he took his family to the south of France, where at Vence and Menton they made their home for five years. During these years he published three books of fiction. In 1930 he wrote *Vence, the Story of a Provençal Town*. The Peatties returned to America in 1933.

Many critics have reacted ecstatically to all of Donald Culross Peattie's writing. But their highest praise has been showered upon *An Almanac for Moderns* (1935). This has been described as "an essay in biology in

PEATTIE, DONALD—Continued

365 parts, the day by day revelation of a sensitive and incorruptible mind." It consists of short, beautifully written reflections on and interpretations of the various manifestations of nature. Of it Mark Van Doren (see sketch this issue) has written: "Not merely is it the best book of its kind that I have read in years: it is one of the best books I ever read. I suspect it of being a classic." As the book of the year most likely to become a classic, *An Almanac for Moderns* was awarded the Gold Medal of the Limited Editions Club in 1935.

The same year Peattie's *Singing in the Wilderness*, a delicately written, somewhat over-sentimentalized memoir of Audubon and his wife, was published. In 1936 came *Green Laurels*, biographical sketches of the lives and achievements of the great naturalists. Mr. Peattie is further distinguished for his *Book of Hours* (1937), 24 essays after the manner of those in *An Almanac for Moderns*; *A Prairie Grove* (1938), the story of a small section of Illinois prairie from the days of its formation to modern times; *A Gathering of Birds* (1939), an ornithological anthology; and *Audubon's America* (1940), for which he wrote the introduction and biographical notes. His column *The Nature of Things* appears each month in *Bird Lore*.

To enable him to continue his work in nature study Mr. Peattie was awarded a Guggenheim Fellowship for 1936 to 1938. He is at present preoccupied with Western nature and history and for the past year or two has lived in Santa Barbara, California.

PEGLER, WESTBROOK (pěg'lēr) Aug 2, 1894- Newspaper columnist
Address: b. Scripps-Howard Newspapers, 230 Park Ave, New York City; h. New Canaan, Connecticut

James Westbrook Pegler (he dropped the James early in his career) has been in hot water so many times as both newspaper reporter and columnist that he must, by this time, have developed the skin of a rhinoceros. The man who has made dissention a philosophy and the word *agin* his battle cry is read daily by 6,500,000 people in 114 newspapers throughout the United States. The fact that his yearly income is estimated at \$60,000 shows that Americans still cling to pioneer journalism—rich in salty abuse, personalities and a strong conviction that in every controversy both sides are wrong.

Pegler was born into a newspaper family in Minneapolis, Minnesota, in 1894. His father, Arthur James Pegler, came from England as a young man, thrilled by tales of

American cowboys, and his mother, Frances (Nicholson) Pegler, was born in Minneapolis. Pegler Sr., became a star reporter in Minneapolis, Chicago and New York. Now in his 70's, he was actively at work for the New York *Daily Mirror* until a few years ago. In 1913 Pegler Sr. and Charles Washburn wrote the classic tear-jerker melodrama, *Little Lost Sister*, taken from some sensational articles Pegler wrote on Chicago vice rings. In 1940 it was playing in New York City to hilarious crowds under the title, *She Gave Him All She Had*.

At five young Westbrook began to show that inquisitive instinct which makes a good reporter. He wanted to know how it feels to ride in a patrol wagon! So when his father took him and his brother for a Sunday morning stroll downtown, he disappeared, rushed to the police station, told the chief he was lost, and while his father was frantically searching the town, had a triumphant ride home in the patrol wagon.

Pegler attended the Horace Greeley School and the Lane Technical High School in Chicago, but his heart was set on entering the newspaper business as soon as possible. At home he lived in an atmosphere of newspaper shop talk. When he couldn't get his father to let him "run copy" to the newspaper, he induced a newspaper photographer to let him carry his camera. One time this involved photographing the disinterred skeletons on a "murder farm" in Indiana. It had no lasting deleterious effect on Pegler, who in 1910, "a raw kid, as freckled as a guinea egg," got \$10 a week at the United Press in Chicago telephoning short accounts of newspaper stories to small dailies. "Bud," as he was called, began to think he was pretty good and asked for more money. "I won't give it to you," said the bureau manager, "but I'll give you some advice. If you ever want to be a newspaperman, you'll have to go back to school." So Pegler went to Loyola Academy for two years.

Pegler met "Tad" Dorgan, the cartoonist, and showed him some cartoons he had laboriously sketched. "Isn't there anything else you can do?" commented "Tad" after a glance at them. During a two weeks' job with the International News Service in 1912 Pegler first met the late Arthur Brisbane, whom he later used as subject for one of his most devastating parodies. Brisbane was a very important person. "Here, boy," he said, holding up several sheets of copy, "run these down to the wire." Pegler didn't know who he was but he did know that he himself was no messenger. "Run it down yourself," he replied.

The United Press re-employed him and started him up the newspaper ladder, first with the Des Moines *News*; next gave him a fancy title (Southwestern manager for the United Press) and sent him to St. Louis. Then they sent him to Texas, where as manager of the bureau he did such good work that in 1916 they asked the 22-year-old reporter to join the staff in London as a foreign correspondent.

Pegler maintains that he was one of the lowest-paid war correspondents with the American Expeditionary Force. Very soon he was in hot water with the officer in charge of British Operations. The United Press was asked to keep the brash young Pegler out of conferences because he embarrassed the general by asking too many questions. As soon as the United States entered the First World War, Pegler lost no time in getting "in bad" with Admiral Sims and then with General Pershing. Although he was perfectly right in wanting the answers to questions, he was about to be shipped home, a failure. Evidently desiring some peace and quiet after his one-man war against generals, Pegler joined the Navy, in Liverpool, in the spring of 1918. At the end of the War he returned to the United States and went into sports-writing for the United Press, candidly admitting that he noticed "that the big salaries on newspapers usually were paid to the sports men." Floyd Gibbons had told him to stop signing himself J. W. Pegler because "a Pullman-car name like 'Westbrook' will help sell your stuff."

Pegler noticed that many sports men wrote in the "poetic, romantic school." Seeing few writers in the tough, rowdy-phrase school, he decided he'd have a better chance with less competition and lined up with them. He wrote slowly, carefully, and chose funny or fantastic sports happenings. Soon he was a star writer who by "tireless arguments" had "pushed up his salary to a fabulous \$125 a week." As a "rather self-conscious happy-go-lucky reporter" Pegler served as a model for *Young Man of Manhattan*, by Katharine Brush.

In 1925 Pegler made a very important change. The *Chicago Tribune* hired him at \$250 a week to write a daily sports story for syndication around the country. When there weren't any sports happenings of interest to write about, Pegler tried his hand on other topics. Thus by accident he changed from a sports writer to a commentator on national affairs. In 1933 he was asked to write a syndicated column for the New York *World-Telegram* and other papers. He was nervous about this promotion "to the ranks of the think men." He didn't want to make a fool of himself and he was modest concerning his own talents. He wrote: "I am not very well acquainted among the gold-standard crowd, the NRA crowd, the Governor-do-your-duty crowd, and the whither-are-we-drifting writers, but new around here. And I have a feeling just from the looks of them that there will be days over here in the Sacred Heritage of Liberty Department when I will pine for good old Primo and the Ol' Bambino."

Right at the start, with Pegler-predilection-for-hot-water, he plunged in, writing the famous column which seemed to justify a lynching in California although it was aimed against self-righteousness. That got him into grave trouble with the intelligentsia, whom he labels "doubledome Babbitts." Dipping his scalpel in gall instead of ink,

WESTBROOK PEGLER

he has outraged at one time or another practically everyone who reads his daily column. When he went abroad and sent back a series of scathing attacks on Mussolini and Hitler (whom he called racketeers at a time when other writers were hesitating about them) the intellectuals liked him. In more recent years they have been calling him a reactionary, Fascist, Tory and Red baiter, detest him because he constantly attacks the CIO and other labor unions, Communism and Roosevelt, whom he labels "mamma's boy."

Pegler has made a fetish of irritation. He assumes that both sides are generally wrong. Identifying himself with the "common man," he asks embarrassing questions. Fascism rouses him to fury, as do crooked politics, spoiled rich people, James Farley, Harold Ickes, the Newspaper Guild, Eleanor Roosevelt (see sketch this issue) and the income tax. In the matter of income tax he has been carrying on a personal war with the tax collector. His agitation against tax exemptions of state salaries has brought about a "corrective act in the New York legislature." He has attacked Huey Long, Florida gambling and Upton Sinclair. He is the only man forbidden (in advance) to attend Walter Winchell's funeral. He is numbered by Quincy Howe (see sketch this issue) among those columnists who are "perhaps more conservative than the high-brows, more set against change because they have traveled farther to reach the positions they enjoy today." Pegler can find nothing good in unions, and delights in rummaging around for evidence that will back him in his contention that they are all either Red or rackets. Singlehanded in 1940 he unearthed damaging evidence against William Bioff, head of Hollywood movie unions, which resulted in Bioff's recall to Chicago to serve an old prison sentence.

PEGLER, WESTBROOK—*Continued*

It was Pegler who revealed the information in April 1940 which led to the indictment of George Scalise, resigned head of the Building Service Employees International Union, A F of L. Scalise said: "I've been Peglerized."

An amusing controversy was one in which Pegler critized Beniamino Buffano's model of the colossal statue of St. Francis of Assisi proposed for San Francisco. Pegler wagered that he could make a better statue. He promptly went to the studio of a friendly sculptor and concocted "an elf toting a gingerbread homunculus in one hand and a sheaf of carrots in the other while a fascinated mouse looks on." Pegler explained its odd look by saying: "My figure included a cornucopia, but two grapes and a pineapple were lost in the casting." The contest seems to have ended in a draw with the \$200 wagered going to charity.

Reading Pegler day by day one finds him very uneven. He is sometimes funny—such as the time he waggishly repeated one sentence 50 times to make up his entire column: "I must not mix champagne, whiskey and gin." At other times he shows that he is way out of his depth, discussing questions which he will not or cannot think through. But no matter what he says, he says it always well and sometimes magnificently. These sentences, brisk, easily read, seem to be dashed off. Actually it takes him hours of slow toil to polish each phrase. He writes in the country, at his home in New Canaan, Connecticut, and hates New York City. About three or four times a year he tours the country to find out what is going on and what he should be *agin*.

His irritated, scornful, suspicious columns seem to be written by someone who is always "on the point of biffing somebody on the jaw." Actually this is a complete fiction. He is friendly and approachable, "Peg" to most people and "Buddy" to a few. "His sandy hair is graying over the temples," writes Milton Mackaye in *Scribner's*. "A gangling kid as a reporter, he has begun to put on a little weight at the middle. He is just under six feet tall, has a sulky Mick mouth (his mother was Irish), a crooked smile and skeptical, angry eyes."

Pegler's marriage is a "storybook romance." At a murder case in 1920 he met Julia Harpman, a reporter on the New York *Daily News*. Their marriage was postponed for two years because Miss Harpman spent more than a year in a hospital as the result of a broken back received in an automobile accident.

Pegler has published two books of reprints of his columns. The first was *'T Aint Right* (1936) and the second, *The Dissenting Opinions of Mister Westbrook Pegler* (1938). One critic said: "If one article incites you to want to kill the writer, calm yourself and read another, you may want to telegraph him congratulations."

Certainly Pegler does not mean everything he says. He even dissents from his profession by writing: "Of all the fantastic fogshapes that have risen off the swamp of confusion since the big war, the most futile and, at the same time, the most pre-tentious, is the deep-thinking, hair-trigger columnist or commentator who knows all the answers just offhand and can settle great affairs with absolute finality three days or even six days a week."

 Who's Who in America

PENARANDA, ENRIQUE (pān'ā-rān'dā ĕn-rĕk') Nov 17, 1892- President of Bolivia
Address: La Paz, Bolivia, South America

General Enrique Peñaranda is a war hero who became President of his country. Commander in chief of the Bolivian Army during the latter part of his country's six-year bloody Chaco War with Paraguay, General Peñaranda was the army's choice for President.

His election was hailed as Bolivia's first return to constitutional government since 1931. It was the first time since March 1931 that the Bolivian government had changed hands without a coup. Bolivians went to the polls in 1940 in orderly, democratic fashion, although only 100,000 of the country's 3,500,000 population (most of them Indians) voted.

While Bolivians had an opportunity to vote for a President for the first time in eight years, they did not have much choice. Two other candidates had been invalidated because they had not fought in the Chaco War, and in the interest of harmony it was said that General Peñaranda would be the sole candidate for President. Five parties presented candidates for Senators and Deputies, however, and a coalition government was promised.

Nevertheless Peñaranda's election was not without some faint repercussions. Two weeks after his election a plot to capture the President-elect and to assassinate Provisional President Carlos Quintanilla was uncovered and nipped in the bud by the army chief of staff. The revolting soldiers marching on the palace were halted without a gunshot, and Peñaranda took over the reins of government peacefully on April 15, 1940.

The popular General Peñaranda had been offered the Presidency twice before and had refused for personal reasons. He has no easy job with Bolivia's complicated economic and political problems. His predecessor, Provisional President Carlos Quintanilla, had taken over after the suicide of Germán Busch, who had set himself up as a dictator in July 1937 after the revolution and had suspended part of the constitution. When Busch was found dead several weeks later, Quintanilla took charge and by restoring the constitution promised an end to the long régime of force and revolution since the military revolt during the Chaco War.

President Peñaranda is a dark, fun-loving man. He is an almost pure-blooded Indian. Born November 17, 1892 in the Province of Larecaja, Department of La Paz, son of Teodocio and María Castillo de Peñaranda, he received his early education in the schools of La Paz. He entered the Military College in 1907, graduating in 1910 with the rank of second lieutenant.

He rose steadily in the army. He was promoted to lieutenant in 1913; captain in 1917; major in 1921; lieutenant colonel in 1925. In 1932, three months after the start of the war with Paraguay, he became a colonel. The insignia of brigadier general he received on the field of battle in December 1933 and the same month was appointed commander in chief of the Bolivian Army in the field, a post which he held until after the termination of the Chaco War.

After the signing of the Peace Protocol of Buenos Aires, Peñaranda was promoted to the rank of division general "for his example and constancy in defending the country, for his skill in leading troops and for his influence in maintaining the morale of the soldier high and steady."

Bolivians were hopeful that in Peñaranda's four-year tenure as President their country would see the beginning of a new era through the solving of its economic, political and social problems. When he took office, General Peñaranda himself talked enthusiastically about the return of democracy, while welcoming and guaranteeing foreign capital invested in Bolivia to improve communications and to build hydroelectric plants.

But although he continued to speak enthusiastically of democracy after taking office, by September 1940, according to the *Christian Science Monitor's* correspondent, Peñaranda's emphasis on a "healthy nationalism" had made the quality of his enthusiasm suspect in certain circles. By Peñaranda's order the Leftist Congress was dissolved; a former Presidential candidate, the Rector of Oruro University, and many others who participated in the Congress were thrown into prison; and an amnesty law for political prisoners was vetoed by the President. His Minister of Agriculture, Alcides Argueda, openly favored a dictatorship.

Wide World

ENRIQUE PENARANDA

Oddly enough, while Bolivia was electing as President its war hero, General Peñaranda, its neighbor, Paraguay, was beginning its first year under the Presidency of Chaco War hero, the late José Félix Estigarribia (see sketch this issue).

PERKINS, FRANCES Apr 10, 1882-
United States Secretary of Labor

Address: Department of Labor, Washington,
D. C.

Frances Perkins, the only woman member of the United States Cabinet, hates references to her sex. "Being a woman," she says, "has only bothered me in climbing trees." It has bothered others, however, and in the fall of 1940 opinions were sharply expressed by Wendell Willkie, Robert Moses (see sketches this issue) and others that the Secretaryship of Labor was a man's job. "The attitude of both labor and employer toward Miss Perkins," said Mr. Moses, "is a good deal like that of habitués of a water-front saloon toward a visiting lady slummer—grim, polite and unimpressed."

It is true that labor has been "lukewarm in her support" and that industry has considered her "one of the least important members of our government." Yet there are

FRANCES PERKINS

few persons in either camp who are not aware of her "strength of character, her devotion to the truth," of the fact that she is "a forward-looking person in touch with all reform movements, sympathetic to social control and social responsibility."

Frances Perkins came to the Department of Labor from the social work field and her broad *a's*, her neat tricorne hats, her New England background combine to set her aside from the rather more tough and businesslike Secretaries of Labor who preceded her. She was born in Boston, Massachusetts and brought up in Worcester. Her father, Frederick W. Perkins, was a classical scholar and businessman who founded the firm of Perkins and Butler, twine manufacturers, in Worcester. Both he and her mother, Susan (Wight) Perkins, were, like their New England forebears, "conservative and puritanical." They were, besides, Republican.

"Fanny" went to Worcester Classical High School, where she was a good but not outstanding student. Album pictures "indicate that she was pretty and she was, by her own account, articulate." When she was 16 she entered Mount Holyoke College, where she majored in biology and chemistry. She was also a fair campus politician, chairman of the Y. W. C. A. committee and elected permanent president of her class of 1902.

Although she was offered a job as an analytical chemist after graduation, Frances Perkins remained in Worcester for the next two years doing social work for the Episcopal Church, since her family didn't believe that women should work outside of the home. They did, however, permit her to take a position teaching chemistry in a girls' school near Chicago. Once there, it was inevitable that she should drift toward Hull

House. For six months she lived there, trudging around to inspect tenements and sweatshops, becoming friends with the social workers there. Then Miss Perkins decided she needed more training in the social sciences. She entered the University of Pennsylvania and while she was studying economics and sociology acted as executive secretary of the Philadelphia Research and Protective Association, which combined placement with social case work. Because of her work, Columbia University offered her a fellowship and she received her Master's degree from the University in 1910.

Very shortly afterward she became executive secretary of the New York Consumers' League, which investigated industrial conditions and fought for protective legislation, especially for women and children. It was in 1911 that Frances Perkins witnessed the Triangle Shirtwaist Company fire in which 146 girls died. She never forgot it and for the next six years devoted much of her time to safety legislation. She conducted an investigation into cellar bakeries of New York City, as a result of which regulations were enforced, and in 1912 she became executive secretary of the New York Committee on Safety, a position she held until 1917. During this time, from 1912 to 1913, she was director of investigations for the New York State Factory Commission. Because of this position she traveled all over the state investigating, and frequently went to Albany. She had gone to Albany before—to help put over legislation for a 54-hour week for women workers—and had become acquainted with the politicians there—Al Smith, Robert F. Wagner, Franklin D. Roosevelt and Big Tim Sullivan, Tammany leader who helped teach her politics. He liked her. "You can look right at a man and know he is lying and never show it," he once commented. It was during this time, too, in 1913, that she was married to Paul Caldwell Wilson, a financial statistician who became secretary and financial adviser to John Purroy Mitchell, reform Mayor of New York City.

In 1919, after she had served for two years as executive director of the New York Council of Organization for War Service, she was made a member of the New York State Industrial Commission by Al Smith, and as commissioner continued writing, speaking and working for industrial and labor legislation. It was she who was largely responsible for the 54-hour week for women being changed to 48, for monthly statements on employment trends, for the standardization of state industrial legislation. In 1921 she became director of the Council on Immigrant Education, in 1922 a member of the New York State Industrial Board and in 1926 its chairman. In 1929 Roosevelt, when he became Governor, made her Industrial Commissioner of New York State. And when Roosevelt became President of the United States in March 1933 one of his first acts was to appoint her Secretary of Labor.

Immediately there was opposition. William Green, president of the American Federation of Labor, railed: "Labor will never be reconciled to her appointment"; the politicians objected to a woman in her position; business felt her to be rather too pink a liberal, with too little experience with Big Business to understand its problems. Only liberal magazines like *The Nation* came out with statements in praise of her suitability, her "diversity of interest within the broad field of labor and industrial relations and superlative personal achievement." Miss Perkins herself remained unperturbed and busy, too busy to buy an inaugural costume. What her daughter Suzanne and a friend bought for her, however, "was precisely as ordered: Rock of Gibraltar, rather, with a dash of style and a discreet touch of feminine appeal."

Her goal as Secretary of Labor, she said in 1933, was to get more pay, more comfort and more security for the ordinary worker. Her first act was to disband a group of undercover men hired by her predecessor, Doak, "to investigate violations of the alien-labor law, Bolshevism, moral turpitude, grand duchesses, foreign movie actors who overstay their leaves and similar menaces." She then proceeded to put in a system of fact finding about unemployment and unemployment statistics. Under Miss Perkins, the Children's Bureau and the Women's Bureau have run smoothly and the Department of Labor Standards, the Bureau of Labor Statistics have all grown and functioned perfectly.

Still, Miss Perkins played only a small part in the growth of other labor agencies and services. The NRA was not put into the Department of Labor; neither was the National Labor Relations Board, The Wages and Hours Board and that for the Walsh-Healy act, though in her department, were made semi-autonomous. Partly because she was unable to build up her department and partly because so many activities were carried on over her head, by 1935 *The Nation*, which had so warmly welcomed her appointment, felt that she was "one of the least important members of our government"; others felt that "she herself has played no important rôle in the labor movement" in a period when labor problems have been to the fore, that her "department remains just a bureau, the Secretary just an office holder."

Most commented upon was her ineffectiveness as a conciliator and what Benjamin Stolberg calls her "ineptitude with the tougher variety of politicians both in the labor movement and in Congress, with the more hard-boiled industrialists and newspapermen." She started out bravely when, shortly after she took office, she stated the case for organization in the steel industry and then toured the steel towns, defying the company police who tried to keep her from speaking. Yet a few years later Big Steel was settled without a strike and

she accomplished nothing in the Little Steel strike, which was lost. During the automobile strike of 1934 she was on the sidelines; during that of 1937 she created headlines by telling reporters that Sloan (see sketch this issue) of General Motors "ran out on me." By then reports were current that Edward McGrady, the assistant secretary, who had brought about a number of settlements in coal and automobile strikes, would take her place.

Labor seemed somewhat to resent her "welfare worker outlook" and remarks such as: "Sometimes violence comes from one side and sometimes from the other"—delivered when she was asked for a comment on a current situation. They, too, like the rest of the country, were conscious of her failure to bring about peace between the CIO and the A F of L—as one commentator put it, "All she did was to flutter solicitously between the two camps and to play down the difficulties in terms of her wish fulfillment." And at the same time it was felt by capital, as the New York *Sun* expressed it on June 4, 1940, that "by her opposition to repair of the Wagner Labor Act and by her support of other jug-handled legislation the Secretary herself . . . has strengthened the subversive elements in the American Labor movement."

Much of the work of the Immigration and Naturalization Service (transferred in 1940 from her department to the Department of Justice) was criticized, and criticism reached a head in February 1940, when a resolution was offered in the House instructing the Judiciary Committee to inquire whether she should be impeached for her failure to deport Harry Bridges (see sketch this issue). It was defeated and hearings were held on the deportation charges.

In November 1940 there were rumors, notably in the New York *Times*, that she had resigned as Secretary of Labor but would be connected with the Administration in some capacity. Miss Perkins denied this.

There are many people in Washington who find Miss Perkins in public life "earnest, rather humorless, briskly official," who tend to resent her sharp way of speaking up. Newspapermen, particularly, ever since they first tried to get "feature" stories from her and were told: "We New Englanders keep to ourselves," have seldom felt her to be a sympathetic personality. They have commented on her habit of talking "as though she had swallowed a press release, no asides, off-record confidences or personal comments." There are others, however, who feel that she has a "great deal of real charm. She is surprisingly feminine. She has large brown eyes, vivacious and intelligent; her hands are beautiful and she uses them expressively." That her clothes are not "surprisingly feminine," all agree. Her hats are almost always tricornered and her street clothes have been said to "look as though they had been designed by the Bureau of Standards."

PERKINS, FRANCES—*Continued*

Although Miss Perkins' private life is strictly her own, with very little known about it except that she has a house in New England and often spends week ends in New York with her daughter Suzanne, "who was never in the least interested in her mother's reforms and is married to David Meredith Hare, a New York socialite," everybody in Washington knows that Frances Perkins is one of the hardest workers in public life. She is in the office from nine in the morning until dinner and she works there until midnight at least twice a week. When she first came to Washington the chauffeur assigned to drive her official car resigned after a few weeks. He was tired, he said.

PERLA, DAVID July 13, 1900—June 14, 1940 Pathologist; immunologist

December 1940 Bulletin: Dr. David Perla died June 14, 1940 of a heart attack in his laboratory at Montifiore Hospital, New York City. He was 40 years old.

From June issue:

The discovery of a method for the prevention and treatment of surgical shock (prostration or collapse that may occur during or after a severe major operation) was announced by Dr. David Perla, young scientist and physician of Montifiore Hospital in the Bronx, New York. Experimentation on, development and results of the new technique were made public in a report by Dr. Perla in the Proceedings of the Society of Experimental Biology and Medicine, March 1940.

Observers believe that the discovery is equal in importance to Crawford Long's use of ether and Banting's discovery of insulin. Success already in 30 cases indicates that the procedure may blaze a new trail in the field of surgical care. It should save many lives not only in the operating room but also in the emergency operating ward and particularly in the hospitals on European battlefields.

The publication of Dr. Perla's paper followed 12 years of research in the field of natural resistance, and nearly two years of carefully controlled experiments with rats and mice.

The new antishock treatment consists of injections of the vital hormone (desoxycorticosterone acetate) secreted by the adrenal gland, in combination with the administration of solutions of common table salt.

Since the development of general anesthesia nearly a century ago, surgeons have long been aware of the dangers of shock that frequently follows an operation, regardless of the physician's skill. It consists of a sudden drop in blood pressure, and the withdrawal of blood from the brain and extremities to stagnate in the large vessels of the abdomen. The condition is known outside the operating room also. It may follow a fall, a bad burn, a limb injury; or it may be brought on by a severe emotional shock.

For a number of years scientists in medicine had been aware of the similarity between the signs and symptoms of "adrenal insufficiency" and those of secondary surgical shock. It was suggested that failure of the adrenal cortex, following an operation, was responsible for the shock. It was known also that the suprarenal cortex plays an important part in the mechanism of natural resistance to intoxications, poisons and bacterial infections. Dr. Perla attacked the problem with a view to finding out whether the patient's resistance could not be built up prior to the operation by supplementing or assisting the function of the adrenal gland.

He began his experiments at the Montifiore laboratories by using the cortical hormone derived from the adrenal glands of cattle, segregated two years before and since used only in the treatment of Addison's disease, and a saline solution which previously had proved effective in building shock-resistance. He divided a number of rats into four groups. He left the first group untreated, administered saline solutions to the second, cortical extract to the third, and both saline and cortin to the fourth group. Then all the rats received lethal doses of histamine, a chemical that lowers blood pressure by dilating the small blood vessels—a condition thus similar to the shock-condition following operations. Of the first group of untreated rats only 40 per cent survived; of those treated with saline, 55 per cent survived; of the cortin-

treated, 75 per cent; and of those with both saline and cortin, 100 per cent survived. Similar experiments, with similar results, were made with mice. It was discovered that the resistance of animals could be built up to a point where they could withstand much greater doses of poison.

On the basis of these experimentations a plan for the prevention of surgical shock was carried out in preparing a series of patients for surgical procedure. These were suffering from major chronic diseases, such as tuberculosis and cancer, but were poor surgical risks because of their debilitated condition. From the fifth to the second day before operation they were given specified amounts of the desoxycorticosterone acetate intramuscularly, and the saline solution intravenously.

"In all instances," Dr. Perla reports, "the patients were strikingly benefited. There was no objective evidence of shock. The blood pressure was maintained or elevated. The temperature in general returned to normal within 24 to 48 hours. Post-operative exhaustion and toxemia were definitely lessened. Complications did not occur. And operative recovery appeared, to the surgeons concerned, to be more rapid than in their preceding surgical experience in our hospital."

However, since many of the gravest operations must be performed after accidents, or wounds received in battle, when there is no opportunity to build up such a resistance to shock, studies were made to determine the use of the preventive medicines after the operation. To simulate this situation rats and mice were given doses of killing poison first, and then divided into four groups. As in the previous experiments, one group was untreated, another given saline only, a third only the cortin, and a fourth both saline and cortin. And, just as the prophylactic treatments were successful in preparing the system for approaching shock, so the therapeutic treatments acted to neutralize the killing poison. Dr. Perla points out, however, that the prophylactic effect of the cortical hormone and saline was much greater than its therapeutic value.

Since the amazing success of the pre-operative treatment at Montefiore Hospital, the method is being used in two other large hospitals in the Metropolitan area, where a wider experience can be established. Working with Dr. Perla on the development of the method were Drs. David G. Friman, Marta Sandberg and Sidney S. Greenberg.

Dr. Perla holds the rank of associate pathologist and immunologist at Montefiore Hospital and is instructor in medicine at Columbia University. He was born in New York City in 1900, the son of Jozue Perla and Fannie (Herzruecken) Perla. He received the degrees of B. S. and M. D. at Columbia University, the latter in 1923. His internship was at Montefiore Hospital (1923-

Newspictures

DAVID PERLA

24); he was assistant superintendent at Bedford Sanatorium (1924-25); research fellow at Henry Phipps Institute, Pennsylvania (1925-26); and studied in Berlin and Freiburg from 1926 to 1927. He became associate pathologist and bacteriologist at Montefiore Hospital in 1927. He is the author of many articles in scientific periodicals, and in collaboration with his wife, Dr. Jessie Marmorston, of works on the physiology of natural resistance. He is the father of three daughters. His hobby is portrait painting—when he finds time for it.

PERTINAX, pseud. See Géraud, A.

PETAIN, HENRI PHILIPPE (pâ'tāN' äN'rē') Apr 24, 1856- Marshal of France
Address: Vichy, L'Allier, France

Hero of the Battle of Verdun, Premier of defeated France (June 16, 1940) at the fall of the Reynaud (see sketch this issue) fight-to-the-end Cabinet, aged Marshal Henri Philippe Pétain became, on July 8, 1940, head of a "completely totalitarian system of government for France."

MARSHAL PETAIN

Thought to be in actuality the figurehead of a régime whose real dictator is Vice-Premier Pierre Laval (see sketch this issue), the 84-year-old Pétain is seen by many observers to be re-enacting the rôle of Hindenburg in Germany after the First World War.

Little was known about Marshal Pétain before his achievement at Verdun elevated him to chief of staff in 1917 and made him one of the most revered figures in France. His was the famous rallying cry, "*Ils ne passeront pas*" (They shall not pass)—a cry made familiar in more recent years as the watchword of the Loyalists in Spain, while its progenitor was, ironically, supporting Franco.

Pétain's life before Verdun was that of an obscure organizer of the French Army. He was born in 1856, educated at the St. Cyr School, early destined for a military career. An officer since 1878, he became in 1900 a battalion commander and for a year thereafter was a professor in a military school. He became a colonel in 1911 and brigadier general in 1914, when he attracted attention for a courageous charge at the head of his troops with a riding crop in one hand and a revolver in the other. In 1914 he received command of the 33rd Army Corps. In 1917 he became commander in chief of the French armies on the Western Front.

The first few years after the War Pétain spent in temporary retirement on his Riviera farm, where he cultivated prize roses. In 1920 he married Madame Hardon. He was recalled to service in 1925 to command the army sent against the Riffs in Morocco. In 1929 he succeeded Foch among the immortals in the French Academy. He served as vice-president of the Supreme War Council, and in 1934 became War Minister of the "sacred union" Doumergue Cabinet after the

Stavisky scandals. During these years Pétain made only one voyage outside his country—that was in 1931 when he came to the United States. He was met at the Battery by General Pershing and was given a triumphal parade to City Hall, where he was welcomed to this country. Of his visit he said that "it surpassed everything of which I ever dreamed." After Franco's victory in Spain, Pétain, who had once taught Franco military tactics and who had always admired him, became Ambassador to Spain. He was recalled from this post to assume the Premiership of France when the Reynaud government fell.

To observers of the less-publicized aspects of Pétain's career, it was no surprise that his first official act as Premier was to tell the nation it must ask Hitler for peace. During a crashing thunderstorm he spoke in a broadcast from Bordeaux. In his aged, cracking voice the one-time hero of Verdun announced that the Maginot Line had broken, that the German columns were plunging southward. "I have applied to our opponent," he said, "to ask him if he is ready to sign with us and, as between soldiers after the fight, and in honor, put an end to hostilities." Franco was asked, at Pétain's request, to be peace-mediator; and those leaders in France who had always been for surrender to the dictators were given Cabinet posts. Weygand (see sketch this issue) was named Minister of National Defense (it was recalled that his sympathies had always been Rightist); Chautemps, who had paved the way for the Daladier (see sketch this issue) régime, was named Vice-Premier; and Jean Ybarnegaray, vice-president of the Croix de Feu, French Fascist organization, was also awarded a Cabinet position. In spite of the strictest censorship, the people of France soon came to believe that France had been undermined as much by treachery as by incompetence and a strictly military defeat.

Some critics maintain that feeling in France became widespread against this pro-Fascist government. Pétain had many years before been suspected of being a patron of the Croix de Feu. Documentary evidence later revealed that Pétain's name, along with Laval's, was among those in the Fascist scandal of the "Hooded Men" during the Premiership of Chautemps. The aim of this organization was to replace the Republic with a totalitarian dictatorship; and at that time Pétain was asked if he were willing "in case of national emergency" to "head a strong government." When the "emergency" finally arrived in May 1940 two other factors made Pétain the favored and logical choice of the pro-Fascists: from the start he had exerted pressure on France to recognize Franco's government; at the same time he was a remembered military hero to all French citizens—an excellent patriot. He was paternally fitted to chastise the people

of France after their defeat; his further broadcast to them has been interpreted in some quarters as a deliberate attempt to develop defeatism among them. "France had too few allies, too few children, too few arms and too few men," he said. "Since the World War victory, the spirit of sacrifice has been absent from France. We have sought more than we have given."

When the British expressed indignant criticism of France's separate peace, Pétain led the French reply and accusation, declaring that Churchill (see sketch this issue) was not the best judge of French interests, that he was trying to divide France "at a moment when the country suffers," and that Britain failed to send sufficient aid to stop the German attack. Pétain accepted, with the terms of the armistice, the fact that "our airplanes and our fleet are coming under the control of Germany and Italy." "Nevertheless," he said, "the government remains free and our honor is safe." There was no explanation from the Pétain government as to why it refused to follow the example of Norway and the Netherlands—move to England, and continue the War from there. British editors, such as Vernon Bartlett, M. P., declared that France's famed "200 families" and their spokesmen—Laval, Flandin and Bonnet—had willingly sacrificed France to preserve their own interests. Even before an armistice was asked they had worried less about the German advance than the possibility of "social" troubles in France.

The Pétain government had said that the French fleet would be turned over to German control. The British, however, had other ideas about this. When, on July 3 at Oran, British battleships opened fire on French ships, the Pétain government directed French warships thereafter to stop all British merchant ships on the high seas and ordered French vessels at Alexandria to fight their way home. At the same time the government was busy drafting a new constitution eliminating "unwieldly democratic procedure," under which Parliament's only task would be to aid the government.

Five days later, July 8, a complete totalitarian system was announced, based on that of the Franco dictatorship in Spain. President Lebrun's resignation was asked; Pétain would be nominal head of the new régime, with Laval key man. The government in reality would be dominated by a triumvirate consisting of General Weygand, Pierre Laval and Adrien Marquet, former Labor Minister. Pétain, "tremendously impressed" by Franco's reconstruction methods in Spain, asked that they be followed in France's reconstruction. He gave additional leaders in the Croix de Feu powerful positions. The Vatican, through its official organ, approved Pétain as head of

the reconstruction of France, saying that he was "an inspiration to the youth of France."

As the foundation of the new constitution, the new slogan for France—replacing "Liberty, Equality and Fraternity"—was to be: "Labor, Family, Fatherland."

On July 11 a national plebiscite was placed before the people, after which 80 negative votes from Parliament were cast on the Pétain plan. September found a new Cabinet set up, with M. Laval the only parliamentarian left in it, found France's "new order" more clearly defined. Anti-Semitism was already one of its features. In October strikes and lockouts were banned; prices, foreign commerce and exchange were controlled; France went off the gold standard; the Entente Cordiale with Great Britain was entirely repudiated, and a policy of "true nationalism" and collaboration with Germany announced. After a meeting between Pétain and Hitler later in October it was feared that this policy of collaboration might even include joining the Axis in warring upon Great Britain as well as allowing Nazi use of the French Navy. This was denied, but the meeting was followed a few days later by the suppression of all colonial general councils and local assemblies in fear of a general movement toward De Gaulle (see sketch this issue), the placing of the textile industry under totalitarian control, and a speech in which Pétain announced that France will work in collaboration with Germany "to maintain French unity . . . within the new European order." "This policy," said M. Pétain, "is mine. The Ministers are responsible only to me. It is I alone history will judge."

That he will remain alone seems unlikely.

PETRILLO, JAMES CAESAR (pě-trīl-lō) Mar 16, 1892- Labor leader

Address: b. American Federation of Musicians, 175 W Washington St, Chicago, Illinois; 1450 Broadway, New York City

James Caesar Petrillo is a tough labor boss who is supposed to ride in a bullet-proof car and keep a pistol in his desk drawer; he "murders the King's English, forces the nation's leading symphony orchestra off the air and hasn't earned his living as a player in over a generation." He has been called the "Mussolini of music," a "pettifogging parasite . . . who machinated his way into control of the American Federation of Music." He is also a labor leader who "for more than 20 years has been boosting the wages and increasing the employment of musicians," in the face of canned music in theatres, dance halls and over the radio. Because of Petrillo "the musician in the theatre pit who used to receive \$12 a week now gets \$99," and he gets union help when he is sick and his widow gets benefits when he dies.

Petrillo, who stays at the Waldorf-Astoria when he is in New York and in an apartment building he owns when he is in Chicago, was born on Chicago's tough West Side. His father had come there from Italy and had a job as a sewer digger for the city. Young Jim went to the Dante Elementary School and in nine years was able to get through the fourth grade. "They bounced me around," he complains. "One year I would be in the fourth grade and next year in the third. They drove me nuts. After nine years I gave it up."

He got jobs while at school and after, peddling newspapers, running an elevator, selling popcorn. He also made his way as a musician. He had started to play the

trumpet when he was eight and soon was a member of the *Daily News* band, in which he played for many years "without audible improvement." Then he organized his own orchestra which played for beer gardens, Italian dances, Jewish weddings and band wagons. He was the trumpeter—"loud but lousy" is his own description—until by popular request he switched to the drums. On the side he ran a cigar stand for a time and was at one time partner in a saloon. Finally he entered union politics.

Petrillo says he got started on his union career because "I liked punching holes in the other guy's arguments." His first affiliation was with the American Musicians' Union, a Chicago independent. At twenty-two he was its president and stayed at its head for three years. Then he was beaten in the elections in 1917 and quit the A. M. U. to join its rival, the American Federation of Musicians. The first speech he made in the Chicago local of the Federation got him boos. Still, in 1919 he became its vice-president and in 1922 its president, at \$100 a week.

He immediately began fighting for Chicago's musicians. When radio began taking jobs away from musicians he stepped in. "Right away I found I had a fight on my hands." Petrillo won that fight: "Instead of seven days, the radio musicians worked six days, then five days for seven days' pay." He was a pioneer with the "standby" system, by which outside union men playing for radio stations must either join the union local or pay a musician to stand by and do nothing. He even arranged it so that the men who turn records when recorded music is broadcast are union musicians, paid union rates.

Petrillo got into a big fight in 1927 when the Chicago theatres disputed his powers. Two thousand musicians went out on strike. But in four days the strike was over and theatre musicians were all unionized. In 1931 Petrillo told the managers of all Chicago's hotels there would be no music on New Year's Eve unless they signed with the union. They signed. In 1936 he forbade Chicago musicians to make recordings for use in broadcasting; in 1938 a contract was signed which gave the American Federation of Musicians control over the output of canned music in 589 radio stations. Petrillo saw to it that no high school band played where a union band might; when a giant panda was to be welcomed by a troop of Chinese Boy Scout buglers, he demanded that eight union men be hired as well—and they were; he convinced the politicians that political sound trucks should resound with live music, not recordings. And he became active in Chicago politics, a "pal" of Mayor Kelly.

In 1933 Petrillo had himself appointed to Chicago's Park Board. He asked the Board: "If I prove the people want concerts will you appropriate for them?" The Board let him try, and in 1935 Petrillo organized free,

Bernard Hoffman

JAMES CAESAR PETRILLO

open-air concerts in Grant Park, with his union footing the whole bill. The next year the Board paid for the concerts, and since 1935 some 15,000,000 persons have jammed Grant Park to hear them, and many union musicians have had jobs.

The threats to Petrillo's power in Chicago were negligible. In 1933, it is true, there were rumors of his having been kidnapped, and an injunction was issued to restrain him from using union funds, since, it was alleged, he had paid his ransom from members' dues. But Petrillo had the union books audited, bought \$4,700 worth of newspaper advertising to tell the world his case, and all came out well for him. When the CIO started, John L. Lewis approached 2,500 members of the Chicago independent American Musicians' Union with the offer of a CIO charter. Petrillo immediately informed the independent musicians that the usual initiation fee of \$100 would be waived (the rate to them was \$4) and within a week had them rounded up into his union. This activity may have been the inspiration for Petrillo's active dislike of the CIO leader and his order in 1939 that references to Lewis be censored out of the *Man Who Came to Dinner* and George White's *Scandals*. Every newspaper in the country assailed him, and Petrillo had to backtrack: "I sure went the wrong way on that one," he said. "I was the most surprised man you ever saw when I read I was attacking the foundations of democracy. I certainly didn't want anybody to call me that kind of a guy—against free speech."

Petrillo's members in Chicago in 1934 sent him and his wife on a two months' tour of Europe—Petrillo came back saying: "They didn't have anything over there we wanted." In 1938 his members presented him with a \$25,000 summer home at Fontana, Wisconsin. Petrillo isn't surprised by these gifts. "I don't abuse the power I have. I'm on the square with our members, so they give me things." In June 1940 his local members, who pay him a salary of \$26,000 a year, helped elect him to the national presidency of the American Federation of Musicians. And Petrillo told them: "My services have never been for sale—only to the musicians I represent. . . I made you and you made me."

Petrillo has been a member of the A. F. M.'s national executive board since 1931. He had tried to get on it in 1927—"I got beaten very bad"—in 1930, and finally made it in 1931. When he wanted to become national president he helped vote the incumbent a \$20,000-a-year pension, and took office on June 24, 1940 at a salary of \$20,000 from the national office and \$26,000 from Chicago, whose head he remains. Five days later he barred sustaining name bands from NBC and CBS in an effort to force two stations to pay minimum wages to a certain number of local musicians whether they were needed or not. This was settled by a compromise. Then Petrillo forbade RCA

Victor to allow the Boston Symphony, the only non-union symphony orchestra, to make any more recordings. (It is because of Petrillo that the Boston Symphony hasn't broadcasted in more than a year.) "They're through," Petrillo announced. "We've taken them off the radio and off the records."

The real storm Petrillo stirred up, however, came in August 1940, when he informed the instrumentalists of the American Guild of Musical Artists (Heifetz, Horowitz, Zimbalist, Iturbi, etc.) that they had to join the American Federation of Musicians by Labor Day or be barred from radio and recording. "They're musicians and they belong to me," he declared. "Since when is there any difference between Heifetz playing a fiddle and the fiddler in a tavern? They're both musicians."

Immediately Lawrence Tibbett, president of the American Guild of Musical Artists and later of the American Federation of Radio Artists (September 1940), sought an injunction to prevent Petrillo's "blitzkrieg," which reflects "the personal ambition of one man to make himself the dictator of culture and entertainment in America." Tibbett pointed out Petrillo's control over his union—his power to fine up to \$5,000, to call a strike at will, to set aside any except a financial provision of the union's constitution. Petrillo pointed out, in answer, that he personally had never called a strike and that the executive board, not he, had power to impose fines, and sadly shrugged: "Everybody calls me the tsar, the chieftain and this and that. What can I do?" Justice Steuer on November 19, 1940 refused to grant the temporary injunction to Tibbett who is continuing to fight Petrillo, nevertheless.

The controversy between Petrillo and Tibbett was heightened by the contrast between the two men personally. The cultured elegance of Lawrence Tibbett seemed so remote from "horny handed" Petrillo, who "except on formal occasions has never been known to use an adjective when he could use profanity; who frequently becomes grammatically involved"; whose face is fleshy, jaw hard. Petrillo is "stumpy, five feet five inches," with a paunch that is hidden by good tailoring ("I spend a lot of dough for clothes"). In summer he weighs 175 pounds, in winter 165, with the difference explained by his bottomless capacity for beer in hot weather.

Petrillo was married in 1916 to Marie Frullate, a girl from his old West Side neighborhood in Chicago. One of their children died of an infection from a football injury; the two others are Leroy, who is now helping to build the Chicago subway, and 16-year-old Marie. "She's beautiful!" says her father. Neither has musical ambitions.

PHILLIPS, WILLIAM May 30, 1878—United States Ambassador to Italy

Address: h. 17 Commonwealth Ave, Boston, Massachusetts

December 1940 Bulletin: William Phillips resigned as Ambassador to Italy during a leave of absence in the United States in the summer of 1940. He has been convalescing from an illness. On December 18 Secretary of State Hull announced that Ambassador Phillips would return to his post in Rome. It is supposed that Italian war reverses make the move necessary.

From July issue:

When in 1936 William Phillips was appointed United States Ambassador to Italy, one commentator announced: "Mr. Phillips has now gone to the Embassy in Rome, where his skill in saying nothing will serve him and his country well." Mr. Phillips' "skill in saying nothing" has been serving him and his country well for many years, in all corners of the globe: London, China, The Netherlands, Belgium, Canada, Washington. He is "everything that Henry James could have hoped for in a United States diplomat. Complete assurance behind which there is an appealing shyness; capa-

city for being entirely graceful under any circumstances and in any language; ability to say yes or no with such distinction as to leave one in doubt as to whether the sun sets in the East or West; warm and friendly courtesy which could not possibly fail under any exasperation; proud lineage and acceptance by the best families—all these are William Phillips'."

The first Phillips arrived in New England around 1630 and proceeded to found Phillips Andover and Phillips Exeter Academies. Another Phillips was the first Mayor of Boston. The Phillips family fortune was made conventionally in shipping and real estate and preserved in the best New England tradition. Probably when William Phillips was born in Beverly, Massachusetts on May 30, 1878, the son of John Charles and Anna (Tucker) Phillips, it would therefore have surprised no one to learn that he was to become one of the "bulwarks of conservatism within the State Department."

William attended Milton Academy, in 1900 received his B. A. from Harvard, where he was three years ahead of Franklin Roosevelt, spent two and a half years at Harvard Law School and in 1903 entered the diplomatic service as private secretary to the venerable Joseph H. Choate, United States Ambassador to the Court of St. James. The "sauve and elegant" young man soon attracted attention, and in 1905 he found himself second secretary at the American legation at Peking. But Peking was very far away. In 1907 he resigned, gave up his seniority, and started all over again in the Gilbert-and-Sullivan-sounding position of assistant to the third Assistant Secretary of State on Far Eastern Affairs. His salary was no more than an office boy's, but like most of those who follow his career he had independent means. The next year he was himself third Assistant Secretary of State, and the year after that he returned to London as first Secretary of the Embassy.

In 1910 Phillips married Caroline Astor Drayton of New York, whose family, fortune, tact and charm would have been an asset to any rising diplomat. In 1912, at the age of 34, he retired on a leave of absence from London to become regent of the College and secretary of the Corporation at Harvard. But in 1914, when war broke out, he accepted from Woodrow Wilson the position of third Assistant Secretary of State which he had held before, and he remained in that position until he was appointed Assistant Secretary of State in 1917. During 1914 and 1915 it was to the Phillips' home in Washington that Colonel House was accustomed to go to discuss the American government's attitude toward the War.

In 1920 Phillips was in Europe as Minister to the Netherlands and Luxemburg, in 1922 back in Washington as Under-Secretary of State, in 1924 in Belgium as Ambassador, and in 1927 he became the United States' first Minister to Canada. Canada was a convenient post because the Phillips

children could go to school in the United States, but the United States Minister and Mrs. Phillips unfortunately never found a house large enough to suit them! In 1929 he resigned and retired once more to Beverly, where he headed the Massachusetts drive of Herbert Hoover's private Committee on Unemployment until President Roosevelt called him back to the State Department in 1933. "That Republican Phillips was so honored by two Democrats (Wilson and Roosevelt) was proof both of his ability and his studied disdain of politics."

Once more Under-Secretary of State, Phillips' job was to supervise the acts of 800 members of Secretary Hull's (see sketch this issue) State Department and of 3,500 United States representatives scattered all over the globe, as well as to confer with the foreign representatives in Washington. Yet, although he would perhaps have been more at home under an old deal than a new, not once did a diplomatic break, a muddled situation or "so much as a misplaced comma" develop to haunt him. He remained "tight-lipped, adroit, correct in all formal punctilio from boutonnières to syntax, never caught off-side in any close diplomatic huddle." For a time it was also his duty to make all diplomatic appointments in the State Department, but here he showed such an "overpowering preference for Social Registerites and career boys" at the expense of ambitious campaign contributors, and he developed such a personal horror of politics that all political comers were finally bundled off to another office.

In 1935 Phillips was a United States delegate to the London Naval Conference. In June 1936, after the resignation of Breckinridge Long, he sailed for Italy to take up his duties on August 4 as Ambassador to that country, to "keep watch in Rome on Europe's fever chart."

Someone once said of Phillips: "He has had the happy knack of always associating himself with the right men. His ladder to success has been Joseph H. Choate, Theodore Roosevelt, Elihu Root, Charles E. Hughes and Franklin D. Roosevelt, but he has climbed of his own ability, initiative and personality."

In spite of a good sense of humor, Ambassador Phillips is "so cautious and deliberate in his choice of words that he supplies his small world with few *bons mots*." But many years ago he supplied the perfect diplomat's answer to an interviewer's question: "There are jarring notes only when there are jarring personalities." Veteran Phillips is justly famed for his avoidance of jarring notes. Tall, lean, faultlessly tailored, complete with Harvard accent, shapely head, "sleek parting of the hair at the top of his high forehead," long nose and "aristocratically petulant mouth," he is "of the polished and professional type, cool to all but their closest friends"—surely "the career man's perfect picture of a diplomat."

Ambassador and Mrs. Phillips have three sons—William, Drayton and Christopher; two daughters—Beatrice and Anne; maintain homes in both North Beverly and in Boston. In Rome their home is a "great Italian Renaissance villa, with stucco walls, marble trimmings and gleaming classic statues galore on the roof and terrace."

PINKERTON, KATHRENE SUTHERLAND June 9, 1887- Author

Address: c/o Brandt and Brandt, 101 Park Ave, New York City

Kathrene Pinkerton's story, *Wilderness Wife*, published early in 1939, of how she and her husband, who was ill, spent five arduous years in the Canadian North Woods aroused much popular interest as a modern pioneer venture. Mrs. Pinkerton was born June 9, 1887, in Minneapolis, Minnesota. After graduation from the University of Wisconsin she worked for the Russell Sage housing investigation, and then as field secretary for the Wisconsin anti-tuberculosis association.

In 1911 she married Robert E. Pinkerton, a writer, and for a time collaborated with him on short stories and novels. Soon after their marriage she and her husband—he on doctor's orders, she a city-bred girl with no experience of outdoor life—went to the Ontario wilderness. They had a capital of

KATHRENE SUTHERLAND PINKERTON

\$80, and hoped to earn money by writing. It is the adventure of those years that Mrs. Pinkerton describes in *Wilderness Wife*. The stories at first didn't sell; while her husband served as a hunter's guide, she learned to cook and to manage a dog team, undertook trapping and fur trading, and even had a baby. Later writing success came, and they left their wilderness life.

"On our return to the States," Mrs. Pinkerton writes us, "we motored Westward, before there were surfaced highways. Lived in the high Rockies, on the desert, in the Sierra Nevada mountains and on the Pacific Coast. Because of our work, we could live where we wished, and it was our custom to settle in a place we liked, work for six months, move on. In 1924 we bought a small boat and cruised the British Columbia coast for three months. Liked it so well we bought a larger boat and lived on it almost continuously for the next six years, cruising the entire British Columbia coast and all of Southeastern Alaska. Once we did not sleep ashore for 522 nights."

They have traveled extensively since then, and in 1940 are staying in California. Their possessions, however, have been reduced for car traveling, and at any moment the Pinkertons can be foot-loose again.

Besides *Wilderness Wife*, Mrs. Pinkerton is the author of *Woodcraft for Women* (1915); *Penitentiary Post* with Robert Pinkerton (1920); *The Long Traverse* with Robert Pinkerton (1920); *Three's a Crew* and *Adventure North* (1940). She and her husband are coauthors of some six million words of magazine fiction.

PORTER, COLE June 9, 1892- Com-
 poser

Address: c/o Richard J. Madden 515 Madison
 Ave, New York City

That a boy from a farm in Peru, Indiana should become one of the best-known composers of sophisticated musical comedies with an international flavor is something of an anachronism. And perhaps Cole Porter, the boy in question, knows it because he has worked so hard at being a playboy.

Born in 1892, the son of Samuel Fenwick and Kate (Cole) Porter, on his parents' 700-acre farm near Peru, Indiana, Cole Porter began playing the violin and piano at the age of six. He didn't play much with other boys, he didn't do much of anything but practice and go to school because his parents thought he had talent. For fun he visited the winter quarters of the Hagenbeck and Wallace circus nearby, and became proficient at circus acrobatics practiced at home. But even before he left the confines of Peru, he composed a piece, *The Bobolink Waltz*, inspired by the song of the bobolink, and sent it off to a Chicago publisher. Although he was informed the song would be published, he never saw a check or the manuscript.

The Porter family was well off financially, Cole's grandfather having established the family fortunes when he started for forty-niner gold and ended up by buying Virginia timberland on which coal was found. Cole was sent to the East Worcester School for Boys, then Yale, where he distinguished himself by writing the famous football songs, *Bingo* and *Bulldog Yale*, and where his ballad *Miss Antoinette Birby* who "lived down in Derby" and whose adventures in that fountain of knowledge—Yale College—became undergraduate legend.

After he was graduated from Yale, he went to Harvard Law School for one semester, but quickly changed to the Harvard Music School, which he attended for two years. Later he supplemented this musical education by studying under Vincent d'Indy, the French composer, at the Schola Cantorum in Paris.

Armed with a Yale degree, a Harvard musical education, entree into the best cocktail parties, and the reputation for playing amusing songs, Porter might have begun his playboy career right then and there. Instead he elected to work. He wrote a musical comedy, *See America First*, in 1915, which turned out to be a dismal failure. It was his first important flop, and Porter was deep in melancholy.

Nelson

COLE PORTER

At this point an acquaintance suggested that the young composer would improve his compositions if he had the inspiration of more play life, saw something of the world and had more stimulating experiences than one circle of friends and one environment could give him. Porter disregarded this advice and set to work doggedly again. Then, when he seemed unable to create music, he joined the French Foreign Legion in desperation. He would see life, he would live dangerously, bravely, perhaps be killed. Instead, with the French Foreign Legion, Porter learned to be a playboy. The Legionnaire worked hard and played hard. Porter marched with a portable piano which looked like a zither slung across his back along with his pack, and when the regiment rested, he struck up the strings and played the men's favorite songs. He found himself composing tunes, creating in the abandon of play.

When the American troops began to arrive in France, Porter was transferred to a French artillery school to learn how to teach French gunnery methods to his fellow countrymen. He was far back of the fighting lines, and on leave had gay times in Paris. His sky-blue uniform, his Croix de Guerre (the French government had decorated him not for bravery but for good comradeship and personality) and his champagne parties are still remembered by Parisians.

During this period he married in Paris Mrs. Lee Thomas, daughter of William P. Lee of Louisville, Kentucky and former wife of Edward R. Thomas, well-to-do socialite. Porter now entered society and became a playboy in earnest.

He also began writing more music and did the scores and lyrics for two successes, *Kitchy Koo* and *Greenwich Village Follies*. *An Old*

PORTER, COLE—Continued

Fashioned Garden from *Kitchy Koo* was a huge success, and a few tunes from *Greenwich Village Follies* caught on. But Porter was still just one of the Tin Pan Alley troop, and not among the ranks of important composers.

Porter, however, did not lead the kind of life of other young men in Tin Pan Alley. He was Park Avenue at its most frivolous. He flitted from one party to another, from one yacht trip to another. He was at the opening of society's season in Paris; gave enormous parties at the Lido, Venice; held a salon at his home in the Faubourg St. Germain; week-ended in Morocco; was off on a world cruise. Producers shied away from him. They were afraid to put their shows into the hands of such a playboy.

Cole Porter's career came to a standstill. From 1923 to 1927 he could not get into a theatrical producer's office. He continued composing, however, for fun and for a circle of appreciative friends. He sang and played at Elsa Maxwell's and Noel Coward's parties. He amused the élite. The then Prince of Wales—Edward—liked his music. People described it as smart, but not commercial. Since Broadway had turned him down, Porter decided to chuck the works, retire to Venice and take up painting.

He tried to think he didn't want anything more to do with producers and acted the part of a bored young man, but when he saw Ray Goetz, the famous theatrical producer, on a beach at Venice, he confesses that his heart leaped. He knew he hadn't been playing for the fun of it. Goetz needed a composer to write scores for a musical comedy to be called *Paris*, which was to star Irene Bordoni. He wanted an American who could write songs with a Parisian flavor, and he didn't think any of the hard-working New York composers could do it.

So Cole Porter got the job, and went to work—or rather to play. For he worked hardest when he played hardest. He turned out not only *Paris* with its popular *Let's Do It Again*, but also *Fifty Million Frenchmen*, *Wake Up and Dream* and *The New Yorkers*. In 1932 there followed *The Gay Divorcee*, with its never-to-be-forgotten *Night and Day*, which swept the country, and in 1934 the tremendous hit, *Anything Goes*, which sent the whole country humming *You're the Top*, a song that was parodied so much that Porter had to take steps to forbid any but the original words from being broadcast on the radio. *Anything Goes* served to push Porter up to the top rung of the ladder of fame. Debutantes, stenographers, the man in the street were singing *You're the Top*.

Porter had written the score and lyrics for *Anything Goes* while drifting lazily down the Rhine River sheathed in a richly colored bathing suit. The music had been written for a musical comedy based upon an explosion on a ship at sea. But just before the show went to rehearsal the American excursion boat, *Morro Castle*, burned, and a comedy about an

explosion seemed in execrable taste. The book had to be rewritten quickly, with the boat afloat, and Porter began again to play and to compose. Only two songs, *You're the Top* and *Blue Bird*, were retained from his original score.

Cole Porter's *Du Barry Was a Lady*, which opened in New York in December 1939, was the first show in four years to charge \$7.70 on opening night, with tickets being "scalped" at \$50 and \$75 a pair. The Cole Porter music and lyrics, and the personalities of Bert Lahr and Ethel Merman (later replaced) in the star parts were considered golden guarantee. The musical comedy had several good songs, among them *Friendship* and *Katie Went to Haiti*, but it was not Porter's best. It was still running strong in the winter of 1940, however, with seats still at a premium. *Panama Hattie*, his latest, opened with Ethel Merman in the title rôle in the fall of 1940 and has been enormously successful.

A working schedule for Porter means three or four parties a night, a wink of sleep between sunup and 10 a. m., and then a stretch of work from 11 a. m. to 5 p. m., when he starts the gay night life again. He does his best work lying on his back, looking up at the ceiling; he has his most successful inspirations while he is hard at work playing. He doesn't need a piano, paper and pencil to compose his lyrics. He thinks everything through, and then sets it down in a few minutes or dictates it to his secretary. His songs generally start with a title. Then he composes the melody, writes the last line of the chorus lyric, and works backward to the verse.

Porter has been called the heir apparent to the throne of Jerome Kern as the nation's top ballader. He followed *Anything Goes* with *Jubilee* in 1935. A song in *Jubilee* which scarcely raised a fuss was made into a dance arrangement by Artie Shaw in 1938. It became one of Porter's greatest hits, *Begin the Beguine*.

In 1938 he fractured both legs when he was thrown from a horse on the bridle path at Long Island's swank Piping Rock Club. In spite of the handicap of crutches he continued his visits to night clubs. While he was in bed he wrote part of the music and lyrics to *Leave It to Me*.

Porter is small, slender and slick-haired, cast in the image of Broadway. He moves, however, in a society of wealth and culture. A round-faced man, with saucer-like, gentle brown eyes, he has roaring enthusiasms. "I don't know why they say I'm bored," he told an interviewer. "I'm the most enthusiastic person in the world. I like everything as long as it's different. I like to go back to Peru, Indiana. I like hunting, swimming, parties, food, drink, composing. I like cats and voyages. You know I couldn't be bored or I couldn't compose. I am spending my life escaping boredom, not because I am bored, but because I don't want to be. I'm a hard-working boy from Indiana and I'm engaged in the busi-

ness of entertaining myself, which enables me to entertain, as much as I can, the world." But one of these days, Porter says he is going to rest—"gardening, you know . . . in my back yard in Paris. I'm going to take a long rest from play and hoe and dig."

Mr. Porter's works include the scores of *See America First*, produced in 1916; *Kitchy Koo* (1919); *Greenwich Village Follies* (1924); *Paris* (1928); *Wake Up and Dream* (1929); *Fifty Million Frenchmen* (1929); *The New Yorkers* (1930); *Gay Divorcee* (1932); *Nymph Errant* (1933); *Anything Goes* (1934); *Jubilee* (1935); *Red Hot and Blue* (1936); part of the lyrics and music to *You Never Know* (1938); *Leave It to Me* (1938); *Du Barry Was a Lady* (1939); *Panama Hattie* (1940). He has also contributed numbers to other shows and written scores for several movies.

PORTER, KATHERINE ANNE May 15, 1894- Author

Address: 1050 Government St, Baton Rouge, Louisiana

Rated by most critics as the outstanding stylist among living American writers, Katherine Anne Porter received on April 3, 1940, the gold medal of the Society for the Libraries of New York University for her book, *Pale Horse, Pale Rider*, published in 1939.

Few writers in the United States have been praised as highly as Katherine Anne Porter for publishing so little. *Flowering Judas*, published with other stories in a volume of that title in 1930, was one of her first published stories and the one that made her reputation. In 1935 the volume was reissued with two short and two longer stories added. Miss Porter continued to write after the publication of *Flowering Judas*, but only a few stories a year appeared and it wasn't until 1939 that her second book, *Pale Horse, Pale Rider*, was published. The reason for her unusual renown among connoisseurs of good prose, despite the smallness of her output, lies in the sheer excellence of all she writes; she commands in her work the most essential and exacting attributes of what constitutes good, as distinguished from esoteric or experimental, style.

G. Maillard Kesslère

KATHERINE ANNE PORTER

Katherine Anne Porter was born at Indian Creek, near San Antonio, Texas, May 15, 1894, daughter of Harrison Boone and Mary Alice (Jones) Porter. She is a descendant of Daniel Boone; and one of her ancestors, Colonel Andrew Porter of Montgomery County, Pennsylvania, was a colonel on Washington's staff. She is quite proud of him: "It seems that he went where he was needed and did the best he could. There is nothing in the record to suggest that he was a careerist or politician." Other ancestors were educators. Miss Porter was brought up in Texas and Louisiana and educated at small Southern schools for girls. She says she was "precocious, nervous, rebellious, unteachable." Writing stories, from a very early age, was her real life, her one interest: "This has been the intact line of my life which directs my actions, determines my point of view, profoundly affects my character and personality, my social beliefs and economic status and the kind of friendships I form."

During all those early years she came in contact with no other writers, an isolation which probably saved her from direct influences and membership or alliance with special groups. She worked as a newspaper reporter in Dallas, and then in Denver, until she became seriously ill with influenza. After recovering she began to travel, in the United States, in Mexico, and abroad, doing reviewing, articles and hack writing of all kinds to support herself. "I have very little time sense," she says, "and almost no sense of distance. I have no sense of direction and have seen a great deal of the world by getting completely lost and simply taking in the scenery as I roamed about getting my bearings. . . I have a personal and instant interest in every human being that comes within ten feet of me, and I have never

PORTER, KATHERINE—*Continued*

seen any two alike, but I discover the most marvelous differences. It is the same with furred animals. I love best remembered landscapes two or three countries away."

She lived and worked for some time in Mexico, and arranged the first exhibition of Mexican popular arts sent to the United States. Mexico was the background for some of her first published stories. Her stories began to appear in *Century*, *transition*, the *New Masses*, *Scribner's* and *Hound and Horn*. When the collection, *Flowering Judas*, appeared in 1930, it received unanimous critical acclaim. Typical of the reaction to these six stories was Louise Bogan's estimate: "It is to Miss Porter's high credit that, having fixed upon the exceptional background and event, she has not yielded, in her treatment of them, to queerness and forced originality of form. . . She rejects the exclamatory tricks that wind up style to a spurious intensity, and trusts, for the most part, to straightforward writing, to patience in detail and to a thorough imaginative grasp of cause and character. . . Miss Porter should demand much work of her talent. There is nothing quite like it, and very little that approaches its strength in contemporary writing."

In 1931 Miss Porter was awarded a Guggenheim Fellowship and went abroad to travel and to write. While abroad she met Goering, Goebbels and Hitler, whom she considered "detestable and dangerous." In Paris in 1933 she married Eugene Pressly.

Miss Porter continued her writing in the United States on her return a few years later. She was a Book-of-the-Month Club Fellow for 1937. She has lectured at the Olivet Writers' Summer Conferences since 1937. During the past few years she has become associated with that group of Southern writers centering at Louisiana State University, whose leader is Robert Penn Warren, editor of the *Southern Review*. In 1938 she divorced her first husband and married Albert Russel Erskine Jr., assistant editor of the Louisiana State University Press and business manager of the *Southern Review*.

Pale Horse, Pale Rider (1939) contains three novelettes. One, *Noon Wine*, is a psychological tale of murder on a small farm in Southern Texas: a tragedy presented not sensationally, but with vividness and conviction. The other two stories are related. In *Old Mortality* we are shown, through the eyes of two little girls, particularly freckle-nosed Miranda, the romantic, captivating person of Aunt Amy, a Southern belle, and the disintegration of her family. In the title story Miranda appears again: it is 1918, she is in love with a soldier, Adam, both get influenza, and Adam dies. It is a bitter, heartbreaking tale of young love and the horror of war. Miss Porter calls it the best story she has ever written. Of this book Paul Rosenfeld writes: "Katherine Anne Porter moves

in the illustrious company headed by Hawthorne, Flaubert and Henry James. Beautifully modeled, petal-like sentences abound in the three novelettes. But unlike those of other conscious stylists, Kay Boyle for example, they never seem to stud the prose and pirouette in the direction of imaginary footlights. They move unobtrusively and precisely. So, too, do the narratives, without breaks and with inflexible steadiness and suppleness, easily, almost with sprightliness."

In spite of her reputation as a stylist, Miss Porter does not try to be one; she actually does not want to write for connoisseurs. She is enjoyed by a relatively small number of readers because she writes sensitively and subtly, with a non-vulgar, non-slick quality. It is probable that she would gain more readers if her style were tougher in fiber, more robust: "vulgar" in the broad, human sense.

For concentration, she likes privacy when writing; but she also likes people and guests, so an isolated life is seldom hers. First, she says, she goes through a long period of thinking out the story. Once she starts writing (the beginning usually comes hard) she writes practically at white heat. Each of the three novelettes in *Pale Horse, Pale Rider* was written in less than a week. She uses a kind of typewritten shorthand, writing "as long as I am allowed by God, guess, and awkwardness." She makes revisions in the first draft, retypes it, makes a few more corrections, and that's all.

Miss Porter is quiet, charming, likes to cook and sew, reads medieval documents and modern poetry. She and her husband live on a tree-shaded street in Baton Rouge. For some years she has been working off and on at a biography of Cotton Mather; and for the past few years on a full-length novel, which she expects to have ready for the publisher soon. She refers to it as the *Promised Land*, although her publishers have advised her to think of a more original title. Its setting is on shipboard, and there are over 40 main characters. Though some critics doubt whether Miss Porter's style and method would be successful on so large a canvas, it must be remembered that, with Katherine Anne Porter, writing isn't a career—"it's a way of life."

PORTINARI, CANDIDO (pôr-tê-nă'rê cãn-dê'dô) 1903- Artist

Address: c/o Museum of Modern Art, New York City

In the fall of 1940 there were three American exhibitions of the work of the Brazilian artist, Cândido Portinari. In August and September the Detroit Institute of Arts presented a showing of his paintings, and his work was represented at a Latin-American Exhibition at the Riverside Museum in New York; in October and November he was given a one-man show at New York's Museum of Modern Art. And his art will be permanently before the public in a volume of reproductions which the University of Chicago Press will bring out in 1941.

From these exhibitions a definite impression of the artist emerges. His is an art that is "remarkably varied in technique, in style and in theme." There are portraits with "a Renaissance straightforwardness and force of simple modeling and linear clarity"; there are female groups magnificent in their monumental qualities—*Women Planting*, for instance. From the architecturally impressive *Sao Joao Festival*, his paintings vary through a "looser technique of flowing surfaces" in his genre subjects and in his "picturesque and flamboyant studies of girls embracing, conversing and couples strolling," to designs like *Carcass* or *Burial* or *Scarecrow* that are fantastic, macabre, eerie, surrealist.

Portinari paints Brazil, mainly—"the red water carafe, the gaily decorated round-topped box which contains whatever the poor Brazilian considers precious . . . the stiff little flag on the mast outside of the village church, the inevitable kerosene can which the women use to carry water on their heads." He has shown the native workers of Brazil without romanticism, without exoticism, as real people who work, play, love, marry and die. *Burial in the Hills*, "a quiet story about life and death—as natural as the hills and the horizon," is typical.

Particularly he has painted the Negroes who make up 30 per cent of Brazil's population. In *Morro*, for instance, which was bought in 1939 by the Museum of Modern Art, he shows a hill in a poor Negro quarter and shows it with sympathy and dignity, untouched by propaganda. Portinari has painted, too, the Indians of South America—one critic insists that he "is at his best when he paints the Indians." In these pictures occasionally there is a tendency toward exaggeration and even distortion for dramatic effect and in these pictures there is little conventional beauty—"Portinari paints ugly things," some critics complain.

Nearly all of Portinari's work, no matter what the style or subject, is distinguished by fresh color. He likes "violent yellows, rich red-browns, green-blacks and electric blues," particularly blues. He himself says, "People are all colors in Brazil, especially

CANDIDO PORTINARI

blue." His work is, distinguished, too, except in evanescent fancies like *Scarecrow*, by studious and effective draughtsmanship.

Portinari's "peculiarly powerful style and vigorous mannerisms are especially adapted to monumental productions," most critics agree, and though he only recently turned to the fresco medium there is no doubt that some of his most successful work has been done in this field. In 1939 he completed a monumental series on the regional occupations of Brazil for the new Building of Education and Health in Rio de Janeiro, and in that same year painted three murals for the Brazilian pavilion at the New York World's Fair. In his frescoes, Portinari's "figures are large and dramatic, his backgrounds highly patterned and his palette rich in cool tones and singing darks. Like the Mexicans he cubes his forms and distorts his shapes to add to their effect of power, but he is an excellent draughtsman, capable of being rigidly naturalistic . . . as in a woman's head, *Retrato de minha mãe*, or decoratively abstract and whimsical as in *Figura e boizinho*."

Cândido Portinari has painted since he was eight. He was born in the state of Sao Paulo in Brazil, the second of the 12 children of coffee workers who had immigrated there from Italy. His schooling was brief and irregular, for he had to help in the fields. It was in one of his short periods at school that Portinari broke his leg playing soccer and was left with a permanent limp. He says now that he is glad he did break it because it left him with more time for painting and none for soccer.

At school and at work Portinari scribbled drawings on paper, fences, walls. The first important one, he remembers, was of an apple on a table in a framework representing another "similar to the one on the table but,

PORTINARI, CANDIDO—*Continued*

naturally, larger." A few years later some itinerant painters came to the little town of Brodowski, where he and his family lived, to decorate the local church. Cândido was allowed to hang around and watch; soon he was given permission to mix the paint; finally, he was allowed to paint stars on the ceiling. That was when he determined to become an artist.

When he was about 15 his family had saved enough money to send him to Rio de Janeiro with three shirts and one pair of pants wrapped in a flour bag. In Rio, Portinari got lodgings in the bathroom of a boarding house and had to be out at five in the morning when the boarders would want to bathe. He enrolled at the art school, got himself a job with a photographer drawing enlargements of photographs and for many years continued to study and live skimpily on whatever he could make from portraits.

In his early 20's Portinari began to receive a few medals and prizes and a few more portrait commissions. Finally, in 1928, he won the *Prix de Voyage* which enabled him to go to Europe. In Europe he visited galleries, talked with people, read and did almost no painting at all. It was in Paris, Portinari says, that "I really commenced to see my native village. I have found that I can paint nothing at first sight. I must wait and let imagination work." He returned to Rio with only one small canvas, scandalizing the art world which was used to seeing painters return from a *Prix de Voyage* with truckloads of art.

He came back broke and with a Uruguayan wife, Maria, whom he had met in Paris. His first job was to convince a graduating class of 40 architects that he would do their portraits cheaper than a photographer would; his next to do them. In 1932 things began to pick up. The painter Foujita visited Rio and became interested in Portinari's work. Through him Portinari got to know the people in the diplomatic and foreign colony and was asked to paint their portraits. He became something of a fashionable portrait painter.

Portinari first came to the attention of Americans in 1935 when his *Coffee* won a second honorable mention in the Carnegie International Exposition. The next year he got his first adequate money-making position—on the faculty of the University of the Federal District in Rio—and stayed there until the spring of 1939, when the University closed. It was in Rio that Portinari got his first fresco commission and in Rio that the first comprehensive exhibition of his work was held in 1939.

With his work exciting attention in the United States in 1940 and with the opening of the Museum of Modern Art's exhibition, Portinari, his wife and their one and one-half year old son, Joao Cândido, came to

the United States for the first time. Portinari, who has been going to American movies every day for many years, found Manhattan disappointingly mild. He was impressed, though, by a "What do you call it? A cafeteria? It was beautiful. And the fruit of the United States so polished and well kept just as though it had been waxed."

Interviewers found Portinari a sandy-haired, five-foot-five, slightly plump young man, with a lively and often satirical sense of humor. But most of them were hampered in their search for feature material by the fact that he speaks only Portuguese and a smattering of French. What many of them did discover was that several months before his baby's birth he began setting aside some of his choicest paintings for the baby's art collection, which is already impressive, and that he still has a small house near his family in Brodowski, where he is "still the simple son of the Italian coffee pickers."

POWYS, LLEWELYN pō'is hlōō-ēl'in) Aug 13, 1884—Dec 2, 1939 English author

"I want to live to a great old age. . ."—such was the hope of Llewelyn Powys, who came of a family rich in literary tradition and who died December 2, 1939 at Davos Platz, Switzerland, at the age of 55.

The author of *Black Laughter*, *The Verdict of Bridlegoose*, and *The Pathetic Fallacy* had suffered for 30 years from tuberculosis. He was born at Dorchester, Dorset, England, the son of a clergyman. From the Sherborne School he went to Corpus Christi College, Cambridge, and in 1908 visited America on a lecture tour. Discovering his disease in 1909, he sought relief in Switzerland and finally in British East Africa, where he raised stock from 1914 to 1919. Returning to England, he left shortly again for America and earned a sketchy living as a journalist in New York until 1924. In that year he took his American wife, Alyse Gregory, managing editor of the *Dial*, back to England. After a journey to Palestine in 1928 and to the West Indies in 1930 he took final refuge in Switzerland.

PRENTIS, HENNING WEBB JR. July 11, 1884— President of the National Association of Manufacturers

Address: b. Armstrong Cork Co, Lancaster, Pennsylvania; h. 151 School Lane, Lancaster, Pennsylvania

In 1940, after a long period of leadership in its councils, Henning W. Prentis Jr., was

Acme

HENNING WEBB PRENTIS JR.

PRENTIS, HENNING WEBB JR.—*Cont.* elected president of the National Association of Manufacturers in recognition of "his leadership in American industry." Both a scholar and a businessman, he was born in St. Louis, Missouri, the son of Henning Webb and Mary Norton (McNutt) Prentis, educated in the public schools of that state and received his B. A. degree from the University of Missouri in 1903. Later, in 1907, he received an M. A. in economics at the University of Cincinnati. For two years he was secretary to the president of the University of Missouri, then served in the same capacity at the University of Cincinnati.

In March 1907 Mr. Prentis left academic life and became assistant to the manager of the insulation division of the Armstrong Cork Company. He has been connected with that organization ever since. He rose from position to position within the company until he assumed the presidency in 1934, with direct charge over 11,000 employees in the United States and abroad. In 1909 he married Ida Bernice Cole of Portsmouth, Ohio.

In addition to serving as director and vice-president of the N. A. M. he was head of a committee which made a two-year survey of the "best" practices followed by outstanding firms of the nation. These were put together in a manual entitled *Constructive Industrial Practices*. His interest in education brought him a position as head of a committee on educational cooperation—a group formed "at the request of distinguished educators to give advice on educational problems too broad in scope to be solved by schoolmen alone." In August 1939, together with 50 educators and industrialists, he took part in a Congress on Education for Democracy at Columbia University. There he asserted that "our founding fathers created a republic as distinguished from a democracy, between which there is indeed a wide gulf. The solution of our problems does not lie in more and more democracy."

Mr. Prentis finds himself frequently in the news these days. He spoke before 2,000 business leaders in May 1940, telling them that "no profit in war" was the policy of the N. A. M. "The association and business as a whole," he declared, "approve an adequate national defense, but oppose any idea of participation in war." "Mobilization for Understanding of Private Enterprise" is the association's platform as a counter-offensive for what Prentis calls "creeping collectivism." In September 1940 he announced that the N. A. M., its industrial council and 243 affiliated organizations are conducting their own survey of defense potentialities of the nation's plants, as one of four major points in an N. A. M. program of industrial cooperation with the preparedness program.

Critics have said that Mr. Prentis "detests the NLRB. He loathes the CIO and

doesn't care much for unions in general. Doubtful about the ability of people to govern themselves, Mr. Prentis has warned against the 'pitfalls of democracy.'" Armstrong Cork makes about half of the linoleum sold in the United States. In June 1940 the employees held and won an NLRB election. "Democracy at work is well illustrated by the National Labor Relations Act," declared Mr. Prentis. "Under its provisions 50 per cent of the employees of any concern are empowered to speak for all—thus disregarding certain rights of the minority."

Governing a huge body of employees, writing on industry and education, making speeches and participating in leadership of the N. A. M. and many other organizations take most of Mr. Prentis' time. On his farm, where he goes for relaxation from his many activities, Mr. Prentis raises horses, cattle and chickens. A few years ago he took up water-color painting and has since made many landscapes of the farm. Throughout his business life he has retained his deep interest in the educational field. He is a member of Phi Beta Kappa, holds two honorary Doctor of Law degrees—one from Hampden-Sydney College and one from Grove City College.

PROCOPE, HJALMAR JOHAN (prō'cō'-pā' hāl'mar' yō-hän) Aug 8, 1889- Finnish Ambassador to the United States; economist

Address: b. 2416 Tracy Pl, N W, Washington, D. C.

"The peace is hard, but Finland is not defeated... Her needs are great and urgent. The assistance of the American people in meeting these needs is of vital importance to us." These words were spoken by Hjalmar J. Procopé, Finnish Minister to the United States, when Finland signed a peace treaty with Russia on March 13, 1940. The future fate of Finland may be uncertain, but Procopé, whose task has been an arduous one during the past few months,

expects to keep on working for Finland. His immediate concern centers around the continuance of fund collecting by American organizations for the relief of Finland; in October 1940 Procopé reported that unless aid is forthcoming, thousands of Finns evacuated from Russian-occupied territory will face "famine and cold" this winter. A weighty problem is what to do with the \$20,000,000 which the Administration had planned to lend Finland through the Export-Import Bank. According to Loan Administrator Jesse Jones (see sketch this issue), it is still available for rehabilitation work.

Hard-working, intensely patriotic Hjalmar Procopé, busiest and handsomest foreign diplomat in Washington, was born in Helsinki in 1889, the oldest son of a prosperous Helsinki lawyer. He was graduated from the University of Helsinki in 1914, and began practicing law a year later. When Finnish freedom came with the Russian Revolution's elimination of the Czarist hold on Finland, Procopé was a judge. During those unsettled and exciting years, Procopé twice stood before a Bolshevik firing squad, and twice by incredible circumstances escaped. The new Finnish government was finally established and recognized young Procopé's abilities. He was a brilliant lawyer, a linguist who spoke English, French, German, Swedish and Norwegian.

In 1918 he entered the foreign service, after being a member of the Helsinki Municipal Council for a year. He became a member of Parliament. In 1920, when he was 31, he was named Minister of Commerce and Industry. He visited England and laid the foundation for a thriving commerce between the two nations. He was appointed Minister of Foreign Affairs in 1924, which position he held through six Cabinets. He was Minister to Poland from 1926 to 1927. He became Finnish Representative to the League of Nations Council, and for six years was active in the work of the League. His work at Geneva educated him in the pressing problems of the world: disarmament, ethnic minorities, the arbitration of international disputes. Procopé believed in the League, up to 1928, as a stronghold of Finnish independence; after that he saw that it would be vain for his government to put any trust in the League. Finland launched a strong military program for defense and began to look to the development of a firm friendship with the United States.

From 1931 to 1938 Procopé was managing director of the Finnish Paper Mill Association, largest exporter of European paper to all quarters of the world, and especially to the United States. There were few American newspaper publishers whom Procopé did not know when he arrived here officially in 1939. He first visited the United States, however, in 1925, as Finland's delegate to the Inter-Parliamentary Union meeting in Washington. At that time he traveled extensively throughout the United States, get-

Blackstone

HJALMAR J. PROCOPE

ting acquainted with journalists, labor leaders and businessmen. He learned all that he could about America to help his country model its ways after the best that he found in the United States. His second visit was in 1937 to strengthen trade relations between the two countries.

Because of his experience at Geneva, because of his knowledge of the United States, and because of the growing gravity of Finland's position in the international situation, in November 1938 the Finnish government chose Procopé for the Washington post. Illness, however, delayed his arrival for five months. When he arrived at the Finnish Legation in March 1939, duties were light: three persons took care of all the business. But since the "Peace of Munich" Procopé and other Finnish leaders were expecting the worst. Risto Solanko, in 1940 Procopé's first secretary, made an economic survey of Finnish resources and the war uses to which they could be put; Colonel Per Zilliacus studied modern warfare in Europe's military colleges. It was Procopé's job to pave the way for the United States to assist Finland in every way "short of war." When hostilities finally broke out between Russia and Finland, it came as no surprise to the Finnish Minister. But after that day the number of men and women working at the Finnish Legation grew from three to thirty, the Legation had its own switchboard going 24 hours a day.

Intelligent and friendly, his erect, tall figure and sure stride well-known in Washington, Procopé had no personal difficulty in enlisting sympathy for his country—a sympathy already predisposed because of the publicity attending Finland's payments of its "war debt." Procopé knew that the raising of money was all-important. This meant hours of hard work daily: he seldom went

to bed till 2:30 a. m., and was up again at 7. He went out to dinner every night, with people who could offer the best avenues of information or help.

Procopé sought first a loan in Wall Street, but soon donations from the American people rained in upon his busy Legation—from \$1,000 a day in December 1939 to \$6,000 in February and March of 1940. Many stories are told about individual donations during the fund-raising drive. A well-dressed woman from Virginia walked into the Minister's office and took a bracelet from her wrist. "This is for Finland," she said. It was worth \$2,500. When Procopé entered a Washington shop to get his fountain pen repaired, the shop-owner promptly donated the 25-cent fee to Finland's treasury. A taxi-driver put a quarter with a note under the Legation's door: "This is all I can spare. Good luck." An American Legion Post in Missouri donated a mule for the Finnish artillery.

The two organizations most active in money-raising, and with which Procopé closely cooperated, were Herbert Hoover's Finnish Relief Fund and General John O'Ryan's Fighting Funds for Finland. These made collections running into the millions. Since all loans were specified to be used for non-military purposes, the Finns were greatly disappointed that they failed to get an American governmental loan to buy munitions. Procopé was restrained in his comment, but there were times when he felt he had failed in his mission. He once remarked that Paavo Nurmi, the Finnish athlete, was the best envoy Finland ever sent to the United States. But throughout the campaign Procopé's personal popularity grew. At the Gridiron Club banquet in Washington in December 1939, he received one of the most rousing ovations ever accorded a guest. He is in demand socially as a superior conversationalist with an amazing range of knowledge, and a capacity for listening as well. He has many requests to make speeches, and often complies. He once spoke over the telephone from Washington to 250 Finnish-American students at Suomi College in Northern Michigan. There were tears in his eyes, and the voice coming over the amplifiers in the college auditorium had a catch in it: it was oratory as moving as any the students had ever heard, burning with deep feeling for a homeland in distress. At its finish Procopé slumped in his chair; and at the college was a deep silence, then a great burst of cheering which he never heard.

At 50, Procopé looks little more than 40, and his step is still jaunty, though his hair is graying from past months of arduous work and worry over the fate of his country. On March 30, 1940 he was married to Miss Margaret Shaw of Sutton-on-the-Forest, York, England, at the historic Virginia home of B. Walton Moore, counselor of the United States State Department. The couple had met two years ago in London. She

is the daughter of Mrs. Adela Shaw and a niece of the Dowager Countess of Lindsay. Procopé's previous marriage ended in a divorce in 1939, Legation attachés said. He has one son, 23 years old, in Finland.

QUEEN, ELLERY, pseud. of **FREDERIC DANNAY** Jan 11, 1905- and **MANFRED B. LEE** Oct 20, 1905- Author of murder mysteries

Address: c/o F. A. Stokes & Company, 445 Fourth Ave, New York City

Detectives spring up in the most unexpected places! Ellery Queen, whose murder mysteries were dramatized over the Columbia network, started his career over a luncheon table 11 years ago. Frederic Dannay, art director of an advertising agency, and Manfred B. Lee, movie publicity man, sat at lunch one day and toyed with the idea of collaborating on a mystery story for a magazine contest. The conversation bore fruit in a manuscript, *The Roman Hat Mystery* (1929). It won hands down but the magazine folded before the authors received payment.

The book publishing house of Frederick A. Stokes took over the manuscript rights, however, and Ellery was off in a cloud of startling deductions. Three years later (after the publication of *The French Powder Mystery* in 1930 and *The Dutch Shoe Mystery* in 1931) the writers were able to quit their jobs and concentrate all their time on their fiction detective, who was by then a best seller.

Since then they have produced fourteen Ellery Queen books, four Barnaby Ross novels, two collections of detective short stories and a mystery-story anthology. Most of these have sold 5,000 copies, and some have gone into popular editions and sold as high as 50,000.

No one wondered about Ellery's identity until Columbia University's School of Journalism in 1932 invited the detective to lecture on mystery writing. They flipped a coin; Lee lost, and Ellery Queen went to Morningside Heights wearing a mask. He spent a good part of that year masked, sitting on tables in department stores autographing books.

Dannay and Lee are cousins, were born the same year in Brooklyn, New York, and have been friends all their lives. Lee attended New York University, where he had his own orchestra. He still plays the violin. They look as much alike as oboe players; they are both of medium height and stocky build. Although they are still under 40, baldness is threatening to push their foreheads up over their heads to their back collar buttons. This made it duck soup for Ellery Queen when he donned a black mask for a lecture or other public appearance, for either could put on the mask and defy Barnaby Ross (author of *The Tragedy of X*, 1932, and

MANFRED LEE [ELLERY QUEEN]

other Drury Lane mysteries), their mystery story colleague, to tell them apart.

Barnaby Ross (Lee) appeared on the platform with Ellery Queen (Dannay) in most of his lectures. Audiences from coast to coast have been thrilled by the contests of wits between these two ratiocinative wizards. Queen would outline a plot; Ross would toss in a complication; and on they would battle, seeking to stymie each other's mental processes, only to arrive finally at a mutually triumphant conclusion that would leave the customers limp. Even the lecture agent didn't know they were collaborators. He thought he had sent out two competing authors to do battle.

Ellery Queen even wore a mask on the stage when he appeared after the first night as coauthor of the play, *Danger—Men Working* which he wrote with Raymond Moore. Their publisher, Frederick Stokes, is supposed to have revealed their identity when he gave a cocktail party to celebrate the publication of *The Devil to Pay* (1938). According to another story Paramount gave the secret away when Ellery Queen went to Hollywood.

"There's enough material in Hollywood for a thousand books," they reported on their return.

"Don't let anyone tell you that fantastic stories of Hollywood are exaggerated

"They don't tell the half of it. Our first assignment was to do a racing story

"Neither of us had ever seen a horse race and we haven't yet

"But we found a man who knew racing from the ground up, lived with him for three days and nights and wrote the picture

"Which delighted the producer."

Both Dannay and Lee have families; Dannay has two sons and Lee two daughters.

For some years both lived in Mt. Vernon, but Mr. Dannay moved to Great Neck some time ago, and Lee to New York. They put in about 12 hours of work a day, doing much of their writing at their homes and meeting to consolidate their material at their hideout, a tiny office near Fifth Avenue unknown even to their wives.

Gum-shoeing Ellery Queen has been in the movies, on the stage, on the lecture platform and last year on the radio as both actor and author. Splitting the detective's name between them, Dannay as Ellery and Lee as Queen, the two writers collaborated on the *Author! Author!* program in which literary riddles and radio charades were aired on Monday nights on the Mutual Broadcasting System. Various other writers served as guests, and S. J. Perelman as wisecracking master of ceremonies.

For the latest radio venture Ellery Queen wrote a \$350-a-week mystery drama, a murder play in which he matched wits not only with the murderer, but with a board of invited guests who were given all clues and then challenged to fit the pieces together. The radio audience meanwhile was given a chance to outguess the murderer, detective and group of experts. For a conclusion the rest of the murder drama was then played off, showing listeners and guests just where they blundered in their deductions.

The authors were somewhat reluctant to make a radio character out of Ellery Queen. However, George Zachary, the radio producer who conceived the idea for the show would not let him escape. He had read through 200-odd stories before finding Ellery Queen, and didn't believe he would find another if he read 200 more.

A sort of intellectual Siamese twinship binds them together. Whenever they get

FREDERIC DANNAY [ELLERY QUEEN]

together to cook up a mystery thriller they toss their brains into the same pot. Their minds blend so easily and naturally that a third person, talking to them, gets the slightly uneasy impression that he is conversing with one man. Never prompting each other by as much as a glance (in one hour-long interview neither ever once addressed the other), one would begin a sentence, in the middle of which the other would hook on a subjunctive clause, with the first reappearing in the caboose of the train of their thought.

"Almost everywhere we went as Ellery Queen and Barnaby Ross we were asked to work on some local mystery

"But we remembered Van Dine's experience when he undertook to solve a murder mystery out in Jersey

"He worked long and hard at it and was getting nowhere

"When along came a flatfoot who didn't know the difference between analytical deduction and postular acne

"And solved it in two hours."

A chart which Ellery Queen worked out for judging detective stories gave Van Dine's *Green Murder Case* a 79 per cent rating; Agatha Christie's (see sketch this issue) *Murder of Roger Ackroyd* the same and Barnaby Ross' *Tragedy of X* 89 per cent. When asked, "How come?" Ellery Queen answered:

"Oh, we felt we ought to give Ross a break

"Because we didn't want to let a pal down."

 1900- Artist

Address: c/o University of Kansas City, Kansas City, Missouri

Luis Quintanilla, for years "one of Spain's most dreaded satirists and an active revolutionary in his personal life," is now teaching at the University of Kansas City. Appointed in the fall of 1940 to start the first university school of fresco painting in the United States, he will have 40 or 50 pupils who will help him paint on wet plaster a real fresco, in the Liberal Arts Building auditorium, "possibly of Don Quixote in a modern setting."

Quintanilla, who is known to America through his exhibitions, through his book, *All the Brave* (1939), through his picture painted for Walter Wanger's movie, *The Long Voyage Home*, is a Spaniard of Basque descent, a nephew of the Bishop of Burgos. He was brought up by his religious and conservative family in a wealthy home at Santander and sent to study at the Jesuit University at Deusto. At 14 he ran away from home to become a sailor in the Spanish Navy. At 20 he was in Paris, studying art and sharing a leaky studio with the late Juan Gris, cubist painter. He learned to paint, he says, "by talking about it all the time."

It wasn't until 1927 that Quintanilla became known in Spain. Then a traveling fellowship was arranged for him which allowed him to study frescoes in Italy.

QUINTANILLA, LUIS—*Continued*

When he returned the director of Madrid's Modern Art Museum began to collect his works and hold exhibitions of them. It wasn't long before he was recognized as "one of the finest artists of the people since Goya," and before his brilliantly colored frescoes were to be seen in Cologne, Germany, Hendaye, France, and Madrid, Spain.

During these years Quintanilla was becoming an active Socialist. Before the first "bloodless revolution" he gave over his apartment in Madrid as a hiding place for arms and, on the night of Alfonso's abdication in 1931, ran up the Republican flag with his own hand before the abdication was definite and then led the Republican forces to the palace. Three years later, when the government had swung to the Right under Lerroux, he offered his home as a refuge for four of his party's committeemen. Government officials raided the place, arrested Quintanilla and the committeemen, charging them with storing arms, and put them into jail. Quintanilla was sentenced to 16 years' imprisonment.

Ernest Hemingway, Quintanilla's friend, received a cable: "Luis hoosegowed," and while the artist was behind bars arranged for the first American showing of his work in December 1934. These were etchings, though Quintanilla had done painting, too, and they were etchings without revolutionary significance. Satirical and humorous Spanish street scenes dominated the show—a picture of a fat and cheerful Madrid dandy having his shoes shined in a park, for instance. Hemingway pointed out that Quintanilla "does not take money and rant and rave to save his soul. He has painted great frescoes in the Casa del Pueblo and the Cuidad Universitario in Madrid and there are no symbols of capitalism or any symbols in them. Always there are people, as there are people in the etchings."

Quintanilla was soon let out of jail and spent the years until the outbreak of the Spanish Civil War in 1936 completing the murals in 11 panels for the Memorial to Pablo Iglesias, Socialist leader who died in 1925 in University City. That done, he made himself a hero by joining the Republican forces and leading the attack which took the Montana barracks in Madrid. Four months after the War had begun Premier Negrin sent Quintanilla out of danger on a diplomatic mission to France. In 1937 he was back at the front, this time to draw, at the government's command, a series of picturizations of the War.

By this time almost all of Quintanilla's important paintings had been destroyed and the Iglesias memorial was just rubble. When Hemingway inquired about his work Quintanilla quietly answered: "It's all gone. . . Let's not talk about it. When a man loses his life's work, everything that he has done in all his working life, it is much better not to talk about it."

The war drawings, however, were saved, and it was these which were exhibited in the United States in March 1938 at New York's Museum of Modern Art. These drawings of war's effect on the streets of Madrid, on the villagers of Andalusia, on prisoners and wounded men were marked by an "absence of overstatement and bitterness which makes them unique among war pictures." These drawings, "at once so delicate and so strong, so ruthlessly real and so instinct with compassion," were done with a fine quill pen in a uniformly unexcited style. War in them was shown not in terms of melodrama, "but rather in its relation to the humble folks who . . . had no word in bringing it about."

During the Spanish Civil War Quintanilla left Spain to paint frescoes for what was to be the Spanish building at the New York World's Fair. But the War ended and there was no Spanish building. Soon, forbidden to return to Spain, he brought all his drawings to the United States, took out his first citizenship papers and rented a small studio in New York City. As he put it in a letter to Hemingway: "I arrived here sad and demoralized. I didn't know whether I should commit suicide or get married, which is to prolong life: I married—[an American girl whom he had met in Madrid]. I didn't know whether to take to alcohol or to work, and I worked. Little by little I took from my palette the bitter memories of Spain and by dint of brush strokes I came to feel myself an individual again and to love colors as old friends who for a long time have been forgotten."

In America Quintanilla worked at top speed and in November 1939 an exhibition of his paintings was held at the Associated American Artists Gallery. Nearly thirty paintings and five large frescoes, *Love Peace and Hate War*, originally commissioned for the Fair, were shown. These frescoes, according to Edward Alden Jewell, have "lightness, gaiety and decorative charm" and are "delightfully painted; for the most part, admirably composed." Other critics pointed out the "pleasing freshness in point of view," the "dignity and emotional appeal," the "able draftsmanship" of these panels, but seemed to agree with Mr. Jewell that Quintanilla "is decidedly at his best in the drawings and etchings."

The canvases in the show were mostly on American subjects: *A Daughter of Revolution in White and One in Red*, *Abandoned Poets of Fourteenth Street*. In addition, the sole painting left after Quintanilla's Madrid studio was bombed, *Brunete War Landscape*, and many of his war drawings and etchings were shown.

It was in 1939, too, that Quintanilla's book, *All the Brave*, was published—drawings by Quintanilla with a preface by Ernest Hemingway and text comment by Jay Allen and Elliott Paul (see sketch this issue). Unanimously the critics pointed out the deep feeling and great technical skill of

these drawings—"savage, ironic, tender, infinitely delicate." Frequently they compared Quintanilla to Goya and frequently they commented on the book's meaning—"This is what happened to Spain. This is totalitarian war and its triumph."

Quintanilla is thin and dynamic, with bright black eyes and a roguish sense of humor. He works furiously and when he is not at work loves long conversations, gay French songs and a good game of pelota.

Who's Who in American Art

VIDKUN QUISLING

QUISLING, VIDKUN (kvīs'ling) July 18, 1887- Norwegian officer and diplomat; head of the State Council

Address: Oslo, Norway

Presumably Major Vidkun Quisling's political ambitions were at last fulfilled on September 25, 1940, when he was proclaimed the sole political leader of Norway, entrusted with the task of imposing Germany's "new order" on his country. The subjugation of Norway has with these measures fallen into the usual Nazi pattern after a period of unwonted indulgence. The cold-eyed, thin-lipped Major has become the exponent of the Führer principle; his party, the *Nasjonal Samling*—National Union—is the only one permitted in Norway; even the existence of such groups as the Temperance League, women's associations and religious auxiliary organizations is endangered on the ground that it is doubtful that they can adequately serve the interests of Major Quisling's new order.

Major Quisling's career until September 1940 has been one rife with disappointments. Even his moment of triumph, when Germany invaded Norway and he became a puppet premier, was short-lived. True, he seemed to be on the way to achieving immortality in a rather unexpected way, via the joyous exploitation of his name by the British:

"Major Quisling," wrote the London *Times* scathingly, soon after Norway was invaded, "has added a new word to the English language. . . . To writers the word Quisling is a gift from the gods. If they had been ordered to invent a new word for traitor . . . they could hardly have hit upon a more brilliant combination of letters. Actually it contrives to suggest something at once slippery and tortuous. Visually it has the supreme

merit of beginning with a 'Q,' which . . . has long seemed to the British mind to be a crooked, uncertain and slightly disreputable letter, suggestive of the questionable, the querulous, the quavering of quaking quagmires and quivering quicksands, of quibbles and quarrels, of queasiness, quackery, qualms and quip. . . . Major Quisling is to be congratulated. He has performed the rarish feat of turning a proper name into a common one." Ever since then the discomfited Major has had to listen to his name being declined in several languages (Quisling—I quisle, you quisle, he or she quisles).

Major Quisling's early years held no promise of his later unexpected contribution to the English language. His was a typical career of a brilliant young officer and diplomat. He was born in Fyresdal, Norway, in 1887, the son of Jon Lauritz and Anna Caroline (Bang) Quisling. From early youth he was trained for a military career. After completing his education in 1905 he was admitted into the army as an officer and his military advancement went on concurrently with his diplomatic career. He passed the War College examination in 1911, became an assistant of the general staff in 1916, got his commission as captain in 1917 and in 1931 was a major in the field artillery.

His diplomatic service unfolded mostly in Eastern Europe. He was sent to Petrograd as a military attaché from 1918 to 1919. In 1919 he was with the Norwegian legation in Helsinki. He served, too, in many international commissions of the League of Nations. From 1922 to 1923 he represented Norway on the International Russian Relief Committee in the Ukraine and in 1923 was a representative of the League's High Commissioner for Refugees

QUISLING, VIDKUN—*Continued*

in the Balkan States. From 1924 to 1926 he was secretary and delegate to the Armenian Commission of the League. On several occasions he was closely associated with Fridjof Nansen's relief expeditions. Reputedly the great explorer had been very fond of his capable young colleague, whose competence and efficiency he greatly valued. It has been said that young Quisling owed his rapid advancement and eventual participation in the government to Nansen's attachment to him.

From 1927 to 1929, while serving in Moscow on the Norwegian legation staff, he was given charge of the British legation during the time when Russian and British diplomatic relations were temporarily severed. As a reward he was named an honorary commander of the Order of the British Empire on November 22, 1929, in recognition of the services rendered to the British government in Russia. His name was struck off the rolls of the Order in June 1940, in recognition of the services rendered to the German government in Norway.

The height of Quisling's career—in independent Norway, that is—was reached in 1931, when he became the Minister of Defense in Karlstad's Cabinet. By that time he had made a considerable name for himself as an expert on Russian affairs. He had written a few books in that field, among them *Russia and Ourselves* (1931) and *Politica Occidentale Orientale*. He spoke Russian as fluently as if it were his native tongue. He was married to a Russian woman—Maria Vasilievna Pasek, a native of Kharkov, whom he married in 1923 when he served on a relief committee in the Ukraine. All this however, did not prevent him from being a rabid anti-Communist. His suspicions of Russian influence in the Scandinavian Peninsula caused him to accuse all the Norwegian labor leaders of being in Russia's pay and planning revolution—charges which he failed to prove. Nevertheless, he resigned from the Farmer Party in 1932 and began to build up his own party.

His reactionary attitude did not make for harmonious relationship with his colleagues in the Cabinet—there was no place for a conservative among the progressive Norwegian laborites. Quisling had made many enemies. There were rumors of complaints, of an investigation committee set up, and it has been hinted that only the collective resignation of the Cabinet prevented Quisling's expulsion from his post. However that might be, he went to the voters in 1933 at the head of the party he founded—the *Nasjonal Samling*—on a platform calling for the suppression of "revolutionary" parties and the "freeing" of labor from union domination.

His party, with its marked Fascist tendencies, was not a success—the trend in Norway

was precisely toward the "revolutionary" parties that Quisling deplored. The National Union polled only 28,000 of the 1,240,000 votes cast in the 1933 elections. Nor did it grow in strength; its 1933 vote was halved at the 1936 elections; it never succeeded in electing even one member to the Storting and was in a state of virtual dissolution by the end of 1939.

Although without honor in his own country, the head of the *Nasjonal Samling* was successful in attracting the attention of Hitler, who was even then preparing his scheme for world domination and was not overlooking any bets. In spite of his minute following and signal lack of success at the polls Quisling had extremely valuable connections in the army and the navy and his party was reputedly nourished by big industrialists. Quisling began to get very friendly with Alfred Rosenberg, the "philosopher" of National Socialism, and to appear at various Nazi gatherings abroad. In July 1937 a conference of Nazi emissaries took place in the German legation in Riga to discuss General Haushofer's favorite theory of Nazi domination of the Baltic. Quisling represented the Norwegian Nazis and assisted Rosenberg, who was chairman of the meeting. At that time reputedly he got Hitler's promise of Premiership in Norway.

Major Quisling was in Berlin on the night of Friday, April 5, 1940, presumably putting the last touches on the German campaign in Norway. Three days later the German warships successfully ran the gauntlet of Norse forts and naval units along the Oslo Fjord and were able to overrun Norway with the connivance of Major Quisling's military friends and sympathizers. Quisling's army connections, not to mention the information he had to offer as a former Minister of Defense, proved invaluable to the Nazis.

While the Germans were trying to lay their hands on the elusive King Haakon (see sketch this issue) long enough to obtain his abdication Major Quisling proclaimed himself Premier, apparently by the simple expedient of announcing it over the air. His government was not recognized even by the Germans themselves, who were mostly concerned with coming to terms with Haakon. According to the Norwegian *White Paper* this attempt failed with Haakon's categorical refusal to recognize Quisling as governmental chief. So a week after his *coup* the disappointed Major resigned and was succeeded by Ingolf Elser Christensen, the 68-year-old Governor of Oslo Province. He himself was put in charge of Norwegian demobilization in the German-occupied areas and later went to Berlin.

He came back from Germany on August 20 in order to make another bid for Premiership and to build up a following. The German authorities were divided in their feelings toward him: although he was backed by Dr. Alfred Rosenberg he had failed to win the favor of Josef Terboven,

the Reich Commissioner to Norway. Also he found it difficult to find prominent Norwegians who were willing to participate in the projected Cabinet. With his arrival, besides, the stubborn though mute opposition of the Norwegians crystallized into violent action. Because of the German uncertainty about him, the Norwegian press and public opinion were comparatively free to criticize him. On August 26 the *Arbeiderbladet* went so far as to publish a resolution adopted by a meeting of the Association of Young Workers, who denounced the possibility of the Quisling government as "a humiliation to the Norwegian people."

Up till then the Germans counted on the Storting's producing its own puppet government. The latter having proved disobedient in that respect, the German patience broke. The editor of *Arbeiderbladet* was arrested for exposing "an exponent of National Socialism . . . to degrading judgments." Quisling was proclaimed Norway's sole political leader, heading a State Council of 13 German-controlled commissioners. Josef Terboven, the Reich's Commissioner to Norway, also announced the end of Norway's monarchy and parliament and stated that the only "avenue by which the Norwegians can regain a large measure of freedom and independence is the *Nasjonal Samling*." It is possible that the riots that followed this decree expressed the lack of reassurance that the Norwegians felt upon learning that their sole hope of freedom lay in the man whose name has, among many people, come to stand for "traitor." In November the publication of a massive edition of *Quisling Has Said*, sort of a Norwegian *Mein Kampf*, could not have added to their hope.

RANDOLPH, ASA PHILIP Apr 15, 1889—Negro labor leader

Address: b. 217 W 125th St, New York City

There are many labor leaders today who believe that the success of the labor movement in this country depends upon its ability to include Negro workers. A. Philip Randolph, president of the Brotherhood of Sleeping Car Porters, has fought most of his life to bring Negroes into the organized labor movement and to end discrimination, in industry and in labor, against his people. He has been praised as "Negro labor's champion" and branded "the most dangerous Negro in America."

Because of his strong support of the trade union movement and his feeling that it is through the trade union movement that Negroes can make gains, Randolph's resignation from the presidency of the National Negro Congress on April 28, 1940, because of his opposition to its working with the CIO's Labor's Non-Partisan League, came as a surprise to many people. He said that any agreement with the League would "split the mass action of this Congress" and added that he would be just as opposed to tying up with the A F of L.

Randolph's attitude against accepting John L. Lewis' invitation to work with Labor's Non-Partisan League, even when the Negro Congress as a whole accepted it, can be attributed to his dislike in taking what

ASA PHILIP RANDOLPH

seemed possibly a first step toward participation in a third party movement if the Democratic and Republican Presidential nominees and platforms were not satisfactory.

Mr. Randolph resigned, too, because he was opposed to accepting money from the Communist Party and unions affiliated with the CIO. He stated firmly that he believed the Congress "should be dependent on resources supplied by the Negro people alone. The ground for my belief is that history shows that where you get your money you also get your ideas and control."

A. Philip Randolph, son of a poor Negro clergyman in the African Methodist Church, was born on April 15, 1889 at Crescent City, Florida. As a child he spent most of his time earning enough to keep the family going, as clerk in a grocery store, selling newspapers, picking up odd jobs. When he grew older and stronger he got work as a section hand on a railroad, digging and shoveling dirt, loading flat cars with sand, laying crossties and rails.

When he had completed his high school course at the Cookman Institute in Jacksonville, Philip traveled North. He took courses, mostly in political science and economics, at the College of the City of New York. He had a succession of varied jobs—as a waiter on the Fall River Line, as an elevator operator, as porter for the Consolidated Edison Company of New York.

Randolph married in 1915. Two years later he and Chandler Owen launched *The Messenger*, a monthly magazine with the subtitle: "The only radical Negro magazine in America." Because of the militant stand against the World War which Randolph adopted he was arrested in Cleveland in June 1918 by the Department of Justice, but released after a few days in the city jail.

Randolph began to contribute to other publications; he became an instructor in the Rand School of Social Science in New York. In 1921 he ran as the Socialist candidate for New York Secretary of State, and at other times for the Assembly and Congress. Until 1925, even though he had organized a union of elevator operators in New York City in 1917 and participated in organizational campaigns among motion picture operators and garment trade workers, he still considered himself a writer and editor rather than a labor organizer.

In August of that year he and a small group of men met in a Harlem recreation hall to outline a campaign to organize sleeping car porters. Randolph was elected president and general organizer of the union, which as yet existed only on paper. Shortly afterward the masthead of *The Messenger* changed to read "The official organ of the Brotherhood of Sleeping Car Porters."

By 1928 the Brotherhood, with over half the porters and maids organized, was ready to threaten strike if the Pullman Company refused to negotiate, but the strike was canceled.

The case between the Brotherhood and the Pullman Company dragged on for many years. It came before the Board of Mediation, before the Interstate Commerce Commission, before a Federal Court. In 1934, when the Railway Labor Act was amended, porters were brought within the scope of the law. Membership jumped, and when an election was held in 1935 the vote was 6,000 for the union to 1,400 against it. In August 1937 A. Philip Randolph was finally able to announce the signing of a contract with the Pullman Company giving the employees \$2,000,000 in pay increases and guaranteeing them shorter hours with pay for overtime. At the biennial convention of the BSCP in September 1940 approval was given to negotiations with the Pullman Company in which a reduction from 240 to 210 monthly average working hours for porters would be asked. "Porters were looked upon as clowns," Randolph says. "Now they must be taken seriously."

Beyond its immediate tasks, Randolph has always looked upon the Brotherhood of Sleeping Car Porters as an example to other Negro workers, helping to draw them into the union movement. He feels that if Negroes are organized "the barriers against race and color will be broken down and eventually destroyed." As the head of the only all-Negro union with an international charter from the A F of L, which officially condemns race discrimination but 20 of whose unions draw the color line, Randolph challenged the delegates at the A F of L National Convention in November to really tackle the problem. He wasn't answered.

Randolph is still a Socialist, though not an "orthodox Marxian." In his spare time he is writing two books—one a social history, the other autobiographical.

ROBERT RAUTENBERG

ries by Victor Thaddeus, died at his home in Arden at the age of 82. He left a widow, Mrs. Louisa Rautenberg, a son and a daughter. Mr. Rautenberg was born in Silesia, Germany, and as a youth studied wood and stone carving in Berlin, Paris, Vienna and Rome. He specialized in ecclesiastical work, and some of his statues were placed in leading churches in Vienna, Paris and Berlin. In Berlin he became a close friend of the philosopher Albert Dulc. Soon after he came to this country in 1887, Mr. Rautenberg became an American citizen. He worked with St. Gaudens, Charles Grafley and other well-known sculptors. His best known work is the statuary and figure work for the main staircase of the Library of Congress. The marble statue of *The Blessed Virgin* in the Roman Catholic Cathedral

of SS. Peter and Paul in Philadelphia has also won the praise of critics.

RAYBURN, SAM Jan 6, 1882- Speaker of the United States House of Representatives
Address: b. United States House of Representatives, Washington, D. C.; h. Bonham, Texas

On September 15, 1940 the House of Representatives mourned the death of its Speaker, William Bankhead (see sketch this issue). On September 16 Sam Rayburn, Democratic majority leader of the House, was elected Speaker. It is the second time that he has succeeded to an office held by Bankhead. In 1935 the two men were rival candidates for the Speaker's office, increased annual salary and shiny limousine, but the late Joe Byrns carried them all away; in 1937 Bankhead was elevated from his post of majority leader to the Speakership, and Rayburn succeeded him as majority leader.

The dark-eyed, "bald, stocky, rugged farmer-lawyer from the red clay country of Texas" (full name Samuel Taliaferro Rayburn) was born in Roane County, Tennessee, on January 6, 1882, the son of W. M. and Martha (Waller) Rayburn. His parents moved to Texas, where they were not too well off, but stories say that as a boy he used to tell visitors at the family homestead that he was going to college, that he would become the Speaker of the Texas Legislature and that he would end up in Congress. He did all of those things. Sent to East Texas College with his father's blessing and \$25, he took his B. S. degree there, then studied law at the University of Texas and began his practice at Bonham, Texas, where "his neglected law shingle still swings in the wind." He was elected to the Texas House of Representatives, where he served for six years and spent the last two as Speaker of the House; then in 1913 he went to Congress as Democratic Representative from the fourth Texas district. He has been there ever since.

Rayburn is seldom known to make speeches and usually gives no more than five minutes to remarks on pending legislation, but as one of Vice-President Garner's trusted lieutenants he has nevertheless been a power in the House for years, maneuvering its Democratic majority behind the scenes. One writer pictures him at the back of the chamber, "standing by the hour with his arms on the rail behind the rearmost row of seats, quietly keeping an eye on what is happening, conferring in whispers with colleagues." "Unspectacular, undemonstrative," even "unimpressive," still when he does speak he is capable of a "don't-give-up-the-bill doggedness" that has put through many pieces of legislation simply by outfighting and outarguing his opponents. He is well liked, however. Everyone calls him "Sam," and new mem-

S. J. Woolf

SAM RAYBURN

bers are impressed when Sam greets them by their own carefully memorized first names. He has served on only one committee. Having been born in a "hamlet on a branch-line railroad," he made railroads his hobby and became an expert on transportation problems and chairman of the Interstate Commerce Committee.

It was Rayburn who in 1932 managed Garner's bid for the Democratic Presidential nomination, Garner who in 1935 pushed him forward for the job of Speaker; but in spite of the close friendship between the two men Rayburn has never wavered in loyalty to Roosevelt. If the President was a New Dealer, he himself was a New Dealer, and he won Roosevelt's gratitude for his fight for the Wheeler-Rayburn Utilities Bill (see sketch of Wheeler this issue) and the Securities Exchange Act of 1934. Elected Democratic majority leader in 1937, Rayburn mourned Roosevelt's defeat over the Reorganization Bill, asking: "Is it possible . . . that this is a leaderless land?" And in June 1938 he eulogized the work of the outgoing Congress in typical New Deal terms. "The record of the last Congress," he said, "is one of which any four-year administration could be justly proud. The array of accomplishments of this Congress is impressive indeed. I do believe that the Congress has done its part well. It now remains to be seen whether others will do their part. We must all realize that all classes and all sections are interdependent. We must stand or fall together. No large sector of our people can be poor and the other part remain long rich. Each of us is responsible not only to our group but to the whole of our population."

Again in 1940 Sam Rayburn offered his support to Vice-President Garner for the 1940 Presidential nomination, calling him an

"outstanding Texan and liberal Democrat," but after President Roosevelt's renomination he made a speech at Williamsport, Maryland in which he characterized the President as the greatest humanitarian to occupy the White House for 50 years, and promised him his full support. Sam Rayburn is, above everything else, a "party man."

The new Speaker is a bachelor and lives in a two-room apartment in Washington. He isn't fond of the social side of Washington life but he is fond of jokes that date back to the Civil War, friends who date back nearly as far, and occasional literary excursions into pedigrees and battles. If he shows "only a slight bulge in the midriff" at his age perhaps it's because he also likes trotting around a golf course on a Sunday morning and taking long walks. Often he walks halfway to and from his apartment and the Capitol and takes a taxi the rest of the way. Every day he smokes a pack or two of cigarettes. His favorite hero is Robert E. Lee, and there are three pictures of the great Southerner on his office walls.

As for vacations, they are a different matter. His sister, whom he calls "Miss Lou" (she calls him "Mr. Sam"), has been keeping house for him and his farmer-brother Tom in a pleasant, white, two-story house two miles west of Bonham ever since their parents died. There are 150 acres of farmland, hackberry trees, and it is natural for friends and relatives to gather in the Rayburns' back yard on hot summer afternoons. At home Sam Rayburn can wear old clothes, tend a herd of blooded Jersey cows, work right out in the fields with the farmhands—and put politics out of his mind.

REITH, JOHN CHARLES WALSHAM, 1ST BARON (rēth) 1889— Head of the British Ministry of Works and Buildings

In the British Cabinet reshuffle of October 1940 Baron Reith was moved from his position of Minister of Transport to the head of a newly created Ministry of Works and Buildings, made necessary by the damage which German aerial bombs have done to houses and other structures.

For many years Sir John has been prominent in Britain but "there is little evidence that anyone has ever liked him." The general impression that emerges from the many articles on his career and work is that of a hard, ruthless and highly efficient administrator, ruling entirely by

Acme

BARON REITH

fear. Of his efficiency—much needed in his new Cabinet job—there is no doubt. It is he who made the British Broadcasting Corporation what it is today and he is also largely responsible for the organization of Imperial Airways.

R. S. Lambert, former editor of *The Listener*, in his book, *Ariel and All His Quality* (1940), has much to say of his 10 years' association with Reith. "For a long while," he writes, "I was handicapped by the sense of fear which he inspired; and for many years, whenever I received a summons to his room, I had to go apart for a minute in order to control my heart beats and allow the mist which rose up in my brain to clear away." Lambert reports, too, that Reith had three seats in his office for visitors—a hard one for nobodies, an arm-chair for senior subordinates and a luxurious sofa for high dignitaries or people he wished to placate. "He would work himself into a fuss about titles, orders of precedence and correct modes of address. . . . He liked being 'sirred' and was once heard to explain the infrequency of his tours round the offices on the ground that his entry would embarrass the staff by causing them to stand up in the midst of their work."

Other associates have reported similar facts: Vernon Bartlett, M. P. and *News Chronicle* journalist, for instance, who records that on Reith's desk at the BBC there was perpetually kept a certificate from his boyhood Sunday School, stating that he had never missed attendance. And the *Frankfurter Zeitung* doesn't sound too prejudiced when it says: "There are numerous anecdotes about Reith, illustrating the hatred of this Scottish minister's son for tobacco, alcohol, jazz music on Sunday and worldliness in any form, his temperament of

an Aberdonian, his arrogance, his thirst for personal revenge." It goes on to quote the remark of an American Quakeress to him in 1917: "Vengeance is mine, saith the Lord," to which Reith is reported to have answered: "Certainly vengeance belongs to the Lord, but it lies with me to be an instrument of that vengeance."

Some people have explained Reith by saying he never got over the fact that he was unable to complete his education at Oxford or Cambridge. He is the fifth son and seventh child of the Reverend George Reith, D. D., a Presbyterian minister of Aberdeen, Scotland, and Adah Mary (Weston) Reith, an Englishwoman. John Reith went to Glasgow Academy and then to Gresham's School, Holt, one of the minor English public schools. He was then trained as an engineer at the Royal Technical College, Glasgow, from which he received the degree of M. S. and became a member of the Institution of Civil Engineers. After five years' apprenticeship in Glasgow, Reith began his first job, with the London engineering firm of S. Pearson and Son, Limited.

When the First World War broke out Reith took a commission in the Royal Engineers, served in France and rose to the rank of major before being invalided out in 1916. When he had recovered from his wounds he spent more than a year in the United States contracting for munitions. Then, in 1918, he went to the department of the Civil Engineer in Chief at the Admiralty and spent the year of 1919 liquidating ordnance and engineering contracts for the Ministry of Munitions. In 1920 he returned to civilian engineering as general manager for William Beardmore and Company. This was his last engineering position.

In 1922 Reith answered an advertisement and was selected out of 55 applicants to be the first general manager of the British Broadcasting Company. Its title was soon changed to Corporation and in one year Reith became its managing director. From 1927 to 1938 he had supreme power over the BBC as director general. Under his control the technological side of broadcasting was rapidly developed; a wide variety of programs was arranged; and the government's policy of running the radio in absolute freedom from advertising and without political bias was faithfully carried out.

Although under Reith considerable imagination was shown in the broadcasting of unexpected and out-of-the-way programs and the talks on various specialized subjects reached a high level, there were complaints. The newspapers used to howl that Reith was making BBC programs the dulllest on all the world's air waves and there was persistent criticism about Sunday broadcasts in particular. But Sir John was unmoved: "So long as I am the director general," he said, "there will be no change in the character of Sunday programs. . . . The BBC has never attempted to give the public what

it wants. It gives the public what it ought to have."

There was criticism on the internal administration of the BBC, too. Reith tended to surround himself with yes-men and freeze out really original subordinates. He appointed a number of military and naval officers to key positions, though they lacked any obvious qualifications and according to the London *Evening Standard* of February 26, 1937: "No candidate for any one of the more important posts was appointed without first of all being examined by Sir John, who always attached great importance to the answer made to the question: 'What games do you play?'" Any aberration from the most conventional moral standards meant instant dismissal and to be involved in a divorce case was the end of working for BBC.

In 1938 Reith resigned from the BBC, a year after the world had heard him announce the abdication of King Edward VIII, to become chairman of Imperial Airways. Before he took over, Imperial Airways had a reputation for bumbling along and it was the job of this "dour, ascetic Aberdonian" to reorganize it efficiently. Immediately he began the top-to-bottom installation of the "rigid quarter-deck punctilio" he had commanded at BBC.

In February 1940 Sir John Reith was appointed Minister of Information, in supreme charge of censoring the British press and getting publicity for the British cause. As Minister a Parliamentary seat had to be found for him, so the member for Southampton stood down in his favor, and in the same month Sir John was returned unopposed. There was not a little criticism of his carrying out of this post and in Winston Churchill's (see sketch this issue) reconstructed government of May 1940 he was transferred from Information to the position of Minister of Transport and then to the position he now holds in the Ministry of Works and Buildings.

Reith stands six-foot-six and is described as having "blazing blue eyes, an impressive dome and a fearsome scar across his left cheek, result of a war wound." He lives in the pleasant Chiltern village of Beaconsfield, convenient to London. He was knighted in 1927 and made a baron in October 1940 in recognition of his services.

In 1921 he married Muriel Katharine, younger daughter of the late John Lynch Odhams of Southwick, Sussex, and they have one son and one daughter.

REYNAUD, PAUL (rā'nō' pōl) Oct 15, 1878- French statesman

Indicted at Riom on October 19, 1940 by the Vichy government on charges of "embezzlement of public funds," wiry little Paul Reynaud, former Premier of France, was said to be devoting the greater part of his day to physical culture—boxing, skipping rope—while awaiting trial.

Born in 1878 in the French Alpine village of Barcelonnette, Paul Reynaud has been described as "a tough little mountaineer with a hard head for business." His grandfather, a French soldier who fought in Mexico under Maximilian and who did not leave that country until he had founded the family's substantial dry goods business there, seems to have possessed that same hard head. Reynaud's father, a Conseiller General, and his uncles, all Deputies or Senators, may have influenced his choice of careers. His family moved to Paris when Paul was a child, and upon graduation from the Lycee Louis le Grand he promptly decided to study law at the Sorbonne.

Reynaud did not begin law practice immediately after graduation, however; instead, he set out on the first of those voyages which have since won him the distinction of "Most Traveled French Statesman." His trip was around the world, and he traveled slowly, by branch railway, horse, canoe—making careful observations as he went. When he returned to Paris to set up practice as a corporation lawyer he employed these same faculties of observation in listening to the pleas of the famous lawyers in the Palace of Justice. Results of either the observation or his assorted other talents were so successful that he later became general secretary of the Paris

International

PAUL REYNAUD

Bar Association and husband of the daughter (Jeanne) of one of its presidents, Henri Robert.

He returned to Paris to enter post-War politics and to join the overruled minority who believed it was to France's interest to prevent a complete economic breakdown in Germany. In 1924 he was defeated as Deputy to Parliament from his own Basses-Alpes district; in 1928 he was elected to the same office, this time representing the sixth Paris district, which centers around the Stock Exchange. He has represented this same Parisian constituency for 12 years.

Specialist in many fields, in the next few years Reynaud served in a number of Cabinets: in 1930, as Minister of Finance under Tardieu; in 1931, as Minister for the Colonies under Laval; in 1932, as Minister of Justice under Tardieu. He was already regarded as a heretic in circles of orthodox financial theory because early in the depression he advocated the devaluation of the franc; he now embarked upon a career of dissent with other official policies. In 1934 he was one of a delegation of voters who went to the President's palace to beg him to dismiss the Daladier (see sketch this issue) government. In March 1935, influenced by De Gaulle (see sketch this issue) he introduced a bill to form 11 mechanized divisions in the French Army, but it was turned down by Daladier. In 1936 he was fighting Laval's (see sketch this issue) pro-Italian policy in Ethiopia. Though no friend of Communism nor of the People's Front, he favored the Franco-Russian pact and the policy of "collective security," and fought appeasement. In 1938, as Minister of Justice under Daladier, he was one of the deputies who are said to have offered their resignations after Chamberlain's visit to Berchtesgaden. At

about the same time Flandin's pro-Munich attitude caused Reynaud to break with the Alliance Démocratique, with which he had formerly been allied. He has not since officially allied himself with any political faction, although he calls himself a moderate conservative.

At one time Reynaud summed up his "lone wolf" political position thus: "I have always had the 11 governments which rule France against me: the Bank of France, the Institute, the great industrial and financial trusts, the Veterans, the bondholders, etc.—in short, the whole of official France."

Time has summed it up otherwise. The next stage in Reynaud's career, probably, best justifies that publication's description of him as a man who "built a career on his belief that France is primarily a nation of small shopkeepers," that "two-thirds of the French people are *not* the Masses." On November 1, 1938, Reynaud became Minister of Finance as the result of a Cabinet reshuffle. On November 12 his decrees were announced. Based on a policy of increased production and lowered consumption for the purpose of building the military power of France as rapidly as possible, in many quarters of the nation they were not greeted with joy. Under Reynaud's predecessors the public debt had swelled enormously, the franc had fallen to less than half its normal value, and gold was pouring out of the Bank of France. Reynaud frankly proclaimed a "policy of sacrifice," of "facing the facts and getting to work." Ruthlessly he slashed expenses, increased taxes. Prices, profits, wages, exchange—all were controlled. The franc was to be further devaluated. Armaments took the place of public works, subway and bus fares were raised, pensions reduced, 40,000 railroad workers fired. On November 30 the people retaliated with a general strike, which was broken.

In April of 1939 further decree laws were announced. By the beginning of the War the five-day week had totally disappeared ("the week with two Sundays," Reynaud scornfully called it), Blum's (see sketch this issue) 40-hour week had been lengthened to 45—in munitions plants to 60—hours, and prices of such commodities as tobacco, wine and coffee had jumped tremendously. Women were mobilized for labor. Civilian France, at least, was being made painfully aware that a war was going on.

By December 1939, France's Minister of Finance was able to make an impressive report: a return to the treasury of 14 billion francs in exported capital, 10 billion francs in gold. And in the same month, on December 25, 1939, Reynaud and Sir John Simon (see sketch this issue) signed the equally impressive agreement binding France and England in a financial and economic union. By this agreement the respective strengths of the two currencies were linked and the material resources of the two empires pooled, to be shared proportionately in the prosecution

of the War. The clause prolonging this partnership until six months after the peace, Reynaud believed, "could be the point of departure for that long-awaited reorganization of Europe."

On March 21, 1940 Paul Reynaud became France's new Premier, after a vote of confidence in Daladier's prosecution of the War failed to give him an affirmative majority.

The capacity for rapid and aggressive action that had marked Reynaud's career in the past was not lost in his acceptance of the Premiership. His Cabinet was formed in 24 hours, and immediately succeeded in antagonizing Marin's extreme Rightist group and others by its inclusion of five Socialists. His first statement of policy to the Chamber was made in four minutes flat. Its keynote was: "My government has but a single aim—to conquer. To win is to save all. To succumb is to lose all."

Reynaud's initial appearance found the Chamber unenthusiastic and its vote of confidence gave him a precarious majority. But in one month the opposition had temporarily "melted away." In spite of the fact that Reynaud's censorship and other restrictive measures were even harsher than those of Daladier's régime, on April 19, in the midst of the War in Norway, the Chamber gave him a unanimous vote of confidence after an all-day debate on his War measures. He fought against the withdrawal of British troops from Norway; he tried to put pressure on Belgium to abandon her neutrality; he wanted to dispense with the slow-moving Gamelin (see sketch this issue), although he did not immediately. His own policy was one of vigorous prosecution of the War. But, as Pertinax (see sketch this issue) points out, he surrounded himself with men of a different, a semi-totalitarian temper. The Countess Hélène de Portes, whose intimate friend he had been for a great many years, and who was rumored to be a lobbyist for several Big Business interests, was also a member of the influential clique which met nightly in his apartment.

On May 19 Weygand (see sketch this issue) succeeded Gamelin as commander of the French forces, and Pétain (see sketch this issue) became vice-president of Council and supreme technical adviser to Reynaud's Cabinet. Louis Marin, Rightist leader, and Jean Ybarnegaray, parliamentary chief of what had been the Croix de Feu, were also taken into the Cabinet in May. Daladier was not ousted until June 5, and it was not until June that De Gaulle became chief assistant at the War Ministry. The stage was getting set for the fall of France. It was only under pressure that on June 12 Reynaud asked Churchill to release France from her promise not to make a separate armistice; after Paris fell Reynaud appealed from Bordeaux to the United States for "clouds of airplanes"; when Britain proposed union to France, Reynaud himself

voted for the British proposals, voted against any armistice, spoke of continuing the War from the Colonies. But most of the men he had put into office were against him, and when he was voted down he "meekly gave way," resigned, let Pétain take over, and, according to Pertinax, was actually ready to go to the United States to serve as Ambassador from Pétain's government. He even telegraphed to Churchill (see sketch this issue), begging him to be satisfied with the arrangements made about the French fleet. "Reynaud has betrayed me three times," Churchill said, and didn't answer.

Later in June, Devaux and Leca, two of Reynaud's closest advisers, were said to have been caught in Spain on their way to the United States with 50,000,000 francs in their bags (in banknotes, gold, jewels belonging to the Countess de Portes). Reynaud was not appointed Ambassador to the United States. And on June 28 news was received of the automobile crash on the French Riviera in which the Countess de Portes was killed, Reynaud injured. His friend dead, his career ruined, France in the hands of his enemies, even his honor not quite intact, he went from the hospital to imprisonment in the Chateau Châzeron, the boxing gloves and the skipping rope.

Small, agile, Reynaud is said to appear much younger than his 60-odd years. The American press often describes him as "dapper," and apparently the adjective is apt. In 1932, at a Hoover rally in Madison Square Garden, the crowd took the top-hatted Frenchman for Jimmy Walker, and called out to him, railing: "What are you doing here, Jimmy?" His political soubriquet is "the cat." "With his somewhat Asiatic features and pinched eyes," says Antonina Vallentin, more poetically, "Paul Reynaud resembles in moments of tranquility a Chinese god carved in ivory. But his face is seldom tranquil—nor is it ever completely mobile. His glance alone is serious, vivacious, agitated."

Reynaud's favorite sport was a strenuous one: bicycling—and his hobby of maps was made more active than most. He has set foot in every continent at least three times, and is particularly familiar with the English language and institutions. He has published four books: *Waldeck-Rousseau*; *Les Trois Glorieuses*; *Jeunesse, Quelle France Veux-Tu?*; *Le Problème Militaire Français* (the latter inspired by the theories of De Gaulle).

REYNOLDS, ROBERT RICE June 18, 1884- Senator from North Carolina

Address: b. Senate Office Building, Washington, D. C.; h. Asheville, North Carolina

"No. 1 Senatorial alien-baiter is North Carolina's Robert Rice Reynolds, an ex-football star who scrimmages against the Menace of Internationalism 24 hours a day," according to the *American Mercury*. For a long time the "sandy-haired, ruby-cheeked Tarheel" has been arguing that "the time has come for changing the tradition that the United States is an asylum for the oppressed of the world," has been insisting that "the millions of foreigners who are about to begin the rape of this country" should be deported or interned in concentration camps—or, at least, fingerprinted. Only

lately has his voice been even feebly echoed in Congressional legislation, however.

Born in Asheville, Buncombe County, North Carolina, on June 18, 1884, the son of William Taswell and Mamie (Spears) Reynolds, nothing much stood in the way of a political career for Bob Reynolds. His father was court clerk, his Uncle Henry chief of police, his Uncle Dan sheriff, his Uncle Gus tax collector. He, however, left home at the age of 12, being somewhat independent minded, and proceeded to become barker for a carnival and a few other things before he even thought about attending the University of North Carolina in 1902 and taking his law degree there in 1906. At the University he had also displayed his versatility by captaining the varsity track team and playing end and halfback on the football team, and it is little wonder that when he decided to set up law practice he selected an ingenious way of getting himself a little advertising. Virtually unknown, he campaigned for prosecuting attorney in 1910 (it cost only \$50 to get on the ballot), and went into the mountains astride a decrepit mare with his saddlebags stuffed with sticks of candy. These he passed out to children; they were inscribed, "Tell your daddy to vote for Bob Reynolds." To the voters he announced frankly that he was out for the job and the money—and was more surprised than anyone else when he won the election. Another Reynolds was in local politics. It was, perhaps, destiny.

His political luck deserted him temporarily, though. In 1912 he overturned a normally Republican district to be elected solicitor by a large majority, but shortly afterward he resigned this post and ran unsuccessfully for the national House of Representatives. Then came World War I. By that time he was a widower with two children, Frances Jackson and Robert Rice, his wife, Frances Jackson, whom he married in 1909, having died. In 1914 he married Mary Bland and sometime during the War he resigned the captain's commission which he had held in the National Guard.

In the next years he was, among other things, to become proprietor of an ice skating rink, to make a million dollars, mainly in real estate, to lose his fortune in land deals and bank failures and to return to North Carolina politics. In 1924 he was campaigning for the job of Lieutenant Governor of the state. It was another unusual campaign. Equipped with a North Carolina Year Book and a voters' list, he mailed some 175,000 postcards to his "God-fearin' 'tater-raisin', baby-havin' constituents," and returned to North Carolina just before the primaries. He lost. Nothing daunted, he entered the 1926 Senatorial campaign, amassed 90,000 votes, though not the office, and then went blithely to work in preparation for the 1932 primaries. There were graduation exercises to be attended in one-room schoolhouses, mountaineers to be championed before the Bar without fees

until Bob Reynolds was recognized everywhere as "Little Father of the Poor." And when campaign time came around Reynolds, without machine affiliations or fame, with only a two-year-old Ford and \$20, stumped the State for six months. He had meanwhile divorced his wife and was married again in 1930—this time to Eva Brady, an ex-Follies girl, who died in 1934.

His opponent for the 1932 Senatorial nomination, Cameron Morrison, had been in Congress for such a long time that his constituents were used to marking their ballots for him almost automatically. But when Reynolds announced that the Senator ate "caviar, which is nothin' but fish aigs," and asked, "Do y'all want a fish-aig Senator?" they began to wonder. Reynolds' car rattled and he chewed wads of cut plug in public. He raised the banner against the Interests, Wall Street and the International Bankers; he blamed Hoover, the Reconstruction Finance Corporation, the moratorium and the Eighteenth Amendment for the wheat and cotton that was rotting while children froze and famished; he called the American Legion "the greatest body of heroes that ever lived in this or any other civilization." And he was elected by 100,000 votes.

In the Senate people weren't sure what to expect of Reynolds, and were rather relieved at first, deciding he didn't have to be taken seriously. Reynolds had known the late Huey Long "when the Louisiana 'Kingfish' was a patent-medicine peddler," and he became his friend at a time when other Senators were ostracizing him. Everyone liked Reynolds. Gregarious and convivial, it is said that he modeled his own manners and style of oratory after the Kingfish's, and was soon known as the Senate clown, the "Tarheel Toreador," filling the record with "turgid pages on his favorite subjects—himself, his travels, his slickness," garnering publicity, being photographed kissing Jean Harlow, endorsing Lucky Strikes—though never forgetting his North Carolina voters. During one housing debate he announced: "If \$700,000,000 of the people's money is to be expended, I want North Carolina, God bless her, to have her part—although she does not need it particularly." In general he supported New Deal social legislation. And although he began crusading against "the alien" after a 1935 call at the San Simeon estate of William Randolph Hearst, it merely seemed like "a safe and effective issue in a State that had the highest percentage of native white population in the country." In May 1938 the Senate pages voted him their favorite Senator.

Not until after Reynolds' trip to Germany after his re-election in 1938 on a pledge to support the New Deal, did the Senator apparently decide to try really seriously to save the country from impending "rape" by "millions of foreigners." Upon his return he announced that "unquestionably the Germans have made a tremendous, a phe-

nomenal progress and have done a great deal for their people," and admitted "in all fairness" that he had been deeply impressed by the Nazi setup. By winter the *Washington Merry-Go-Round* was calling him the "Tarheel Führer," accusing him of "acclaiming Hitler as a great man." Reynolds rose to defend himself. "Those who would picture him as anything other than the protector of the nation from 'isms,' all kinds of 'isms,' Hitler's and Mussolini's included" were being grossly libelous. But in the Senate he continued to make such statements as: "France and England are through. Democracy is finished in Europe. Hitler and Mussolini have a date with destiny. It's foolish to oppose them, so why not play ball with them?" Later he was found arguing for Franco's cause in Spain, defending Hitler's seizure of Czechoslovakia as an innocent outburst of "frontier spirit."

He also quit the New Deal camp. It is said that he wanted to get on the Foreign Relations Committee, and that South Carolina's Jimmy Byrnes fixed it and thus lured Reynolds' vote to a group bent on cutting relief deficiency funds when there was a crucial one-vote margin—in January 1939.

On January 31, 1939 Reynolds announced the creation of the Vindicators, a "mass movement of Americans" to "discuss Americanism." The Vindicators were a chain of patriotic societies without dues, contributions or salaries. The official organ, *The Vindicator*, cost \$1 a year, a sum which also paid for the organizational work and three official emblems: a "banner" for every unit of fifty members (coiled rattler on a yellow background with the legend "Don't tread on me"); a red, white and blue button for each member's lapel; a red, white and blue feather for each member's hat. Mottoes were "America for the Americans; America first; Crush the enemies of America." Objectives were to keep us out of the War which, Reynolds warned, British and French propaganda was seeking to draw us into; register and fingerprint all aliens; stop all immigration for the next 10 years; banish all foreign "isms," most particularly Communism; deport all alien criminals and undesirables, whose number was, he was sure, legion.

Although appeals were made for supporters "regardless of race, creed or politics," he advanced "scientific" proof that "the Jewish people do not become integral parts of American life, except after generations and under pressure," and Jews were actually barred from membership. Excerpts from *Social Justice* have also penetrated Reynolds' Senate speeches, and his friendship with George Deatherage, leader of the Fascist, anti-Semitic Knights of the White Camellia has been held to show the real nature of his "Americanism." Reynolds has been called "chief Nazi spokesman in the United States"; it has been pointed out that "the decorations in his Washington office . . . are very graphic about Communism, say nothing about Nazism," and some

REYNOLDS, ROBERT RICE—*Continued*
have asserted that "German correspondents and diplomats faithfully report to Berlin all his anti-alien tirades." Many others have taken him less seriously, however, saying that he merely imitates Dies (see sketch this issue) and "his success at rabble-rousing," that he is still merely playing at publicity (like the time he kissed Jean Harlow) or at politics ("I play politics all day—every day").

Recently Reynolds has not been completely consistent. He spoke against conscription, saying, among other things, that "the squirrel hunters of North Carolina and Kentucky can keep Hitler or anyone else off until the Marines arrive and the situation is well in hand," but voted for the bill itself. He shows every symptom of sticking by his anti-alien guns, however, and was an ardent supporter of the Smith Amendment and the Allen bill to deport Harry Bridges (see sketch this issue).

The Senator has a reputation for having said that he visited "Hungria" on his latest trip to Europe, and that he thought Hitler had "done wrong to take the Sudan," but he also has a reputation for being the best actor in the Senate (as a matter of fact, he has been a professional), and his ignorance is probably artful. Actually he is the most widely traveled man in Congress, having been around the world "six or eight times" and chatted earnestly with half the statesmen in Europe. He has even written two travel books, *Wanderlust* (1913) and *Gypsy Trails*. When Italy seized Albania he was the first to observe that it had been sold to Italy by King Zog I a decade before.

He holds other records, too. "Florid, fleshy, and fresh," he is seen oftener than any other member in the Senate gymnasium; he gets more mail, telephone calls and visitors than any of his colleagues; and he is the prime dandy of the Senate, posing in double-breasted suits and violent cravats except in campaigning, when he wears old clothes and drawls "No'th Ca'lina." Someone called him "the Duce of the Senate haranguers" and pointed out unflatteringly that "the fact that a Reynolds can happen at all is a signal example of the chances we must accept for the sake of a democracy." But those who vote for him are devoted to him and call him "Our Bob."

RICKENBACKER, EDWARD Oct 8, 1890- President and general manager of Eastern Air Lines, Incorporated

Address: Eastern Air Lines Building, 10 Rockefeller Plaza, New York City

Edward Vernon (generally known as Eddie) Rickenbacker, aviation hero of the First World War, stepped out of his well-established rôle of businessman in 1940 to talk and write publicly again on aviation. In magazine articles and in speeches he urged that the United States build up its national defense with more planes and train more pilots. As one of the most glamorous of the United States' War heroes and as an important figure in the aviation industry, Rickenbacker's opinion can be expected to have weight with the public.

Eddie Rickenbacker's life follows one of the most beloved American patterns—the poor orphan whose exploits on the automobile race track and in the air led him on to prosperity and success in business. He was born in Columbus, Ohio, the son of William and Elizabeth Rickenbacker. As a boy, Eddie, according to his own description of himself, was a "tough little kid with an uncontrollable temper," the leader of his gang. His father died when he was twelve, and Eddie, the third of seven children, made up his mind to do something to help his mother.

The day after his father's funeral, instead of going to school, he started off in the direction of the Columbus factories. At the glass works he said he was 14 and got a job for \$3.50 a week. He worked a twelve-hour night stretch, walked four miles to work to save carfare and turned every cent he made over to his mother.

He was always interested in motors and in mechanical things, so he enrolled in a correspondence school for a course in engineering and drafting. In order to be near engines he got a job with the Frayer-Miller Cooled Car Company in Columbus. An aggressive youngster, he went from the engineering phase of automobile manufacture to the sales division.

When the future war ace was 20, automobile racing caught his fancy and from 1910 to 1917 he was the daredevil of the American automobile race tracks. He won championships at national and international meets. When the United States declared war in 1917 Rickenbacker was preparing a racing team for the English Sunbeam Motor Company. He dropped his plans and a month later enlisted in the army.

His efforts to get government sanction to enlist all the automobile racing men into one squadron of fighting pilots did not meet with success, so he went to France as a chauffeur assigned to drive General Pershing's car. But flying still fired his imagination and he asked to be transferred to the Air Service. On August 25, 1917 he was sent to Tours, France, for preliminary training in flying. Subsequently he was transferred to Issoudan Training Field as

Wide World

EDDIE RICKENBACKER

chief engineering officer with rank of lieutenant.

But he still was not in the thick of fighting and to a daredevil like Rickenbacker this was not satisfactory. Requests to be transferred to the front were met with the answer that he could not be spared at Issoudan Field. He finally had to get himself sent to the hospital for two weeks to show that he was not indispensable and to get his way about going to the front.

His career as an American War ace began when he was transferred to active duty with the 94th Aero Pursuit Squadron, first American air unit to participate actively on the Western Front. In September 1918 he became the commander of the squadron which became known as the "Hat-in-the-Ring Squadron" and world-famous. The squadron was credited with 69 victories, the largest number of any American unit. Rickenbacker headed the list by bringing down 26 planes himself. Miraculously, he was uninjured.

At the end of the War he retired with the rank of major and a reputation as one of the most glamorous of America's War heroes. He was honored with the Croix de Guerre with four palms and the Légion d'Honneur from the French government and with the Distinguished Service Cross with nine palms and the Congressional Medal of Honor from the United States.

Rickenbacker returned to the automobile industry after the War, organizing and becoming vice-president of the Rickenbacker Motor Car Company. When the company was dissolved he joined the Cadillac Motor Car Company as assistant sales manager in charge of the La Salle division. After a year in that position he was transferred by General Motors Corporation to the Fokker Aircraft Corporation of America

RICKENBACKER, EDWARD—*Continued*
as vice-president and director of sales,
with headquarters in New York City.

From 1932 to 1933 Rickenbacker was
with the Aviation Corporation as vice-
president of its American Airways, In-
corporated. Then he became associated
with North American Aviation, Incor-
porated, as vice-president, and on January
1, 1935 he became general manager of
Eastern Air Lines, Incorporated.

As a director of North American Avia-
tion and manager of its Eastern Air Lines,
Rickenbacker ran Eastern almost like a
one-man line. When the Air Mail Act of
1934 was passed forbidding one company
to manufacture airplanes and also to have
air mail contracts, North American Avia-
tion found itself in an embarrassing posi-
tion. North American built only military
planes, so it got away for a time with its
ownership of Eastern Air Lines and its
air mail contracts. But when the govern-
ment began looking askance North Ameri-
can decided to sell Eastern Air Lines. It
was excellent property, having been the
only major air line to show a sizable profit
of \$270,000 in 1937.

Rickenbacker's pleasant position as boss
of Eastern Air Lines was threatened by
Transcontinental's and Western Air Lines'
bid to buy Eastern. Rickenbacker got
Wall Street banking firms' backing and
they offered \$3,500,000 for Eastern Air
Lines, outbidding the Transcontinental and
Western Air Lines. Rickenbacker re-
mained not only general manager in com-
plete control of operations but was made
president of Eastern Air Lines when the
deal was consummated in 1938.

Rickenbacker has been married to the
former Mrs. Adelaide F. Durant since
September 16, 1922. They have two sons.

RODGERS, RICHARD June 28, 1902-
and HART, LORENZ May 2, 1895- Composers of musical comedy
Address: b. c/o Music Corp of America, 745 Fifth Ave, New York City

When a team like Gilbert and Sullivan or Rodgers and Hart appears on the scene, the first question laymen ask is: "Which do you write first, the music or the words?" Dick Rodgers, of Rodgers and Hart, says there's no answer to the question. "My favorite blight and partner, Mr. Lorenz Hart, often hands me a completed lyric to be set to music. More often I have a tune ready for him to work on. Sometimes we sit in a room and hate each other until we get a title; then I throw Larry out

of the house and fool around until I get a satisfactory melody, inspired entirely by the title and not by nostalgia for Venice in the spring."

It was by this method, at least, that in 1940 the Rodgers & Hart-John O'Hara musical comedy, *Pal Joey*, got its lyrics and tunes written.

Since they first met in 1919, when Hart was 23 and just out of Columbia and Rodgers was 16 and just going in, they have never done a stick of work apart. "It was love at first sight," they say. And it has stayed that way. Between them they have turned out well over a thousand songs, many of them hits, including *Thou Swell*, *The Lady is a Tramp*, *Ten Cents a Dance*, *With a Song in My Heart*. Between them they have been responsible for at least one and sometimes two musical comedy successes on Broadway nearly every year.

Almost all his life Richard Rodgers has been writing music. "For the sake of color," he says, "I should have been a singing waiter at Nigger Mike's. Unfortunately I was a doctor's son and very well fed as a kid." He was born on June 28, 1902 in New York City. His mother was a "merry, musical woman who liked to sing and play the piano." She would sing songs from the *Merry Widow* and *Mlle. Modiste*, and when Richard was four he was able, by ear, to pick out the melodies on the piano. His family encouraged him, as he grew older, to write music.

Dick Rodgers turned out his first song, *My Auto Show Girl*, when he was 14, and proceeded to become precociously active in the amateur-show business. He wrote the music and some of the lyrics for the shows put on by the Akron Club, a social organization to which his elder brother, now a Park Avenue obstetrician, belonged, and for various other benefit performances around town. Between shows he tried to peddle mimeographed copies of his songs to music publishers, most of whom listened to a couple of numbers without emotion and then, rising, said: "Thank you very much." "This, a courteous phrase, always courteously spoken in the show business, is generally a death verdict, but it had a violent and healthy effect upon Rodgers."

He entered Columbia University in the fall of 1919 determined to write the music for the Varsity Show the next spring. The show was called *Fly With Me*, and he was the first freshman ever to compose the score of a Columbia Varsity Show. After this achievement he was acclaimed a prodigy by the Columbia faculty and the New York press to such an extent that he never went back to Columbia—partly because he feared an anti-climax, partly because, through *Fly With Me*, he had met Lorenz Hart.

Rodgers tells about their first meeting. "A friend of mine, Phil Leavitt, told me he would like to introduce me to a fellow called Hart. It appeared that this Hart

RODGERS AND HART

knew something about lyric writing but had no composer. I knew something about composing but had no lyricist. We ought to get together. On a Sunday afternoon I was taken to Larry's house. Well, we sat around and talked theatre and song-writing. I played some tunes for him about which he was highly agreeable, and he told me his ideas about lyric writing. . . . Neither of us mentioned it, but we evidently knew we'd work together, and I left Hart's house having acquired in one afternoon a career, a partner, a best friend and a source of permanent irritation."

Lorenz Hart grew up on West 119th Street in New York City, the son of a promoter, Max M. Hart, and Frieda (Isenberg) Hart. In spite of the fact that his father generally promoted the wrong thing, the Hart household was a lively and genial one. At Columbia University he became locally famous as a versifier, and though he left in 1918, he was called back to write the lyrics for the Varsity Show for which Rodgers did the music.

Rodgers' and Hart's first professional collaboration was on a song called *Any Old Place With You* which was interpolated in a Lew Fields' comedy, *A Lonely Romeo*. But in spite of the first small flurry of success on Broadway the early nineteen-twenties were mainly a long and futile period of hanging around Broadway. Finally Rodgers went to the Institute of Musical Art to study under Frank Damrosch and at the end of the year was chosen, as one of the Institute's most promising students, to write the music for its annual show.

When Rodgers left the Institute he found once more that there was nothing for him on Broadway. With Larry Hart he put on some 20 amateur shows in the next year

or two for girls' schools, churches and synagogues. He was just on the point of going into the children's underwear business when Benjamin Kaye, a lawyer, told him the Theatre Guild needed some new tapestries and wanted to put on a small amateur show Sunday nights to pay for them. Dick refused to write the music for the show. "No more amateur shows for me."

After Kaye had explained the advantages of meeting "Terry" Helburn and working with Guild Theatre understudies, Rodgers gave in, but, he said: "I'll have to have Larry Hart write the lyrics." Hart had been translating plays and musical comedies into English for the Shuberts and had, with the money from his translations, gone into the producing business with two fairly spectacular failures: one a play starring Vera Gordon, and another chiefly notable because there were only two people in the cast.

The Garrick Gaieties, their musical comedy for the Guild, opened on a Sunday night in May 1925 "to the hosannas of public and critics, and soon became a riot with nightly performances and two matinees a week." It played 214 performances on Broadway. One night in 1939 "when Dick Rodgers and Larry Hart attended one of the Theatre Guild's stately first nights, Larry nudged Dick and murmured, 'See those tapestries? We're responsible for them.' 'Hell,' said Rodgers, 'they're responsible for us!'"

Since then Rodgers and Hart have worked on almost 30 shows together. Most of them—*The Girl Friend*, *A Connecticut Yankee*, *Dearest Enemy*, *On Your Toes*, *I'd Rather Be Right*, *Babes in Arms*, for instance—have been hits. In May 1940, they had two musicals running simultaneously—*Too Many Girls* and *Higher and Higher*, both full of "youth and freshness." There have been one or two flops—*Betsy* and *Chee-Chee* are examples—but their batting average is unusually high. As one critic put it: "Their services to musical comedy can be exaggerated, but hardly their success."

Rodgers and Hart have made a lot of money. When they collaborate with one or more authors on a show, their combined royalty is six per cent of the gross box-office receipts. They get about \$20,000 a year apiece from royalties on the performance of their songs and their income from the sale of sheet music and records runs high. They make money in Hollywood, too, though Rodgers prefers Broadway. In Hollywood his usual experience was to hand in a score, and, when the picture was produced, find the score either missing or massacred. Once Rodgers and Hart worked for 15 months at MGM and turned out only five songs. Said Rodgers: "In New York we often write five songs in one week. In three weeks we did the entire score of *I'd Rather Be Right*." He remembers well the time when "Rodgers and Hart" were credited

in the sheet music made for the movie *Mississippi* with the song *Swanee River*.

In composing his songs Rodgers is more methodical in his work and calmer in his attitude than Hart, the lyric writer. He starts about 11 in the morning and if the collaborators have agreed to work that day in Rodgers' apartment he puts in a series of telephone calls to Hart, beginning around 10 o'clock. After the two have met and roughly completed the score, they separate until the show is ready to go into rehearsal, and their collaboration then becomes for each man "a matter of grim and solitary labor." Hart dashes off to Atlantic City while Rodgers puts on a torn brown sweater buttoned up the front and shuts himself in his study to write the music. He insists that tunes never come to him in the middle of the night. "No tunes have ever come to me anywhere. I've had to go to them," he says.

"To begin with, I write scores and not isolated song numbers; therefore the particular song in question must bear a family resemblance to the other musical material in the piece." Rodgers and Hart have been trying for many years to write musical comedy that will be as well constructed as straight drama, but it has been hard to convince authors and producers that any sentence implying the presence of the moon or a feeling of frustration isn't sufficient cue for a boy and girl to walk into a spotlight and sing about love. In *On Your Toes* they felt they had come close to a reasonable combination of plot and song, but it wasn't until *Babes in Arms* that they were able to turn out a show in which every number was a "plot" number including the hit song, *The Lady is a Tramp*.

"A song is words and music and nobody ever fused words and music more effectively than Rodgers and Hart." When Rodgers' melodic line expresses gaiety, sadness, humor, Hart's lyrical line invariably complements and fulfills it. Rodgers, who believes that, aside from Jerome Kern, nobody has influenced him musically, is "not only master of a tonal palette filled with surprise and delight, but is constantly searching for new forms across the known boundaries of his medium. The dream music for *Peggy Ann* and 12 years later the music for *I Married an Angel*; the *Slaughter on Tenth Avenue* ballet music for *On Your Toes*; the march of the clowns in *Jumbo* are imaginative and charming beyond the accepted standards of musical comedy music."

Rodgers and Hart are as different at a first-night as they are in appearance and in their personal life. As Dick tells it: "Larry is more fortunate than I am on these occasions since he is able to work off the nervous tension by walking up and down in back of the audience, cursing softly if a joke fails to get a laugh and rubbing his hands vehemently if a song goes over well. I seem compelled to take it sitting down.

I cringe in the last row where I can run to the nearest exit in case of mis-fire."

Rodgers is "poised, immaculate and humorous. He is under five feet seven inches in height but seems tall in comparison with the exact five feet of his partner, a small tumultuous man, rumpled and amiable behind a large cigar which he takes out of his mouth only in order to make excited gestures with it." Nothing about Rodgers worries Hart except his own conviction that Rodgers encourages the orchestra to play too loudly: "So you want to drown out my lyrics?" he wails. Rodgers regards him peacefully and inquires: "Do you want the audience to go out whistling the lyrics?"

All this bickering is affectionate, the kind that can go on for 20-odd years between two friends, even though their lives are different. Rodgers married Dorothy Feiner in 1930 and "now lives rather formally with his wife, two daughters and three servants in a pleasant duplex apartment on East 77th Street. Larry is a bachelor and his home life is a happy pandemonium shared by his mother, his brother Teddy, the actor, and Black Mary, the general maid who has been with the Harts for some 20 years."

"Mr. and Mrs. Rodgers, gay, attractive, sociable, are frequently seen with friends at first nights, in restaurants, and at parties. Larry likes parties, too, but the thought of a white tie dissolves him and he prefers to give parties at home, always loudly and almost tearfully proclaiming any soirée of his a failure if even one guest has departed sober."

Dick was once asked: "Don't you and Hart ever fight?" He replied: "And how! Though I must explain that the fighting is all on a theoretical basis. It is difficult to prove this, but in over 20 years of coping with each other, we have never had a disagreement over policy or credit or money or, for that matter, any of the things that cause partners to part."

RODZINSKI, ARTUR (rud-jën'skē) Jan 2, 1894— Conductor

Address: 11001 Euclid Ave, Cleveland, Ohio

The 1940 season of the New York Philharmonic Orchestra at Lewisohn Stadium in New York was opened with an all Brahms concert, conducted by Artur Rodzinski. The Lewisohn concerts, frequently attended by as many as 20,000 people, offer the best music and the best conductors to New York City at prices from 25 cents up.

Mr. Rodzinski, who has conducted at Salzburg and Warsaw, in Budapest, Vienna and Paris, who is the permanent conductor of the Cleveland Symphony Orchestra, is at home at the Lewisohn concerts. For many years he has been pleading for the democratization of music. For many years he has insisted that music should belong to all who want to hear it. However, concerts like the Lewisohn ones are only a step in the right direction, for these concerts are not free, they are supported by millionaire philanthropists and they are local. Rodzinski's idea is that great orchestras and opera should be turned over to the people. The owner of every radio, he suggests, should be taxed \$1 a year and with this money a Department of Art under the Secretary of the Interior could be set up. The people do want music. This way they could get it.

Artur Rodzinski, "in the front rank of the younger generation of symphonic leaders of today," was born at Spalato on the Dalmatian

coast of the Adriatic, where his Polish father had been sent temporarily on a military assignment. His father wanted him to be a lawyer and sent him to the University of Vienna, from which he received a Doctor of Laws degree. While he was at Vienna he studied as much or more music than law. He watched rehearsals, he attended every performance, spent every spare minute going over scores and was able to get his Doctor of Music degree very shortly after his law one.

Rodzinski's musical career began at Lwow, Poland with modest choral direction but he soon had a chance to try conducting at the Lwow Opera. His "sparkling" performance of *Ernani*, *Carmen* and other operas brought him to the attention of Warsaw and after one trial there he was given a contract. It was a hard job. Day and night he had to keep ahead of the orchestra by studying and memorizing scores he had scarcely seen before.

For five successful years Rodzinski conducted opera and the Warsaw Philharmonic Orchestra until one day in 1924 a "tall blond man" appeared in his dressing room after a performance of *Die Meistersinger* and asked him: "How would you like to go to America?" The quiet, young conductor of 30 decided he'd like it very much and the next year went with Stokowski to Philadelphia.

Rodzinski spent four years in Philadelphia as assistant conductor of the Philadelphia Orchestra of which Stokowski was conductor, as director of the orchestral and operatic departments of the Curtis Institute of Music, as principal conductor of the Philadelphia Grand Opera Company. During these four years he appeared with the New York Symphony, the Detroit Symphony and the Rochester Philharmonic as guest conductor.

The next four years Rodzinski spent as conductor of the Los Angeles Philharmonic, appreciated there for his "untiring efforts and consummate musicianship," as the scroll given him on his departure attests. He left, it has been said, because of the Philharmonic's money difficulties, which led the directors to think that maybe a change of conductors might be a drawing card. They engaged Otto Klemperer, and Rodzinski went to Cleveland in 1933 to become the second conductor that city's orchestra had ever had.

Today, in its seventh season under Rodzinski "the Cleveland Orchestra stands at the height of its virtuosity, rich in tonal beauty, balance and unity, a splendid fulfillment of a conductor's lofty aims." Besides building up the audience for regular symphony series, Rodzinski added opera to his schedules and made his Wagnerian performances famous. He worked to make this orchestra serve the whole community, through educational work and so-called "popular" performances. Educational work in music, based on close cooperation with the public schools, began in the orchestra's first season and has become a model plan adopted in many parts of this and other countries.

Musical America

ARTUR RODZINSKI

His programs with the Cleveland Orchestra, both in Cleveland and on tour, are widely popular, for Rodzinski has emphasized the classics and at the same time welcomed new creative effort. He has conducted a good deal of American and foreign modern music; he was the first in America to perform Shostakovich's *Lady Macbeth from Mzensk*. "First time in Cleveland" is a familiar marking on his programs.

In August 1936 Rodzinski made his debut at the Salzburg Festival—the first permanent conductor of a United States Orchestra to lead there. After one performance Toscanini stepped to the podium and led the cheering. Then he turned to the president of the Festival and said: "Next year you won't need me—you have him," with a nod at the 43-year-old Cleveland conductor.

Since Salzburg Rodzinski has conducted in most of the capitals of Europe and in 1937 was guest conductor of the New York Philharmonic. As such he brought from the orchestra "some of the best balanced music of the year." There, in defiance of popular custom, he appeared with score and baton. To him, conducting from memory is "the craziest thing in the world"; the men fear the conductor will forget and the batonist inevitably finds himself "conducting cues, not music."

When NBC asked Toscanini to conduct a series of concerts in 1938, Toscanini specified, among other things, that Artur Rodzinski select and train the new orchestra. Rodzinski succeeded in persuading fine concert artists to join and coaxed others away from their positions in other orchestras. He was especially proud of the strings. "There are no second violins," he says. "They are all firsts." Rodzinski has conducted this orchestra himself in nation-wide broadcasts.

Rodzinski has often been called a "conductor's conductor," one of the highest tributes in the world of music. In him are all the qualities essential for a great orchestra leader—"profound musical knowledge, masterful baton technique and a high capacity for the projection of emotional intensity." His beat is flexible and his phrasing ingenious. Some musicians feel that occasionally he exaggerates certain passages beyond necessity—the second movement of Sibelius' *Second Symphony*, for instance, which he takes more slowly than any other conductor alive. Most are aware only of the meaning and musicianship he gets out of whatever he is conducting.

Severely formal on the podium, Rodzinski is an affable and humorous personality in moments of leisure. He spends most of them with his second wife, the grandniece of Wieniawski, the famous Polish violist-composer (he was divorced from his first wife), at their estate at Stockbridge, Massachusetts, where they raise white goats. Rodzinski sells the milk not only in the Berkshires but in New York and other Eastern cities.

His son Witold also makes his home in the United States.

Dr. Rodzinski started raising goats after he discovered that goats' milk was a cure for his tortured stomach. Today on his 200-acre farm he has about 70 goats and 40 acres which he personally plowed, harrowed and seeded to raise alfalfa for feed. There are a large pasteurization plant, milking rooms, exercise grounds, and Dr. Rodzinski is interested in all the latest scientific discoveries in the goat world. There is trade talk right now about dairy radios to sooth or stimulate at milking hour with music, but Dr. Rodzinski is skeptical about that. "I have music enough," he says.

ROMANO, EMANUEL (rō-män'o) Sept 23, 1904- Artist
 Address: 39-72 44th St, Long Island City, New York

In October 1940 Emanuel Romano's one-man show at the Marie Sterner Galleries, New York City, received critical acclaim. The drawings, in silverpoint, graffito and other original techniques show "an unusual talent for draftsmanship." One critic said: "Romano injects into his drawings an old master quality that is yet fresh and contemporary." Another said: "The solid mastery of draftsmanship that pervades all his

EMANUEL ROMANO

work is never obscured by the rich play of fantasy which makes him one of the most imaginative and interesting artists of his generation."

Visitors to both 1940 World's Fairs—San Francisco and New York City—found on view murals executed by Emanuel Romano for the Metropolitan Life Insurance Company. Mr. Romano wrote us that "the New York mural is 75 feet long and 11 feet high. Unfolding like a scroll, it is the story of insurance and at the same time the story of American family life today, designed to leave a lasting impression of family activities." The mural, which took a year to paint, shows a vivid contrast between city and country life and between youth and age. Variations in color, texture and shape have been employed to express that contrast. The scale is monumental and the whole has great decorative quality.

Emanuel Romano was born in Rome September 23, 1904, of Jewish ancestry, the son of Enrico Glicenstein, internationally famous sculptor and etcher who has exhibited with Rodin and twice was awarded the *Prix de Rome*. Not wishing to trade on his father's fame, the youthful Emanuel adopted the name Romano. The boy and his sister, Beatrice, grew up in an artist's environment. She is a worker in gold, silver and leather; their mother is a ceramist and sculptor. Always their homes, in widely scattered places, have been a beehive of artistic activity, as each member has pursued his own speciality. Romano admits that as a child he was ever in search of new forms for expressing himself in color and line. He has lived in Venice, Florence, Naples, Geneva, Paris and on the Riviera. Although he has studied at the University of Geneva, he had no formal art educa-

tion—only his father's strict artistic discipline and his own personal studies of the Old Masters throughout the museums of Europe. "The artist," says a critic, "has never lost contact with his early teachers. He sees the relationship between the expressionists and primitivists and abstract painters of today and the imagery of the past."

John Erskine, writing of Romano's one-man show in 1931 in New York, notes this resemblance in the artist's work to the Old Masters, particularly Michelangelo, "partly," he says, "because the proportions even in a small drawing are heroic, partly because the posture of the body stimulates an intellectual emotion, and at times suggests abstract ideas."

After achieving some note in Europe, where his pictures are owned by colleges and private collectors in Italy, Switzerland and France, Romano came to the United States in 1928. He spends his time in his studios in New York City and Boston. In 1931 he held his first one-man show in New York. The art critic of the *New York Times* noted the zeal which Romano showed in his paintings and drawings, a zeal which had nothing to do with the subject matter: "On the contrary, in these pictures farmers are leaning on their scythes; the family sits around the table, eating and drinking and cutting lovely hunks of bread; the mother nurses her baby; the workman chuckles over his newspaper. The line of the drawings is delicate; the color, that of faded fresco. But the delicacy is never precious and there is nothing weak about the sensitiveness."

In shows of his work held since 1931 Romano's pictures encompass a surprising range of material. Working in water color, gouache, oil, pen, crayon and silverpoint, he has painted landscapes and still-lives, but his principal interests are people and animals. He has always shown a great love of the circus, and much of his work is dotted with acrobats, harlequins and punchinellos. Here the vivid color, strong light, fantastic costumes "lend themselves to bold patterns and pronounced dramatic moods."

In 1937 he designed and executed a two-panel mural called *Circus* which covers 500 square feet and is placed in the New York City Home for Dependents on Welfare Island. One panel depicts a ring master, a circus horse, trapeze performers and several clowns; the other shows a strong man balancing a girl, while other performers and monkeys delight a painted audience. Brilliant in strong greens, yellows and reds, it was designed by the artist to compensate the inmates of the home for the melancholy aspects of their present lives.

Romano believes that every artist is a propagandist for something—that art for art's sake is meaningless. Years ago before it became the fashion for artists to paint "social protest subjects," he painted many

canvases portraying the working man—frequently shown struggling under heavy burdens. “While many contemporary painters are literal and journalistic in their pictorial descriptions of workers and the unemployed,” says one critic, “Romano, accustomed to the theme, maintains his artistic balance. His social depictions have consequently greater artistic validity. They are well-knit in design, strong in pictorial elements of form, texture, color.”

An exacting worker, Romano is constantly aware of the emotional values of color. Using ancient formulas, which he hunted for in Italy, he mixes his “pigments himself, prepares the grounds, experiments with all sorts of combinations and textured effects.” His draftsmanship is sure in whatever styles he essays—moods of subtle delicacy forming strong contrasts with other pictures of bold, smashing color and brusque execution. “In general,” says John Erskine, “Romano draws like a sculptor, with an eye for three dimensions rather than for the receding planes which painters look for.”

Of average size, fair-skinned, with receding hair line and melancholy deep-set black eyes, Romano, in common with all his family, has strong social consciousness. He is a tremendous worker who never finds enough hours in the day to do all he wants and who never is satisfied with his work.

 Who's Who in American Jewry

ROOSEVELT, ELEANOR Oct 11, 1884—Journalist; educator; wife of the President of the United States

Address: h. Hyde Park, Dutchess County, New York; The White House, Washington, D. C.

That the First Lady, Anna Eleanor Roosevelt, should have a third term is the unanimous opinion of her many admirers—and these include a considerable number who were against a third term for her husband. When Franklin D. Roosevelt became President in 1932, the public life and many activities of Mrs. Roosevelt brought a storm of criticism; now there are few to challenge the often-made statement that she is the greatest President's wife since Dolly Madison. A Gallup (see sketch this issue) poll in January 1939, showed that 68 per cent of the American people approved of Mrs. Roosevelt (her husband received a smaller popularity poll)—and this percentage included a large number of Republicans. More young people than older people are for her; and she is more popular with the low income

ELEANOR ROOSEVELT

than with the high income group. Women in small homes on Main Street throughout the country—especially those who read her column, *My Day*—like her informal, folksy, neighborly manner. The opinion of the small shopkeeper, the factory worker, the taxi driver is apt to be: “She’s a democrat, Joe—a little ‘d’ democrat.”

Even were she not the wife of a President, Eleanor Roosevelt would be a distinguished woman in her own right. She has made a career for herself in the social service field, including her work in the Women's Trade Union League; in 1927 she became a teacher on the staff of the Todhunter School; she has traveled extensively and lectured on topics that interest women; she is the author of six books, not including the published collection of her newspaper columns, *My Days* (1938). Two are for children; one is an autobiography, *This Is My Story* (1939); the others collections of essays: *It's Up to the Women* (1938); *This Troubled World* (1938); and the recently published (September 1940) *The Moral Basis of Democracy*. A new biography, *Eleanor Roosevelt*, by Ruby Black, appeared on Mrs. Roosevelt's birthday, October 11.

The Moral Basis of Democracy is based on Mrs. Roosevelt's conviction that democracy and religion (“Love thy neighbor as thyself”) may together produce a way of life able to withstand any totalitarian assault. She discusses the great historic documents of democracy, including our own Declaration of Independence based on the ideas of Tom Paine: We have, however, “allowed a situation to arise where many people are debased by poverty or the accident of race in our own country, and therefore have no stake in democracy, while others appeal to the old rule of the sacredness of property rights to retain in the hands of a limited

ROOSEVELT, ELEANOR—*Continued*

number the fruits of the labor of the many." In Mrs. Roosevelt's basically sound though undistinguished writing there are some contradictions. She states emphatically that democracy means "individual liberty." Yet the first thing she lists among what we must sacrifice in order to retain democracy is the "privilege of thinking and working for ourselves alone," that we must "submit our ideas to the test of what the majority wishes." She does not tell us how what the "majority wishes" shall be decided in these days of crisis; nor, how, if individual liberty (democracy) must be temporarily sacrificed in time of crisis, it will be gotten back again when and if that crisis is passed.

Although Eleanor Roosevelt received in April 1940 *The Nation's* first annual award for distinguished service "in the cause of American social progress," she has been under fire in connection with her sponsorship of the American Youth Congress and her membership in the American Newspaper Guild. The former, charged the Dies (see sketch this issue) Committee, was Communist dominated; the latter, Westbrook Pegler (see sketch this issue) charged, was also run by Communists: hence Mrs. Roosevelt should resign. Once several years ago Louis Howe, the President's personal adviser, grumbled to the First Lady: "If you aren't called a Communist before the President leaves the White House we'll all be lucky." Mrs. Roosevelt has always been vitally interested in young people. Her favorite government agency is the National Youth Administration, and she feels that the problems of youth today represent our greatest social concern. Accordingly she continued her friendship with the Youth Congress leaders and took notes at all the hearings before the Dies Committee. Said she: "If they are accused of Nazi or Communist domination that is no reason for turning our backs. It is unfair unless you find out the facts and help them." As answer to Pegler's Newspaper Guild charge, she refused to resign, but said she meant hereafter to take an active part in Guild affairs "so long as I am a newspaper writer." At a stormy meeting on September 25, 1940 she listened quietly, taking notes, while her husband's policies were severely castigated, and voted with the minority pro-Roosevelt group.

Anna Eleanor Roosevelt was born in New York City October 11, 1884, daughter of Elliot and Anna (Hall) Roosevelt. She has described her family background and her childhood years with frank charm in her autobiography, *This Is My Story* (1939), familiar to many readers. She was the shy, unattractive, awkward daughter of a beautiful mother; it was her father whom she adored: he called her "little Nell" and took her traveling with him. There were two younger brothers. The mother died in 1892; the father two years later. She went to live with her grandmother and, since she had no playmates, read voraciously. When she

was about 15 she spent her holidays at her Uncle Theodore's at Oyster Bay. There were parties; and shy, gangling Eleanor suffered the fate of a wall flower. "I was a poor dancer, different from all the other girls. . . I still remember my gratitude at one of these parties to my cousin Franklin when he came and asked me to dance with him!"

After private schooling in England and vacation-traveling abroad, Eleanor "came out," and began to see more of cousin Franklin. Their engagement was announced when she was 19; they were married March 17, 1905. Because Uncle Theodore came to the wedding, the guests were so interested in the presence of the President that the newlyweds were totally neglected. After a honeymoon summer abroad they returned to America. In 1906 Anna Eleanor, the first baby, was born; and the following year, James. Servants brought up the babies; Mrs. Roosevelt writes that she wishes now she had learned to care for them herself. A second son, Franklin, died in 1909; in 1910 Elliott was born. Two more sons, Franklin Jr., and John, completed the family.

When Franklin Roosevelt entered politics they moved to Albany, where Mrs. Roosevelt attended her first political convention (1912). The next move was to Washington: Roosevelt was appointed Secretary of the Navy by President Wilson. The War came, and Mrs. Roosevelt was active working in the Navy Hospital; after the War she and her husband again went abroad together. It was during the summer of 1921, while they were at Campobello, that he became stricken with infantile paralysis. Long months of hospitals, then convalescence, kept the Roosevelts from public life. When Roosevelt recovered, and was subsequently elected to the Governorship of New York, Mrs. Roosevelt again continued her growing interest in social and political matters. She gives full credit to the League of Women Voters for having grounded her in citizenship and government; and in 1928 she helped originate the nation-wide web of active units of Democratic women.

When the Roosevelts entered the White House in 1932, she was fully prepared for an amazingly active public career. It is said that during the last seven years she has traveled some 280,000 miles, written a million words, earned and given away over half a million dollars, shaken as many hands, delivered several hundred lectures and radio speeches, attended to her colossal mail (150,000 letters in 1939) and in-between times knitted garments for her nine grandchildren.

Her innumerable trips all over the United States, lecturing, or just seeing how people live, have made her the butt of many a joke and cartoon. But on these trips she chats with anyone she meets on plane, bus or train; she goes to see engineering and housing projects and talks with workers; she

visits with women in small towns. She is the moving spirit behind Arthurdale, a pioneer project for West Virginia coal miners. She went to see the Okies in the *Grapes of Wrath* country and was appalled by conditions: "At one place I saw a water pipe line next to a privy." A migrant's wife said, "She's nice—just as homey as we are." Because of all this, some observers believe that Mrs. Roosevelt has done more to popularize the Roosevelt Administration than any other person or factor.

Her column, *My Day*, started in 1935, now reaches some 4,500,000 readers. Purposefully chatty, naïve, full of trivialities and platitudes, it seems to tell all—but by no means does so. During the past year it has been given over to more political comment than previously. Mrs. Roosevelt, however, refuses to believe that what she writes or does is responsible to the electorate, since "I have never been elected to any office." But Quincy Howe (see sketch this issue) points out: "The one thing a reader of her column might bear in mind is that Mrs. Roosevelt sometimes releases trial balloons for her husband, and when she writes about politics she almost always expresses a point of view that has the blessing of the White House." And it is known she confers with the President and reports to him on what she has heard and seen. "But I would never presume to make recommendations," she says.

Desperate appeals for help come to Mrs. Roosevelt from all over the country, and she often uses her own capital in setting up people in small businesses. She has been particularly interested in the Negro people; memorable is her sharp action on the move to exclude Marian Anderson, the singer (see sketch this issue), from Constitution Hall in Washington; and she once gave a White House party for delinquent Negro girls. She is an admirer of the work of Richard Wright, Negro novelist (see sketch this issue). She is always cordial to the many visitors who make demands on her time; usually equal to all situations. However, the story is told that when one day a pompous Southern lady called at the White House, Mrs. Roosevelt's dog bit her on the ankle. To her colored maid Mrs. Roosevelt exclaimed: "Mamie, that settles it: from now on we have iodine kept in this room."

She is still shy; she is not a good speaker, especially over the radio; only in the last few years has she learned to dress well. But her energy, warmth and naturalness win every group. Newspaper women have the greatest affection for her. She likes best to meet people at informal picnics at her Hyde Park cottage, Val-Kill. Usually she cooks the hot dogs and hamburgers herself. Her hot dog picnic for the visiting King and Queen of England in 1939 made history. Interested in the activities of her children, she visits them when she can,

writes to them often: they never write to each other, and this distresses her.

At the suggestion of a future political career for herself, Mrs. Roosevelt says, "Nothing under heaven could ever persuade me to run for any public office!" Whether or not she became First Lady for a third term, her newspaper contract was sure to go on. It is also reported that Bryn Mawr College is looking for a new President and that they want Anna Eleanor Roosevelt. When she does become an ex-First Lady, Mrs. Roosevelt will doubtless be able to set another precedent.

ROOT, OREN JR. June 13, 1911- Lawyer
Address: b. 15 Broad St, New York City;
h. 455 E 57th St, New York City

Oren Root Jr. is the "affable effervescent young man of 28" whose whirlwind campaign to make Wendell Willkie (see sketch this issue) the Republican candidate for President achieved startling and stupendous success. It all started one morning when Mr. Root read Willkie's article in *Fortune* magazine called *We, the People*. He was impressed. That same afternoon he went to hear Willkie speak at Town Hall in New York; that same night he got busy.

In the winter of 1939 he drafted declarations and had 800 petitions for Willkie for President printed at his own expense. All the next week end he spent sending them to the younger alumni of Harvard, Yale and Princeton. At the same time one of Root's friends began an advertising campaign in the New York *Herald Tribune*. In the public notices column he inserted: "Wendell Willkie for President! Help Oren Root Jr. organize the people's demand for Willkie. Send Root a contribution to 15 Broad Street, New York."

The response to the petitions was greater than even Root had dreamed, and when the newspapers started printing stories about his

OREN ROOT JR.

one-man campaign, the three switchboards of the law firm where Root worked became so choked that none of the partners could get a line. "There was nothing to do but move out," Root said. He set up makeshift political headquarters in the apartment where he lives with his mother. This didn't work either, and soon a regular office was set up with a staff of six paid workers and about fifteen volunteers.

Root hadn't even met Willkie while all this was going on. After the campaign was swinging on, Willkie invited him up. He was dubious about the whole business. "Still he liked me," Root says, "and said I could go ahead. But he wouldn't lift a finger to help me."

Without Willkie's help Root managed to collect petitions from every state and territory of the United States, managed to win over to the Willkie side large numbers of the Republican Party and was one of those who can be given much of the credit for the landslide at the Republican Convention which made Willkie the Republican candidate for President.

Root was able to do this mainly because of his own firm and great faith in Willkie. One of his campaigning letters went so far as to state that "If we elect him President we will see the dawn of a New World." When he was asked to explain what he meant, he admitted: "Gosh, I have no idea," and said it had been dashed off in a white heat right after his first meeting with Willkie when he had been so affected by his "colossal charm" that he had just let himself go. Since then he has insisted with equal conviction that "each person who is for Willkie is for him heart and soul. There is a quality and a strength in this support for Willkie, especially among the inde-

pendent voters, in which may lie the seeds of victory for the Republican Party in November."

Blue-eyed, six-foot Oren Root is the grandnephew of the late Elihu Root and the son of Oren Root, who worked himself up to be head of the Hudson and Manhattan Railway. He is also the grandson of another Oren Root, a professor of mathematics at Hamilton College known to generations of students as "Square Root," and the son of Oren and Aida (de Acosta) Root. Young Root was graduated from Princeton in 1933 and received his law degree from the University of Virginia in 1936.

After graduation he went into the law firm of Davis, Polk, Wardwell, Gardiner and Reed in New York and until the spring of 1940 was kept busy handling the legal affairs of some of the charitable organizations represented by his firm, drawing wills and occasionally appearing in court. He had, however, already sallied forth into politics as a member of the New York County Republican Committee, a campaigner for Mayor La Guardia in 1937 and for Thomas Dewey (see sketches this issue) for Governor in 1938. After the Convention he became head of the Associated Willkie Clubs of America, and after the election he urged that the clubs become a permanent organization "dedicated to the preservation of free government in America." "We the People" was his suggested title.

ROSE, BILLY Sept 6, 1899- Theatrical producer

Address: b. Hotel Paramount, New York City;
h. 33 Beekman Pl, New York City

The trouble with showmen, Billy Rose thinks, is that there are too many geniuses and not enough showmen among them. As for me, this "mighty midget" says, "I sell ballyhoo, not genius." Selling it, he has achieved "such fame as has not been achieved in the show business since Phineas Barnum brought the original Jumbo to this country and put a sign over the exit of his museum saying: 'This way to the Egress.'"

A tiny man who bounces when he walks, the entire success of Billy Rose, son of David and Fannie Rosenberg (he has had his real name, William Samuel Rosenberg, legally changed to Billy Rose) is founded on an immense enthusiasm fed by an abnormal desire for fame. This desire has been part of his life since he went to Public School 44 in The Bronx, New York and was merely intensified when he became Fanny Brice's husband and

heard himself called "Mr. Brice." Billy's father was "a salesman who would have difficulty selling a famished dog a bone." Billy wanted to be someone.

He started being someone in P. S. 44 by becoming a sprinter, "learning to jump the gun without detection." "A steal of two yards enabled him to win the gold medal for eighty-five pound sprinters in an interscholastic meet in Madison Square Garden in 1914." When a medal for English was offered in a city-wide competition Billy studied hard and won it. It was as a shorthand speed demon, however, that Billy won his first national fame. Every contest he entered he won and pretty soon was round-shouldered from hanging medals on his shallow chest "so his mother could exhibit them proudly to her horde of relatives."

Soon the inventor and head of the Gregg system of shorthand heard of Billy. Those were the days of the great battle of Gregg versus Pitman, and Mr. Gregg decided to use Billy as an example of the superiority of his pothooks. He trained him. Three men dictated to Billy in relays at increasing rates of speed. When the dictators broke under the strain, a special phonograph was constructed which fired 350 words a minute at Billy. Drilled and trained for the shorthand contest of the world, Billy broke his index finger the day before. But he won anyway by shoving his pen through a potato and holding the potato in his fist. At 18 he was the shorthand king of the world!

Billy demonstrated his speed at the Steel Pier in Atlantic City by taking dictation from all comers in all languages and at all speeds and reading it back, and he went on tour for Mr. Gregg. During the War he organized the stenographic bureau for Bernard M. Baruch's War Industries Board and recorded all of Mr. Baruch's confidential work.

In 1920 Billy decided to give up shorthand and leave New York. His parents were sure he was crazy—wasn't he making about \$300 a week? But Billy went West. By the time he got to San Antonio he was broke. Fortunately for him the Republican Party of Texas was having a state convention and when the convention broke up in a row, with the Negro delegates seceding and holding their own convention, Rose took a word by word account of their meeting. He got all the speeches in full, mimeographed them and sold copies at 25 cents a page. He started back home with almost \$1,000.

Legend has it that on his way back from San Antonio Billy Rose met a girl, distantly related to the Shuberts, who informed him how much money Irving Berlin made as a song writer. Billy decided to be a song writer. He learned how in the New York Public Library. Patiently he read most of the song hits published in the twentieth century. He indexed them for phrases, rhymes and sounds and discovered that the only important line in a song was the first line of the chorus, but that sounds were very im-

White

BILLY ROSE

portant. The best sound, he found, was "oo."

His first song was *Barney Google*. He took it around to where the song writers hung out and just declared he was a song writer. The song was a success. Other hits followed—*You Tell Her I Stutter*, *Follow the Swallow*, *Mmmmm*, *Would you Like to Take a Walk?*, *Don't Bring Lulu*, etc.—until as a song writer Billy Rose had a top ASCAP rating.

Billy became bored with song writing. He needed more scope for his talents. So he went into the night club business. He took a shabby little place, called it "The Back-Stage Club," announced that it was a hangout for people of the stage and was soon doing a flourishing trade—about \$4,000 profit a week. Ambition soared and Billy opened the "Fifth Avenue Club," across the street from the residence of John D. Rockefeller Jr. The cover charge was \$5 and the trade was smart society and gangster. When he found out the club was too near St. Patrick's Cathedral to sell liquor, he breathed a sigh of relief and sold it for \$15,000. He had never liked it there. His haughty headwaiter wouldn't let him on the floor, because he felt that Billy lowered the tone of the place.

Fanny Brice and Billy Rose met when she was in the *Follies*. She liked the lines, "In the middle of a moment you and I forgot what 'No' meant" from *In the Middle of the Night*, and asked to meet the author. Her face fell when Rose was introduced. "You're disappointed," he said, "because I'm not a tall Spaniard with eyes like live coals." There was a long courtship, in the course of which Fanny showed her love by referring to Billy as "that pasty-faced dope," and they were married on February 8, 1930, Billy's first try at marriage and Fanny's third.

ROSE, BILLY—*Continued*

Rose couldn't bear to be swallowed up by his wife's reputation. He went to Hollywood, hoping for fame greater than hers. For six months he wrote for MGM at a salary of \$1,000 a week and never had a line accepted. By this time, what with the depression and the radio, the song business wasn't so good and Billy wasn't making money at it. He decided to produce a musical comedy.

Its name was *Sweet and Low* and it was a flop. Undaunted, Billy Rose turned it into a tabloid review, called it *Crazy Quilt* and toured the country with it. It became "one of the most profitable theatrical enterprises of recent years." Billy had learned how to ballyhoo. Operating through chambers of commerce, boards of trade and grangers' organizations he impressed the citizens for 100 miles on each side of his itinerary of the glory which Billy Rose was conferring on their section by having *Crazy Quilt* visit it. He stirred up their civic pride by asking them to remember the Alamo and the Maine and not to sell America short, by turning out in hordes for *Crazy Quilt*. He roused their enthusiasm by calling it "Three Shows in One," a "Theatrical Colossus," by describing the chorus as "Notable Nymphs", "Statuesque Odalisques" and "Dashing Demoiselles." When the tour was over, Billy Rose knew that he was Barnum's spiritual heir. He slipped only once—when he got sidetracked in 1932 into producing *The Great Magoo*, a straight drama and a quick failure.

He got a new idea—a combination of theatre and restaurant. But before he started he scientifically studied all earlier attempts at the same thing and decided that they had been too expensive and formal. His own, the Casino de Paree, was a success—"tony but with an undercurrent of 'honky tonk.'" Then he hired a theatre around the corner and called it Billy Rose's Music Hall. Billy Rose was practically the only person who made money from the night club business in the late '30s. His Casa Mañana and Diamond Horse Shoe also herded in the customers.

But he wasn't satisfied. Finally he got an idea that was really colossal. "Kid, I found out the other day," he said, "that a circus sometimes makes as much as \$50,000 in a one-night stand. I said to myself, that's the racket for me." Rose hired the Hippodrome in New York, bought the biggest elephant in the world, got Rodgers and Hart (see sketch this issue) to write the words and music, Ben Hecht and Charles MacArthur to write the play and Jimmy Durante to star in it. *Jumbo* was a year in production and postponed five times until its first performance in 1935. It was Billy Rose's idea of a circus, which meant that it started out with countless myriads of dream women—"the tour of the big tent should be a migration of maddening madonnas." Which

meant, too, that instead of 50 or so unrelated acts, as Barnum did it, *Jumbo* was a more or less unified drama, with Paul Whiteman and a zoo thrown in for good measure.

If the ballyhooing before *Jumbo*—which included an elephant parade in Wall Street—was noticeable, it was mild compared with that for the Fort Worth Centennial celebration in Texas. Billy Rose brought newspapermen from New York in airplanes; he covered every barn and fence in 48 states with propaganda. It was a mad and monster entertainment, and Billy Rose rode easily through all Fort Worth's hurly burly, incessantly smoking through an 18-inch cigarette holder made from an albatross quill, and phoning Fanny Brice in New York. Fanny was proud—"a Jewish Noel Coward," she called him.

Billy Rose put on other shows. His *Aquacade* at the 1939 and 1940 New York World's Fair was "one of the most amazing success stories" in the anthology of show business. "To many of the civic patriots who conceived the Fair, a Rose girl show had no place in their vision of the World of Tomorrow. How Rose thawed their attitude so thoroughly that he eventually got the Fair's choicest ready-built concession for a figure 10 per cent under that of the highest bidder is a Broadway legend." The *Aquacade*, a slick, streamlined revue in a swimming pool 300 feet long with a cast of about 300—Billy says 500—was the most spectacular feature of the Fair's amusement section.

Billy married its leading lady, Eleanor Holm, in the fall of 1939 after he got a divorce from Fanny Brice. Eleanor thinks him "the most fascinating man I've ever met." She and the "mad Mahout" have just taken a five-story house in New York, "a setting lavish as Billy's productions." Billy has four offices, but works in his bedroom, dressed in pajamas. He hates to get dressed and even Eleanor hasn't been able to do anything about it.

Billy has money—the furnishings of his house are supposed to have cost about \$200,000—and he has the fame he's always fought for. He has the money because he is one of the shrewdest economists in the entertainment world who hires a C. P. A. to watch him and everyone of his lieutenants relentlessly. He has fame because of his press agent, Dick Maney, and because he is Billy Rose, and this fame is guaranteed by a never-ceasing flow of "colossal" ideas. His latest concerns a Sky Show—sort of an *Aquacade* of the air, and he is also reported working on a giant Broadway sports palace.

ROSS, NELLIE TAYLOE Director
 United States Mint

Address: b. Treasury Bldg, Washington,
 D. C.; h. 2126 Connecticut Ave, Washington,
 D. C.

Mrs. Nellie Tayloe Ross, first woman
 Director of the United States Mint, super-
 vises the manufacture of all coins and is
 responsible for the safekeeping of the gov-
 ernment's vast gold and silver stocks,
 amounting to 20 billion dollars. She directs
 the activities of eight mint institutions
 throughout the country as well as the
 Bureau of the Mint in Washington, D. C.

When Mrs. Ross was appointed Director
 of the Mint in 1933, activities were at a
 low ebb owing to the depression, and per-
 sonnel had been reduced to a skeleton.
 Coincidental with the enactment of new
 monetary laws, a load of work was laid
 upon the Mint under which the skeleton
 force staggered. Gold from all over the
 world began flowing into the Mints, soon
 to be followed by great deposits of silver.
 With the upswing of business that began
 in 1934 a demand for coin also began, which
 has continued until the present. All re-
 cords for coinage were broken in October
 and November 1939; so heavy have been the
 coinage requirements since, that frequently
 the Mints have operated 24 hours a day, in-
 cluding Saturdays and Sundays.

Such drastic and sudden increase in the
 activities of the Mint service necessitated
 expansion of facilities of man power, ma-
 chinery, vault space and working space.
 The skeleton force of 1933 has trebled, and
 equipment has been expanded in proportion,
 new machinery installed, new vaults pro-
 vided or old vaults modernized in every
 field institution. Three new Mints have
 been constructed. A guard force formerly
 composed of "broken-down" employees has
 been supplanted by one of stalwart men,
 trained in the use of arms.

Mrs. Ross was appointed by President
 Roosevelt to head the Treasury Assay Com-
 mittee, which in February 1940 tested the
 coins minted during the past year. In
 this annual event two out of every 10,000
 coins are weighed; each must assay 900
 parts silver to 100 parts copper.

Mrs. Ross, the first woman director of
 the Mint, is the first woman to have her
 likeness on one of the mint medals. One
 side shows a profile of Mrs. Ross and on
 the reverse is an idealized figure seated
 before a balance, weighing coins. On the
 medal also may be seen a copy of the

NELLIE TAYLOE ROSS

Treasury seal, a coining press, bars of gold and stacks of coin.

Her name appears also on the cornerstone of the United States Bullion Depository (for gold) at Fort Knox, Kentucky; the United States Bullion Depository (for silver) at West Point, New York; and the new Mint building at San Francisco. These three impressive structures, as well as the addition to the Mint building at Denver, have been built since 1933.

Mrs. Ross is of medium height, has brown hair with a little gray in it now, and very large, expressive blue eyes. She claims the woman's prerogative of not making her age public. Although she is called "a daughter of the old South," she is a native of St. Joseph, Missouri. Her father, James Wynne Tayloe, was descended from the distinguished Tayloe family. One of its members erected the celebrated Octagon House in Washington, and later the equally famous Cameron House which served as the home of President Madison after the White House had been destroyed by the British during the War of 1812. Her mother, Elizabeth Blair Green Tayloe, was descended from Samuel Ball Green, whose mother, Patty Ball, was a cousin of the mother of George Washington.

She was educated in public and private schools and under private teachers. In 1902 she went to Wyoming as the youthful bride of William Bradford Ross, a young Tennessee attorney, who had chosen Cheyenne as his home. They had four children, one of whom died in infancy.

In 1922 Mr. Ross was elected Governor of Wyoming. In the middle of his term he died, and Mrs. Ross was elected to fill out his unexpired time, January 1925 to January 1927. Thus, although she and "Ma" Ferguson of Texas were elected on the

same date, Mrs. Ross has the distinction of being the first woman Governor of any state because her inauguration preceded that of Mrs. Ferguson by two weeks. She ran for a second term, but was defeated in a close election. Some commented that "she had been too cautious in action."

Mrs. Ross was state representative; then vice-chairman of the Democratic National Convention. She seconded the nomination of Al Smith at the Houston Convention of 1928. For the four following years she was in charge of activities of Democratic women, with an office in Washington, and she directed the 1932 Roosevelt campaign among women.

In addition to supervising the activities of the Mint institutions and the home she maintains for herself in one of the spacious, older apartment buildings in Washington, she acquired a farm in Maryland a couple of years ago, and devotes as much attention as possible to developing it. Tobacco is the principal crop raised at La Trappe, as the historical old place is called. Mrs. Ross spends her week ends as well as her summer vacations at the farm.

In her youth Mrs. Ross was very proud of the prizes she took with her embroidery and was quite famed in her community for her needlework. Today, she has little leisure to devote to a hobby, although she has a great interest in antiques. "I always hesitate," writes her secretary, "to say this for publication, because immediately after it appears in print we are deluged with letters and calls from people who want to sell her one of their heirlooms."

Those who know her believe that while her success in a public career is based partly on political opportunity, "her fine intellect, lovely personality and most of all her capacity for hard, grueling, sustained work" have contributed to that success.

Mrs. Ross contributes articles on political subjects to women's magazines and is in demand as an interesting and entertaining speaker, "impressing her hearers with her earnestness and sincerity." She had never made a formal public address of any kind when she first addressed the State Legislature as Governor. Then her only training for such an event had been that which she had received as president of the Women's Club in Cheyenne.

Emily Newell Blair reported (1939): "Few women have known more women or been beloved by so many. And why not? I saw her recently speaking before almost a thousand women. . . Her plea for lasting peace was as valiant, earnest and intelligent as she herself was winsome and winning. Women recognize in her a woman who, when called on, can meet any and every situation with distinction, yet remain always feminine."

 Who's Who in America
 Who's Who in the Nation's Capital

ROWELL, CHESTER H. Nov 1, 1867-
 Editor

Address: b. San Francisco Chronicle, San Francisco, California; h. 149 Tamalpais Road, Berkeley, California

Chester Harvey Rowell, called "one of the leading newspaper editors of his generation" and a Pacific Coast leader in the Committee to Defend America by Aiding the Allies, was one of the three Americans presented on October 27 with the Roosevelt Distinguished Service Medal for 1940.

Mr. Rowell was born in Bloomington, Illinois on November 1, 1867, the son of Jonathan Harvey and Maria Sanford (Woods) Rowell. He received his Ph. B. from the University of Michigan in 1888, a year after his marriage to Myrtle Marie Lingle of Webb City, Missouri, and did graduate work not only at Michigan but at the Universities of Halle, Berlin, Paris and Rome. He then taught at academies in Kansas, Wisconsin and California, for a year (1897-98) was an instructor in German at the University of Illinois, and in 1898 became editor and publisher of the *Fresno Republican*. He was to remain its editor for 22 years, at the same time taking active part in politics. From 1889 to 1891 he had been a clerk on the committee on elections in the United States House of Representatives, and in 1901 he published his *Digest of Contested Election Cases in the House of Representatives of the United States, Fifty-sixth Congress*. Among other activities he was a member of the Republican State Committee from 1906 to 1911; in 1910 chairman of the Republican State Convention; he was a delegate to both Republican and Progressive National Conventions (from 1912 to 1916 he was a member of the Progressive National Committee); and he organized and served as president of the Lincoln-Roosevelt Republican League from 1907 to 1911.

After 1923, having ceased to be editor and publisher of the *Fresno Republican* in 1920 and at the same time having given up the position as president and general manager of the Fresno Republican Publishing Company which he had held since 1912, Mr. Rowell began to devote much of his time to foreign travel, lecturing and newspaper syndicate writing. To mention only a few of his activities, in 1924 he was a delegate to the International Congress of Penal Law at Brussels, in 1925, 1927, 1929, 1931 and 1936 a member of the Institute of Pacific Relations Conferences, in 1939 a delegate to the International Labor Conference at Geneva.

Since 1926 he has been a member of the National Crime Commission, and since 1927

president of the California League of Nations Association. From 1927 to 1934 he lectured on political science at the University of California and at Stanford, and he also did extensive lecturing elsewhere on educational, civic and political subjects. His interest in social problems brought him to the presidency of the California Conference on Social Work (1928-29); in 1928, 1929 and 1931 he was a member of the Presidential Emergency Boards on railroad strikes; since 1935 he has been a member of the American Youth Commission; and he is a member of the Social Research Council of the Pacific Coast.

This does not mean that Mr. Rowell has ceased to be either a newspaper editor or an active worker in the Republican Party. In 1932 he became editor of the *San Francisco Chronicle*, his present newspaper. An active supporter of Hoover even before his nomination in 1928, in that year Mr. Rowell was a delegate to the Republican National Convention. In 1936 he was again a delegate, and argued for "a positive program for the Republican Party," for, he thought, "the governmental and economic institutions of America are menaced with literal revolution, which must be stopped now or never." In the years 1938 and 1939 Mr. Rowell was a member of the National Republican Program Committee.

In many of his articles, published in magazines and newspapers all over the country, the editor of the *San Francisco Chronicle* has expressed concern for the freedom of the press as well as for the freedom of business from excessive governmental influence. Speaking of pressure from advertisers and other unofficial sources, he inquires: "What profiteth it a nation that its press be free of the law, if it makes merchandise of its own soul?"

Mr. Rowell has one son, Jonathan Harvey Rowell, and two married daughters, Mrs. J. A. Givens and Mrs. W. D. Laughlin. He and Mrs. Rowell live in an attractive home in Berkeley, California.

RUSSELL, BERTRAND ARTHUR WILLIAM, 3RD EARL May 18, 1872- Philosopher; educator; author

Address: Barnes Foundation, Merion, Pennsylvania

It was a housewife, Mrs. Jean Kay, (with a daughter of 18) who instituted the legal action which led to the voiding on March 30, 1940 of the appointment of Lord Russell to the philosophy faculty of the City College of New York. "I was glad," she cried, "that right and decency have triumphed." A reporter visiting her home found by cross examination that Mrs. Kay "was fond of reading philosophy ... Elbert Hubbard and Emerson."

The affidavit protesting the appointment alleged that Mr. Russell was "lecherous, salacious, libidinous, venereous, erotomaniac, aphroditous, atheistic, irreverent, narrow-minded, bigoted and untruthful"; that the doctrines which he calls philosophy were "just cheap, tawdry, worn-out, patched-up fetishes, devised for the purpose of misleading the people."

Justice John E. McGeehan, in a 17-page decision, ruled that the appointment should be revoked on three counts: Lord Russell was not subjected to competitive examination, a violation of the Constitution of the State of New York; he was not a citizen, a violation of the State Education Law; and the appointment would be a violation of "the public health, safety and morals of the people."

Many individuals, organizations and church groups rejoiced in the decision, including the Rt. Rev. William T. Manning (see sketch this issue), Bishop of the Episcopal Diocese of New York, who had asked in the pulpit: "What is to be said of colleges and universities which hold up

before our youth as a reputable teacher of philosophy, and as an example of light and leading, a man who is a recognized propagandist against both religion and morality, and who specifically defends adultery?" and continued the attack in print.

Acting President Nelson Prentiss Mead of City College replied: "Mr. Russell has been invited ... to teach courses in mathematics and logic ... and not to discourse on his personal, ethical and moral views." The Committee on Cultural Freedom stated: "When the history of intellectual bigotry is written the denial of Bertrand Russell's right to teach will take its place on the record along with the persecution of Socrates and Galileo, whose critical tradition and belief in free inquiry Bertrand Russell carries into the world today."

Mr. Russell was supported by educators such as Franz Boas, Robert M. Hutchins, Marjorie Hope Nicolson (see sketches this issue) John Dewey; by groups such as officers of nine book publishing houses, The American Committee for Democracy and Intellectual Freedom, the American Federation of Teachers; by 330 administrators and 1,880 students of the City College of New York.

His opponents were led by the Hearst press and individual clergymen; by groups such as the Knights of Columbus, the Greater New York Federation of Churches, the National Catholic Alumni Federation, the National Society of New England Women, the New York County Board of the Ancient Order of Hibernians and the New York Post Office Holy Name Society.

The American Civil Liberties Union, Russell's counsel, indicated that Russell was willing to come to New York whenever necessary to answer charges of immorality. They intended to institute charges of breach of contract. But—Mayor La Guardia (see sketch this issue) in the meanwhile eliminated the \$8,000 appropriation for the position from the city budget. As a result of the uproar the New York State Legislature authorized a \$30,000 appropriation to investigate state wide education expenses and the activities of the Board of Higher Education.

Russell, who was silent during the entire controversy, wrote: "I am not as interested in sex as Bishop Manning, who is greatly concerned with it. Sex is only a small part of what I have written. Bishop Manning and his supporters have noticed only this part. They don't notice that almost all of my writing has been on other subjects. . . Precisely the same accusations were brought against Socrates—atheism and corrupting the young."

Even though La Guardia warned that the fight would be futile, Russell's case was to be argued again in the Appellate Division and in the Court of Appeals at Albany in the fall of 1940. In October, however, it was announced that Russell had signed a five-year contract to deliver one lecture a week at the Barnes Foundation, Merion, Pennsylvania, beginning January 1, 1941. In the meanwhile he was delivering the

William James Foundation lectures in philosophy at Harvard. The Board of Higher Education therefore decided "to take no further steps in reference" to the dispute.

A United States resident since 1938, Bertrand Russell has taught at the University of Chicago, Smith College, the University of California at Los Angeles (1939-40) and is giving the William James Lectures at Harvard 1940 to 1941. Officials at Harvard University on March 31, 1940 declared that the New York Supreme Court decision would have no effect there. They reiterated their policy of allowing instructors "academic freedom." The appointment, made two years ago, brought protest from Massachusetts State Representative Thomas Dorgan, who cited arguments similar to those that brought the action in New York.

Bertrand Russell, the second son of Viscount Amberley, was born at Trelleck, England, on May 18, 1872. An earldom was created for his grandfather, Lord John Russell, Liberal Prime Minister and a follower of John Stuart Mill, in 1861. Bertrand Russell, who prefers to be known as plain Mr. Russell, succeeded to the title upon the death of his brother (March 1931), the second Earl Russell.

Orphaned at the age of three, Bertrand Russell was brought up at Pembroke Lodge in Richmond Park, Surrey, by his grandmother. Educated by governesses and tutors, he acquired a knowledge of German and French and laid the foundation for a lucid prose style. At Trinity College, Cambridge, he obtained a "First" in mathematics and moral sciences.

When he left Cambridge in 1894 Russell was attached to the British Embassy in Paris and there married Alys Pearsall Smith in December of that year. They went to Berlin, where he studied social democracy, and later settled in a small cottage near Haslemere, Surrey, where Russell devoted himself to philosophy and wrote *German Social Democracy* (1896).

Russell became interested in the Italian mathematician Peano, whom he met at a mathematical congress in Paris, and after a study of his works Russell wrote *The Principles of Mathematics* (1903), his first important book. With Dr. A. N. Whitehead he developed the mathematical logic of Peano and Frege, and jointly they wrote *Principia Mathematica* (1910), which *Life* lists as one of the 100 Great Books of All Time.

Russell was appointed lecturer at Trinity College in 1910, where he had been made a fellow after graduation. "He made frequent trips to the Continent, and occasionally abandoned philosophy for politics. When the World War broke out he took an active part in the No Conscription Fellowship and was fined 100 pounds for issuing a pamphlet on conscientious objection. His library was seized in payment of the fine, and although it was sold to a friend, several

valuable volumes were lost." His lectureship was canceled. Then he was offered an opportunity to lecture at Harvard, but the military authorities prevented his departure from England, sentencing him to six months' imprisonment for his pacifist views expressed in an article in the *Tribunal*. The *Introduction to Mathematical Philosophy* (1919) was written in prison.

After his release a group of Russell's friends arranged for him to give a series of lectures in London which resulted in his writing *Analysis of the Mind* (1921). Then he made a brief visit to Russia to study conditions, and wrote *Bolshevism: Practice and Theory* (1920). In 1920 and 1921 he lectured on philosophy at Peking University, China. Returning to England, after his wife had secured a divorce in 1921, he married Dora Winifred Black, author of *The Right to Be Happy* (1927). The following six years were divided between Chelsea and Land's End. He supported himself by lecturing, journalism and writing books.

In 1922 and 1923 Russell stood as a Labor candidate for Parliament in Chelsea, London and his wife was a candidate in 1924. In 1927 the Russells started a famous nursery school in Hampshire, which was a success in every way except financially. The heavy drain on his income forced him to write voluminously and make several lecture trips in America to cover the deficit. Russell's conception of freedom in the nursery school has shocked the English. According to one story, "a local rector, visiting the school, knocked on the door, which was opened by a nine-year-old girl, stark naked. Cried he: 'Good God!' Retorted she, slamming the door: 'There is no God!'"

Russell, on becoming a peer in 1931, announced he would take his seat in the House of Lords, where he would speak out not on partisan measures but on social questions such as divorce. He continued to lecture and to write, and was awarded the Sylvester Medal in Mathematics by the Royal Society, of which he had been a fellow since 1908.

Divorced a second time, Russell married his former red-haired, youthful secretary, Patricia Helen Spence, in 1935. Three years later Russell received an appointment to teach mathematics and logic at the University of California at Los Angeles, and they came to the United States. With them are their three-year-old son, Conrad, and the two children of a former marriage, John Conrad and Katherine Jane, both students at the University.

Mr. and Mrs. Russell plan to live on a farm in Chester County while he is lecturing at Barnes. His subject will be the historical development of ideas and cultural values from the Greeks to the present.

Burton Rascoe describes Russell as: "A thin, wiry man, a little below medium height, with a hatchet face, furrowed cheeks, a Scot's complexion, and a shock of white hair. He looks a little like Henry Ford. He has a quizzical smile and an alert

Hansel Mieth

BERTRAND RUSSELL

look of intense curiosity. He has a fund of anecdotes and tells them well. Amiable and human, he can enjoy a gay party and have a playful time. He is fond of adding malicious footnotes to his manuscripts."

Of his work, J. W. Cunliffe says: "His remarkable gift of clear expression has enabled him to bring to the knowledge of a wide public the implications of recent theories of mathematical physics, about which he speaks with disinterested authority; his radical views of public and international questions naturally meet with less general acceptance, but even those who disagree with him on political issues respect him for his independence of mind and his undoubted devotion to what he believes to be the truth."

Among Russell's many books not mentioned previously perhaps the best-known are: *Why Men Fight* (1917); *Proposed Roads to Freedom* (1918); *A B C of Atoms* (1923); *A B C of Relativity* (1925); *What I Believe* (1925); *Education and the Good Life* (1931); *Education and the Modern World* (1932); *Conquest of Happiness* (1933); *Religion and Science* (1935); *Which Way to Peace?* (1936); *The Amberley Papers* (with Patricia Russell) (1937); *Marriage and Morals* (1938); and *Power* (1938).

RUTHERFORD, JOSEPH FRANKLIN
 1869- Leader of Jehovah's Witnesses

Address: 101 Henry St, Brooklyn, New York

According to Stanley High, Joseph Franklin Rutherford's "only rival to the title of the nation's most potent religious leader is Father Coughlin" (see sketch this issue). Rutherford, known as "Judge" to his followers, is the leader of Jehovah's Witnesses, who believe that Biblical prophecies govern every earthly event but who don't think of themselves as a religious group at all: "Religion . . . turns men away from God." More than six feet tall, hazel-eyed, portly, severe and senatorial in appearance, Judge Rutherford doesn't look like the standard version of a prophet. He wears old-fashioned stand-up collars with a little black string bow tie, has a long black ribbon for his glasses and often carries a cane. Still, to many thousands of people this seems not at all unsuitable for a man who must interpret "Jehovah's word" in the difficult year 1940.

Joseph Franklin Rutherford was born in Missouri in 1869, the son of James Calvin and Lenore (Strickland) Rutherford and grew up much like any other farmer's son. He studied law and practiced it in several small Missouri towns, and it is said that he was at one time a Missouri circuit judge. The "Judge" may be completely unofficial, however; he never uses the title himself. In 1896 he was campaigning for William Jennings Bryan; it is difficult to say exactly when he fell under the influence of "Pastor" Charles Taze Russell, whose Biblical interpretations formed the faith of the group known as the "Russellites" in the early 1900's and before. Russell attacked "hell," preached a doctrine of the "second chance," kept prophesying an Armageddon and a "second coming"—"a time of retribution upon all, who by fraud or force, sometimes in the name of the law and under its sanctions, have unrighteously grasped the rights and property of others. The retribution, as we have seen, will come from the Lord through the up-

rising of the masses." It is said that a Russellite called on the Judge and, as was customary, left him some literature and some Scriptural quotations; he read them, was interested, became a *Bible* student and eventually a Russellite.

Lawyers weren't too common in the movement, and a good lawyer was a valuable acquisition, for the Pastor and many of his followers were continually arousing the prejudices of the law. Sometime around 1907 the Judge became legal adviser for the movement and made frequent appearances in court in Russell's defense. When the latter died in 1916 he hadn't appointed any successor, but it seemed a natural thing for Rutherford to take over. He did—just about the time when the United States was entering World War I. No Russellite believed in worldly wars and much less in fighting them, and wherever Rutherford went conscientious objectors sprang up. The military authorities asked him to be quieter. He wouldn't. After a great many unpleasant experiences at the hands of "bloodthirsty clergymen" and others, he finally wound up in the Federal Penitentiary in Atlanta in 1917 with seven of his followers. He was there for nine months and managed to enroll more than a hundred prisoners in his *Bible* class during that time. That may or may not be why the United States Court of Appeals decided to reverse its decision and let him out—a petition signed with some 700,000 names demanding his release may also have had something to do with it, and maybe the Department of Justice grew tired of getting letters of protest. In any case it was March 26, 1919 when he walked out of Atlanta, and he immediately marshaled forces for a national convention at Cedar Point, Ohio.

Shortly afterward, the dogma of the Russellites was revised, a mythology of "invisible powers" substituted for the late Pastor's interpretations. There was nothing inconsistent about this, for his followers believed that the meaning of prophecy is only gradually revealed as the time becomes ripe for it. Armageddons had never taken place on their promised dates. But now all was understood—somewhere in the invisible world Satan's rule had already ended, in 1914; Jesus, son of the "Great Theocrat Jehovah God," had been enthroned as King that same year and would henceforth direct the work of his witnesses on earth. Though Satan was still operating, all governments being "devil's kingdoms," in 1918 Jesus came "to His Temple," and "Armageddon will come as soon as the Witness work is completed." It was 1925 when this Witness work officially began, for in that year the Russellites and the International Bible

G. Maillard Kesslère

JOSEPH RUTHERFORD

Students changed their name to Jehovah's Witnesses. And although the Pastor had said: "Let every soul be subject to the powers that be," it was now necessary actively to resist the now-dethroned Satan, who was grooming himself for a rapidly-approaching final conflict with Jehovah. Since when Jesus came back to earth he would set up his kingdom here and judge between the good and the bad, it was also necessary to warn as many people as possible so that they too might be saved. The slogan of Jehovah's Witnesses was: "Millions now living will never die!"

For these reasons the Witnesses hate war, Fascism, Big Business, the American Legion, the DAR, the Catholic Church (and, as a matter of fact, all organized religions), financiers, politicians, the League of Nations, and all governments including the "Anglo-American seventh empire" foretold by Daniel, which falsely "sees itself as the world's peacemaker." They acknowledge allegiance only to "Jehovah's theocratic organization," and refuse to salute even the American flag just as—one writer says—the early Christians refused to put a pinch of salt on the altars of the Roman emperor and the Quakers refused to doff their hats in the presence of royalty. Though they would not refuse to fight for Jehovah's government, they would not serve if drafted for the worldly war which they believe inevitable. "We, as Christian people, respect the flag of the nation where we reside and we willingly obey every law for which that flag stands. We deem it more important to obey the laws of the land, without violating our covenant with Almighty

God by saluting an earthly thing, than to salute and then immediately violate the law for which the flag stands."

Rutherford is said to have well over 2,000,000 followers in 36 nations. Until World War II he traveled widely, addressing gatherings of Witnesses in nearly all these countries. More than 200,000,000 copies of his writings—he has written 17 books and more than 70 pamphlets—are said to have been circulated in over 80 languages. In August 1939 active field workers were estimated at 41,902 in the United States, some 11,000 in Great Britain and Canada, 28 in Chile, 114 in Brazil and a bare handful in Africa. Jehovah's Witnesses operate not only by door-to-door visits, distributing and selling literature, but also own or rent several hundred sound trucks which go around spreading the word noisily and use phonographs to play Judge Rutherford's messages to prospective converts. More than 15,000 recordings have been sold at \$10 each.

President of the Watch Tower Bible and Tract Societies of Pennsylvania and New York and also of the International Bible Students' Association of Great Britain, Judge Rutherford edits the semimonthly *Watch Tower* and the weekly *Golden Age*. The latter was described by the *Christian Century* as a "vigorously written and well-edited weekly with sections devoted to Labor, Big Business Bits, Educational Flashes, Political, Domestic and Foreign News. . . . It plants vigorous and well-directed blows at commercial and military exploiters, is militantly anti-Fascist, and is spoiled mainly by its intemperate Catholic baiting."

The Witnesses have an imposing eight-story tabernacle near the Brooklyn end of Brooklyn Bridge, the ruby electric lights above it proclaiming "Riches," and there the "Bethel Family" of nearly 200 workers is employed printing and mailing literature, manufacturing phonograph and transcription machines, making ink, keeping books—and maintaining their own Staten Island radio station WBBR. On the West coast there are other quarters, Beth-Sarim, (the House of Princes), in San Diego. That was built to house the prophets—Daniel, Ezekiel and the rest—when they return to earth, and to avoid legal trouble the deed is drawn in the prophets' names. The Witnesses also have a printing plant at Berne, Switzerland, and there used to be another in pre-Hitler Germany.

All this takes money, but there must be a substantial profit from the sale of books and pamphlets alone. During the year ending September 30, 1939 there were 15,169,244 pieces of literature sold or distributed solely in the United States, and more than a million miles covered in doing it. Witnesses are not lazy.

The Witnesses often hold conventions, and these may be lively affairs. In Sep-

tember 1938 a hookup between the Royal Albert Hall in London and auditoriums in twenty-three states in America, ten Canadian, four New Zealand cities sent Judge Rutherford's "heavy, rounded" voice to something like 100,000 spellbound listeners. "A hideous monstrosity," he announced, "is rapidly moving to rule the world by dictators and to regiment the people. God, by his holy prophets, thousands of years ago, as recorded in the *Bible*, foretold this great menace, its cause, and what will be the result." In June 1939 the Judge again spoke at a convention in Madison Square Garden, New York City, and four people were hurt. A five-day convention of Witnesses at Detroit in July 1940 meant to Detroit citizens sandwich signs, handbills, pamphlets and sound cars roving the streets. It meant to the Witnesses "hundreds of converts" claimed and a mass baptism for 2,500 at the end. Fifty Witnesses were left behind in the clutches of the law, but they were, unfortunately, used to that.

John Haynes Holmes has likened the Witnesses to the early Christians—as they appeared to the "highly respectable and patriotic Romans of their day." They have been jailed from Maine to Texas without charges or on charges of being spies, radicals, Nazis, Fifth Columnists; their cars have been wrecked; their headquarters have been sacked and burned; private houses have been stoned, raided, Witnesses dragged out and beaten up or tarred and feathered; their literature has been seized and burned; they have been stricken from relief rolls. As early as 1935 teachers and children who were Witnesses had been expelled from schools for refusing to salute the flag, and the United States Supreme Court in June 1940 upheld the right of school officials to force children to salute.

It has also on more than one occasion upheld the right of Witnesses to distribute literature and to play their records, but although the Department of Justice has sent special circulars to United States district attorneys instructing them to prevent interference to the right of freedom of assembly, in many cases there has been a "complete unwillingness of local law-enforcement officers" to do so. The American Legion and the Ku Klux Klan have been especially active against the Witnesses. In August 1940 the American Civil Liberties Union was defending 1,300 of them in 200 legal cases. In Germany there are thousands of them in concentration camps; in Canada it is a prison offense to be a Witness; in Australia the demand for their suppression is said to be growing. In England, however, they are merely exempt from military service.

Judge Rutherford himself is something of a mystery. In Detroit he was seen by his flock only at the opening and closing sessions of the convention, stayed incommuni-

cado at an unnamed hotel. There is a Mrs. Mary M. Rutherford and a son, Malcolm C. Rutherford. Still, this secrecy doesn't seem to reflect on his character. There has never been the slightest suspicion that he misuses the funds which he handles; he has never entered any supernatural claims for himself; and he signs his correspondence modestly "J. F." One unusual honor came to him when in 1933 and 1934 French versions of his books won first prizes for religious literature at expositions sponsored by the French Ministry of the Interior.

SAERCHINGER, CESAR (serch'inj-er sā'zar) Oct 23, 1889- Radio commentator; author

Address: h. 299 Riverside Drive, New York City

For many years a foreign correspondent and, since 1930, organizer of the first complete transatlantic broadcasting service for American radio listeners, César Saerchinger is an authority on underlying forces in the contemporary world situation. He utilizes his varied background experience in a weekly broadcast over the National Broadcasting System: *Stories Behind the Headlines*, a program arranged with the cooperation of the American Historical Association. His most recent book, *The Way Out of War* (January 1940), is a brief but penetrating and concisely written study of the forces that make for war, and what can be done to prevent war.

Mr. Saerchinger says that it is not nations but their leaders who make war; and that in the War in Europe today the social structure of civilized man is at stake. He traces the background events that led to the First World War, showing the development of nationalism and capitalistic enterprise that threatened the "balance of power." After the War, nationalism became the minorities' problem. An economic war continued between imperialism's theory of collective security and the growth of totalitarian economy with its ideas of self-sufficiency. It was the failure of the World Economic Conference (1933) that brought on an epidemic of dictatorships. The present struggle is to maintain the "free" cooperative economic system developed by the Western democracies against the alternative of totalitarian economy, as exemplified by Germany and Soviet Russia.

It is the business of statesmen of the "have" countries, Mr. Saerchinger believes, to provide the means to live for the "have-not" countries. There is also needed a revision of the League Covenant and the spirit in which its provisions are carried out. The underlying causes of war will not be removed until nationalism, industrialism and imperialism are curbed. Further, no peace can be permanent that does not take into account the law of perpetual change. Nothing short of a federation of European states can bring real security against war. America, says Mr. Saerchinger, must stay out of the European War. We must preserve our moral leadership, and be ready to render economic support when a peace is made.

Because of the authority represented in *The Way Out of War*, Mr. Saerchinger was asked to participate in the *Town Meeting of the Air* radio program March 28, 1940, on the subject, Are We on the Road to War? The speeches of Mr. Saerchinger, Frederick L. Schuman, Norman Thomas and James G. McDonald on this subject have been published in a pamphlet by *Town Meeting of the Air* (1940).

César Saerchinger was born in Aix-la-Chapelle, Germany, October 23, 1889, son

Roy Lee Jackson

CESAR SAERCHINGER

of Victor and Anna (Lange) Saerchinger. He came to the United States in 1898, becoming an American citizen in 1910. He was educated in the Realgymnasium Halle, Germany, and in the New York City public schools; he also studied music with private teachers. He sang as a boy soprano soloist at Christ Church, New York, played piano in a New Thought Church, and did hack writing to help swell the family income. He began his editorial work as assistant in a publishing firm in 1905, and in 1908 became editorial assistant on the *National Cyclopaedia of American Biography*. He spent one year of study abroad; then at the outbreak of the War returned to the United States with a headful of information and ideas, and an installment-plan contract for a Steinway Grand. One day he heard of a project to put out a 14-volume musical encyclopedia. He spent six weeks working out a meticulous plan for one, submitted it to the publishers, and landed the contract to edit it. This, *The Art of Music*, he edited from 1913 to 1917. He served on the editorial staff of *Current Opinion* in 1917.

In 1915 he married Marion Wilson Ballin of New York. They have two children: Dagmar and Eugene Henry Benjamin.

At the end of the War Saerchinger became foreign correspondent for the *New York Evening Post* in Berlin, 1919 to 1921. He was one of the first foreign "peace" correspondents to turn up at Berlin, and a mere cub among the seasoned newshawks. But he had beginner's luck. He was the first foreign newspaperman to interview General Von Ludendorff—and all but got chewed up when he tried to sound out the General on Wilson's "humanity" pleas. He then landed an interview with Friedrich Ebert, and traced the famous War Mani-

festo of the German Intellectuals to its source, establishing to his satisfaction that the author was Herman Sudermann. He talked with Töller in Munich a few days after the Communists proclaimed a Soviet; and in Copenhagen in 1920, obtained the first exclusive interview, with Litvinov, the future Soviet Commissar for Foreign Affairs.

For some years he roamed over Europe recording its musical life. He obtained interviews with Richard Strauss, Felix Weingartner, and Artur Nikisch, went to Bayreuth in a Red Cross ambulance, and found aged Cosima Wagner still alive. He reviewed the works of the younger generation of musicians, took a decisive part in the founding of the International Society for Contemporary Music at Salzburg, discovered and brought considerable talent to the United States.

In the late '20s he settled in London with his family, dividing his time between his two interests, journalism and music, until he discovered the job that was to combine and absorb both: radio. It happened that in 1930 he was covering the London Naval Conference for the *Philadelphia Public Ledger* when he met radio commentator Frederic Wile of Washington. When Wile left London, he placed Saerchinger in charge of Columbia interests. After new scoops—in radio this time—Saerchinger landed Secretary of State Stimson (see sketch this issue) on the day the Tripartite Naval Agreement was perfected. He also brought the voice of the Prince of Wales for the first time to American listeners.

This was the beginning of Saerchinger's activity as first European director for a national broadcasting chain; during the next seven years he organized the first complete transatlantic broadcasting service for American listeners. He brought the voice of George Bernard Shaw (after some nine months' persuasion), H. G. Wells, Sir Oliver Lodge, Stanley Baldwin, and many more, as well as the important messages of King George, King Albert, Queen Wilhelmina (see sketch this issue), Hindenburg, Masaryk, De Valera (see sketch this issue), and dictators Mussolini and Hitler. Chancellor Dollfuss not only broadcast twice for Saerchinger, but took him into his confidences: one of the little Chancellor's last acts was to confer on him the Austrian Cross of Honor.

To keep his broadcasts from becoming commonplace, Saerchinger evolved new types of programs epitomizing the culture and the art of many lands. A brilliant array of such programs from the homes of Shakespeare, Milton, Wordsworth and Keats, from the ruins of Pompeii and the streets of Cairo and many other places, made radio history. The climax of Saerchinger's activities came with the abdication crisis in England, which he describes in his book, *Hello, America!* (1938), as "ten nights that shook the ether." His final

assignment was the Coronation of George VI.

Saerchinger's radio series, *Stories Behind the Headlines*, has won nationwide popularity for its entertaining and penetrating analysis of cause and effect. All of his references are authenticated by a member of the American Historical Association. It was this program which the Ninth Institute for Education by Radio, conducted in Columbus, Ohio, chose to receive its First Award for an historical program broadcast over a coast-to-coast network during 1938.

He is the author of *A Narrative History of Music* (with Leland Hall, 1915); *The Opera* (1916); and *Hello, America!* (1938). In the last-named he describes his varied experiences as the arranger of broadcasts from all the chancelleries of Europe, including the Vatican. He tells of the significant personalities of contemporary life whose voices have been heard in America via radio, and closes with a chapter on the future possibilities of radio.

Searchinger is much interested in the subject of radio as a political instrument; and in a recent article on radio censorship he said: "The American radio must be concerned to safeguard the spirit of democracy if the industry is to remain free and untrammelled. This, indeed, is the difference between the American system and the systems of most European countries. The very fact that the present controversy has arisen shows how deeply ingrained is our feeling for independence and freedom of thought. We mean to preserve this freedom all along the line, and to make new media of expression subservient to it. We do not want radio, now that it has become such a powerful medium of publicity, to be controlled or bureaucratically censored from 'above.' On the other hand, we do not wish to see it exploited by unseen forces beyond our control."

SAINT EXUPERY, ANTOINE DE (sant' ex-ü'pā-rē" än-twaN) 1900- Author
Address: c/o Appleton Century, 35 W 32nd St, New York City

Of that generation which came into its own in the years immediately following the War, few have the robust equilibrium of the French airman, poet and philosopher, Antoine de Saint Exupéry, who received the French Academy's Grand Prix in the summer of 1939. His *Wind, Sand and Stars* (1939) has, however, more than a sanity of integration. It represents the creation of a kind of new literary cosmos, sprung from

ANTOINE DE SAINT EXUPERY

such things as the symmetry of an engine and the timelessness of flight into the night.

Antoine de Saint Exupéry—known to his friends as "Saint-Ex"—was born in Lyon in 1900. His father's ancestors were natives of a small village, in the old province of Limousin, which bore their name. His mother belonged to the famous old Boyer de Fonscolombe family to whom Fragonard and other painters of the eighteenth century dedicated their finest pictures.

In the eyes of the orderly Jesuit Fathers at Montgré and Mans, young Antoine was a noisy fractious youngster, difficult to teach. But at the college of Fribourg in Switzerland he made an admirable record in philosophy and the classics. The World War brought an end to all this; but the intellectual tastes which he acquired at this time established his life's fundamental accent.

Near the town of Bugey where Antoine, at the castle of Saint Maurice de Remens, passed his holidays, was one of France's oldest airports. He watched the trial flights of the apprentice pilots, was initiated into the mysteries of motors, and listened to many a fabulous boast that enlivened the adolescence of aviation.

This love of vast horizons led naturally to a brief naval-school training. It was in the cards, for a while, that he was to be a marine officer; but he failed his subsequent examinations.

He took lessons from a civil pilot, was granted his license and entered the service at Strasbourg. He was sent off to Morocco as a cadet and came back an officer. Very shortly, however, he returned to civil life, entering a business concern. But after a few months he felt himself completely thwarted and again (1926) plunged into civil aviation.

SAINT EXUPÉRY, ANTOINE DE—*Cont.*

Before receiving his long-awaited first commission with the Latécoère Company (Toulouse-Dakar line) he underwent a novitiate that included some short miscellaneous courses at Perpignan. At the end of a year's heavy flying schedule on the Toulouse-Casablanca run, he was put in command of the airport of Cap-Juby, at Rio del Rio, a Spanish possession on the West coast of Africa. Except for occasional skirmishes with the Moors it was a tedious charge.

Saint Exupéry went to South America when the airmails were pushing their way down from Brazil, and he himself fixed a route to Punta Arenas, the Southernmost air base in the Argentine. Those were the days, says he, when "our planes frequently fell apart in mid-air."

He admits that he "succumbed" to the desert as soon as he saw it, despite the sense of the irreparable which sometimes came over him—"the thought that far away the whole world is ageing . . . trees have brought forth their fruit . . . grain has ripened in the fields. . ." But for three years he flew the African mails, with quarters at Port Etienne, on the edge of one of the most unsubdued regions in the Sahara.

The art of flying over both South America and Africa is told in two of his books. *Night Flight* (1932) is a story of the European mail and how it is flown by night. It won the Femina Prize and was a Book-of-the-Month Club choice. In it "both the glamor and terror of night-flying at high altitudes are invested by the author with a kind of metaphysical poetry." It established his reputation in the United States. In *Southern Mail* (1933) he tells both a love story and the story of a plane's flight in Morocco. A critic said he "writes of love like a Frenchman and of flying like a pilot."

In December 1935 he decided to try a long-distance flight from Paris to Saigon. His wife, Countess Manuella, put a razor and a change of shirt in his bag, and with Prévot, his mechanic, he took off on the 29th. He avoided Paris "with a jerk," headed for the valley of the Loire, skimmed Sardinia, and entered Africa at Bizerta. They were about 250 miles into the desert when they crashed. For three days they went without water. They survived on the will to live and the feeble comfort of a pint of coffee, a half-pint of white wine, some grapes and two oranges. A passing Arab came to their rescue.

Just before the outbreak of the Second World War, Saint Exupéry flew the North Atlantic as a member of the crew of the flying-boat, *Lieutenant de Vaisseau Paris*, which was making an experimental flight for Air France. He returned to America and was working on a new novel when the beginning of hostilities called him home.

Assigned to an air training school at Toulouse, Saint Exupéry asked to be trans-

ferred to active duty at the front, as captain in an observation squadron. As he said to Dorothy Thompson (see sketch this issue) in an interview: "Nobody has the right to write a word today who does not participate to the fullest in the agony of his fellow human beings. If I did not resist with my life I should be unable to write. . . One must write with one's body."

During the War Saint Exupéry's observation plane was shot to pieces in action on the Western Front, but he escaped injury to the end of French hostilities. In the chaotic conditions following the fall of France he disappeared and efforts to make contact with him failed. In December 1940, however, he was able to inform his publishers that he was in Lisbon, awaiting transportation to America.

Saint Exupéry is a tall and somewhat massively built man, with a round, smooth face, large chestnut eyes and a friendly, inquiring, upturned nose. He is neither an obliging optimist nor a naïve sentimentalist, but life to him has much bigness.

SANDBURG, CARL Jan 6, 1878- Author
Address: Harbert, Michigan

Outstanding American poet and biographer, Carl Sandburg has been awarded the 1939 Pulitzer Prize (awarded May 1940) in history for his *Abraham Lincoln: The War Years*. These four large volumes, the result of thirteen years of intensive research, together with *The Prairie Years* (two volumes) which was published in 1926, make up a major monumental work in historical biography that has been called the greatest study of an American ever written by another American. And in November 1940 its author was elected to the American Academy of Arts and Letters, succeeding the late John H. Finley (see sketch this issue).

In their story of Lincoln's growing up and early career *The Prairie Years* are like a lyric prologue to the greatly written human tragedy of *The War Years*. The vividly recreated scenes and cumulative force of detail of the latter work make it a biography not only of Lincoln but of the whole Civil War, concerned less with events than with the men and women who made them. There are extended portraits of the main figures of the time, and there is also a great background of humanity, woven in with anecdote and incident, against which the massive, solitary, but warmly realized, wholly human figure of Abraham Lincoln rises. Sandburg's aim was to "restore Lincoln to the common people to whom he belongs." As readers of his poems, *The People*,

Yes, might expect, there is throughout a tender understanding and appreciation of these ordinary folks. Lincoln is built up from their belief in him, their stories about him, his words to them: a homely, neighborly man who could be austere as well as kind, whose salient characteristics were his sadness and his humor, who combined the spirit of a dreamer and poet with the mind of a far-seeing, calculating politician. Above all Sandburg stresses the indescribable loneliness and personal isolation of this man who had to carry on alone, tortured and almost broken under his superhuman task.

The biography extends from the time Lincoln boarded the train at Springfield to go to his inauguration, down to the black day his coffin was placed in the earth of the Springfield he had left. In between lies the drama of violence, intrigue, bloodshed; of dealings with generals, Congress, the press; draft riots, emancipation, Copperheads; the early failures and the later triumphs; the rising faith of the people in Lincoln; the dream that forecast his death; the assassination, the grief of a nation. Significant to our time is the book's store of material on what happens to a democracy when it goes to war. The whole is written with a simple, richly cadenced prose; Sandburg the poet emerges in many pages that have the impact of lyrical free verse, such as the concluding passage describing the return of Lincoln's body home. Allan Nevins' estimate reflects in general the unanimous critical opinion of *The War Years*: "It is not merely a biography; it is a magnificent piece of history, an epic story of the most stirring period of national life and a narrative which for decades will hearten all believers in the stability of democracy and the potentialities of democratic leadership."

Of all American writers Carl Sandburg is most particularly fitted to be Lincoln's biographer. He, too, was a poor boy who grew up on the prairies, worked at a number of jobs and got little schooling, but liked the common people and got on with them. He has the same earthy, genuine sense of humor; he loves folklore and is a teller of anecdotes and of parables. A poet, he understands the poet in Lincoln; a practical man also (he could never have handled voluminous biographical material, he says, if he hadn't known how to be scientifically efficient), he could understand Lincoln's shrewdness. And like Lincoln, he believes in the destiny of democratic America.

Thirteen years after Lincoln's death, while the Civil War was still being fought at the corner store, Sandburg was born on January 6, 1878 at Galesburg, Illinois, son of August and Clara (Anderson) Sandburg. His parents were Swedish immigrants, his father a worker in the railroad blacksmith shops at Galesburg. At 13 Carl became a milk-wagon driver; later he was a barber-shop porter, a scene shifter in a theatre, a truck operator at a brick kiln. He didn't go to school much, but he read books: folk tales

CARL SANDBURG

and biography. He listened to the local lore about Lincoln, to the Fourth of July orators who made speeches about him and he read all that he could about Lincoln. When he was 17 he struck out for the West, riding freights; worked in Kansas wheat fields and washed dishes in city hotels. These hard jobs gave him an early sympathy for workers. Back again in Galesburg, he decided to be a house-painter. Then the Spanish-American War came and Sandburg served in the Sixth Illinois Volunteers for several months; he is proud of his army service and still wears a veteran's insignia.

Influenced by a friend he met in the army, he decided to get an education, and worked his way through Lombard College at Galesburg (1898-1902). At college he was captain of the basketball team, editor of the college monthly and annual; he won several declamation prizes and was a member of the Poor Writers' Club. After graduation he traveled around the country holding various jobs, such as selling stereopticon photographs, then settled in Milwaukee, working for a year as district organizer for the Wisconsin Socialist-Democratic Party. He was secretary to the Mayor of Milwaukee from 1910 to 1912, and as associate editor of *System Magazine* in 1913 came in contact with employers of labor. Inevitably he got into newspaper work, first as Stockholm correspondent for Newspaper Enterprise Associates, then as editorial writer for the *Chicago Daily News*. He covered the Chicago race riots for that paper and several years later became its motion picture editor.

Sandburg married on June 15, 1908 Lillian Steichen, whose brother is Edward Steichen, the famous photographer. Sandburg wrote a biography of him, *Steichen, the Photographer*, in 1929. The Sandburgs have three children: Margaret, Janet and Helga.

SANDBURG, CARL—*Continued*

While still in college Sandburg had begun writing poetry; he won *Poetry Magazine's* Levinson Prize in 1914 for his poem, *Chicago*. When his *Chicago Poems* appeared in 1915, elegant poetry readers were shocked by his calling Chicago "hog-butcher of the world." Other sensibilities were outraged by his use of slang and the earthy, racy speech of workers. Still others objected to his loose free-verse lines. But further volumes of poetry followed: *Corn Huskers* (1918); *Smoke and Steel* (1920); *Slabs of the Sunburnt West* (1922). These were poems of tough, vivid realism about men who worked in the fields and in the factories, built from Sandburg's own experiences, on work shared with them, on the things he knew about their lives and difficulties; sensitive, also, to the beauty of earth, of the prairies, of harvest; and of the raw, lean potentialities of the Midwestern cities. The poems were psalms of life with human understanding and social meaning. The fullest realization of his themes and the culmination of his poetic powers appear in *The People, Yes* (1936). Sandburg himself has called this volume "my footnote to the last words of the Gettysburg Address."

He writes not only about, but for the people, in popular language that has no esthetic claims, no technical skill, no rhetorical embellishments. But it is writing rich from authentic experience, full of folklore and idiomatic speech—of talk from farms, mines, hobo campfires, section gangs, soap boxes. It tells what the common man thinks, it affirms his strength and value. Newton Arvin says that *The People, Yes* is "an eloquent and sometimes a passionate reassertion of the dignity, the fortitude, the unweariable creativeness, the historic and unrelinquished hopes of the laboring many." Sandburg's weaknesses lie in inconclusive statement, uncorrelated facts; he is content to pose the question: "Who knows the answer?" Earl H. Robinson, coauthor of *Ballad for Americans*, is to make a musical dramatization of *The People, Yes*.

Some excellent books for children have been written by Sandburg, among them *Rootabaga Stories* (1922); *Potato Face* (1930); and *Early Moon* (1930).

Many people had been reading Sandburg's poems, but many more actually got to know him when he started traveling around the country lecturing, reading his poems and singing folk songs. Sandburg is a natural entertainer, he likes to talk to people and they like his deep slow voice, his humor, his homely informality. He stands tall and erect, a shock of white hair falling forward over his forehead, his lined but strong face and deep-set blue eyes. He is not a fastidious dresser, but likes to wear old flannels and old shoes, his black bow tie his one concession to formality.

His friend Harry Hansen writes of him: "Although Carl uses no gestures and rarely

alters his attitude, his face is a sensitized mirror of his moods. When he aims a thrust at some inhuman practice that has aroused his indignation, his lower jaw sticks out, his lip seems to curl and he drawls out his words as if taking careful aim. When he reads the *Rootabaga Stories* he is as a big boy among children." Sandburg had been collecting folk songs since boyhood, but it was not until 1920 that he began singing them for the public; since then they have become the most popular part of his programs. He accompanies his songs with a guitar, singing in a deep, natural baritone. His audiences have given him ballads and songs from their sections of the country; he added these to his collections and in 1927 published his *American Songbag*, containing many ballads put in print for the first time.

The Sandburgs live in Harbert, Michigan, among the sand dunes 60 miles east of Chicago across the lake, where Sandburg has done all his writing on *The War Years*. He took over the attic, with a stove, a cot, a lot of book shelves, a typewriter on a crackerbox. "If Grant and Sherman could run campaigns from crackerboxes, so could I," he said. The shelves soon filled up with hundreds of source-books on Lincoln, gathered from libraries and from people all over the country during his lecture tours. "I sort of planned my singing tour so it would take me where I knew material was." He marked these books for copyists, who worked two at a time on the downstairs porch. Sandburg worked long and hard, but he had to learn from the examples set by Gene Tunney (see sketch this issue) and Ty Cobb to get more sleep. *The War Years* was originally conceived as an essay; he thinks now that he could still spend a good 10 years more writing about Lincoln's life.

But with several volumes of verse and six volumes of Lincoln biography behind him, Sandburg does not think he will again write anything so enormous as the latter. He has been urged to write his autobiography because of his interesting work and experiences, but he has an idea that his life story would make "melancholy reading." Of his work he says: "Among the biographers I am a first-rate poet, and among poets a good biographer; among singers I'm a good collector of songs and among song-collectors a nice judge of pipes. I don't care how I am rated. I'm thankful to keep out of jail. Friendships are welcome, but flowers of approval are not a requisite." This is Sandburg, awarded the Pulitzer Prize for the year's best history, who can also write, with quiet irony:

"I tell you the past is a bucket of ashes.

I tell you yesterday is a wind gone down, a sun dropped in the West.

I tell you there is nothing in the world, only an ocean of tomorrows, a sky of tomorrows."

SAPOSS, DAVID Feb 22, 1886- Labor
 economist

Address: h. 2716 Woodley Pl, N W, Washing-
 ton, D. C.

David Joseph Saposs, the "bushy, rumpled little expert" who was chief economist for the National Labor Relations Board, head of its research division, no longer has a department to head. On October 11, 1940 President Roosevelt signed the Civil Deficiency Appropriation Bill which abolishes his research division, by then known as the "technical" division. Although columnist Ludwell Denny pointed out back in March that "to abolish the division at a time when both employers and unions are criticizing the board for knowing too little about the economic facts" is the height of absurdity, the House Appropriations Committee recently swept it completely away on the grounds that "no need exists."

Senator Wagner later managed to get an amendment permitting the retention of its functions, however. These are many and varied: the formulation of monthly and annual reports; analyses of employment records; library and reference work; economic service to the legal division; work on economic material that may go into briefs; preparation of economic data in relation to jurisdictional problems. But since none of this work will be carried on by an independent body, *finis* is written "to a project which played a nightly significant rôle in virtually revolutionizing industrial relations in the United States."

Saposs, the economist who has been in charge of this work, has also been kept busy for a long time denying that he is a Communist or ever has been one. Senator Burke and Martin Dies (see sketches this issue) were the first to make the charge. In March 1940 Mapes Davidson resigned as trial examiner for the board, charging that a majority of its members "continue brazenly and openly to foster Communists and kindred radicals as they have done in the past." His fire was centered for the most part on Mr. Saposs, who was said to have lectured the examiners on "what should be gotten into the record of a Labor Board meeting, aside from direct evidence, to show by inference that employers are fostering company-dominated unions." He also spoke of Mr. Saposs' "smelly Fansteel decision in which you sought to bestow a paternal benediction on sit-down strikes." In April David Saposs was once more attacked as a possible Communist in a report by two minority members of the House Committee investigating the Labor Board: "If the excerpts from his writings which were read into the record are a fair example of his views we disapprove as strongly as our colleagues

Associated Press

DAVID SAPOSS

of a person entertaining such views holding an important position in the government." Mr. Saposs replied that the excerpts were not representative and submitted "a positive statement of his political and economic philosophy together with letters and writings of persons acquainted with his work and record."

He was supported by educators, labor leaders and writers and in the end exonerated by "some of the staunchest opposition Congressmen," but continued to be attacked in testimony before the Smith Committee. Said *Time*, when appropriations for the research division were abolished: "What the NLRB foes really sought was abolition of Economist Saposs," who, "though often denounced as a Communist, is neither Red nor useless, but a zealous watchdog of labor rights." According to the *New Republic*, "doing away with this arm of the Board was a considerable victory for those who oppose collective bargaining and for the Congressmen who respond to their pressure."

David Saposs was born on February 22, 1886 at Kiev, Russia, the son of Isaac and Shima (Erevesky) Saposs. His family came to the United States when he was nine, and he was educated at the University of Wisconsin, where from 1911 to 1919 he was labor economics research associate, making himself an expert on the labor movement. Later—from 1924 to 1926—he was also to study at Columbia University. As a labor economist, before coming to the National Labor Relations Board in 1935 he held such diverse positions as director of the Company Union Study of the United States Bureau of Statistics (1914), New York Department of Labor expert (1917-18), investigator for the Carnegie Corporation Americanization Study (1918-19), investigator for the Interchurch

World Movement Steel Strike Inquiry (1919-20).

Perhaps his most valuable experience, however, was as founder and co-director (1920-22) of the Labor Bureau, Incorporated, which served as consulting economist to labor organizations, for in that position he had a unique opportunity to find out how labor organizations worked from the inside. As head of the Labor Division of Columbia University (1926-30), which was making a study of post-War social and economic conditions of France, he also made two trips abroad, spending a year and a half learning about the European labor movement; from 1922 to 1933 he was a member of the faculty of Brookwood, the first resident labor college in the United States; and he has lectured at New York City's New School for Social Research and at the Rand School. Few men have been so well equipped by training and experience to tackle the multitudinous problems faced by the chief economist of the understaffed NLRB.

Mr. Saposs is the coauthor of *A History of the Labor Movement of the United States* (1918), known as the outstanding work on the subject; is the author of *Readings in Trade Unionism* (1926); *Left Wing Unionism* (1926); *The Labor Movement of Post-War France* (1930); coauthored *Labor and the Government* (1935); and has published numerous articles on labor in magazines, many in the *New Republic*. In 1935 he was writing that "a strong trade union movement is only possible when aided by the government," although advising labor to build a third party in preparation for the time when the Administration might grow hostile. He is a member of the American Economic Association.

Since 1934 Mr. Saposs has lived in Washington, D. C., with his wife, the former Bertha Tigay (also from Russia), whom he married in 1917, and his two daughters, Corinne, born in 1924, and Barbara, born in 1929. His hobbies, he says, are walking and farm work.

SARNOFF, DAVID (sar'noff) Feb 27, 1891- President of the Radio Corporation of America

Address: b. 30 Rockefeller Plaza, New York City; h. 44 E 71st St, New York City

David Sarnoff is not only president of the Radio Corporation of America but chairman of the board of its subsidiaries, the National Broadcasting Company, the RCA Communications, Incorporated, RCA Manufacturing Company, and a director of the

Electric and Musical Industries, Limited. He is the "industry's No. 1 wonder boy in the United States."

The son of Abraham and Lena (Privin) Sarnoff, he was born in Minsk, Russia, February 27, 1891. As a Russian immigrant boy he came to the United States at the age of nine, and soon afterward was helping out the family finances by selling newspapers. His father died when he was fifteen, and David, the eldest of five children, was the man of the family. He got a \$5-a-week job as a messenger boy with the Commercial Cable Company. Fascinated by the telegraph instruments, he taught himself the Morse code and applied for a job at the Marconi Wireless Telegraph Company.

He got a job as an office boy, and two years later received his first assignment as a wireless operator in a Marconi station on Nantucket Island off the coast of Massachusetts. An ambitious youth, Sarnoff studied technical books on engineering at night and decided he wanted to take some electrical engineering courses at Pratt Institute in Brooklyn. In order to attend the school he got a transfer to Sea Gate, New York, though it meant a \$10 salary cut. The cut was soon made up, however, when he was made office manager of the Sea Gate station. He served next as wireless operator aboard the *S. S. Beothic* on an Arctic sealing expedition, and in 1910 came to the New York Marconi station at Wanamaker's department store.

The young telegraph operator distinguished himself and came to the attention of the world in 1912 when he picked up word that the *S. S. Titanic* was sinking. He stayed at his station unrelieved for 72 hours, helping to direct ships to the sinking vessel, and got first news of the survivors. All other stations were ordered closed so as not to interfere with his work.

Sarnoff's rise in the Marconi Company was rapid. He was in turn radio inspector; instructor at the Marconi Institute; chief inspector; assistant chief engineer; assistant traffic manager; and finally, in 1917, commercial manager. When the Radio Corporation of America was formed in 1919 and acquired the Marconi Company Sarnoff was taken over as commercial manager.

His rise with the Radio Corporation of America was equally rapid. By 1922 he was general manager and vice-president; in 1929 he was made executive vice-president; and on January 3, 1930, just before his thirty-ninth birthday, he became president of the Radio Corporation of America.

In the years of his connection with the Radio Corporation of America, Sarnoff has gained a reputation as a keen executive and a formulator of sure-footed, sound policies. He was active in organizing NBC, which first inaugurated network broadcasting; he assisted in the negotiations which resulted in combining radio and phonograph machines; and he took

Kaiden-Keystone

DAVID SARNOFF

an important part in giving voice to the silent pictures.

Long before radio was thought of in terms of entertainment, Sarnoff dreamed of its broadcasting possibilities. As far back as 1915, when he was traffic manager of the Marconi Company, he made a recommendation to the company's general manager urging that the already proven facilities of wireless communication be carried further than mere message-sending, through the development of a music box to be used in the home for the reception of music. Nothing was done with the idea, which seemed fantastic at the time. Later, when the General Electric Company was organizing RCA, Sarnoff, in a report to the chairman of the board, again referred to his "plan of development which would make radio a 'household utility' in the same sense as a piano or phonograph." He suggested a portable household reception unit, predicting it could sell for about \$75; and he also figured out the possible earnings in the first three years of production. Sarnoff's figures tallied close to the actual selling prices of radio sets from 1922 to 1924. But while he calculated sales returns at \$75,000,000, sales for the first three years after RCA adopted Sarnoff's "music box" idea amounted to \$83,500,000.

When RCA was first organized it was little more than a selling agency for the General Electric and Westinghouse companies. Under Sarnoff's unification plan it became a completely integrated research, manufacturing and selling organization, independent of its original parent companies.

Music has been one of Sarnoff's most important hobbies, and many of NBC's musical programs were his ideas. He established the weekly music appreciation hour under Dr. Walter Damrosch, which

SARNOFF, DAVID—*Continued*

became part of the curriculum of thousands of schools; he arranged for grand opera to be broadcast from the stage of the New York Metropolitan Opera House, when such things were startling innovations; and in 1937 he engaged Arturo Toscanini to conduct a series of 10 symphonic programs over the NBC networks with a newly created NBC symphony orchestra. He is a director of the Metropolitan Opera Company and director and chairman of the board of the Chatham Square Music School.

As he foresaw the possibilities of radio broadcasting long before it was thought of as a practical commercial household vehicle, so Sarnoff has been predicting that television can be commercially successful. RCA has been a pioneer in the television field under Sarnoff's direction. In 1935 he obtained from his directors a million-dollar appropriation to take television out of the laboratory and give it the benefit of exhaustive engineering field tests under actual service conditions.

In May 1940, at an RCA stockholders' meeting, fruits of that research were shown when stockholders were treated to the first public demonstration of a television program on a new, large, six-by-four-foot screen. The program included an hour of music and dramatic features and a news broadcast. David Sarnoff's television dream was about to come true, as his radio broadcasting dream had come true.

The Federal Communications Commission, however, ruled in that month that television broadcasting must remain longer on an experimental basis. Testifying before the United States Senate Interstate Commerce Committee that television had received a tremendous setback by this ruling, Sarnoff said RCA had no intention of "freezing" television and called it a potential billion-dollar-a-year business capable of rising to greater heights than the \$600,000,000 radio industry. As a result of his testimony and that of others, the FCC decided not to fix standards immediately.

Sarnoff's career is one of the most romantic in American industry. He has been decorated by three foreign countries, Luxembourg, France and Poland, and has been honored with degrees by five universities. Square-set, of medium height, blue-eyed, Sarnoff speaks slowly and quietly, with none of the Hollywood mannerisms of the big executive. In addition to heading the vast RCA, Sarnoff maintains an active interest in various civic and social organizations. He was married in 1917 to Miss Lizette Hermant of Paris, France. The couple have three sons.

SAROYAN, WILLIAM (sor-rō'yän) Aug 31, 1908- Author; playwright; winner of Pulitzer Prize for best American play of 1939 to 1940 season

Address: 1821 15th Ave, San Francisco, California

William Saroyan began writing when he was 16 years old, and decided to give himself until he was 30 to prove that he could write, or as he calls it, "to win recognition." Saroyan was working in his uncle's vineyard at Fresno, California at the time, but in hours away from pruning the vines he studied the pulp magazines avidly. "I aimed at getting \$50 a story—that seemed riches then," he says.

After a careful study of the pulp magazine stories, Saroyan dashed off 10 stories which he thought followed the pulp pattern and sent them to the editors. Every one came back with rejection slips.

This, Saroyan says, convinced him that he had to write in his own way, and not according to any set pattern. It has resulted in his highly subjective style that follows no formal narrative, and that has been both berated by critics and enthusiastically praised as "imaginative, fresh, and original." But while the editors paid scant attention to Saroyan's determination to be himself in his writing, Saroyan kept right on writing, confident that he had something important to say.

He finally made his literary debut as "Sirak Goryan" with a short story, *The Broken Wheel*, which appeared in 1933 in *Hairenik*, an Armenian daily published in Boston, and which was reprinted by Edward J. O'Brien in his *Best Short Stories of 1934*.

When in the same year *Story Magazine* accepted his short story, *The Daring Young Man on the Flying Trapeze*, Saroyan was evidently beside himself. He wrote critics throughout the country, sent them messages, bursting with the news of the great Saroyan. He deluged *Story* with his work. Sometimes the postman deposited two stories a day from Saroyan at the door of the magazine. *Story* published several of these, others were turned over to the *American Mercury* and other magazines. In the fall of 1934 twenty-six of the tales were gathered into Saroyan's first book, *The Daring Young Man on the Flying Trapeze and Other Stories*.

But when the book was published the critics to whom Saroyan had written so enthu-

siastically of his powers as a writer were laying for him with brickbats. They decided that he didn't write short stories at all; he didn't even write English; he was a "flash in the pan, a fraud, an egomaniac, a fool."

The book, however, became a best-seller, and Saroyan remarked: "Maybe American criticism is too far ahead of American writing or American writing is too far ahead of American criticism. I take heads." When critics contend that his short stories cannot properly be called short stories at all, or label them merely as "poetic shouts" written in prose, Saroyan replies: "What the hell difference does it make what you call it just so it breathes?"

Saroyan shouts loudly that he cares nothing for art or art forms, but that he is concerned with life. In a story called *Myself on Earth* he wrote: "I am a story-teller and I have but a single story—man. I want to tell this simple story in my own way, forgetting the rules of rhetoric, the tricks of composition. I am not a writer at all. I write because there is nothing more civilized or decent for me to do."

The profits from *The Daring Young Man on the Flying Trapeze* (the first edition of which became a collector's item) enabled the young author to go to Armenia and Russia for a visit in the summer of 1935. Some of his travel notes found their way into his second book, *Inhale and Exhale*, a collection of more than 70 new stories, published in 1936.

Saroyan is a prolific writer. He is frank in describing himself as a "natural." His writing flows without impediment. And he always has stories to tell. "What else is a natural?" he asks. But he maintains he is not a hard worker. After turning out three stories a day for a week, he is likely to spend a month loafing. He likes to travel and can work wherever he happens to be: London, Moscow, New York, Fresno. During a furious bout of typing he often takes time out to play his portable phonograph, preferably noisy jazz and cowboy songs.

Even Saroyan's severest critics had to admit that he was no "flash in the pan." His name appeared on the covers of a long list of American magazines and his short stories were collected in half a dozen volumes. They included *Peace It's Wonderful*; *Little Children*; *Love, Here Is My Hat*; *Three Times Three*; and *The Trouble with Tigers*. Saroyan was finding champions among the best known critics, many of whom were now applauding him as a genius.

Saroyan's debut as a playwright was made in 1938 with *My Heart's in the Highlands*, produced by the Group Theatre first and later taken over by the Theatre Guild. No two critics seemed to agree on what the play really meant. A fable of an ineffectual poet, his young son and a bearded trumpeter, it was called "modern, arty, experimental." Critics found it strangely touching and said it won for Saroyan an important niche in the hall of playwrights. Average playgoers,

however, didn't seem to know what it was all about.

While *My Heart's in the Highlands* was being produced on Broadway, Saroyan wrote his second play, *The Time of Your Life*, which won him the Pulitzer Prize and the New York Critics' Circle Prize. He is said to have written it in six days in a New York hotel. At the same time he was busying himself sending telegrams to friendly admirers and others telling them that *My Heart's in the Highlands* was the best play in town. Then, having polished off *The Time of Your Life* and sold it to Eddie Dowling, who later produced it with the Theatre Guild, Saroyan suddenly ceased his deluge of telegrams and left town.

When *The Time of Your Life* opened on Broadway in the fall of 1939, it received, on the whole, excellent reviews. Even those who damned it with faint praise admitted that it was a moving piece of work. Described as a "robust fantasia of love, lust, life, liberty and the pursuit of happiness" by a group of characters who parade in and out of a San Francisco waterfront barroom, it had as its chief character one Joe, who spent his time drinking, dreaming, and trying to help the other lost souls in the barroom.

Critics talked of its "originality, force, freshness and humor." George Jean Nathan inquired of those who would ask what it was all about, if they would ask "what some of the greatest music ever composed is about." Another critic wrote: "The content of the play is much the same as is everything that Saroyan writes, a hymn to the human heart expressed in terms of a poet's imagination." Such reviews made up for those few who found it merely "inconsequential, ingratiating, witty" or "drifting, sentimental, garrulous."

The Time of Your Life played twenty-two and one-half weeks on Broadway, and closed April 6, 1940 without earning back the cost of its production, estimated at about \$25,000.

It was chosen the best new play of the 1939 to 1940 season by the New York Critics' Circle in May 1940, a few weeks after Saroyan's third play, *Love's Old Sweet Song*, opened. In choosing *The Time of Your Life* as the best play of the season the critics declared in their citation that the honor went to Saroyan because his play was "an exhilarating demonstration of the fresh, original and imaginative talent he has brought to our American Theatre."

Three days after the Critics' Circle announced its award, the Pulitzer Prize Committee also chose *The Time of Your Life* as the best American play of the season. It was the first time that the Critics' Circle and the Pulitzer Prize committee had agreed on a choice. The Critics' Circle had been making independent choices for several years because it had disapproved in the past of the Pulitzer Prize conception of a best play.

WILLIAM SAROYAN

Saroyan should have been a happy young man in May 1940 with two of the major theatre awards to his credit, but there was a fly in the ointment of success. He was disappointed over the reviews his new play *Love's Old Sweet Song* was receiving. It had received "mixed reviews"—some good, some bad. This time Saroyan had written a play with more plot than his usually formless dramas. *Love's Old Sweet Song* was a humorous, sometimes sentimental story revolving about an old maid who is led to believe by a messenger boy that an itinerant patent-medicine hawker is the man who filled her dreams of love back in her girlhood. Although the hawker is a fraud, the woman's faith and trust transforms him into something satisfyingly true. Some critics raved about the play but others didn't, and Saroyan was disappointed.

Saroyan created a seven-day sensation when he refused the \$1,000 award that went with the Pulitzer Prize. In a long-winded statement explaining his refusal, Saroyan declared with his customary candor, "I believe that *The Time of Your Life* is a good, and perhaps great theatrical work. However, I also believe in the essential and possible greatness of all my work, in the theatre as well as in the short story form.

"While I am deeply grateful that formal, and one might say official, recognition has come to a piece of my work, I have always been opposed to awards in general in the realm of art, and particularly material awards, which seem to be dangerous both to the recipient and to the art form which has been awarded." Wealth patronizing art, he added, seemed to him to be in bad taste. Saroyan was taking the same stand Sinclair Lewis had taken in 1926 when he rejected the \$1,000 prize for his novel, *Arrowsmith*.

Some found Saroyan's action inconsistent, since he had apparently been pleased with the Critics' Circle Prize. One magazine editorial suggested that the resultant publicity Saroyan got from his rejection of the Pulitzer Award "he couldn't have bought for less than \$1,500."

In January 1940 the Ballet Theatre staged the world première of *The Great American Goof*, described by Saroyan as a "ballet-play" and "a new American form." It used music, dialogue, dancing and stereopticon effects. Some critics were merely baffled and some thought the experiment good.

In the summer of 1940 three new Saroyan plays, *Sweeney in the Trees*, *Hero of the World* and *Something About a Soldier*, the last of which took him a year to write, were produced at various summer theatres in the East. Although critics didn't seem to think them up to standard, Saroyan wanted to act as producer and director for *Sweeney* on Broadway. The autumn of 1940 found *Time of Your Life* opening for its second short but successful run, all three of Saroyan's Broadway successes published in book-form, and the playwright himself visiting New York and announcing his intentions of finishing four new plays in a couple of weeks or so, according to Leonard Lyons. "But my work will probably be interrupted," he feared, "by my being conscripted into the army." (Saroyan's opinion of army life and the War in general wouldn't influence any young man to run for the nearest recruiting station.) "Then why don't you get married and raise a family?" asked Lillian Hellman. "It's too late," he replied. "There isn't enough time." "There is," said Miss Hellman, "for Saroyan."

Saroyan's latest book, *My Name Is Aram*, was the January 1940 choice of the Book-of-the-Month Club and describes the "imaginative life of an Armenian boy in California." Christopher Morley says it shows him at last as the "grown and many-colored artist; the genuine poet in prose, and spokesman for the youth of the world."

Saroyan wrote another pretty comprehensive autobiography of his early life for the *New Yorker*:

"Born August 31, 1908,
In Fresno, California;
Student at Emerson Public School
On L Street, between San Benito and
Santa Clara;
Holder of the First Prize for Street
Sales,
The Fresno Evening Herald, 1917;
Twice Winner of the Around-the-
Block Race, 1918;
Founder, Manager, and Boss of
Henry-and-
Willie's Empty Lot for Sons of Ar-
menians,
Assyrians, and Other Immigrants;
Winner of Highest Third-Grade Binet-
Simon Intelligence Rating,
"Far Above Average, Although Poor
at Arithmetic;"

Official Letter-Writer to Mayor Toomey
 For the Fifth Grade;
 Speaker at the First Meeting Of the Parent-Teachers' Association;
 Singer of "The River Shannon;"
 Author of "How I Earned My First Dollar;"
 First to Dive from the Oak Tree Into Thompson Ditch at Malaga;
 First to Climb Guggenheim's Water Tank
 And Drop a Cat;
 Most Frequent Visitor of the Public Library;
 Borrower of the Most and Best Books;
 First Reader of the *Autobiography of Benjamin Franklin*;
 First to Subscribe to Lionel Strongfort's
 Body-Building Course;
 Holder of the Certificate for Free-hand Penmanship;
 Fastest Postal Telegraph Messenger In the San Joaquin Valley, 1921,
 And Other Things Too Recent Or Too Numerous to Mention. . ."

He doesn't mind mentioning most of them, though.

SAYRE, FRANCIS BOWES Apr 30, 1885— Lawyer; United States High Commissioner to the Philippines

Address: Manila, Philippine Islands

Francis Bowes Sayre is a lawyer and a diplomat who because of his special diplomatic service in the Far East and Europe holds enough foreign decorations to cover the most expanded chest. In July 1939 President Roosevelt appointed him High Commissioner to the Philippines, and at that time President Manuel Quezon of the Philippine Commonwealth said: "No better appointment could have been made."

Before he took office Francis Sayre was familiar with the commonwealth's problems. Since 1934 he has been a member of the body planning new economic ties between the United States and the Philippines when the Philippines get their independence in 1946. He was also chairman of the Joint Preparatory Committee on Philippine Affairs which in November 1938 turned in the most complete report ever made on the Islands. Unlike Paul V. McNutt (see sketch this issue), his predecessor, Sayre had an open-minded attitude toward Philippine independence. McNutt frankly said that the Islands should be retained, at least as a dominion, but when Sayre arrived in Manila he declared that the Philippines would be cut loose in 1946. Since he has been in Manila he has occasionally clashed with Quezon, however. With 10 years for the Filipinos to learn how a democracy should be run, he finds some indications that they are being steered toward a dictatorship. Nevertheless there has been cooperation, and frequent conferences have been held between the two governments on military and civil problems which would arise in the event of an emergency affecting the Philippines.

Francis Bowes Sayre was born in South Bethlehem, Pennsylvania, the son of Robert Heysham and Martha Finley (Nevin) Sayre, on April 30, 1885. In 1909 he received his B. A. from Williams College and in 1912 was graduated from Harvard Law School. He became deputy district attorney for New York County and stayed in that position until 1914, when he returned to Williams as assistant to its president and instructor in government.

FRANCIS BOWES SAYRE

On November 25, 1913, before his return, he had married Jessie Woodrow, the daughter of President Woodrow Wilson, at the White House. It has been said that Sayre not only resembles Wilson in looks but is the "residuary legatee of Wilson's enthusiasms." Mrs. Sayre died in 1933, leaving three children. In 1937 Mr. Sayre was married again, to Elizabeth Evans Graves.

From 1919 until he left in 1933 to become assistant Secretary of State, Sayre was connected in one way or another with Harvard University. From 1919 to 1924 he was assistant professor of law, and professor of law from 1924 to 1933. In 1923 he took a leave of absence to become adviser in foreign affairs to the Siamese government, and on behalf of Siam negotiated new political and commercial treaties with France, Great Britain, the Netherlands, Spain, Portugal, Denmark, Norway, Sweden and Italy. For his services he received many honors from King Rama VI of Siam.

Mr. Sayre became the director of the Harvard Institute of Criminal Law in 1929 and in January 1933 was appointed Massachusetts State Commissioner of Correction. In November 1933 President Roosevelt appointed him Assistant Secretary of State.

Because of his academic background and in view of the recent housecleaning of "brain-trusters," Sayre's appearance in Washington was at first greeted with suspicion by the old-timers, but "his magnetic and attractive personality, his rapidly moving mind, his extreme energy" broke down all opposition and he was soon felt to be one of the real finds of the Roosevelt Administration.

In Washington, Sayre worked directly under Secretary of State Cordell Hull (see sketch this issue) and was Hull's "right-hand man in the making of our recent reciprocal trade treaties." Sayre, it has been said, be-

lieved in the reciprocal trade treaties as Saint Augustine believed in God. In 1939 his book, *The American Trade Agreements Program*, appeared.

Francis Sayre is also the author of numerous books on law and international affairs, among them *Experiments in International Administration* (1919); *Cases on Labor Law* (1922); *Cases on Criminal Law* (1927); *Siam Treaties with Foreign Powers* (1920-27, 1928); *Cases on the Law of Admiralty* (1929); *America Must Act* (1935); and *The Way Forward* (1939).

"With a prominent nose, long face, thin hair retreating from a high forehead, and wearing spectacles," there does seem some ground for the belief that he resembles his father-in-law, Woodrow Wilson.

 Who's Who in America
 Who's Who in the Nation's Capital

SCHELLING, ERNEST HENRY (shĕl'-ing) July 26, 1876—Dec 8, 1939 Pianist; composer; conductor

"What this boy needs is more oatmeal, more fresh air!" said the great composer Brahms upon hearing the 10-year-old Ernest Schelling play, after which "he took me toward him, leaned over and kissed me, his huge beard smothering me as he did so," recalled Schelling.

Ernest Schelling, one of the most brilliant figures in the musical life of New York, died suddenly of a cerebral embolism at the age of 63. Born in Belvedere, New Jersey, son of a Swiss philosopher and theosophist, Felix, and Rose (White) Schelling, he was a piano prodigy. He made his first public appearance at the age of four, spending much of his youth abroad, where his father's social position gave him entree into the great salons of Paris. Before he was eight he was studying at the Paris Conservatoire with Mathias, a pupil of Chopin; and at ten he was a pupil of the great Leschetizky. Then started concentrated hard work as he gave concerts before many of the crowned heads of Europe. Such tremendous demands took their toll and the full-fledged virtuoso of 16 could play no more—crippled with neuritis of the hands.

At 20 he had regained his health and played for Paderewski, who said: "You have little technique, not much flexibility, but I see a spark still in you. Come to Switzer-

Musical America

ERNEST H. SCHELLING

land and I will take you under my wing as my only disciple." After four years of unrelenting study for eight hours a day, Schelling became discouraged at his first concert and sought forgetfulness at a monastery, but the musical fire still burned and he returned to take up a brilliant career.

During the First World War he went to France with the rank of captain, received the decoration of the Legion of Honor, the Distinguished Service Medal, and was mustered out as a major. He was married to Lucy How Draper in 1905. She died in 1938. Four months before his death, he married the 21-year-old Peggy Marshall, niece of Mrs. Vincent Astor, musical patroness.

Perhaps Schelling is best known for his conducting of special children's concerts. From 1924 onward these concerts, where children learned to love and understand fine music and musical history, grew in popularity until he had enthusiastic audiences in all the large cities of America, England and Holland. To the children he was always "Uncle Ernest." Radio broadcasts of these concerts with the Philharmonic Symphony had increased his prestige tremendously all over the country.

Most critics believed that Schelling was greater as a concert pianist than as conductor and that his work as a composer was lacking fundamental originality, but when he was stirred by strong emotions he was capable of effects of great power. His *Victory Ball*, based on a satirical verse of savage impact by Alfred Noyes was a direct result of the bitter disillusion, he suffered in the World War. It always made a dramatic sensation when a leading symphony performed it. Other of his works are *Impressions of an Artist's Life*; *Morocco*;

Concerto for Violin and Orchestra; and *Légende Symphonique*.

SCHIAPARELLI, ELSA (skyä'pä-rě'l'ě ä'l'sä) Parisian couturière

Address: 610 Fifth Ave, New York City

A "style refugee" to this country after the fall of France, during the early autumn of 1940 Elsa Schiaparelli lectured in 30 United States cities before women's clubs and department stores on *Clothes and the Woman*, wearing costumes which she had designed. Part of the royalties for their reproduction went to a fund for unemployed Parisian midinettes. Mme. Schiaparelli planned to return to Paris in November, where her house had been turned over to the Quakers for the benefit of the homeless, only one room reserved for herself. During her tour she insisted that as a style center no other city could take the place of Paris. "I am not pessimistic about our future," she said. . . There may be ashes on the fire, but the flames are still there."

Elsa Schiaparelli is of remote Egyptian descent on her mother's side; her Italian father was dean of the University of Rome, professor of Oriental lore, and in his lighter moods dabbler in numismatics; and her uncle, Giovanni Schiaparelli, was the discoverer of the canals on Mars. At six she ran

ELSA SCHIAPARELLI

away from home, and was found three days later leading a parade. She was sent to an English dame's school, and lyric summers spent in Capri or on Lake Como soon found her writing verse. *Arethusa*—for the Homeric guardian of the fount of forgetfulness—was her first bold try in her sixteenth year. It was published, but her father refused to read it and sent her off to a convent in Switzerland, where not only the mountains but the school itself gave her two years of complete joy.

At 17 she was enrolled in a school in England, and shortly after the outbreak of the First World War she was married to a Polish gentleman. They came to New York, and here their only child, Marisa, was born. Madame Schiaparelli was living in Greenwich Village, working for the movies in New Jersey, doing translations and taking part-time jobs from importers. At the end of five years she returned to France, did a little gold sculpture, and read a lot of French, English, Italian and German.

It was the chance designing of a black sweater for herself that decided her career in 1927. This piece of "chic melancholy" was hailed by her friends as something rather hard to forget. She began furiously to design clothes, and in two years she moved into her own attic shop in the Rue de la Paix. Her salon grew steadily in size and inimitability, and in 1935 she moved into a pretentious establishment in the old house of Chéruit, 21 Place Vendôme.

Madame Schiaparelli has wisely conserved her "sense of inexperience" (she was certainly slated for an intellectual rather than professional life), and she has been described as "Tanagra-like" in build, with an "exotic hierarchy of feature."

SEABROOK, WILLIAM Feb 22, 1886—
 Author

Address: b. c/o Harcourt, Brace & Co, 383
 Madison Ave, New York City; h. Rhinebeck,
 New York

Like the man who didn't believe in ghosts but was afraid of them just the same, William Buehler Seabrook, whose tales of adventure in strange lands have been filled with investigations of the supernatural, goes on to discover (and debunk, maybe) vampires, werewolves, doll-image making and other diabolical doings right on our own civilized doorsteps. Of *Witchcraft: Its Power in the World Today* (September 1940) Seabrook solemnly says in his foreword that he is addressing the book to "rational people" only. "While witchcraft is not demoniac, it is a specific, real and dangerous force, evil when used for evil, mysterious in some of its manifestations, but always analyzable, always understandable within the bounds of reason, and combatable in consequence like crime, snake bite, insanity and yellow fever." He emphasizes the fact that witchcraft is successful only (like the induced auto-suggestion known to psychiatric science) provided the victim himself knows that he is being worked upon.

In the Ozarks, in Southern France, in Pennsylvania hexings, even in modern social and intellectual circles, doll-images of people have been made, pierced with pins in vital spots, and sure enough the victim—informed by supposed friends of what is being done to his image—gets terrible pains and wastes away. Unless, of course, the doll is found and destroyed. In Brooklyn there was a girl who had read all about vampires and knew, because of her uncontrollable craving for blood, that she was one. (It turns out that she suffered from pernicious anemia.) In Washington Square at a party, another girl (a Russian refugee "addicted to occult escape mechanisms") stared at a Chinese magic hexagram and went through the "slit in time" to imagine herself a wolf. A girl named Justine could hang by her wrists till her mind slipped into the future:

WILLIAM SEABROOK

once she saw a misbehaving lion in a circus in Avignon. Six months later she and Seabrook happened to be in Avignon: there was the circus, and there was the same anti-social lion behaving just as Justine had foreseen. The trouble with Justine (as with many other clairvoyants) was that she never foresaw anything she might turn a profitable penny on. "One person possessed of telepathic or clairvoyant power and capable of using it could make world history for good or evil, wreck all the stock markets in less than a week, smash governments"—and, presumably, do something about Hitler.

William Seabrook was born at Westminster, Maryland on Washington's birthday, 1886, son of William Levin and Myra Phelps (Buehler) Seabrook. Environment scarcely explains why a boy whose father was a Lutheran minister and who grew up in ordinary small American South and Midwest towns should become a traveler in strange lands and in the realms of the occult. Seabrook thinks heredity had something to do with it. "There was bad blood in me," he says in the book on witchcraft, "from the angle of magic, and it came, mandragora-like, from the best roots of my family. My only distinguished ancestor was a great-great-grandfather on the maternal side, Peter Boehler, a bishop of the Moravian Church." He was a missionary who worked among the Indians, the Negroes, etc. Family tradition had it that "he was up to his ears in black magic." Once church leaders nearly had him deposed; his defense was that he dabbled in magic in order "to fight the Devil with his own fire." From his nursery days Seabrook remembers hair-raising tales of this ancestor. He was also brought up on ghost-stories told him by a South Carolina nurse.

He was educated at academies in Pennsylvania and Virginia and in 1906 received his M. A. degree from Newberry College, South Carolina. He then got a job on the Augusta, Georgia *Chronicle* as a cub reporter. In 1908 he went to Switzerland and studied philosophy and metaphysics at the University of Geneva. After traveling in Europe for two years he returned to Atlanta, Georgia to operate an advertising agency. In 1912 he married Katherine Pauline Edmondson. Then the War broke out; he enrolled as a private in the French Army, was gassed at Verdun. He began his writing career as a reporter for the *New York Times*; encouraged by H. L. Mencken, for seven years thereafter he was a special feature writer for newspaper syndication.

In 1924 Seabrook and his wife went to Arabia. His first book, *Adventures in Arabia* (1927), was about their experiences among the Bedouins, Whirling Dervishes, etc. A visit to the Haitian voodoo country produced *The Magic Island* (1929). In 1931 came *Jungle Ways*, best remembered for Seabrook's description of a cannibal barbecue (recipes furnished). "The meat," he said, "tasted like good, fully developed veal." *Air Adventure* (1933) concerned a trip by plane from Paris to Timbuctoo. There he found Père Yakouba, whose life story was recounted in *The White Monk of Timbuctoo* (1934).

About this time Seabrook became a heavy drinker, needing one or two quarts of liquor a day. He got into such a bad physical and mental state that he entered an institution in Westchester County, New York, where he took a six months' cure. The frank account of what he underwent there, published in *Asylum* (1935) brought him more publicity than any other of his books. After its publication Seabrook received hundreds of letters from drunkards or their families asking about the institution. A further book followed his return to sobriety, *These Foreigners* (1938), sound studies of five immigrant groups in the United States and their contributions to American culture.

Seabrook and his first wife were divorced in 1934; in 1935 he married Marjorie Muir Worthington. (His first wife in turn married Mrs. Worthington's former husband, Lyman Worthington.) Marjorie Worthington is a successful popular novelist; a tall, strikingly handsome brunette who likes best to live in the country, where she can wear slacks and work among her flowers. Her husband ("Willie" to his many friends and Westchester County neighbors) is big and hearty, with a thick thatch of brown hair and warm blue eyes, fond of good talk and good food. They have an eight-acre farm near Rhinebeck, New York. Marjorie Seabrook has taken over the furnishing of the attractive farmhouse, and Seabrook himself has successfully converted the barn on the place into a handsome studio. There is a big, combined living and dining room; an upstairs

study decorated with trophies from his many travels: rare rugs, Arabian guns and swords; and all kinds of African handicraft, including a remarkable assortment of devil masks.

SEMON, WALDO LONSBURY (sē-mŭn) Sept 10, 1898- Chemist

Address: c/o Goodrich Rubber Company, Akron, Ohio

On July 31, 1940 the B. F. Goodrich Company and the Phillips Petroleum Company announced the formation of the Hydrocarbon Chemical and Rubber Company for the production of synthetic rubber, the Phillips Company to provide the petroleum and the Goodrich Company the skill and experience in manufacturing.

Actually most of the credit for this skill and experience must go to Dr. Waldo Lonsbury Semon, inventor of *Ameripol* and head of chemical research for B. F. Goodrich. His synthetic rubber is the outgrowth of years of experimentation and the culmination of continual application and tireless effort.

The manufacture of American synthetic rubber is well timed. With war in progress and international trade stagnant, we need our own rubber to manufacture our own tires, insulate our own wires, chew our own gum. Yet the manufacture of synthetic rubber is not an American idea. It was begun by Germany during the last War. Isolated, it was impossible for her to buy any rubber products, and her ingenious chemists and research scientists set to work to devise a synthetic rubber (*Buna*) strong

enough to make serviceable tires for automobiles and airplanes. Other attempts at synthetic rubber were made by the Du Ponts and by the Russians, who call theirs *Sovprene*. *Ameripol*, however, is the newest and most refined of the synthetic rubbers.

When Dr. Semon, whose discoveries eventually led to *Ameripol*, started out in 1928 his only aim was to preserve rubber. By 1932 he had learned to use those materials that made his later work more simple, and from July to December of 1933 he focused his attention on one single method of preserving rubber, part of which he discarded, part of which he extended into further research.

In August 1934 he found, finally, that he was able to retard the aging process of rubber and increase the resistance to the formation of cracks upon flexing. A month later he produced his first synthetic rubber-like composition. A group of organic substances were combined at a high temperature, treated to form a stiff resistant gel and then cooled. The result was an excellent insulator, capable of resisting high voltage and corrosion. Not only had Dr. Semon found the nucleus of his future work but with each experiment the process had grown simpler and the idea more clarified.

On December 11, 1935 Dr. Semon discovered *Koroseal*, made from salt, coke and limestone. It is usually classed as a plastic, even though it is a rubbery synthetic, and though it cannot be vulcanized, it can be made in any consistency from jelly-soft to bone-hard. Resistant to nitric and hydrofluoric acids, it makes good linings for pickling tanks. It also goes into beer pipes, gaskets, waterproof fabrics, fabrics for holding parts to be coated in chromium plating baths.

SEMON, WALDO—*Continued*

After four years of experimentation, after four years of searching and after making more than 5,000 synthetic rubbers, Dr. Semon compounded *Ameripol*. Its basic raw material is petroleum and other materials in it are gas, air and soap. Scientifically, the complex petroleum unit is broken into a mixture of simple molecules from which is extracted a gas which, under pressure, produces the basis of *Ameripol*. This is again mixed with other ingredients prepared from natural gas and air, and then this resultant combination is made into a milky emulsion, using soap. Again an agitation process and the ingredients react to form an emulsion of synthetic rubber.

The Goodrich Company announced *Ameripol* in June 1940 and in July 1940 *Ameripol* tires were put on the market, priced at \$5 higher than rubber tires. It was claimed that they would wear as long as natural tires while being more resistant to heat, aging and sunlight. According to Dr. Semon, *Ameripol*, not only in tires but in other products, "in many of its important properties is equal or superior to natural rubber." A factory with a production capacity of several tons of *Ameripol* daily is under construction in late 1940.

Waldo Semon was born at Demopolis, Alabama. His father, Frank Emerson Semon, was a civil engineer who built the town's light and power plant and whose profession kept his family on the move. It wasn't until Waldo was seven that the Semons settled down for a while. Then Mr. Semon took a position in the city engineering office in Seattle, Washington and Waldo was able to get through the sixth grade before the next jump—to Medford, Oregon, where he finished grade school and started high school. Then on to Ashland, Oregon and Eugene, Oregon, and finally back to Seattle, where Waldo finished high school.

All this time Waldo had been working summers, picking strawberries, prunes and hops in the Northwest; working as a water boy on a construction project; digging ditches; even working with a surveying crew. When he got out of high school he continued to work, mostly for the state highway commission. But he quit this to enter the University of Washington in 1916. Here he majored in chemistry, spent one summer working for the United States Geological Survey, another helping build a spur of the Milwaukee railroad and analyzing inks for code messages for the United States Intelligence Service. He was graduated with honors in 1920.

Immediately he married Marjorie Gunn, whom he had known since freshman chemistry. The two of them settled down at the University of Washington. Semon studied for his doctorate while teaching and Mrs. Semon tutored would-be chemists. Dr. Semon also acted as consulting chemist to private industry and published several

technical papers. It was in 1926, three years after he received his doctorate, that the Goodrich Company asked him to join its department of chemical research. Without any fanfare Dr. Semon piled his family into a wheezing second-hand car, climbed behind the wheel and headed Eastward. He reached Akron in 16 days and has stayed there ever since.

Six-foot-two, Dr. Semon has the physique of a lumberjack and uses it to good advantage swimming and boating. This doesn't happen often, however. Mostly he spends hours in the laboratory over his test tubes and beakers—long hours without a break, away from his wife and three daughters. And Sundays he conducts a class at the First Congregational Church in Cuyahoga Falls, Ohio.

SEREDY, KATE (shĕr'ĕ-dĕ) Author; artist
 Address: c/o Viking Press, 18 E 48th St, New York City

One of the most popular author-illustrators of children's books is Kate Seredy, who won the Newbery Medal in 1938 with *The White Stag*. Her latest book is *The Singing Tree* (1939), and she has since done the illustrations for other children's books, and one translation from the Hungarian, *Who Is Johnny?*, by Leopold Gedö (1939).

Kate Seredy was born in Hungary, and grew up in Budapest and the surrounding country. She was well-known for her illustrations before she began writing books. She says: "I started to draw for children as soon as I was old enough to go to school. These first drawings were highly successful as far as my classmates were concerned, but my teachers didn't think much of them. Perhaps because they were not very flattering portraits!" After high school she went to the Academy of Arts in Budapest and studied during summer vacations in Italy, France and Germany. When the War broke out she became a nurse and her experiences made her a confirmed pacifist.

KATE SEREDY

On coming to America in 1922, she already had a number of children's books to her credit. But she couldn't speak English—and that handicapped her for some time. Nevertheless she learned, in 12 years, to speak and write English so well that she wrote *The Good Master* (1935), a lasting favorite with boys and girls. This was followed by *Listening*, the story of her house in the Ramapo Mountains of New Jersey. In 1937 came *The White Stag*, the Newbery Prize winner. In connection with this book Miss Seredy feels that she owes much to her father, and pays him warm tribute. He was a man beloved by the neighborhood children: he collected the carvings and paintings of the countryside, and he told stories that taught young people how to think, how to live. His favorite story was that of the White Stag, one of the great legends of mankind. It is a tale of the legendary founding of Hungary, particularly of the hero Attila who, guided by the White Stag and the Red Eagle, led his people to their promised land.

The Singing Tree is a sequel to *The Good Master*. It covers the era 1914 to 1918, when Hungary, like the rest of Europe, was surrounded by the horror of warfare. The mischievous children of the previous book have grown older. Jancsi, now the Young Master, and Kate, no longer a tomboy, share the solace of their farm with Russian prisoners and German war orphans. The whole doctrine of the story is the world's need for tolerance and peace.

Miss Seredy has a farm of her own. She loves animals, gardens and making things for herself, such as clothes, furniture and pottery. She likes playing the piano and chasing hunters away when they intrude on her land. She hates caterpillars with the exception of a caterpillar tractor. Her trac-

tor is named Attila because it has a one-track mind and mows down everything in its path. Attila does every job on the farm, aided by Ferdinand, a docile and very powerful disc-harrow.

SERKIN, RUDOLF Mar 28, 1903- Pianist and composer

Address: National Broadcasting System Artists' Service, RCA Building, New York City

Rudolf Serkin took American music-lovers by storm when he made his first United States appearance in 1935. Since that first concert Serkin has been rated one of the finest pianists of today. On June 20 he inaugurated the 1940 Lewisohn Stadium Concerts under the baton of Arturo Rodzinski (see sketch this issue), and was slated to play several concerts during the summer and autumn.

Rudolf Serkin was born in Eger, Bohemia, of Russian-Jewish parents. At four he could play the piano creditably and was able to read music with facility. On the advice of the celebrated Viennese pianist, Alfred Gruenfeld, his parents placed him under the tutelage of Professor Richard Robert in Vienna. At that time his parents were so poor that they had only one room for themselves and eight children. There, in the din and clatter, Rudolf learned to play, and at 12 made his debut as guest artist with the Vienna Symphony Orchestra.

Though he achieved great success and was offered a long tour by enthusiastic managers, his teacher and parents decided that he was still too young to undertake anything so strenuous. For several years he continued his studies, rounding out his technical knowledge of music by studying composition under Arnold Schönberg. When he finally inaugurated his career he established himself quickly as an important artist, giving concerts in France, Switzerland, Italy, Spain and Austria.

Herbert F. Peyser, writing in Berlin for the *New York Times* in 1931 made the comment that "Mr. Serkin is not a sensational pianist, though he can storm the clouds and summon the mellowest of thunders and dazzle like the best of them in the sheer resplendence of mechanics." He added: "a tall, gangling, bespectacled young man of 25 to 30, suggesting in his general appearance a somewhat overgrown high-school student, his demeanor at the keyboard is, on the whole, tranquil and unmannered." His playing, in its limpid and subtle loveliness, called to mind the famous Gieseking.

In 1935 Serkin appeared in the United States for the first time with Adolf Busch, the violinist, at the Coolidge Festival in Wash-

RUDOLF SERKIN

ington. When he made his American debut the following winter as soloist under the baton of Arturo Toscanini, conductor of the New York Philharmonic Symphony Orchestra, Leonard Liebbling called "an artist of unusual and impressive talents in possession of a crystalline technique, plenty of power, delicacy, and tone pure and full." Not to be outdone, Olin Downes claimed that he was "a masterly musician . . . a scholar and a profound one, without pedantry, with the loftiest conception of beauty, whose every thought and emotion is for the glory of his art."

In 1937 he gave his first New York recital in Carnegie Hall, and Downes described him as: "a curious figure on the platform, because of his slightness and the fact that he is not tall, and the nervous intensity of his walk to the piano, and his fantastical intentness on the work in hand. . . . He played significantly, always with a magnificent control and with a sovereign sense of form. Richness and complexity of detail never distracted him from issues, but only added to the richness of the effect, and in lyrical passages his tone was lovely in color, in nuance, in capacity to carry, even when the key was barely pressed down by the finger."

In 1937 Serkin, appearing with the National Orchestral Association under the direction of Leon Barzin, received the following comment from the well-known critic, Jerome D. Bohm: "His treatment of the music was perfectly proportioned, teeming with sensitively applied nuances, and invested with unceasing tonal loveliness and astonishing technical finish."

Since his first appearance in this country with Adolf Busch, Serkin has played several series in concert with the German violinist. As a matter of fact, so closely

attached did they become musically, that Serkin stepped forward to tighten the bond by marrying Busch's daughter in 1936.

SERRANO SUNER, RAMON (sĕr-ră'nō sōōn'yār) 1901- Spanish Foreign Minister; head of Falange Española Tradicionalista

Address: b. Madrid, Spain; h. Saragossa, San Clemente 25, Spain

That Spain had definitely hitched its wagon to the Axis star became apparent on October 18, 1940 when Ramón Serrano Suñer, brother-in-law of Generalissimo Franco, succeeded Colonel Juan Beigbeder as Foreign Minister. Franco himself took over the Ministry of the Interior which Serrano Suñer had held since 1939, but it was significant that the staff of the Ministry remained unchanged under the same Under-Secretary that Serrano Suñer had. Possibly Serrano Suñer is in late 1940 running foreign affairs in person and the Interior through his former assistant. Upon assuming office he declared that his appointment meant Spain's acceptance of the "New Order" in Europe and that Spain "must not lose a single moment" in coming to grips with world affairs. Since then he has admittedly discussed with Hitler Spain's possible territorial gains if it should join the Axis.

Serrano Suñer's appointment is the culmination of great activity on his part. In September he went to Germany to confer with Von Ribbentrop and then on to Rome, where he made headlines by snubbing the Vatican and exchanged greetings with his good friend Ciano (see sketch this issue) after the latest Brenner conference.

The New York Times has called Serrano Suñer "Spain's second most prominent figure," but there is reason to believe that, although content to stay in the background, he is Spain's most powerful figure, without any qualifications. It has been often and openly stated that Ramón Serrano Suñer is Spain's real ruler, the power behind the throne occupied by his more publicized brother-in-law, Generalissimo Francesco Franco.

Before Señor Serrano Suñer became Foreign Minister he held the post of Minister of the Interior. This post also included the Ministry of Communications and gave him full control of the post office, telephone, telegraph and cable systems. As Minister of Press and Propaganda, he had the absolute say over what the Spanish people read or hear. He still is the president of the *Junta Política* of the Falange Española Tradicionalista and has in his hands the control of Spain's

sole political party with its membership of 2,000,000, not counting the auxiliary organizations. No wonder then that there has grown up around him a legend of omniscience and omnipotence that has a sinister flavor.

El Cuñadísimo—the “brother-in-law-issimo,” as the Spaniards call him—has always had much to say about Spain’s foreign policy. He has always favored close ties with Italy and Germany, hated France and scoffed at England’s “countinghouse diplomacy.” He is an ardent admirer of Hitler and Mussolini and he is a good friend of Count Ciano (see sketch this issue). In 1939, on the occasion of celebrating the third anniversary of the Rightist Rebellion, he claimed that Gibraltar would soon be returned to Spain—a statement that found echo in Franco’s public demand in 1940 that England give up The Rock.

Like so many present-day key-men in the destinies of Europe, Ramón Serrano Suñer, whom *Time* has called “the fastest climbing of Europe’s modern politicians,” comes from rather humble origin and was generally unknown before swiftly moving events brought him to the top. Before the Civil War broke out he was an obscure lawyer. Probably the most significant thing he did at that time, from the point of view of his career, was to marry the handsome Señorita Zita Polo, sister of Franco’s wife, and so obtain a vital stake in Franco’s fortunes. Another important relationship was his close friendship with José Antonio Primo de Rivera, son of the erstwhile Spanish dictator and founder of the Falangist movement.

Serrano Suñer was born in 1901 in Saragossa. He studied law in the Italian universities—in Rome and in the famous University of Bologna. There he obtained his admiration for Fascism as a philosophy and a practical method of wielding power. Upon coming back to Spain he practiced law in Saragossa, obtained a certain amount of recognition as a good lawyer and held a few minor judicial posts.

In 1933 he went to the Cortes as the deputy of the Catholic Party from Saragossa. He was still in Madrid when the death of General Sanjurjo placed his brother-in-law at the head of the rebellion. He was taken into custody in 1936 and held in one of Madrid’s “model prisons,” from which he managed to escape in 1937 in a rather picturesque way: he disguised himself as an Argentine sailor and was able to board an Argentine ship unrecognized. Then he made his way to Burgos, where Franco was entrenched.

Once in Burgos he began his climb to power. He was given the portfolio of the Ministry for Press and Propaganda and instituted strict censorship in Franco-owned territory. He was sent on a good-will trip to Germany, where he got an enthusiastic reception, attended the 1937 Nuremberg Nazi Congress and met Hitler. He came

European

RAMON SERRANO SUNER

back to Spain full of admiration for the Nazi efficiency and was soon given a chance to try out Nazi methods as Minister of the Interior. At the same time Franco made him Governor of Valladolid.

Señor Serrano Suñer’s work was done mainly behind the lines. While Franco fought his way to the domination of Spain, he, as an expert on national administrative matters, was charged with the task of keeping order in the rebel-owned territory. Much of his attention was given to organizing and strengthening the Falange, in which all of Spain’s heterogeneous Rightist elements, from Fascists to Carlists, were gradually fused. This party was later to serve him as a bulwark in his struggle with the military diehards who were campaigning with Franco and who held for him a soldier’s characteristic mistrust for the administrator.

As Franco’s forces cut deeper into the Republican territory, forcing the desperately-fighting Loyalists to give up one city after another, Señor Serrano Suñer’s functions began to assume a grimly paradoxical character: his was the task of eradicating the Leftist elements of the population—which he did with grisly efficiency, the number of executions mounting into thousands—and feeding the rest. In September 1938, after the Civil War was over, he embarked on the gigantic task of reconstruction which today, after a year and a half, has made hardly a dent on the general situation. He organized the Auxilio Social (originally called the Winter Aid after the similar German organization—another sign of German influence), a nationwide social service supported by a sales tax; enforced government-fixed prices; established a distribution of free milk and set up govern-

SERRANO SUNER, RAMON—Cont.

ment-financed orphanages to take care of children left alone and destitute by the War.

The height of his personal triumph came in June 1939, when he, together with a retinue of Spanish generals, accompanied the Italian "volunteers" back to Rome. He was a huge social success, completely overshadowing the rest of his compatriots; also he cemented his friendship with Count Galeazzo Ciano, another "in-law" significant in European politics. His return to Spain marked an important crisis in his political life. Reports had been current that Franco was seriously contemplating making his brother-in-law Premier. But in August this step was forestalled by a near insurrection among the ranks of the blunt old-guard army leaders who detested Serrano Suñer.

Here the soft-spoken Minister showed his claws: one after another his opponents—Juan Yaguë, the bibulous Queipo de Llano, the popular Miguel Aranda—were relieved of their commands. Then followed a series of decrees that sapped the power of the opposition and strengthened Serrano Suñer's position to that of a virtual dictator, as well as marked the Falange's victory over the older aristocratic military clique. Serrano Suñer suspended all public meetings, forbade all gatherings except with his written permission, speeded up the reorganization of the army by recalling the demobilized officers.

Serrano Suñer's name for the system under which Spain is ruled is syndical nationalism. The syndicates which he has set up are reminiscent of the Labor Front in Germany in their complete subjection to the state. His totalitarian attitude includes business: he is as hard on the intransigent businessmen clinging to the idea of individual enterprise as Hitler. Reminiscent of Germany and Italy, too, is the all-pervasive character of the Falange, the sole political party: every village has some sort of an organization connected with the Falange, such as *Prensa y Propaganda, Informaciones y Investigaciones*. And the supreme authority is vested in the 20 members of the *Junta Política* headed by Serrano Suñer himself.

One of the reasons why the all-powerful Serrano Suñer was content to stay in the background is his lack of popularity. Franco is much more appealing, a bluff and hearty soldier. Serrano Suñer is distant and forbidding in his manner, although he can be very charming when it is necessary. He has been described spitefully as "that pulpy olive fashioned in the likeness of man." That is unfair: his appearance in his austere black Falange uniform is impressive although somewhat Mephistophelian. His face, beneath its cap of graying hair, is narrow, ascetic and worried, his eyes are rather hard. He is hard-working, tenacious and ambitious. Little is known of his personal life, except that he has six children.

That his rôle in their country's destiny is well realized by his countrymen is evidenced

by the amount of the brother-in-law jokes going the rounds in Spain. Here is one told toward the end of the Civil War:

Franco goes to heaven and is stopped at the gate by St. Peter who asks him his name.

Franco: "I am Franco."

St. Peter: "Never heard of you."

Franco: "El Caudillo."

St. Peter: "Never heard of him."

Franco (in despair): "The brother-in-law of Serrano Suñer."

St. Peter: "Oh, come right in! Why didn't you say in the first place that you were a friend of his?"

SHERWOOD, ROBERT Apr 4, 1896—Dramatist; author

Address: 630 Fifth Ave, New York City

There Shall Be No Night, Robert Sherwood's latest play, opened in New York on April 29, 1940. "Writing with tremendous sincerity, burning indignation and occasional high eloquence, Mr. Sherwood says in it that unless the rest of the world unites in arms against Fascism, we are all headed back to the Dark Ages." Immediately a stir was created. The *Daily Worker* assailed him as the stooge of the imperialist war mongers; a group of "Christian Frontists" accused him of following the Communist line; Raymond Clapper (see sketch this issue), writing in the *New York World-Telegram*, stated: "This play, depicting the tragedy of Finland, seemed to me a rank inflammatory job, pleading for intervention, sneering at our reluctance to go in"; the *Boston Transcript* said that Sherwood's conclusion that this War were better fought to a conclusion by men with no illusions of patriotic glory, in whose minds "there shall be no night," is more than a brave statement. "It seems the only one in which there is any hope at all. . ."

Sherwood himself, in answer to those who claim that he has dealt the case for American neutrality a "nasty uppercut," says: "There's a frightful conspiracy of silence that's turning Washington into an orgy of unreality. . . It's a 'peace hysteria' clouding all attempts at intelligent thought about the War. Congress is one mass of Chamberlains. The United States is in exactly the same ostrich-escapism as England up to the insanity of Munich."

On Christmas Day 1939 Robert Sherwood listened to a broadcast from Finland by William L. White, American newspaper correspondent, called *Christmas in the Mannerheim Line*. Out of that broadcast came the idea for his play. For 20 days he turned the idea over in his mind and on January 15

S. J. Woolf

ROBERT SHERWOOD

he started writing. In 26 days the play was completed. He sent it to the Lunts. They read it on the train on their way to Wisconsin. Lynn Fontanne tells it thus: "We had planned, Alfred and I, to rest for the summer. . . . At Harrisburg I wired Mr. Sherwood: 'This half of the combination returns in two weeks for rehearsals.' At Chicago Mr. Lunt sent a telegram: 'So does this half.'"

The chief character of *There Shall Be No Night*, played by Alfred Lunt, is an eminent Finnish neurologist who has just received the Nobel Prize for research into the causes of mental diseases. Being a free man intellectually, he does not believe in war. It is stupid, reactionary, weak minded. Thoroughly absorbed in research, Dr. Kaarlo Valkonen postpones thinking about the possibilities of Russia's invading his native land. But the Russian invasion does come, and Finnish freedom is shattered. The doctor's son goes to battle and is lost. The doctor himself is forced to lay down the ideals of the physician and take up the gun in defense of Viipuri.

Of the impact of *There Shall Be No Night* all critics are agreed. Richard Watts Jr., says: "It is not a tidy or consistent play. Yet it is a play of stature, dignity and high emotion, thoughtful, eloquent and heartfelt." Brooks Atkinson says: "As a play, *There Shall Be No Night* is not a masterpiece; it has a shiftless second act and less continuity of story than one likes to see" . . . but although it is uneven drama, "it honors the theatre and the best parts of it speak for the truth with enkindling faith and passionate conviction." He says, too, that in it is "some of the best prose writing in the modern theatre," although Wolcott Gibbs, writing in the *New Yorker*, feels that "too often the message, in the form of nearly interminable monologues by Mr. Lunt, brings the

action to a standstill, and much too often Mr. Sherwood's deep feeling betrays him into the kind of prose that sets a Hearst editorial apart from any other writing in the world."

Robert Sherwood, who was gassed and wounded in the First World War and spent many months in a hospital, has written of war before. *Waterloo Bridge* (1930) (in May 1940 released as a motion picture) was a play about the last War, showing what it was like through the characters of two Americans, a stranded chorus girl and a young soldier from Syracuse who enlisted with the Canadians. *Idiot's Delight* (1936), which won him his first Pulitzer Prize, told of the war that looms ahead, an international devastating war that is to bring the structure of the world tumbling down around our heads. Indeed, it has been said that "Sherwood seems never to have been able consciously or subconsciously to forget the War. . . . The terror and the stupidity, the brutality and waste of those days and the disillusion that followed them remain constantly with him, in one way or another showing through everything of importance that he has written."

Robert Emmet Sherwood (he does not use his middle name) was born in New Rochelle, New York, on April 4, 1896, the son of Arthur Murray and Rosina (Emmet) Sherwood. He left New Rochelle at the age of two "because my parents, who had the upper hand of me at the time, decided that I should be moved." Before he was out of short pants, Robert was writing. At seven he edited for a year a magazine called *Children's Life*; at eight he had planned a revision of *A Tale of Two Cities*; and by the time he was ten his first play, *Tom Ruggles' Surprise*, had been written.

He attended Milton Academy in Massachusetts and then went to Harvard in 1914, where he did such a good job editing the "Vanity Fair" number of the *Harvard Lampoon* that he was offered the position of movie critic on the real *Vanity Fair* magazine when he returned from service in France. He went there in 1917 with the 42nd Battalion, Black Watch, of the Canadian Expeditionary Force after he had been rejected by virtually every branch of the American service because of his unusual height.

He started working on *Vanity Fair* when he returned from the War in 1919 and stayed there until he became associate editor of the old *Life* in 1920. In 1924 he became editor of *Life* as well as its motion picture editor, and stayed there until 1928. It has been said that because of his movie reviews for *Life* he "may justly be called the founder of American film criticism. Until he began paying the movies the compliment of treating them as an art form . . . film reviews had been merely publicity blurbs of reporters' paragraphs recounting the plot." It was while he was at *Life* that Sherwood was first married, on October 29, 1922, to Mary Brandon of Indianapolis. His daughter, Mary, was born of this mar-

riage. He was married a second time, in 1935, to Madeline Hurlock.

While he was at *Life*, Sherwood was also literary editor of *Scribner's Magazine* and motion picture editor of the *New York Herald*. His first play hit, *The Road to Rome*, was produced in 1927 by the Theatre Guild. Its story is that of Hannibal, who saw the gates of Rome but didn't shatter them, who met tribulations with elephants and women. This was considered a most actable comedy, as proved by its long and successful run. Next came *Love Nest*, an unsuccessful dramatization of a Ring Lardner story.

The Queen's Husband (1928) was a burlesque on a member of European royalty, given point by the visit of Queen Marie. *This Is New York* (1930) has been called "a banal and negligible melodrama with vigorous dialogue and a gangster-Park Avenue plot." *Waterloo Bridge*, about the First World War, followed in 1930, and in 1931 came *Reunion in Vienna*, which was a great success both as a play and as a movie, a "mad slapstick comedy with undertones of philosophy concerning the final contest between the old and the new order." In 1931, too, Sherwood wrote *The Virtuous Knight*, his only novel.

In 1934 appeared *The Petrified Forest*, "with one of the best first acts Sherwood has ever written," a play dealing with problems raised by the depression. In 1936 *Idiot's Delight* was produced—"successful melodrama with a strong after-taste of ideas that are worth expressing." *Idiot's Delight*, unlike *There Shall Be No Night*, takes a purely personal interest in its people and only glances sidelong at war itself as one of mankind's fantastic and sinister follies whose action may begin "in any imminent year." "But the sidelong glances are penetrating, the impression is vivid, the effect is sensational."

The Playwrights' Producing Company was founded in 1938 by Maxwell Anderson, Elmer Rice, S. N. Behrman, the late Sidney Howard and Robert Sherwood, to produce their own and others' plays. Sherwood is its youngest member, and it was his *Abe Lincoln in Illinois* which set it off to "a brilliant start." It was this play, too, which won for Sherwood his second Pulitzer Prize. It is built about the familiar crises of Lincoln's life—his tragic love affair with Ann Rutledge, his marriage to Mary Todd, the debates against Douglas and his assumption of the Presidency—but the emphasis is original. For 20 years Sherwood had pondered this play and it says what all Sherwood's other serious plays and serious prefaces had tried to say. For Sherwood, Lincoln "had saved the Union and the right of its citizens to the liberty which today in a world disrupted with hatred, oppression and bestial brutality we still enjoy."

In 1937 Sherwood was elected president of the Dramatists' Guild of the Authors' League, a post which he held until he was succeeded in late 1940 by Elmer Rice. He is president of the American National Theatre and Academy, an organization chartered by Congress, whose purpose is to bring the Ameri-

can theatre to the whole American people.

In November 1940 he was elected to the National Institute of Arts and Letters and in January 1941 will be presented with the Institute's gold medal for distinguished service in the field of drama.

As the man who made the European War an issue in the Broadway theatre, today Mr. Sherwood would be expected to speak with intensity when questioned about the meaning of his latest play and his intentions in it. He is six-foot-seven and not immune from the habit of the tall of bowing their heads when they speak. His eyes remain glued to the object of his remarks. He talks directly to the point. "Ever since this War started the isolationists have had the floor. Practically every one agreed we must say nothing out loud, we must whisper nothing, we must think nothing which might involve the United States in this War. When I started to write this play I had come to the conclusion that the isolationists were leading us into a position of really awful peril for this country." Now, he believes, we should join an economic blockade with the Allies and let this country be proclaimed as "an arsenal" for them; supports Clarence Streit's (see sketch this issue) plan for an English Speaking Union to stop Hitler; was the author of the *Stop Hitler Now* advertisements inserted in newspapers throughout the country in the summer of 1940 by the Committee to Defend America by Aiding the Allies. In speeches he has assailed Lindbergh, Ford, Hugh Johnson (see sketch this issue) as members of an anti-democratic "appeasement" clique. He was a "fanatical" supporter of President Roosevelt in the 1940 Presidential campaign.

Noel Coward once asked Sherwood's sister: "What is that nine foot of gloom you call your brother?" Actually Robert Sherwood is far from gloomy. But he believes the final optimism that is expressed in *There Shall Be No Night* is entirely dependent on this country.

SIGERIST, HENRY ERNEST (sī'gě-risť) Apr 7, 1891- Professor of the history of medicine

Address: b. Institute of the History of Medicine, Johns Hopkins University, Baltimore, Maryland; h. 3946 Cloverhill Rd, Baltimore

Dr. Henry Ernest Sigerist, who is considered by many to be the world's greatest medical historian and who is director of the Institute of the History of Medicine at Johns Hopkins University, is one of this country's foremost proponents of socialized medicine. To him medicine "is not only a science whose triumphs are technical improvements,

but a service whose success is measured by the ability of a small group of men to make mankind's life more livable."

In the early 1930's Dr. Sigerist became known to American doctors as a strong and articulate advocate of socialized medicine, and today "no man's arguments are read by either side of the socialized medicine controversy with greater respect." Dr. Sigerist has pointed out time and again that "one-third of the population has no medical care or not enough." He has urged "socialized medicine, under which medical care is not sold to the population or given as a matter of charity. Medical care under such a system has become a function of the state, a public service to which every citizen is entitled."

In the many years that he has fought the American Medical Association and those physicians who believe in an individualistic system of dispensing medicine, Dr. Sigerist has brought forth answers to all the objections to socialized medicine that are inevitably raised, both by those who oppose it and by those who are curious as to how it can work out, if it can.

To those who raise the cry of "regimentation," he points out that socialized medicine doesn't mean regimentation at all, but "organization." "Why should anybody feel regimented," he asks, "by having the possibility to budget the cost of illness and by having the privilege to receive all the medical care he needs?" When people say that doctors may neglect patients when they haven't the money-making incentive Dr. Sigerist calls such an assumption "an insult to the medical profession." To fears of politics interfering if medicine were government controlled, he states firmly: "Political interference can be opposed by public opinion." He points out, too, that "our present system allows only very few people to choose their own doctor"; that with socialized medicine physicians would have opportunities for postgraduate training and incompetent elements could be eliminated; and that state control of medicine, actually, isn't a radical departure: "more than 60 per cent of all hospital beds are owned and operated by the government" and nine-tenths of the work of the Public Health Service "consists of new tasks which private medicine was unable to fulfill."

Since 1932 Professor Sigerist has been at Johns Hopkins University. Before then, he admits, he had "an adventurous career." He was born in Paris, the son of Ernest Henry and Emma (Wiskemann) Sigerist, on April 7, 1891. When he was still young he and his family moved to Zurich, in Switzerland, and he studied at the Gymnasium there from 1904 to 1910. It was while he was at the Gymnasium that Dr. Sigerist decided to become an Orientalist. He ordered an Arabic grammar and got up at dawn every morning to study. From Arabic he plunged into Hebrew, Syriac, Persian and Chinese. (Today he knows 14 languages well.)

When his teachers insisted that he specialize young Henry Sigerist rebelled. He went into science and then medicine. In 1911 he attended University College in London and a few years later the University of Munich in Germany. In 1917 he got his M. D. from the University of Zurich.

After the World War Dr. Sigerist intended to become a country doctor in a Swiss valley: "I would love my valley and keep it in order." It wasn't long, however, before he realized that his ambitions were broader than that and in 1921 he returned to the academic field to become a lecturer in the history of medicine at the University of Zurich. From 1925 to 1932 he was a professor in the history of medicine at the University of Leipzig.

During these years of teaching Dr. Sigerist became famous as the author of books on medical history: among his most famous is *Man and Medicine* (1932), which was translated into six languages. During these years he traveled in almost all of Europe's countries, studying their medical systems, their histories, their social systems.

In 1931 Dr. Sigerist was invited to become head of the History of Medicine Institute at Johns Hopkins University, but before he accepted he explored all the great medical centers of the United States and visited the institutions of small towns. Up and down the country he roamed, investigating history, economics and folkways as well as medical practice. He found the United States "a great world, a gigantic historical process, strange and alluring," and felt that the center of gravity of medicine was shifting from Germany to this country. So he accepted the Johns Hopkins position.

With his wife, Emmy M. Escher of Zurich, whom he had married in 1916, and his two daughters he settled in Baltimore, where for more than eight years hundreds of enthusiastic students have been flocking to his lectures. In 1939 he gave the first course in practical socialized medicine ever held in the United States. This course and his others are always lively, for Dr. Sigerist "doesn't mind expounding his dynamic conception of medical history in hand-to-hand argument." Once a student argued a point he raised and when asked the authority for his contention, replied: "You." "When?" asked Dr. Sigerist. "Three years ago," replied the student. "Ah," said Sigerist, "three years is a long time. I've learned a great deal since then."

When not giving classes, stockily built Dr. Sigerist spends most of his time at the Institute, surrounded by books and filing a three-volume series on the history of Latin medical literature in the early Middle Ages; in another are notes for a definitive four-volume history of medicine and a two-volume sociology of medicine—notes that he has been compiling for seventeen years. His most recent books published in the United States are *American*

Althausen

HENRY ERNEST SIGERIST

Medicine (1934) and *Socialized Medicine in the Soviet Union* (1937). And month after month, year after year, innumerable reports, bulletins and articles come forth under his authorship or editorship. In late 1940 he is writing a series of articles on Group Health Plans in the United States, their difficulties and successes.

SIKORSKI, WLADYSLAW (sĭ-kōr'skē wvā-dĭs'swāf) May 20, 1881- Commander Wladyslaw Sikorski has been in England. Premier of the Polish government

Since the downfall of France in 1940, General Wladyslaw Sikorski has been in England. A representative of the Polish government is at Vichy, France. A little less than 200 miles from Paris, at Angers, the sedate and historic capital of the old duchy of Anjou, the expatriate "Capital of Poland" was established in late 1939. Resourceful, confident and handsome General Sikorski, a past master in military strategy, was its Premier.

Wladyslaw Sikorski was born in Tuszów, near Sandomierz, Central Poland on May 20, 1881. He was graduated from the Lwów High School in 1902 and was conscripted into the Austrian Army in 1905. In the year following he was placed on the reserve list with the rank of lieutenant and afterward returned to the Polytechnic Institute of Lwów. At the University he was president of a benevolent organization which was, actually, the very center of

SIKORSKI, WLADYSLAW—*Continued*

Polish patriotic activities, and he became a ranking organizer of military units. Six years after his graduation (1908) he was called to the Austrian legions, but Polish political influence had him transferred to the Polish legions, with the rank of lieutenant colonel. He was arrested by the Austrians following the Brest-Litovsk Treaty. His rise in military power was all the while fast and sure, and he was shortly advanced to a generalship. Moreover his prestige was greatly strengthened in the Battle of Warsaw when he strategically forced the Bolsheviks into retreat.

After the assassination of President Narutowicz late in 1922 Sikorski, now Chief of the General Staff, was called upon to form a government. He accepted, took over the Ministry of the Interior for himself and proclaimed a state of siege (martial law) in Warsaw. He and his cabinet resigned not long afterward but were asked to withdraw their resignations. Despite an apparent vote of confidence the government's position was basically unstable. In March 1923 nicely veiled but nevertheless bitter resolutions were passed, and within two months the Sikorski government was overthrown. It resigned immediately. In the new (Grabski) régime Sikorski in 1924 was made Minister of War.

It has been intimated that some of the tempting offers which Sikorski made to Pilsudski, then in retirement, were not the military plums they appeared to be. This would depend, it would seem, on how deep the rift between these two figures had become at this time. In any event it was in the face of considerable opposition that Sikorski clung to his long-held conviction that although it would be a great mistake to base Europe's peace on bayonets alone Poland must not allow herself to become defenseless. His successor in the War Office seemed to undo much of what he himself had done.

Sikorski retired from active duty in 1926 and devoted a good deal of time to writing, one piece of which was an account of the Polish-Russian campaign of 1920. His *Future War* was translated into French, enjoyed a wide circulation and won him election to the French Academy. Marshal Foch, who wrote the preface to the French edition, which was called *La Guerre Moderne*, considered Sikorski one of the most capable of military strategists.

After the establishment of the Polish Government at Angers, Poland's attitude toward Czechoslovakia was clarified. The Czechs had bitterly remarked that Poland, in its seizure of the Teschen area in 1939, had done to them what the Soviet Union later did to Poland—took advantage of a Nazi smash to fill their own pockets. But Sikorski conferred with Edvard Beneš, former President of Czechoslovakia, and reported: "Past errors between our two countries have been repaired and in the future we shall cooperate."

SIKORSKY, IGOR IVAN (sĭ-kôr'skē).
 May 25, 1889- Airplane designer

Address: b. Vought-Sikorsky Aircraft, Stratford, Connecticut; h. Newtown, Connecticut

Igor Sikorsky, famous aeronautical engineer, treated newspaper and newsreel men to a strange spectacle in a field adjoining the Vought-Sikorsky airplane plant near Bridgeport, Connecticut on May 20, 1940. He took over the controls of his latest flying machine—a new type of helicopter—and rose vertically into the air like some object in a vaudeville magician's act. First he rose five feet and descended, then thirty feet, and finally he rose sixty feet in his strange machine, flew forward fifty yards or more and came down on the spot from which he had taken off.

The idea of helicopters is not new and Sikorsky himself tried his hand at constructing them back in 1909 when he was only 20. The real importance of this demonstration was that if Sikorsky was putting his creative genius into studying helicopters now, the chances of their becoming commercially practical before long are good. By September 1940, as a matter of fact, he was making the personnel of his airplane manufacturing division nervous by landing the eccentric little craft among the cars in the plant's parking lot and doing other humming-bird tricks with it. They were immensely relieved when he shipped it off to an exposition.

Sikorsky's demonstration of his helicopter was reminiscent of his early days in aviation. He is one of the few active airplane designers who began their careers during aviation's infancy. The story of his career is the story of aviation. Sikorsky was the first man to build a successful multi-motored plane; he designed the first of the Pan-American Airways' transoceanic clippers; he designed the United States' large patrol bomber, the *Flying Dreadnought*, as the *XPBS-A* was nicknamed.

Igor Sikorsky was born in Kiev, Russia, youngest of a family of five children. His father, Dr. Ivan S. Sikorsky, professor of psychology in the St. Vladimir University at Kiev, imbued him with an early interest in science. One of his mother's heroes was Leonardo da Vinci and her stories of his flying machine filled young Igor with dreams of huge flying transports. At 12 he made a rubber-powered helicopter. It did not fly, but the young mechanic was not discouraged. He continued to tinker, disturbing the neighborhood with homemade bombs and other less explosive gadgets.

In 1903 he entered the Naval College in St. Petersburg but after being graduated in 1906 he lost interest. Later he decided that his real career lay in the field of engineering, and entered the Polytechnic Institute in Kiev in the fall of 1907. He continued tinkering in his workshop at home and, in fact, gave his work there more attention than his theoretical studies at the Institute. It was at this time that the flight of Count Zeppelin in one of the early dirigibles and the first successful flight of the Wright brothers in America set Sikorsky dreaming about flying machines again.

He started to study all available literature on flying and went to Paris, cradle of the aviation industry in Europe, to observe the early efforts of plane builders there. He came back home determined to build his own flying machine. Contrary to the advice he received in Paris, he decided to build a helicopter rather than an airplane and started constructing the machine, in 1909, with money borrowed from his sister. He spent several months assembling it, but it never budged from the ground. He built another helicopter, then an airplane, but neither left the ground under its own power. Neighbors of the Sikorskys shook their heads sadly at these goings-on of Igor. That Sikorsky boy was just a crackpot, they decided.

Sikorsky spent two fruitless years designing planes that did not fly. He used up all his family's money and fell behind in his studies at the Polytechnic Institute with nothing to show for his pains but a few brief hops in the S-2. This made thirteen embryonic flights totaling seven minutes before it crashed and nearly ruined its designer, who, like all fliers of the period, had no practical flying experience and had to feel his way at the controls. Nevertheless, this small success impressed the elder Sikorsky, who decided to see his son through. Igor quit school, devoted himself to building two new planes and by the summer of 1911 was able to stay aloft half an hour at a thousand-foot altitude in his latest plane, the S-5. He got a pilot's license and took part in the army maneuvers in his plane.

The S-5 set a world's record, flying 70 miles an hour and carrying three men. It made a cross-country flight of 30 miles, which was phenomenal then. One time during a demonstration flight its motor stopped and Sikorsky had to make a forced landing. He found that a mosquito had flown into the gasoline and had been drawn into the carburetor. The accident gave him the idea for a multi-motored plane which would continue to fly even after one motor failed.

Before he built his first multi-motored plane, Sikorsky won the highest award in the Moscow Aircraft Exhibition in 1912 with another plane, the S-6A. As a result he was given a contract by the Russo-Baltic Railroad Car Works as chief designer and engineer of its new airplane division. He also was given the privilege of building one

IGOR SIKORSKY

experimental plane a year at the company's expense.

Sikorsky's *Grand*, his first four-motored, dual control, 9,000-pound, four-passenger plane, made aviation history—it established a world's record for staying aloft with eight persons for an hour and fifty-four minutes. Czar Nicholas II inspected it and sent Sikorsky a watch with the Imperial eagle, which the designer still wears on important occasions. During the First World War he became rich and his bomber versions of his four-motored plane made a sensational record. This ended with the Russian Revolution. Sikorsky fled the country, leaving \$500,000 in government bonds and real estate. After a brief period in London and Paris he arrived in the United States in March 1919 with only \$600 in his pocket and unable to speak a word of English.

For a time the famous designer had to go on a diet of bread and beans as his capital dwindled and he could find no place in aviation after the First World War slump in that industry. He lectured to Russian immigrant groups on aviation, mathematics and astronomy, earning from \$3 to \$10 a lecture. It was 1923 before he finally got a start in aviation in the United States with the aid of a few hundred dollars raised by Russian friends who gave their savings to the Sikorsky Aero Engineering Corporation.

Sikorsky and his workers used second-hand parts, made their own tools, worked for weeks without money to build the first American-made Sikorsky plane. Despite all the sacrifice, the plane was damaged in its first test flight. Sikorsky refused to give up and demanded \$2,500 more from his stockholders. He got it and the S-29, one of the first twin-engined planes made in America, a 14-passenger cabin job with a speed of 115 miles an hour, was the result. With its

SIKORSKY, IGOR—*Continued*

success, Sikorsky found it easy to get new backing and the Sikorsky Manufacturing Corporation was organized in 1925.

The designer next turned his attention to amphibians, and the popularity of the S-38, an amphibian 10-seater, brought the company Wall Street backing. In 1928 the company was reorganized as the Sikorsky Aviation Corporation. In 1929, a month before the stock market crash, the company was sold to the United Aircraft and Transport and at present is known as the United Aircraft Corporation's Vought-Sikorsky Aircraft Division. Sikorsky is not an officer of the company; he is its engineering manager at a salary of about \$20,000 a year. Bonuses and dividends bring his income to about \$25,000 a year. It is at the Vought-Sikorsky plant near Bridgeport that Sikorsky's big flying boats have been built.

A short, bald, mild-mannered man with a broad Slavic nose and gray-green eyes, Sikorsky has an old-world courtesy and politeness which he carries into the factory with him. He addresses a workman with "If I may make a suggestion," instead of giving orders. His best work he does at night with a pot full of coffee by his side.

Sikorsky has been married twice. His first wife, whom he married in his early 20's in Russia, died. He met his present wife, the former Elizabeth Semion, a Russian like himself, when he gave a lecture at the Russian People's Home, a mutual-aid society where she was a teacher. He married her on January 27, 1924. By his first marriage he has a daughter whose husband works for the Vought-Sikorsky Company, and he has four sons by his second marriage. Sikorsky was naturalized in 1928 and sharply resents being taken for a Soviet sympathizer.

Sikorsky lives in a white colonial house near Newtown, Connecticut, where he has a large study with an ample library of scientific, philosophical and religious books and a large selection of fine phonograph records. He has a garden there, too, which he likes to plough with a tractor. Recently he built a second, smaller house near Litchfield, Connecticut which he uses as a hideaway when he wants to read and work in complete solitude.

 Who's Who in America

SILLANPAA, FRANS EEMIL (sil''on-pä' fränts ē'mil) Sept 16, 1888- Author
 Address: c/o Alfred A. Knopf, 510 Madison Ave, New York City

After the outbreak of the Russo-Finnish conflict late in 1939 many Americans turned with increasing interest to an understanding of Finnish history and culture. Little of the work of modern Finnish writers has become known in this country. But Frans Eemil Sillanpää, Finnish novelist, was awarded the 1939 Nobel Prize for Literature by the Swedish Academy. Those novels by him which have been translated into English should serve to acquaint American readers with his work.

He was born in southwestern Finland, in the rural parish of Hämeenkyrö. His parents were small farmers and had pioneered the land themselves; they had moved into the forest country, built their own dwelling and cleared off enough trees to give them a small farmstead. The youngest of their three children, and the only one to survive, was Frans Eemil, the author. Despite the hardships of his boyhood, he managed to get a good education—not only in elementary and secondary school, but also at the University of Helsinki, through which he worked his way. He matriculated there in 1908 and studied the natural sciences, but it soon became apparent that his real interest lay in writing.

His first productions were short stories and articles which began to appear in magazines and newspapers about 1913. These established for him both a popular audience and a critical reputation; and he was soon approached by a book publisher who asked him if he would consider writing a novel. An agreement was accordingly made and the young author set to work. According to his own story, he spent the next two years alternately writing the book and explaining to his publisher why it wasn't completed. Finally the publisher, growing desperate, bodily kidnapped the author and settled him in a hotel room in Helsinki, where he finished the book under forced draft. Called *Elämä ja Aurinko* (*Life and the Sun*), it was published in 1916. It had a considerable success and definitely established its author as an important writer.

Since that time his output has been steady and his reputation has spread all over Europe, especially in the Scandinavian countries. He has been regarded for years as a likely Nobel Prize winner. His published works now include at least fifteen volumes; nine of these are collections of stories and other short pieces, while six are full-length novels. Two of the novels have been translated into English—*Nuorena Nukkunut* (*The Maid Silja*), published in 1933, and *Hurskas Kurjuus* (*Meek Heritage*), 1938. This latter, brought out in Finland in 1919, first brought him an audience outside his own country. It is the story of a typical uneducated Finnish peasant of the older generation, from his birth in the "hungry sixties" to his death

FRANS EEMIL SILLANPÄÄ

before a White firing squad in the War of 1918. The War was still in progress when Sillanpää commenced this work; and while he took no sides in the struggle he had enough actual contact with the rival forces to let him know what they represented, and to write with truth and force of the gap, still unbridged today, between Russian and Finnish viewpoints.

Meek Heritage was published in Finland less than a year after the fighting was over, and its impact was tremendous—so much so that the author was granted a life-time government pension in 1920 to enable him to devote his time entirely to creative writing. Other honors than this have come his way; he has had government prizes for most of his novels and in 1936 he received an honorary Doctorate in Philosophy from the three-century-old State University of Finland.

The simple peasant origins of the new Nobel Prize winner continue to set the pattern for his living. He was married in 1916, the year of his first book, to a crofter's daughter from a nearby farm, and with his bride went to live in a little cottage in their home district. They stayed there for several years, and there the first of their seven children was born. Later they moved into Helsinki where they lived for a while in a large apartment. But they maintained the old family farm as a country home and there the author now lives most of the time.

Sillanpää, a great bearish person weighing at least 250 pounds, is a devoted parent, raising his children in accordance with his own ideas. These include teaching them to handle spiders, beetles and other insects without fear.

His work even in its most grimly realistic sections is marked by a fine feeling for land-

scape and the forces of nature, by a certain nationalistic feeling and by a remarkable quality of mystery and poetry.

Sillanpää is now completing a new novel on which he has been at work for several years.

SIMON, JOHN ALLSEBROOK, 1ST VISCOUNT (si'mon) Feb 28, 1873- Lord Chancellor of England; former Chancellor of the Exchequer

Address: 11 Downing St, S. W. 1, London England

In May 1940 Sir John Simon was created Lord Chancellor of England, the highest judicial authority in the British State. Twenty-five years ago he refused this office, for his ambitions then were political rather than judicial. Now, when his efforts as Chancellor of the Exchequer have won little sympathy, when any aspirations to the Premiership seem doomed, he has quit the hurly-burly of competitive politics for the Speakership of the House of Lords.

His proposed tax schedule and budget, offered in April 1940, were the heaviest in British history. Taxes were put on cigarettes, whiskey, matches; income taxes were increased; a "purchase tax," the first sales tax in England, was proposed—to bring in an annual revenue of 1,234,000,000 pounds. And yet the main criticism was that the budget was too small—"a cowardly budget," Mr. Keynes called it. The thin, gray-haired Chancellor of the Exchequer said sadly in answer to the stormy debate: "I have proposed unprecedented taxes and yet the main complaint has been that they should be greater."

Unpopular, too, in his schedule was the absence of luxury taxes on cosmetics, for instance, or on an obvious source of revenue like advertising. But Sir John has never been popular in Great Britain, except during the period in the last War when he vigorously opposed conscription. His splendid legal brain has won him respect, but his temperament is remote, frosty and legalistic. By the orthodox Liberals he is regarded as a renegade to Toryism—he strongly supported Chamberlain, even after the defeat in Norway. By the Labor Party he is esteemed a deadly enemy because of his speeches after the General Strike of 1926. In the minds of the general public he is associated with a whole series of crushing taxes which recent economic difficulties and the War have forced him to impose.

John Allsebrook Simon, on May 13, 1940 raised to the peerage as Viscount Simon of Stackpole Elidor, is not a Jew, though he has often been thought one because of his name and, some think, because of his facial characteristics. He was born of a Welsh father and an English mother. His father, the Reverend Edwin Simon, the son of a stone-

mason, was a Congregational minister who married Fanny Allsebrook. John Simon went to kindergarten in Manchester and at 10 to the Bristol Grammar School. At 14 he won a scholarship to Fettes, the Edinburgh public school. From there he won another scholarship to Wadham College, Oxford. He played Rugby for his college, became known and feared for his cynical and pungent speeches at the Union (debating society), won high academic honors and in 1898 was called to the Bar.

Simon made rapid progress as a junior counsel—so rapid that in 1899 he was able to marry Ethel Mary Venables, whom he had met at Oxford. She died in 1902 in childbirth, leaving him with two daughters and a son just born. In the following year his management of an intricate railroad case put him in a fair way to fortune. Later he was one of the counsel engaged in the arbitration between the United States and Russia over the Alaska question. He became known as a masterly exponent of difficult Chancery cases, but practiced also at the King's Bench, the Court of Appeal, the House of Lords, the Privy Council and even occasionally the Divorce Court. He was never a spectacular criminal lawyer and it was not until he attained political eminence that his name became known to the public at large, though in a few years he built up a huge practice and began to earn colossal fees. In 1908 he "took silk" as a King's Counsel, at the very early age of 35.

Meanwhile Simon had begun his political career by going into Parliament for the North-London constituency of Walthamstow as a Liberal in 1906. He was returned again in 1910, though with a reduced majority, and continued to sit for this division until 1918. In 1910 Mr. Asquith (later Lord Oxford) chose him, in spite of his comparative youth, for the office of Solicitor General. In 1913 he was promoted to Attorney General, with a seat in the Cabinet, and from 1915 to 1916 served as Home Secretary. Unlike many of his colleagues he supported Great Britain's entry into the War in 1914; but in the following year conducted a vigorous campaign against universal military service. Simon went out to the Air Staff in France, where he served as a major and was mentioned in dispatches.

In the 1918 election Simon lost his parliamentary seat, but came back in 1922 as member for Spen Valley, which he has represented ever since. He was associated with Asquith's so-called "Wee Free" Liberals, not the Lloyd George group, so there was no office for him for many years. Nevertheless he presided over sundry judicial inquiries and commissions, the most famous of which was the India Reform Commission, appointed to consider the practical application of the Montagu-Chelmsford reforms.

In 1931 the second Labor administration was dislodged and its place taken by the

so-called "National" Government, consisting mainly of a solid block of Tories, with a sprinkling of Labor and Liberal members. Simon and his group supported this coalition, and have since been known to the Independent Liberals (led by Sir Archibald Sinclair [see sketch this issue]) as the "Simonites." The propaganda value of the name is obvious.

Simon served as Secretary for Foreign Affairs from 1931 to 1935. By this time he seems to have lost all traces of Liberalism and is hardly to be distinguished from the highest Tory. His record as Foreign Secretary is very far from edifying. In some quarters it was considered that he took the wrong line over Manchukuo and Spain, helped to weaken the authority of the League of Nations and annoyed the United States. He was one of the most outspoken members of the "appeasement" clique, and is remembered for his happy statement that German rearmament would make for peace. Later, at the time of Munich, "it was his steadfast intention to out-Chamberlain Chamberlain." From 1935 until 1937 he was Home Secretary, and since then, until early 1940, Chancellor of the Exchequer.

The tale of his social and academic distinctions is a long one. Knighted in 1910, sworn to the Privy Council in 1912, he has since advanced two more grades of knighthood in the Victorian order and has been invested with the Grand Cross of the Order of the Star of India. He holds the honorary degree of D. C. L. from Oxford (for which University he was for some years standing counsel); he is an honorary Fellow of All Souls, and has been made LL. D. by Edinburgh, Cambridge, St. Andrews, Manchester, Leeds, McGill, Toronto and Columbia.

Simon has excited the admiration that brilliant gifts call forth but has won little affection. John Gunther calls him "the greatest lawyer in modern England and the least successful foreign minister" and reports an acid saying of Mr. Lloyd George: "John Simon has sat on the fence so long that the iron has entered into his soul." He is calm, imperturbable, but lacking in warm human feelings.

In 1917 Simon was married a second time, to an Irish lady from Wexford, Kathleen Manning Harvey, who was created a Dame of the British Empire in 1933. She personally concocts a throat mixture of lemon juice, brown sugar and honey with which Simon refreshes himself when he has a long speech to make. They live at Walton Heath close to a famous golf course where he frequently plays. Anything he wins—and he wins often—is sent to the League for the Abolition of Slavery.

SINCLAIR, SIR ARCHIBALD, 4TH BART Oct 22, 1890- British Secretary of State for Air

Address: b. Thorney Court, Kensington, London W. 8, England; h. Thurso Court, Caithness, England

For 20 years Liberalism (with a capital) has been under a cloud in Great Britain, though there are many liberal minds in all three parties—Conservative, Liberal and Labor. In the great heyday of official Liberalism, in 1910, young Archibald Sinclair was just passing from his military college into the Life Guards; in 1922, the year in which what remained of the party was split in two, he began his political career; and in 1935, the year which confirmed the National Government in its huge majority, he became head of that section of the party which remained independent, outside the coalition.

Sir Archibald Sinclair was born 20 years too late to have any real hopes of ever being Prime Minister of England and despite his prestige and distinction had been, until Winston Churchill's (see sketch this issue) government came into power, only the leader of a small band of opposition Liberals in the House of Commons. Today, as Secretary of State for Air, his ability in economic and military affairs is finally matched by opportunity, for while the task of producing airplanes falls to Lord Beaverbrook (see sketch this issue), it is Sinclair who must see that they are put to the best possible use. Since air and naval power will probably decide the issue of the War, Sinclair, with Sir Cyril Newall, Chief of the Air Staff (see sketch this issue), controls a department vital to the very survival of his country.

Acme

SIR ARCHIBALD SINCLAIR

Archibald Henry Macdonald Sinclair, fourth baronet, is one of the greatest chieftains of the Scottish Northern Kingdom, but he is also half American. His father, Clarence Granville Sinclair, the third baronet, married Miss Mabel Sands, "a famous New York beauty." Born heir to a tremendously rich inheritance—he is supposed to have inherited more than \$1,000,000 on his twenty-first birthday from his American relations, who include the Vanderbilts and the Rutherfords—he was educated at Eton and at the Royal Military College, Sandhurst. From Sandhurst, in 1910, he passed as a subaltern into the Second Life Guards.

For 12 years Sinclair pursued the career of an army officer, serving right through the European War. In 1916 he was second in command to Winston Churchill in the Sixth Royal Scots Fusiliers, and by 1918 he had risen to the rank of major. In that year he married Marigold Forbes, and the year after became Lord Lieutenant (head of the county magistracy) of Caithness.

Three years later, in 1922, Sinclair was elected to Parliament for the division of Caithness and Sutherland, one of the few safe Liberal seats. That same year he was made Companion of the Order of St. Michael and St. George. He devoted himself to economic studies, took his Parliamentary work very seriously and took up flying as a hobby.

Although he showed himself a radical during his early years in Parliament, Sir Archibald was no friend of the Labor Party and especially resented Labor's attitude when it took office in 1924—to him the Labor Party seemed unappreciative and unaccommodating in light of the Liberals' support of them. He stayed in Parliament, always returned to the same seat, and in 1930 and 1931 was chief Liberal Whip (the Whips look after party discipline and summon members to divisions). When, in 1931, the National Government was formed, he adhered to it and was given the post of Secretary of State for Scotland. When the Ottawa Trade Agreements were signed in 1932 he resigned, however, for he had always been a free trader.

During the troubled period of the Abyssinian War Sinclair tried to make the government take a stronger line toward the totalitarian countries. He greatly condemned England's policy of paying lip service to the League of Nations while allowing its authority to be undermined. On the Abyssinian question, on the League of Nations and on the dangers of the rising Nazi power he made rousing and masterly speeches.

In 1935 Sinclair became head of the Independent Liberals in succession to Sir Herbert Samuel. At that time the Liberal Party was split into two parts, the "Simonites," followers of Sir John Simon (see sketch this issue) and coadjutors of the Conservatives, and the "Samuelites," a small independent fragment. For many

years before then and since Sinclair concentrated his forces against Sir John Simon, whom he called "the evil genius of British politics." Since he became head of the "Samuelites" Sir Archibald's attitude toward Labor has become somewhat more sympathetic, though there has always been a broad gulf between his Liberal views and those of a party dedicated to socialism in one form or another.

It was Sinclair who was one of the first to raise his voice in protest against England's conduct during Hitler's invasion of Norway. "Furiously and attractively eloquent," he demanded "a grand inquest" on the whole matter. "I hope," said he thunderously to an Edinburgh audience, "that it is not too late for craven and irresolute counsels to be suppressed. . . I am amazed at the false prophets telling us that Hitler missed the bus, that we have turned the corner and that we are now ten times more confident than six months ago. That reminds me of the prophesy that Munich meant 'peace in our time.'"

At 50 Sir Archibald Sinclair shares with Mr. Anthony Eden (see sketch this issue) the distinction of being the best-looking man in Parliament and one of its most appealing. According to A. J. Cummings, a Liberal journalist: "He abounds in mental and physical energy. His judgment has matured. He knows his own mind. He has made a close study of the political and military problems of the moment. His almost joyous gaiety conceals a keen and resolute spirit and yet hints at that touch of boldness which seems at present to so many people the one thing needed in British statesmanship."

Sinclair has a big mock-Gothic castle at Thurso, "one of the most famed and imposing in the realm." During vacations he shoots, fishes or saws wood with his boys there. He has two sons, Robin and Angus, both at Eton, and two daughters, Elizabeth and Catherine. He was made LL. D. of Edinburgh in 1932 and is a Chevalier of the Légion d'Honneur.

SLOAN, ALFRED PRITCHARD JR.
May 23, 1875- Chairman of the board of General Motors Corporation

Address: b. 1775 Broadway, New York City;
h. Great Neck, New York

The man responsible for the operation of the United States' second biggest manufacturing enterprise (Big Steel is the first) is Alfred P. Sloan Jr., chairman of the board of General Motors Corporation.

Born in New Haven, Connecticut on May 23, 1875, son of the late Alfred Pritchard and Katherine (Mead) Sloan, Alfred grew up in Brooklyn, New York, where his family moved when he was five. Among other things, his father was a partner in a tea and coffee importing business, and a contributor to Wesleyan charities; one grandfather was a schoolteacher, another a Methodist minister. But his own bent was mechanical and scientific. After attending Brooklyn public schools he entered the Polytechnic Institute, acquired a reputation as a sort of minor prodigy, passed examinations for the Massachusetts Institute of Technology with great ease but wasn't allowed to enter because of his youth. In order to make up for the delay young Alfred finished its four-year course in three years when he did get inside, and took his B. S. in electrical engineering in 1895, at the age of twenty. He was the youngest in his class.

After graduation he found a job as draftsman in the Hyatt Roller Bearing Company of Harrison, New Jersey, in which his father had a considerable investment. At Cambridge he had met Irene Jackson of Boston, Massachusetts and he married her three years later.

He was only 26 when he became Hyatt's president and general manager, and he held that position for 15 years. At first billiard balls were the company's chief manufactured product, but it wasn't long before young Sloan saw the possibilities in manufacturing steel roller bearings for the rapidly expanding auto industry. With this product perfected, he devoted his energy to selling it, and often went out on the road himself. He learned to know personally all the great names of the automobile industry, learned the business of building cars at firsthand, sold Ford his first order of Hyatt bearings, and retained him as a friend and as his best customer. During Sloan's first month at Hyatt the gross business had been under \$2,000; in time the net profits reached as much as \$4,000,000 a year. Still Sloan was worried. His two gigantic customers were Ford and General Motors—suppose one or the other or both decided to make their own bearings? "I had put my whole life's energy into Hyatt," he said later. "Every-

ALFRED P. SLOAN JR

thing I had earned was there in bricks, machinery and materials." With his father, Sloan owned about 75 per cent of Hyatt by this time, and, when in 1916 Durant of General Motors started linking accessory companies into United Motors, Sloan brought Hyatt into the accessory combine for \$13,500,000 and became its president. By the time he was 41 he was worth nearly \$5,000,000.

In 1918 Durant joined United Motors with General Motors, and Sloan became a vice-president and member of its executive committee. In November 1920, in the midst of the post-War depression, 2,500,000 shares of General Motors passed from the ownership of President Durant to the Du Ponts. Pierre du Pont (see sketch this issue) therefore took over as president of the company, but with the understanding that most of the operating burden would be on the man who was by this time the corporation's "heavy-duty trouble shooter," the man who had shown "he could straighten out almost any kind of a snarl." It was in December 1930 that Alfred Sloan was put in charge of operations as "operating vice-president, also sitting on the finance committee." And when on May 10, 1923 Du Pont resigned from the presidency of General Motors to become chairman of the board, Sloan succeeded him as president, and a few days later found himself a director of the E. I. Du Pont de Nemours Company and on the board of the Chase National Bank. He later became a member of the board of directors of the Pullman Company as well.

During Sloan's first year as president of General Motors he doubled the company's manufacturing capacity and sold more cars than ever before in its history. Under his administration a decentralized plan of management was set up in which the initiative

of each of General Motors' executives was exploited to the utmost, the immense corporation being tied together by a committee system and by Sloan's famous "standard procedures," which provided a "free and orderly circulation of information." Sloan said that in his opinion "the organization of which I am now president would be impossible without the principle of individual initiative."

The system proved itself so sound from the point of view of the stockholder that even during the depression General Motors took no losses, omitted no dividends, even after a drop in sales of more than 70 per cent. In 1936 there was a return of 24 per cent on the book value of the capital stock and surplus, as compared with an average return of 18 per cent, and in the same year Sloan was listed as the highest-paid executive in the United States.

It was also in December of that year that the sit-down strikes in General Motors plants began, after Sloan had refused to confer with representatives of the United Automobile Workers about employee grievances. Not until months later did the President consent to negotiations with Lewis and the auto unions, Governor Murphy (see sketch this issue) acting as go-between.

In May 1937 Sloan became chairman of the board of directors. He owned 750,000 shares of GM—at least in 1938.

The first half of war-year 1940 found General Motors handling a quarter more business than during the first half of 1939, but in September 1940 Sloan warned that, although business in general was facing an expanding market due to munitions orders, the years following the War are sure to be lean years.

Mr. Sloan is a staunch Republican and has contributed consistently and substantially to Republican Presidential campaign funds. He believes that "attempts to improve the economic status of our people, especially those who have so little, through wage-hour laws, shorter hours and all the other panaceas that have been imposed on the economy in recent years, are nothing but wishful thinking." Increased production is his own recipe for a higher standard of living for the American people, and he sees increased production as made possible only by "co-operation with mutual respect and confidence" between capital and labor. And "we just can't keep up with the politicians' ability to spend our money," he complains. It was Sloan who in November 1940 suggested that in the interests of national defense the six-day week should supplant the five-day week in American industry, and the overtime premium be eliminated "as soon as the slack in employment is taken up." He also expressed the fear that "unjustified" increases in wage rates would result in inflation.

General Motors' executives are notoriously well paid, for Mr. Sloan believes in recognizing "outstanding ability." His corporation he sees as "a pyramid of opportu-

ity from the bottom toward the top, with thousands of chances for advancement. Only capacity limited any worker's chances to grow." He also sees it as performing a tremendous public service. *Fortune* agrees with him in so far as General Motors has contributed to technological advance, to making prices of cars lower for the consumer, to rewarding its executives and stockholders, but thinks the labor-minded might think some of the money should go toward stabilizing employment. Although the average wages paid by General Motors are comparatively high, there is little or no security for labor.

On the board of the Massachusetts Institute of Technology, Mr. Sloan has made substantial contributions to education. In June 1940 he made a gift to M. I. T. for the expansion of its airplane engine laboratory. He is also the founder of the Sloan Foundation, of which his brother Harold is director, for "Studies Bearing Directly Upon Human Relations and Devoted to the Increase and Diffusion of Economic Knowledge." The income from one of the funds goes to the University of Chicago to help underwrite a weekly national radio round-table on current affairs, income from another toward underwriting consumer education at Stephens College, Columbia, Missouri.

Sloan is almost six feet tall, "gaunt, lanky, with long, bony hands," and wears collars "of an arresting height and as stiff as a Buick mudguard." His long forehead is topped by a "tuft of gray-white forelock that valiantly defies baldness." He has "intense blue eyes." He is an impeccable dresser, though his valet buys most of his clothes for him, but likes to keep warm. Sometimes known as "silent Sloan" because of the deafness that makes him quiet in a large gathering, he is actually far from that. "His physical activity is varied but continual: when in action he squirms, he taps his fingers, he gestures, he puts his head in his hands, he draws one of his feet into his chair and sits on it; sometimes he speaks softly, sometimes he shouts, in a voice that has more than a trace of a Brooklyn accent."

Few men have been so devoted to business. Sloan has never found time to learn golf; he rarely drives his own car; when on a vacation abroad he has usually found GM's foreign branches more interesting than anything else; he doesn't go in for "culture" in the usual sense; he has no children to take up his time; he retires early; he seldom even gets aboard his yacht, the 235-foot \$1,250,000 *Rene* (which, by the way, was incorporated under the name of the Rene Corporation, and from 1931 to 1936 showed operating "losses" of \$278,474). The list of clubs of which he is a member—from the Detroit Club to Palm Beach's Bath and Tennis Club—doesn't make him a real clubman. His fraternity is Delta Upsilon.

In his work Mr. Sloan is said to have "an almost inhuman detachment from personalities." "We never give an order in GM," he says. "We 'sell' the idea to those who must carry it out." One typical story tells of a young executive making a suggestion with the comment: "I suppose you will bawl me out for this." "Why," was Mr. Sloan's answer, "did you ever hear of me bawling anybody out?"

SLYE, MAUD Feb 8, 1879- Pathologist
 Address: h. 5822 Drexel Ave, Chicago, Illinois

Sometimes called the "American Curie," Maud Slye is a University of Chicago pathologist who since 1908 has been tending, breeding and writing the biographies of thousands of mice, in an effort to learn more about cancer and its causes. Cancer kills one out of ten men who reach the age of thirty-five, one out of five women; yet Dr. Slye has good reason for asserting that by selective-breeding care cancer could be stamped out in a generation. If more progress in cancer research has been made in the past 30 years than in the preceding 30 centuries, it is in large part due to her refusal to accept the old theory that it is not in any way inheritable, and to her persistence in attempting to find out just how it can be bred out.

Maud Slye was born in Minneapolis, Minnesota, on February 8, 1879, the daughter of James Alvin and Florence Alden (Wheeler) Slye. Her parents were poor, and she came to the University of Chicago as an undergraduate with only \$40. For three years she put herself through school without help as one of the under-secretaries to President William Harper, carrying full academic work at the same time. A nervous breakdown resulted and she went to Woods Hole, Massachusetts to recuperate. She then finished her course at Brown University and acquired her B. A. there in 1899. Next she worked as a professor of psychology and pedagogy at Rhode Island State Normal School until 1905, but already

Helen B. Morrison

MAUD SLYE

her chief scientific interest was in the laws of heredity, and when in 1908 she was given a small grant to do postgraduate work at the University of Chicago she took it.

One of the first things Maud Slye did at Chicago was to spend \$6 for six Japanese dancing mice, whose peculiar waltzing motion is due to a nervous disarrangement. In a corner of the basement of the zoological laboratory she began breeding them with albino mice with the idea of learning something about the factors in the inheritance of nervous abnormalities. Working 18 hours a day and longer, without an assistant, often going hungry herself because her mice required so much food, Maud Slye soon got on the trail of something—though that something had very little to do with nervous abnormalities. She learned that several cattle at the Chicago stock yards were afflicted with cancer of the eye—and that all of these cattle came from the same ranch. She began acquiring other data about cancer that seemed to point to the conclusion that there was an inheritable factor among its causes. Then she went to her superior and asked if she couldn't use her mice to prove that there was. He said: "That was settled long ago—it is not inherited."

Just the same, Maud Slye went ahead. Every time a mouse died it was autopsied. It was 1910 before her first mouse developed breast cancer. After that cancerous mice were bred with other cancerous mice; healthy mice were given healthy mates.

In 1911 Otho S. A. Sprague died and left millions of dollars for medical research; the Sprague Memorial Institute was set up at the University. Maud Slye became a member of its staff as well as instructor in pathology, and for the first time was provided with a steady, adequate income.

More than that, she was given a two-story building for her laboratory, and the director of the Institute, the pathologist, H. Gideon Wells, began to collaborate with her in microscopic analyses. Her first paper on cancer was read before the American Society for Cancer Research on May 1913, and at that time the theory that cancer might be contagious, caused by a filterable virus, was given a deathblow when she proved that healthy mice could mingle with doomed ones without any ill effects—at least that was what had been going on in her laboratory.

In 1919 Miss Slye left the staff of the Institute, becoming director of the Cancer Laboratory at the University of Chicago. In 1922 she was promoted to an assistant professorship in pathology, and in 1926 to an associate professorship. That same year she announced her belief in the possibility of controlling and preventing human cancer, for mice come closest to man in the percentage that have cancer and in types and locations of such growths. If it was being controlled and prevented in her laboratory, as she claimed it was, why not?

But other people had been doing research in cancer, too, and her theory wasn't accepted so easily. Some of their experiments seemed to point to radically different conclusions from hers. For instance, Japanese scientists found that tar painted on a rabbit's ears produces cancer, and concluded that it could therefore be caused merely by an irritation. Still Maud Slye wasn't defeated. She countered with the theory that the *disposition* toward cancer must have already been present in those rabbits, that it was the *disposition* that was inherited—and demonstrated by producing one strain of mice which uniformly developed lip cancer when their teeth were not filed down, another strain that did not.

Cancer is generally held to be an abnormal method of cell growth, in which cells keep multiplying because some normal factor in the cell itself is missing. From working with her mice over a period of years Maud Slye finally concluded that cancer susceptibility was a recessive characteristic, determined by only one gene and following Mendelian laws in a very regular sort of way; that the stimuli which will actually produce cancer, however, are extremely diverse. In 1936 she amended her theory, saying that there seemed to be three types of genes—one determining the location of the cancer, one its type, and the third its degree of malignancy. According to her final theory a man susceptible to one type of cancer could marry a woman susceptible to another type and the children would probably escape both types, but if the man and his wife were susceptible to the same type of cancer it might very easily be disastrous for their offspring.

This does not mean that everyone accepts her conclusions. In 1936 Dr. Clarence Cook Little of Jackson Memorial Laboratory at

Bar Harbor, Maine, who has also been working with mice over a period of years, called her contentions "pure poppy-cock." He wanted Miss Slye to furnish a herd of male, non-susceptible mice which a "neutral, properly qualified laboratory" could work with in order to test the validity of her hypothesis. Miss Slye replied that she had offered to do this five years ago, and he had not responded to her offer; that the non-tumor strains with which she had done her preliminary work were no longer in existence.

More than 140,000 mice have been on Miss Slye's autopsy table. The Cancer Laboratory is a three-story building in whose basement will be found steam-sterilizing equipment; on the first floor, cages where the offspring of cancerous mice begin and end their lives; on the second floor, examination and autopsy rooms; on the third floor, quarters for healthy mice. On each cage door is the history of its occupant, date of birth, matings, etc., and a pedigree going back 100 generations (which is something like 3,000 years in man's life span). In this laboratory, says Miss Slye, "the mice are kings, and we workers of secondary importance." It is a mouse Utopia, for all diseases but cancer must be prevented, and the mice kept alive and well to the oldest possible age. The life span of the average mouse has been just about doubled here.

If something should happen to her laboratory and its occupants—an epidemic, an accident—it might wipe out the work of a lifetime. Miss Slye therefore moved across the street after one blizzard night when she feared for its safety and had to rush through the storm to reach it. When her mother was ill in California she rented a boxcar and took her mice with her to the coast. In fact, the first time she was brave enough to leave her laboratory in the care of an assistant was in 1936, when she took her first vacation in 26 years and went to Europe. There she addressed the International Congress for the Control of Cancer in Brussels and also visited Amsterdam, Berlin, Paris, London and other cities.

Miss Slye said in 1937: "I can go through this laboratory and predict for each of these 9,000 mice here whether any individual mouse will have a cancer and if so what type it will be, where it will appear and at what age. . . . If we had records for human beings comparable to those of my mice we could stamp out cancer in a generation." She believes "only romance stops us" from taking advantage of the facts which her experiments have put at our disposal. Permitting more human autopsies and keeping adequate medical records for every individual would be only a first step, but "so long as there's life in my body, I shall continue to fight for that first step in the long battle that lies ahead."

Forty-two brochures on the nature and inheritability of cancer have been published by Miss Slye. In 1914 she received the gold medal of the American Medical Association

for outstanding research; in 1915 the Ricketts Prize; in 1922 the gold medal of the American Radiological Society. She holds an honorary D. Sc. degree from Brown University and honorary memberships in the Seattle Academy of Surgery and the Southern California Medical Society, and is a member of the Association for Cancer Research, the Chicago Institute of Medicine, the American Medical Association and other scientific societies.

Maud Slye is strong-featured, dark-browed, and wears her white hair cropped short. Away from her mice, she has a multitude of interests: music, nature, gardening, painting, poetry. She has, in fact, published books of poetry, *Songs and Solaces* (1934) and *I in the Wind* (1936).

SMITH, KATE May 1, 1909- Radio singer; actress

Address: 1819 Broadway, New York City

"Undisputed first lady of radio" is Kathryn Elizabeth Smith (she uses only Kate), 235-pound singer, who, at the age of 30, has achieved a position never before occupied by any broadcasting entertainer.

During the past years she was selected for the annual listing of the Ten Outstanding Women of the Year; the Red Cross awarded her its Legion of Valor Medal for her \$4,000,000 campaign in their behalf; and, in addition, she was asked to sign at the White House in a "command perform-

KATE SMITH

ance" for King George VI and Queen Elizabeth of England.

Financially, Kate Smith is "sitting pretty" as the possessor of a unique three-year-non-cancelable radio contract guaranteeing her not less than \$7,000 a week. In her nine successful years as a radio entertainer she has "used her booming, unschooled voice, plus occasional bursts of hearty Americanism, to sell millions of dollars worth of cigars, automobiles, coffee, and, since 1937, General Foods' cake flour, baking powder and salt."

the singer's career according to her, really began when she was only four years old. At that early age she delighted in accompanying her parents to church in Washington, D. C., where she would stand, the hymnbook upside down before her, and sing religious songs with great enthusiasm. Her birthplace is Greenville, Virginia, where she was born May 1, 1909, the daughter of William and Charlotte Smith.

The biggest day of her life, Kate claims, was the one in 1917 on which she was allowed to sing for the Blue Devils, a band of a hundred veteran French soldiers who were sent to the United States by the Allies to participate in Liberty Loan rallies. Kathryn Elizabeth's popularity was a thrilling experience and the singer still remembers the moment when the captain stepped up on the platform, planted a Blue Devil cap on the side of her head and kissed her on both cheeks.

After this, Kate continued to sing at school and church concerts and at local amateur nights and benefits. She added the Charleston to her acts and won numerous contests. But her father, who was a wholesale distributor of magazines, did not want a vaudeville performer in his family and insisted that she go in training to become a

nurse. "The family arguments won out for a time," Kate says, "but after several months of probation work, standing on my feet some 10 or 12 hours a day, I decided that as a nurse I was a pretty good entertainer."

In 1926, the girl, still in her teens, was invited to go to New York for a musical comedy rôle in Eddie Dowling's *Honeymoon Lane*. The show opened in Atlantic City August 29 with Kate cast as Tiny Little. Newspapers were kind to "the youngster with no stage experience whatever, who literally stopped the show." On September 20 *Honeymoon Lane* opened at the Knickerbocker Theatre in New York City, where it ran two years.

Kate's second stage appearance in the road company of *Hit the Deck* was more pleasant than her first because it gave her a chance to "shake the rafters" with the syncopated spiritual, *Hallelujah*, which she thoroughly enjoyed. But, upon her return to New York, she found that she was remembered not as a singer but as a fat girl. "Being fat didn't worry me in the least," she says. "It was the problem of making people realize its unimportance which floored me temporarily."

An opportunity to solve this problem was not immediately forthcoming, for Kate was costarred with Bert Lahr in *Flying High*, the story of a fat girl! The humiliation of Lahr's "double-entendre" jests was almost unbearable, and Kate was on the verge of leaving the show business forever and becoming a nurse when Ted Collins stepped into the picture. "Whatever success I have had or may have," she says, "is due entirely to Ted Collins, the man who took me and my work seriously and made it his chief concern."

As "patient stooge" for all the comedians in *Flying High* Kate had been very unhappy. Previously when she had appeared in *Honeymoon Lane* and *Hit the Deck*, it was always the same story. No one was willing to judge her for her "infinitely sentimental contralto" alone. Critics claimed that "Kate Smith is immense in more ways than one", "she is sitting on top of the world—nothing else would bear that weight," she is "a theatrical find of huge proportion," etc.

Ted Collins' first move as Kate's self-appointed manager was to persuade the management of *Flying High* to ease up on the wisecracks about her weight. Secondly, he had records made of her voice at the Columbia Phonograph Company, where he was an executive. Before long he had arranged with William S. Paley (see sketch this issue), president of the Columbia Broadcasting System, to audition the blues singer, and she was given a 15-minute "spot" on the air. This was in February 1931; within seven months she had her first radio commercial contract, and by autumn of that same year her weekly salary had climbed to four figures.

Kate wanted to put on a friendly, neighborly program, so Ted originated the greeting, "Hello, everybody! This is Kate Smith." As a theme song, the entertainer chose *When the Moon Comes Over the Mountain*, and to express her appreciation to the radio audience, she asked to be allowed to end each program by saying, "Thanks for listenin'." These three parts of her show are now world-famous.

Kate Smith's career is handled by the Kated Corporation, one of the most remarkable organizations in show business. The corporation is capitalized at \$400,000 and was, in June 1940, producing the *Kate Smith* weekly hour program, six *Kate Smith* daily talks and several other radio acts, such as the *Aldrich Family* and *My Son and I*. It manages a professional basketball team, the *Kate Smith Celtics*, and handles the singer's philanthropies, of which there are many. In spite of all these activities, Kate Smith and Ted Collins have never had a written agreement. "You do the singing," said Ted, "and I'll fight the battles."

In 1932 Kate Smith was on the West Coast making *Hello, Everybody*, a scenario written especially for her by Fanny Hurst. "Hollywood frightened me," she recalls. "It lingers in my mind as a huge stage, enhanced by impossibly brilliant colors in sky and vegetation, filled with extraordinarily dressed actors and actresses mouthing lines and going through their paces for the benefit of an ever-present audience."

"Road fever" hit Kate Smith and her gang in October 1933, and they left radio to make a vaudeville tour of the United States. On this trip the singer appeared before audiences aggregating a million. She was made a Texas Ranger by "Ma" Ferguson, Governor of that state, and an honorary member of the Winnebago Tribe of Sioux Indians with the name of Hom-O-Goo-Winga (Glory of the Morn).

After the tour sponsors clamored for Kate Smith's services, but the "discriminating diva," as she was called, "turned down a high-salaried medicine contract, snubbed her nose at a chance to sing on a tempting skin-cleansing program." Instead, Kate accepted an offer from CBS to appear on a sustaining "matinee hour," a show designed for the entire family.

In January 1935 "Kate Smith, a star in her own right, set out to become a constellation." Sponsored by the Hudson Motor Corporation with a weekly outlay of \$30,500, the singer toured the country trying to find new talent. Because of the size of the task she was obliged to abandon the idea, however.

Since 1937 Kate has been working for General Foods Corporation. In addition to her own songs, on her Friday night show she usually presents a brief drama with an outstanding radio, stage or screen star, a comedy act, *Snow Village Sketches*, and a chorus. During the week, she presents a 15-minute noonday chat from her rose and

apple-green apartment on lower Park Avenue. Here she lives quietly with her maid Maria, her cat Mittsy, and two parrots who invariably greet her with "hello, baby."

The singer has often been accused of having a "hospital complex." To this taunt her only reply is: "It is true that I've been hurt many times in the past by some smart newspaper writer who sent up a shout of 'publicity' whenever I appeared at one of the veterans' hospitals, sent flowers to shut-ins, or collected dolls at Christmas for youngsters who had never had a brand-new doll in all their lives." But these critics do not bother Kate and she bears them no malice because they do not understand the girl who still clings to her "childhood illusions." Today she is the only star in radio who is permitted, in violation of the Communication Commission's rules, to address directly on the air the people for whom she sings her special songs.

For her Armistice Eve program in 1938 the chanteuse, "sensitive to the rising tide of Broadway patrioteering," got Irving Berlin, composer of *God Bless America*, to give her the exclusive right to sing it on the air. This "badgered ballad" she sang week after week on her program until it was finally released for use by other patrioteers.

Kate's hobbies are numerous. At Lake Placid, where she has a cottage next door to Mr. and Mrs. Ted Collins and their eighteen-year old daughter, Kate lives the life of an athlete. Golf, tennis and swimming amuse her in summer, and winter finds her skating, tobogganing or skiing. She loves to dance at any time but dislikes night clubs because they are "stuffy and overcrowded."

Amateur photography is another hobby; her collections include odd perfume bottles and first editions. She is reputed to be the only private citizen in the United States allowed to use the President's entrance at Union Station, Washington, D. C.

In 1938 Kate Smith wrote the story of her career, *Living in a Great Big Way*. The book is not only a record of her achievements but is also a sincere declaration of her philosophy of life. It paints a picture of the singer as a genuine, unaffected person who has managed to "be herself" in a business where "phonies" flourish. She has been described as "a gay and gallant spirit, one of the most winning figures before the public's eyes and ears." She has "regular features, lovely eyes and a peachy-creamy skin."

SOGLOW, OTTO (sög'lō) Dec 23, 1900—Cartoonist

Address: h. 330 W 72nd St, New York City

Otto Soglow's cartoons enliven books, articles, advertisements, stories, but it is probably the Little King, that portly, bearded monarch, who has made him best known. The first drawing of the Little King appeared in the *New Yorker*. The editor called for another and then another, turning down six of every eight early ones submitted. Finally he made the Little King a weekly feature until Hearst's King Features Syndicate signed a contract with Soglow calling for a weekly Sunday page of his creation.

When the Little King first caught on and when he came out in a book (1933), psychoanalysts analyzed his personality, manufacturing companies put him on glasses and ties, made dolls of him; and Russia's then-important Litvinov begged Ambassador Bullitt (see sketch this issue) not to return to the Soviet Union without a copy of the book. More recently the Little King made his appearance in a New York ballet produced by the Monte Carlo Company, choreography by Massine (see sketch this issue).

OTTO SOGLOW

The main charm of the Little King has always been his complete simplicity, so incongruous in the royal setting about him. In one typical sequence, for instance, he arises from a magnificent royal bed, walks through sumptuous halls across a drawbridge and then takes in his morning quart of milk just like any tenement dweller. In another, escorted by a cortege of exquisite flunkies, he makes a stately ascent of a stately stairway and then slides down the bannister.

Otto Soglow was born far from scenes of such splendor, on New York's lower East Side. He attended public school in New York and then got himself jobs as a packer, dishwasher, errand boy, machinist's helper and baby-rattle painter in a sweatshop. From his hard work he was able to save enough money to study at the Art Students League. For a short while, in the days of silent films, he thought of being a movie actor, but nothing came of it.

What Soglow learned at the Art Students League enabled him to get jobs as an illustrator. He started with the cheap pulp magazines, doing conventional hackwork on cowboy pictures or gangster thrillers. Eventually he worked himself up until he was able to sell his drawings to the old *Life*, *Collier's*, *Judge*, *American Magazine* and the *New Yorker*. Commissions to illustrate books came in—today he has illustrated over 20, the latest of which is Frank Case's *Do Not Disturb*; advertisers began to use his work; his own books came out—*Pretty Pictures* (1931); *Everything's Rosy* (1932); *The Little King* (1933); *Wasn't the Depression Terrible?*, written with David G. Plotkin, (1934), and *Soglow's Confidential History of Modern England* (1939).

Most people consider Otto Soglow "quiet, retiring, almost shy." His hobby, he says, is "drawing very detailed pen and ink allegorical and grotesque drawings." In 1928 he was married to Anna Rosen of New York, a painter who also does wood carving. They have one daughter, Tona.

SPELLMAN, FRANCIS JOSEPH,
ARCHBISHOP May 4, 1889- Archbishop
Address: 452 Madison Ave, New York City

When Pope Pius XII appointed Bishop Spellman on May 23, 1939 to be Archbishop of the million-odd Catholics of the See of New York, Archbishop Spellman promised to dedicate himself in every possible way to the welfare of children, whom he called the "hope of the future." He said: "I shall welcome the participation of all in the doing of good things for God, for country, for the poor, the sick, the suffering, and the underprivileged. For my part I shall give my all and do my best."

On March 12, 1940, in St. Patrick's Cathedral, Archbishop Spellman received the sacred pallium, the symbol of unity and loyalty to the Pope, and commemorating also the Archbishop's authority over souls in the Archdiocese of New York. This Archdiocese, probably the richest in the United States, includes Manhattan, the Bronx, Staten Island and the up-state counties of Westchester, Dutchess, Orange, Putnam, Rockland, Sullivan and Ulster. Archbishop Spellman also has authority as "metropolitan over the suffragan sees of Brooklyn, Albany, Buffalo, Rochester, Syracuse and Ogdensburg."

At the ceremony Archbishop Spellman publicly professed his Catholic faith. He also said: "I profess and glory in my American citizenship, and I pledge myself to maintain and defend our fundamental liberties. I am opposed to tyranny, even though it calls itself freedom. I am opposed to anarchy, even though it calls itself liberty. I am opposed to traitors to the United States, even though they wave American flags and call themselves patriots."

Archbishop Spellman was born on May 4, 1889 in Whitman, Massachusetts, the son of a grocer. In 1911 he received his Bachelor of Arts degree from Fordham University, and on the recommendation of William Henry Cardinal O'Connell of Boston was sent to the North American College in Rome, where he was ordained in 1916.

Father Spellman returned with his Doctorate in Sacred Theology to Boston, where in 1922 he became vice-chancellor and, shortly after, Director of Catholic Literature for the archdiocese. He served on the staff of *The Pilot*, the diocesan paper.

In 1925 the Vatican summoned Father Spellman to Rome, where he remained in the service of the Papal Secretariat of State for seven years, the first American so to serve. While at the Vatican he gave

ARCHBISHOP SPELLMAN

the English translations of the international broadcasts and encyclicals of Pope Pius XI. In 1931, when feeling between the Vatican and Fascist Italy ran high, the Pope entrusted to Monsignor Spellman an encyclical on Catholic Action which he feared might be suppressed in Italy. The American priest flew with it to Paris and there released it to the world. He did not pilot the plane on that trip, although Monsignor Spellman held an Italian pilot's license and later obtained an American license in Massachusetts.

On September 8, 1932, Francis Spellman was consecrated a bishop in the Vatican Basilica, where, 16 years before, he had said his first Mass—the first United States bishop ever consecrated there. He returned to this country as the Auxiliary Bishop of Boston, and was appointed pastor of the Sacred Heart Church, Newton Center, Massachusetts, where, until his appointment as Archbishop, he devoted himself earnestly to running a large parish. Modestly, he has often said (with a touch of brogue): "I have always been a parish priest."

When Archbishop Spellman received the sacred pallium, he announced a plan for a new \$2,500,000 Catholic high school for boys to be built in The Bronx. Later he explained that he had "just happened to say that it would be a wonderful thing to have a high school in The Bronx"; 24 hours later a priest came in to tell him the land had been obtained; soon afterward he saw a picture of the architect's drawing.

SPENDER, STEPHEN Feb 28, 1909-
Author

Address: c/o Longmans, Green & Company, 55
Fifth Ave, New York City

With a revolutionary vigor that has caused some of his critics to compare him to Shelley, Stephen Spender has lent a rational fearlessness and a resonant lyricism to the harvests of that group of young English Left-wing poets who "care for freedom more than for the privileges which have given freedom of intellect to individuals in one particular class."

Stephen Spender was born on May 28, 1909, of German-Jewish-English lineage. His father was the late Edward Harold Spender, author, journalist and lecturer, who afterwards became a War-savings propagandist. As a small child he delighted in painting, but at 17 he had set up his own press and supported himself by the printing of chemists' labels; and during the year following he issued his *Nine Experiments*, a paper-back pamphlet of verse. After attending University College School in Hampstead, London, he went up to University College, Oxford, at the age of 19, but found campus life very hostile to his temperament; after some travel abroad he returned to Oxford, and then went down from the University in 1931.

As an undergraduate Spender published *Twenty Poems*, in which there were a palpable independence of language and a gusty imagination; and for the *Spectator's* pres-

STEPHEN SPENDER

entation of "the younger point of view" Spender wrote an article asserting the new poets' need of good constructive criticism. "Too many," he said, "have been ridiculed, excessively admired, and . . . now tolerated, without ever having been criticized." He was largely concerned at this time with the importance of style, the "'schema' of all great poetry."

In 1933 Spender's first substantial book of *Poems* (published in the United States in 1934) appeared in London, and even those critics who demurred at his Communist ideology could not deny his lyrical vehemence. A year later came *Vienna* (American publication date 1935), with imagery of disturbing literalism and some grim mockery that has now become even more grimly significant.

The Destructive Element (1935) was Spender's attempt at a critical analysis of the (probable and actual) expedients of Henry James, Yeats, Eliot, D. H. Lawrence, etc., when they were confronted by "that experience of an all-pervading Present, which is a world without belief." *Burning Cactus* (1936) was his first volume of stories. In *Forward From Liberalism* (1937) he drafted his politico-poetic credo. His *Trial of a Judge* (1938), a verse tragedy on European misrule which was produced by the Group Theatre on the day after its publication, was heralded by the *Spectator* as the "finest English poetic drama written since Otway's *Venice Preserved*." And his work as a cotranslator of Federico García Lorca, Ernst Toller and Rainer Maria Rilke introduced some of their most significant work to the American public in 1939.

In 1936 Spender married Agnes Marie (Inez) Pearn, eldest daughter of the late William Henry Pearn.

Unlike most of the English delegates to the International Writers' Congress, Spender refused to be thwarted by the Foreign Office's ban on visas, and with the aid of French colleagues who had made complicated arrangements for getting the Britishers across the frontier, he proceeded in the summer of 1937 to València, Barcelona for the Congress in which 28 nations participated, as no purely literary affair but rather as an "emphatic assertion that the creation of literature today is inseparable from the struggle in which the standards of culture" must be kept from destruction by Fascism. The "mob," he observed, generally "destroys things not because they are given three stars in *Baedeker* but because they symbolize tyranny, injustice and superstition."

Spender became a firm friend of André Malraux and of José Bergamin, the Spanish Catholic writer who has so effectively aided the Loyalists; and among the Spanish poems which he has translated are several by Manuel Altolaguirre.

Spender is tall and slim, with a high forehead and wavy hair. During the summer he wears a shirt open at the collar, and assumes an extraordinary resemblance

(which obviously strengthens the parallel of literary temperaments) to the familiar portrait of Shelley. Malcolm Cowley, who was in Spain with Spender in 1939, credits him with a personality that is "serious, subtle, generous and full of charm." He has remained in England during the War.

SPERTI, GEORGE SPERI Jan 17, 1900-
Research scientist

Address: b. 6616 Beechmont Ave, Cincinnati, Ohio; h. Fort Mitchell, Kentucky

Since he received his degree in electrical engineering from the University of Cincinnati in 1923, Professor Sperti has interested himself in research. In the practical realm this has resulted in his invention of the K-va Meter, Sperti sunlamps, and light-treatment processes for production of vitamin D. He is the cofounder of the Basic Science Laboratory of the University of Cincinnati and of the Institutum Divi Thomae, Cincinnati, Ohio, where he is in 1940 research professor and director of research. The Institutum was founded to provide research in the various fields of science and to give post-graduate courses in science.

Professor Sperti started his career in the laboratories of large industrial companies. He was assistant chief of the Meter Laboratories of the Union Electric Company, Cincinnati, Ohio; assistant research director of the Duncan Electric and Manufacturing Com-

GEORGE SPERI SPERTI

pany, Lafayette, Indiana and research assistant at the University of Cincinnati.

Pope Pius XI honored him by appointing him to the Pontifical Academy of Sciences, November 1936. Professor Sperti is the co-author of *Quantum Theory in Biology* and *Correlated Investigations in the Basic Sciences*. He is editor of the Bulletin of Basic Science Research and Studies of the Institutum Divi Thomae.

Born in Covington, Kentucky, and still living in Kentucky at Fort Mitchell, he is single. Farming, fishing, horses are his hobbies.

SPITALNY, PHIL—*Continued*

atres and movie houses and broadcasting the *Hour of Charm* program over NBC. This female orchestra has come a long way from the days when to get his first audition Phil Spitalny had to list his band simply as "Phil Spitalny and His Orchestra" and "pipe" the program from a studio blocks away from his prospective sponsors.

The kind of music which the orchestra plays is light dance music, but music in which, according to Mr. Spitalny, "there has been no compromise with cheapness—only good melodic airs have been arranged." After considering for a long time "what sort of music we can offer the masses who love music without having studied it" he decided that the answer was "light music, melodic, rhythmic, well-played tunes which will satisfy the ear and the emotions without overtaxing an intellect which has not been trained so that it may grasp the beauties of the greater classics." The results, says Mr. Spitalny, have proved that "my belief is far from wrong."

To him the relation between this kind of music and an all-girl orchestra is clear. Long ago, when he first set out, Phil Spitalny discovered that light music, to be entirely pleasing, "must give the listener an impression of sweetness, of charm. And where in the world can you find a better exponent of charm than a charming young woman?" He decided on this kind of orchestra, too, because he felt that women should be able to have a future in music. In fact, even before he had his all-girl group he was one of the first band leaders to use a feminine violinist and vocalist with his band.

When he engages women, Spitalny's main requirement is real musicianship. No performer is hired who can't give a finished rendition of two sonatas and two concerti, who hasn't "individual gifts of rhythm and melodic perception," who can't read music fluently and who hasn't had a good deal of experience. In his orchestra eight of the first violins are graduates of the Juilliard School of Music; the concertmaster is a well-known virtuoso; Frances Blaisdell, the flautist, is considered one of the finest in the world.

Surprisingly enough, Phil Spitalny finds women musicians easier to work with than men. "Give me women to work with every time," he says. "They're more cooperative and they don't waste their emotions on much except their music." His girls follow a strict and rigid routine, rehearsing five days a week for five or six hours each day. Their ages range from seventeen to thirty, and as part of their contract they pledge not to

Roy Lee Jackson

PHIL SPITALNY

marry while members of the unit without giving six months' notice. And they manage to get along together without evidences of feminine temperament. They themselves choose a governing board which has the last say about all problems of costumes, hotel rooms, the assignment of upper and lower berths, dressing rooms and general behavior.

Like the members of his orchestra Phil Spitalny is a popular musician whose training has been along strictly classical lines. He was born in Odessa, Russia, the son of Jacob Spitalny, into a family which had been musicians for many generations. His musical education started early and at the age of nine he is supposed to have played the clarinet all night long to earn a few cents. At the Conservatory of Music in Odessa he studied piano, violin and clarinet, but the clarinet became his favorite instrument, and it was as a clarinetist that he toured Russia as a musical prodigy.

When Phil was 15 he came to America with his mother and his brother Leopold, who is now a member of the NBC Symphony Orchestra. After staying in New York for a short time, the Spitalnys moved to Cleveland, Ohio, where Phil served a further musical apprenticeship under his brother Leo, playing in local bands until he began to develop his own ideas of orchestral work.

In the original Cleveland Symphony Orchestra Phil Spitalny used to play the clarinet, and later he founded and conducted his own symphony orchestra in Cleveland which gave Sunday morning concerts of

classical and symphonic programs. Then he came East to Boston, where he directed a 50-piece symphony orchestra in one of the larger motion picture houses. After two years there he was well-known as a leader of theatre, hotel, radio and recording bands, so well-known that he was able to make a successful world tour.

Back from the tour, in 1932, he decided to break up his orchestra and organize a group of talented girl musicians. His brother and all his friends told him he was crazy, but he persisted. He spent six months and twenty thousand dollars searching for talent, traveling all over the country, giving auditions, visiting amateur groups, persuading parents to allow their daughters to come to New York. Then he had trouble getting sponsors, until he adopted the ruse of not letting them know they were listening to women until it was too late.

Today Spitalny's orchestra has grown from 22 to 34 girls and today has smooth sailing: there are broadcasts, successful tours, movie shorts. But still Spitalny warns his girls to be careful. It's all right if a male trumpet player breaks a note, he tells them, but if one of them did it people would say, "Well, what can you expect from a woman?"

This five-foot-three conductor with dark complexion and dark, slightly thinning hair, is one of the hardest workers in his field. Often he spends as much as 15 hours a day rehearsing, making arrangements, doing research for special programs and even designing some of the dresses the girls wear. But he keeps up with the latest news, books, pictures and concerts; manages, too, to spend time with his equally musical wife and daughter, and to find a few moments once in a while for a card game or the amusements on the Atlantic City boardwalk.

SPRY, CONSTANCE Dec 5, 1886- Horticulturist

Address: 64 S Audley St, London, England

Mrs. Spry, long noted in English gardening circles as an outstanding master of the art of flower arrangement, achieved international fame when she was asked to design the garden and interior flower decorations for the wedding of the Duke of Windsor and Mrs. Simpson. Her latest book, *Garden Notebook* (1940), is a charmingly informal book which does not mind mixing the recipe for a particularly good potato salad to serve with cold meat with discussions of little-known annuals for the garden. Critics believe that she has "something of the magic" of Beverley Nichols and Richardson Wright as a gardener-writer. She uses the time-tried procedure of dividing her material into twelve chapters, one for each month. Although Mrs. Spry is an English gardener, much of her material relates to American gardens.

She was born in Derby, England, December 5, 1886, and spent her childhood and early married life in Ireland. To an American used to making a garden from virgin woodland, her stories of the century-old gardens she owned at various times are enchanting. During the First World War she was a social worker in a dreary part of northern England. In order to relax herself in this depressing environment, she turned to flower arrangement. Her vases

SPRY, CONSTANCE—*Continued*

and bowls of flowers, so different from the formal Japanese influence (she feels that Americans have overdone the Japanese type), caused enthusiastic comments. She was consequently asked to design window arrangements for Atkinson's, a well-known perfume shop in Bond Street, London.

"I think," she says, "that I had unconsciously struck a moment when people were getting tired of the conventional set pieces made by professional florists and were not entirely satisfied with purely amateur arrangements." Soon she opened her own shop, having, as she says, "no preconceived ideas about what were really florists' flowers." She therefore "used quite naturally whatever I thought was decorative, going each morning to Covent Garden and buying there, but adding all sorts of odds and ends from my own garden. It was the use of these odds and ends, quite natural to me, which seemed to interest people."

In England she has done a great deal toward popularizing various unusual flowers and the use of twigs, seed heads, weeds, grasses, green leaves and vegetables in flower arrangements. This material she uses as enthusiastically as she would use the choicest orchids. She recalls that she would visit the Royal Horticultural Society's flower shows, pick out a few unknown flowers with good decorative qualities, buy a few plants or bulbs and grow them in her own garden. She has always found that anything unusual sells well. Growers would soon become interested and the flowers would appear in quantity on the market. Illustrations of Mrs. Spry's unconventional but charming flower arrangements began to appear in periodicals. Unusual, to Mrs. Spry, does not mean bizarre arrangements which are not in harmony with the surroundings of the vase. Mrs. Spry says: "When I first came to America I was laughed at quite a lot for introducing vegetable leaves and fruits into my flower arrangement. Provided the plant is beautiful, I cannot see why I should not use it for decoration just because it has the added advantage that it can also be eaten."

In the beginning of 1938 she was asked to come to New York at the invitation of the Women's Auxiliary of the Brooklyn Botanical Garden to give two lectures on modern flower arrangement. Her decorations, which show not the slightest trace of Japanese influence but stem instead from the Dutch flower painters, were enthusiastically received. She toured the States in connection with the Garden Clubs of America; spoke over the radio; and found such an interest in flower arrangements that she was enabled to obtain American backing for a shop in New York City's exclusive 50's. She returned to England to collect neces-

sary materials and opened the shop in late November 1938.

The next year she delivered lectures in many cities of the United States and returned to New York for the opening of the World's Fair, where, at the request of the British Government, she arranged two large groups of flowers for the Hall of Honor in the British Pavilion. Every week these were changed by her staff, for Mrs. Spry was off to London again. She lives in an old Kentish farmhouse an hour from London. Every morning she motors down with flowers grown in her nursery for her London shop.

Aside from contributions on flower arrangement to English periodicals, she has written for *Harper's Bazaar*, *Vogue*, *House and Garden* and *Ladies' Home Journal*. In addition to her latest book she has written two others. The first, *Flower Decoration* (1935), is a book on the use of flowers as decoration, in which the author explains and illustrates her thesis that floral decoration should bear a distinct relationship to the architecture and general decorative scheme of the room—"that our object should be to reveal and emphasize the particular qualities or beauties in our houses by using our flowers as an artist might use colors." Her second book is *Flowers in House and Garden* (1938). It presents a more detailed treatment than her earlier book. Ten chapters are devoted to flower growing and house decoration, arranged by the months of the year. Of it one reviewer wrote: "Mrs. Spry can arrange almost anything to look beautiful, whether it be kale leaves, orchids or common flowers."

STARK, HAROLD RAYNSFORD Nov 12, 1880- Chief of United States naval operations

Address: Navy Department, Washington, D. C.

With national defense a topic of primary interest in the face of developments in Europe in 1940, Admiral Harold R. Stark, chief of naval operations for the United States, occupies a more spotlighted position than any Navy man has since 1914. Appointed chief of naval operations by President Roosevelt in 1939, Admiral Stark carried the burden of appearing before the United States House and Senate Naval Affairs Committees to plug the cause of "building a Navy second to none," and urging appropriations for the Navy's greatest peace time expansion.

Stark was commander of the cruiser division of the United States Battle Force, with the rank of rear admiral, when he was jumped over the heads of 10 ranking admirals, of vice-admirals and rear admirals to the position of chief of naval operations with full rank of admiral, to relieve Admiral William D. Leahy, due for retirement in May 1939 and slated as Ambassador to France in 1941. Stark was then 58 years old, and, as admirals go, a youngster. His appointment assured the Navy of comparatively long-term leadership, for he was six years from the compulsory retirement age.

President Roosevelt first met Admiral Stark in 1914, when the President, then assistant secretary of the United States Navy, was on board the destroyer *Patterson* off the coast of Maine. He said to young Lieutenant Stark at the helm: "May I relieve you for a while? I am an experienced navigator, and I know this coast." The young lieutenant replied: "I am in command here and responsible for the ship. I doubt your authority to supersede me. If you can offer any helpful suggestions I should be glad to hear them." Mr. Roosevelt evidently liked that kind of sea talk. At any rate he picked Stark over 59 others who outranked him for the No. 1 post in the United States Navy.

Admiral Stark, white-haired, capable, professorial and mild in manner, is considered by those acquainted with naval affairs a good choice for the position of chief of naval operations. He is said to be a fortunate combination of activist tradition and studious, informed knowledge on the overlapping zones of naval and foreign policies. He believes that the navy should operate its own air fleet and should always be ready for quick, hard-hitting action. Primarily he is a "big gun" expert, and thinks that decisions go to the biggest and best guns despite all modern improvements in the big battle wagons.

HAROLD R. STARK

An inlander, born at Wilkes-Barre, Pennsylvania, November 12, 1880, Admiral Stark was graduated from the United States Naval Academy in 1903, and was promoted through the ranks until he reached the rank of rear admiral in November 1934. From 1903 to 1917 he served on various ships and at various stations. From 1917 to 1919 he was aide on the staff of Admiral Sims, who was commanding the United States naval forces in European waters.

During the First World War Admiral Stark distinguished himself by taking a flotilla of reconconditioned, broken-down destroyers from Philippine waters to harry German and Austrian submarines in the Mediterranean. For this he won the Distinguished Service Medal and the Order of the Crown of Italy.

After the War he occupied a number of posts, including that of aide to both Secretary of Navy Claude A. Swanson and former Secretary of Navy Charles Francis Adams, before he became commander of cruisers of the United States battle force in 1937. Stark was successively: inspector in charge of ordnance at the Naval Proving Ground, Dahlgren, Virginia and at the Naval Powder Factory, Indian Head, Maryland; chief of staff, Destroyer Squadrons, Battle Fleet; commander of the *U. S. S. Virginia*; and, from 1934 to 1937, chief of the Bureau of Ordnance of the Navy Department, Washington, D. C.

The Admiral (sometimes known as "Betty" in the ranks) was married in 1907 to Katherine Rhoades of Wilkes-Barre, Pennsylvania. They have two daughters, both married.

Appearing before the United States House and Senate Naval Affairs Committees in the spring of 1940, Admiral Stark recommended a 25 per cent increase in the size of the

STARK, HAROLD R.—*Continued*

United States Navy in order to maintain the 5-3 ratio with Japan, set by treaty. According to Admiral Stark, with a 25 per cent increase the Navy would be able to defend the Continental United States, the Panama Canal and Hawaii against any aggression, but in case of the worst possible danger—a coalition attack by Japan, Germany, Italy and Russia—it could not guarantee to defend the whole Western hemisphere. "We might," said the Admiral, "have to sacrifice southern Brazil."

Asked by a member of the Senate Naval Committee if a state of emergency existed in the international situation as it bears on United States defense, Admiral Stark answered: "My position is that we should have a Navy second to none, and I feel that I would be derelict in my duty if I found out that we were deteriorating and did not take steps to recover our position." The international situation, he stated, "was an emergency and should be dealt with by America as such."

Tables submitted by Admiral Stark showed that in ships built or being built, measured in terms of modern craft, the United States was in third place, with Britain first and Japan second in first-class navies. The ratio between the United States and Japanese Navies he declared was nearing parity, because of the building the Japanese Navy was doing. "We are uncomfortably close to a 5-5 ratio. We are asking Congress to reaffirm the 5-3 ratio."

By June 1940 the Admiral was asking for a 70 per cent increase in the strength of the United States fleet. And in a nationwide broadcast on Navy Day, October 27, he warned that the United States must envisage "the possibility of simultaneous attacks in either or both oceans." He expressed himself as satisfied with the shipbuilding yards' ahead-of-schedule pace, however.

 Who's Who in America
 Who's Who in Government

STASSEN, HAROLD EDWARD (stās'ën)
 Apr 13, 1907- Governor of Minnesota; Key-
 noter Republican National Convention, 1940
Address: State Capitol, St Paul, Minnesota

Governor Harold Edward Stassen is the wonder boy of Minnesota. At 31 he was elected Governor; he made sweeping reforms in the state government; and in one

year as Governor he had made such a record for himself that, had he been old enough, he would have been considered tall Presidential timber in 1940. Since that was impossible, he was chosen to deliver the keynote address at the Republican National Convention in Philadelphia. He is the youngest Governor ever elected in the United States—young enough to have registered for the draft in October 1940.

Governor Stassen's career reads like an American success story of the old-fashioned kind. Born on a Dakota County, Minnesota farm about six miles from the Twin Cities, on April 13, 1907, the son of William Andrew and Elsie Emma (Mueller) Stassen, who were of German, Czech and Norwegian descent, Harold Edward Stassen attended a little red schoolhouse two miles from his home. He finished the six grades in four years, and entered the Humboldt High School in St. Paul, where, in order to earn money, he got himself a newspaper route (which he tripled in two months).

The spring young Stassen was graduated from high school his father was ill, and the 15-year-old Harold took over for a year, planting, harvesting and selling the crops. The next year, 1922, he matriculated at the University of Minnesota. To earn money, he worked as a grocery clerk, Pullman car conductor for three years, and grease boy in a bakery between semesters.

Stassen really started his political career in college. He was a topflight campus politician. By the time he was a sophomore he knew everybody, and everybody knew him. He was intercollegiate debater, champion intercollegiate orator, captain of a national championship rifle team, holder of almost every campus office including that of all-university class president, and was an honor student to boot. He was so involved in campus politics that he had to hire a fraternity brother as personal secretary.

In college, too, he gathered around him a group of young Republicans, and laid the groundwork for the Young Republican League, of which he became the first chairman.

He received his B. A. degree from the University of Minnesota in 1927, and his law degree two years later. The ink was hardly dry on his diploma when he and a fellow graduate, Elmer J. Ryan, now in Democratic politics, opened a law office in South St. Paul, a stockyard town of 10,000. Within several years their business had grown so that they had four other attorneys in the office. Stassen says he made more money than he makes now as Governor (\$7,000 a year).

In 1930 Stassen was elected to his first political office, County Attorney of Dakota County. He won the election without any extensive personal campaigning. During the heat of the campaign he was taken ill, and his partner, Ryan, went out and did the talking for him. Stassen was re-elected County Attorney in 1934, and held the office until he was elected Governor.

Meanwhile, Stassen and his Young Republicans had been busy. Gradually they were wresting power from the old guard Republicans in party politics, and in 1937 Stassen announced himself as a candidate for Governor. He overcame the conservatives in his party easily, and in 1938 faced the formidable opposition of the incumbent Governor Elmer A. Benson and his Farmer-Labor machine, entrenched for eight years.

But Stassen was a far more energetic campaigner than Benson. He went on a tour of the state that touched every village, town and city. He spoke morning, noon and night, sometimes making as many as four speeches in one evening. He had a way with audiences. Strapping, six-foot-three, ruddy, blue-eyed, with a wide, contagious smile and a friendly manner, Stassen made it a rule never to speak longer than 20 minutes. He wound up his speeches by telling the audience he wanted to shake hands with all before he left. With that he made a "bee line" for the door, and actually shook the hand of every departing listener. It "wowed" the audiences.

Stassen promised the voters clean politics, and preached a liberal brand of fundamental democratic principles. He promised a cleanup of scandals in government, a reduction of operating costs without reduction in relief, and an end to the "labor front" reign of terror. When the votes were counted Stassen had 678,839; Benson, 387,263.

Stassen kept his campaign promises. In one short legislative session he cleaned up scandals, put through his promised Civil Service Law and his labor and antiloan-shark bills, reduced state operating costs \$5,000,000 without cutting relief, launched a program to find work for unemployed youth and to boom the state's tourist business. His Labor Law provides that neither strike nor lockout can be instituted in Minnesota until both disputants have waited a 10-day "cooling-off" period (30 days additional if the public welfare is involved). He keeps in touch with his constituents by weekly radio talks, and solicits letters and criticism. The voters like it. A poll in the summer of 1940 showed the state 68 per cent behind Stassen, although he was re-elected in November by a considerably smaller plurality than in 1938. His handling of patronage and his close connections with Willkie (see sketch this issue), who failed to carry the state, possibly accounted for the lower Republican vote.

Governor Stassen is married to the former Esther Glewwe, daughter of a South St. Paul storekeeper, whom he has known since his school days. They have one child, four-year-old Glen Stassen.

STEINBECK, JOHN Feb 27, 1902- Author
Address: c/o McIntosh & Otis, 18 E 41st St,
New York City

Considered by many critics the best novel of the last 10 years and awarded the Pulitzer Prize in May 1940, *The Grapes of Wrath*, by John Steinbeck, published in 1939, certainly became the most widely read and best-known book of the year. There were 450,000 copies printed by May 1940. Since it has been made into an excellent motion picture playing to capacity audiences, the story of *The Grapes of Wrath* has deservedly become known to a great many more.

A social novel with a powerful theme, excitingly and intensely written, it tells of a great modern trek—a broken-down jalopy and truck caravan—of poverty-stricken people from the Dust Bowl region to the promise of work and plenty in California. Typical of these migrating families, the folks called "Okies," are the Joads from Oklahoma: great-hearted, toughly-courageous Ma, who must hold the family together; Tom, the oldest boy, out of prison on parole; skirt-stricken Al; the two youngster Joads; Grampa, lively, mean and ribald;

JOHN STEINBECK

Rosasharn, who is expecting a baby—all of them, with their friend the ex-preacher Casey, starving their way West in an old truck. Grampa and Gramma are left in unmarked graves along the road; the family stops in the disreputable camps dotting Highway 66. Finally they reach California, where they do have a pleasant interlude in a Government-run camp. But later, hungry and trying to get the work glowingly promised by handbills, they are hounded from place to place by sheriffs and labor contractors. Tom Joad is forced to go into hiding for killing a vigilante who had clubbed to death his friend Casey; Rosasharn's baby is born dead. But Ma says: "We ain't gonna die out. People is goin' on—changin' a little maybe, but goin' right on."

The Grapes of Wrath is about people, real Americans today: migrant farmers whose lives become tragedy through no fault of their own. Steinbeck understands these lives; through the Joads he has presented a whole culture that is not only uniquely American, but which has the lasting quality of a folk-myth. The narrative is vigorous, colorful, dramatic—though at times, particularly in its concluding episode, falsely dramatic; the speech of the people—honest, colloquial, coarse—is faithfully rendered; many of the minor incidents and situations are faultlessly and unforgettably told. It is not a novel of propaganda, but an inspired human tract, angry at a great injustice, but full of the affirmation of human dignity.

The movie version of *The Grapes of Wrath* sets a high standard of excellence in adaptation, direction, acting and photography. The last few scenes of the book are left out—but these were the least significant and convincing—and the picture closes with Tom Joad fleeing from the camp. The tone,

the diction of the original are tempered, but the story loses none of its emotional impact. Throughout taste, economy, balance and artistry make it one of the best productions to come out of Hollywood.

John Ernst Steinbeck (he does not use his middle name) was born in Salinas, California, February 27, 1902, of mixed German and Irish ancestry. His father, John Ernst Steinbeck, was born in Florida but lived most of his life in Salinas, where he was county treasurer for many years. Sixty years ago his mother, Olive (Hamilton) Steinbeck, taught in the tiny red schoolhouse of the Big Sur, that rugged country of ranges and cliffs which provides the locale for some of Steinbeck's work. Steinbeck was a member of the first surveying party that ever went down into the Big Sur country, when there was no motor road but only steep, precipitous bridle paths and mule tracks. He remembers the time when many families lived down there. "It was not always as deserted as it is now," he says, "and I think one has that feeling, very definitely that people lived there long, long ago, and have left their presence."

He was a graduate of the Salinas High School, 1918. At intervals from 1919 to 1925 he attended Stanford University but was not entirely happy there until it was understood that he wasn't anxious for a degree but wanted to study only what interested him. In between times he traveled about the country getting jobs wherever he could, on cattle ranches and in a sugar refinery. Then he went to New York and worked as a reporter on a New York newspaper but got fired because he couldn't or wouldn't report facts as he found them—only the poetry or philosophy he saw in them. He helped carry bricks for the building of Madison Square Garden and tried free-lancing.

Back again in California, Steinbeck had his first novel, *Cup of Gold* (the fourth he had written) published while he was living up in the High Sierras near Lake Tahoe's Emerald Bay, where he had a job as winter caretaker for an estate. When the owners found that a pine tree had crashed through their roof, he lost his job—but got one the next day in a trout hatchery.

His first book, *Cup of Gold*, was published in 1929; *Pastures of Heaven*, the second, was issued in 1932; and his third, *To a God Unknown*, came out in 1933. They were not successful financially, for the three together did not sell more than 3000 copies. Steinbeck had almost given up hope of making a living at writing by the time his fourth novel, *Tortilla Flat*, was published in 1935. It attracted considerable attention, no fewer than eight editions were published, and with the sale of the motion picture rights (though the picture was never made). Steinbeck, for the first time in his life, was able to look forward to at least a year or so of economic comfort. With its success he gained some recognition, and his fifth book, *In Dubious Battle* (1936), achieved a moderate sale.

While some people called it the best strike novel ever written, *In Dubious Battle* was criticized by Leftists who disliked its portrayal of radical leadership and by reactionaries who thought there was too "Red" a sympathy in his description of strike-breaking. But the Commonwealth Club of California awarded it the gold medal for the best novel by a Californian during the year.

His next book, *Of Mice and Men* (1937) became, however, a best seller, and made Steinbeck widely known. It is a tender, human story of the strong attachment of two "bindle stiffs," or tramps, on a California grain ranch. One is George, shrewd, sophisticated job-getter and protector-in-general of big, dim-witted Lennie, who loves small, soft animals to their peril and death. The two have a wonderful dream of getting a little farm all their own on which to settle down. But the soft hair of Mae, a "floozy" ranch wife, attracts Lennie; and the end is tragedy for Lennie, and for George.

A dramatization of the book in 1938 had a successful run on Broadway. Early in 1940 a moving picture version was released, with Burgess Meredith (see sketch this issue) and Lon Chaney Jr., in the title roles. Focusing on action and the building of tension rather than on a sentimental relationship between the two men, the picture presents a tough, raw and at times bleakly tender tale moving toward a powerful climax.

Steinbeck has been described as "of giant height, with fair hair and fair moustache, and eyes the blue of the Pacific on a sunny day, and a deep, quiet, slow voice. He belongs to the coast, the Monterey bay, the ranges and cliffs of the Big Sur country." He reads books on physics, philosophy and biology, but very little fiction, although he likes the writers who had leisure to think deeply about what they wrote—Thackeray, for instance. He was married in 1930 to Carol Henning of San Jose, California, and after their marriage he and his wife lived a while in Monterey, the scene of his novel *Tortilla Flat*. There they owned a launch and spent much of their time sailing and fishing. The fish were a valuable addition to their meager budget, for they lived on \$25 a month. At present they live near the small town of Los Gatos, California.

Actually very little is known about Steinbeck, a shy, publicity-abhorring man who prefers the quiet, simple life on his ranch. It is said that when he came to New York in the summer of 1937 he was beset with such a fanfare of literary teas and lionizing that he cleared out as soon as possible on a Norway-bound freighter. He dislikes Hollywood almost as much as New York. Public dinners are anathema to him, and he avoids speech-making—his own or others'. He hates being photographed. Once he was poor, living the life of a working "stiff" on fruit ranches. Now, though royalties pile up, he has neither time nor taste for luxuries. In Mexico he is hard at work in 1940 gathering material for a movie with Herbert Kline, producer of the documentary films, *Crisis* and

Lights Out in Europe. Steinbeck will write the screen story, which will concern itself with Mexican conditions, and Kline will direct and produce it. Steinbeck had another contract, paying a bare fraction of what he could command from any Hollywood studio, to write *Behold the Man* for the United States Film Service. Since no provision was made for the latter in the latest Federal budget, however, this contract has been abandoned.

STEINBERG, HANS WILHELM 1899-Conductor

Address: c/o National Broadcasting Co, 30 Rockefeller Plaza, New York City

Hans Steinberg has been in America only two years but in those two years he has conducted the NBC Symphony Orchestra, he has appeared with the Philadelphia Orchestra in Robin Hood Dell, he has led the New York Philharmonic Orchestra at the Lewisohn Stadium concerts and he has been engaged by NBC as one of the four regular conductors for its orchestras in the 1940 to 1941 season.

Steinberg came to this country well recommended, however. His work as guest conductor in most of Europe's capitals had brought him fame, and Toscanini had singled him out as one of the most competent and inspiring of the younger modern conductors.

Steinberg's life has been one devoted to music with a singleness of purpose. Born in Cologne, Germany in 1899, he began to study the violin almost as soon as he was big enough to hold one. While at grammar school he attended the School of Higher Musical Studies in Cologne. When he was about 15 he started taken piano lessons with Professor Uzielli, who was perfectly certain that the boy would become a virtuoso with this instrument. But he not only studied the piano and violin, he stud-

Roy Lee Jackson

HANS WILHELM STEINBERG

ied the theory of music and composition, and at the end of his studies won the Wullner Prize for conducting, presented by the city of Cologne.

In 1929 Steinberg's musical career began when he was made "Correptitor" and personal assistant to Otto Klemperer at the Cologne Opera House. In 1924 he was made first conductor. Because of his success in Cologne, Zemlinski engaged him as conductor for the German Theatre in Prague, where after a very short time he became opera director.

From 1926 on Steinberg became a regular guest conductor at the Berlin State Opera House and in 1929 accepted the post of General Musical Director of the Frankfurt Opera House and conductor of the Museum Concerts in that city. Frequently he appeared as guest conductor with the great orchestras of Europe—in Paris, London, Prague, where after a very short time he was engaged by Huberman to conduct the Palestine Orchestra after he had been made an exile from Germany.

Toscanini was scheduled to appear with the Palestine Orchestra, and when he came there was delighted with the preliminary groundwork that Steinberg had done for his concerts. Immediately he chose him as his assistant in preparing for the NBC concert broadcasts in 1939. He assisted Toscanini, and after Toscanini left conducted the NBC Orchestra himself in a number of broadcasts.

Like Toscanini, Steinberg conducts without a score, but unlike Toscanini "he waggles his head both for cues and for umph." And "when the pinches come he winds up like Dizzy Dean and lets them have it."

STEINBERG, MILTON, RABBI Nov 25, 1903- Rabbi of the Park Avenue Synagogue in New York City; author

Address: b. 50 E 87th St, New York City

Rabbi Milton Steinberg's first work in fiction form is an excellent novel whose central figure is Elisha Ben Abuyah, a second-century apostate from the Jewish faith. A student of classical literature and history, particularly the Greco-Roman period, Rabbi Steinberg has imbued the background of *As a Driven Leaf* (1940) with carefully authentic detail. This, together with a vivid, sensitive and dramatic handling, makes the book not only a convincing document but a highly moving piece of creative writing.

The wealthy and gifted Elisha, admitted to the highest Jewish council, the *Sanhedrin*, and married to a conventional woman who has no sympathy with his intellectual interests, turns in his search for "absolute truth" from the Talmud to the logic of Euclid. His wife is outraged, and a separation follows. His pupils leave him. He goes to Antioch, center of Greek learning, where he rises high in the favor of Manto, the brilliant mistress of Rufus, governor of Palestine. But finding no faith in either the Greek or the Roman world, Elisha, having forsaken his own, is indeed lost. Rufus forces him to help stamp out Judaism, and he comes to be despised by both Jews and Romans. In a final scene of dramatic intensity he is compelled to witness the deliberately cruel executions of his friends in the rabbinate whom he has betrayed.

Thus, unlike that other famed apostate, Spinoza, Elisha does not transcend his apostasy, but falls victim to it. His tragedy, as Rabbi Steinberg shows us, lies in an over-intellectuality, a rigid super-fidelity in the search for a logical theology. But the character of the man is glowing and real;

RABBI STEINBERG

and the book's theme is freshly pertinent to contemporary conflicts.

Rabbi Steinberg was born in Rochester, New York, November 25, 1903, and received his early schooling there. He was not, however, reared for the rabbinate, the profession first chosen for him being medicine. But at the College of the City of New York he became interested in classical languages. He took his M. A. at Columbia University. Then, under the influence of Rabbi Jacob Kohn of Los Angeles, he studied for the rabbinate and was ordained at the Jewish Theological Seminary.

He taught Jewish history and religion at the Teachers Institute of the Seminary, but his first congregation after ordination was in Indianapolis, Indiana (1928-33). Since then he has been Rabbi of the Park Avenue Synagogue in New York City. He was a member of the editorial board of *Reconstructionist*, 1936 to 1937; he has been a member of the administrative council of the Zionist Organization of America since 1934 and of the Rabbinical Assembly since 1936.

In 1929 he married Edith Alpert of New York City, and on his honeymoon visited Palestine, thus adding to his firsthand knowledge of the background for *As a Driven Leaf*. The Steinbergs have two children, Jonathan and David Joel.

Following numerous articles and reviews, Rabbi Steinberg published in 1934 *The Making of the Modern Jew*, an account of the history of the Jews beginning with medieval times, and an analysis of their situation today. The book was praised for its authoritative merits and for the vigor of its style. As one critic said—and this may be said also of *As a Driven Leaf*—"Steinberg writes as with a scalpel, in sharp, incisive, penetrating sentences. A vivid, communicative ardor illumines his pages."

STETTINIUS, EDWARD REILLY JR. (stě-tin'ni-ūs) Oct 22, 1900- Member of the National Defense Commission

Address: b. War Department, Washington, D. C.; h. 21 E 79th St, New York City

During the First World War a man named Edward Reilly Stettinius was called from the Diamond Match Company by J. P. Morgan to direct the munitions' purchases of the French and British governments in this country. His work earned him a Morgan partnership, and after the United States entered the War he was requisitioned for similar work with our War Department. With World War II raging in Europe, another Stettinius, youthful, silver-haired Edward Reilly Jr., announced his resignation as chairman of the Board of Directors of the United States Steel Corporation and as director and member of its finance committee to accept full-time duties on President Roosevelt's new National Defense Commission. "As coordinator of industrial materials, his duty will be to see that the factories get all the material they need and get it quickly." His task is to render the United States independent of foreign sources for adequate supply of strategic materials. The Raw Materials Division under him has attempted to solve some of the more pressing problems by setting up emergency reserve supply of grease wool and achieving expansion of synthetic rubber production and tin-smelting plants.

Mr. Stettinius' qualifications for an important position in any such commission have been universally acknowledged by the press, one commentator calling him "all that the most critical Republican could ask." He was born in Chicago, Illinois on October 22, 1900, the son of the Morgan partner and of Virginia (Carrington) Stettinius, and from his days at prep school at Pomfret, Connecticut, he had to overcome "the handicaps of wealth, position and the reputation of a brilliant father." Matriculating at the University of Virginia in 1919, where "Big Stet" had been a student before him, young Stettinius acquired the title "Little Stet" and, in spite of the fact that he was already gray-haired and sober,

EDWARD R. STETTINIUS JR.

got himself elected to the Imps, "an honor usually conferred upon the University's most rousing hell raiser." Somehow he never piled up enough credits to graduate, but his brilliant work as founder and manager of a student-employment bureau attracted the attention of a vice-president of General Motors, who offered him a job before he left school in 1924.

Before accepting it "Stet" took an educational trip abroad, and then went to Detroit to the Hyatt Bearings Division of General Motors as a 40-cent-an-hour laborer—"in overalls, though not without expectations." Whatever his expectations, they weren't disappointed. By 1931 Stettinius had become vice-president in charge of industrial and public relations, one year after having been appointed assistant to President Sloan (see sketch this issue). Then, during "the heyday of NRA," Stettinius went to Washington—first as liaison officer for General Motors with the New Deal authorities; in 1932 as director of the National Share-the-Work Movement for the Second Residential District; then, in 1933, as liaison officer between the Industrial Advisory Board and the National Industrial Recovery Administration. In Washington he won dozens of friends in the inner councils of the New Deal, astonished everyone by his "talents for soothing unreconstructed tycoons," and although "his friends were baffled by this open consorting with the enemy," acquired a reputation as a liberal, enlightened young businessman that was to be very helpful to United States Steel after Myron Taylor (see sketch this issue) called him in April 1934 to become vice-chairman of Big Steel's Finance Committee.

At that time Stettinius knew nothing about steel, and many people thought of him as merely a Morgan "stooge." He

wasn't exactly that. For two years he read everything about steel he could lay his hands on, spent months knocking about the plants. In 1936 he became chairman of the Finance Committee and a director of the corporation, and on April 5, 1938 the steel world was dumbfounded by the promotion of a "37-year-old stripling" to the chairmanship of the Board, after the resignation of Myron Taylor, twice his age.

Taylor hadn't made a mistake, though. Evidently what "Steel" needed was young blood, and a man who could function acceptably as "Washington representative of the Corporation." Under the guidance of Stettinius United States Steel ceased being a "political scapegoat," and the revolution in the company's sales, management, labor and public relations policies was typified by the modernization of New York headquarters, once "a dark wilderness of unused gas jets, rolltop desks, internal politics."

In the fall of 1939 Stettinius once more came to Washington, this time as head of a War Resources Board appointed to study industrial mobilization of the United States in case of war. After a few weeks the board was disbanded and its unfinished report was never made public, but it seems reasonable to suppose that at that time Stettinius formed a rather good idea of industrial defense needs.

During the first three months of 1940 the 26 steel companies showed profits of \$25,134,000, compared with \$6,865,000 for a similar period last year, but Stettinius announced that in 1939 United States Steel stockholders had earned a "wage" of only 3 per cent, and gave it as his opinion that "a starvation wage for owners is as destructive as a starvation wage for workers." In May 1940 Stettinius gave up a position with a salary of \$100,000 to become a government dollar-a-year man.

Shortly afterward President Roosevelt announced the sale of \$200,000,000 worth of "antiquated" armaments to United States Steel for \$50,000,000, for resale to the Allies.

"Genial, excessively energetic," Stettinius "has the happy faculty of charming even those whom he defeats." His heavy, black brows and ruddy complexion contrast with his white hair and teeth to make him extremely striking in appearance, and when restless Ed Stettinius "goes bounding through the board room hung with somber portraits of past great steelmen, he suggests a somewhat impudent tourist taking a gallery of old masters in his stride." Episcopalian, member of the Union Club and other clubs, he enjoys society with a Virginia wife (he married Virginia Gordon Wallace of that state in 1926), three young sons (only one of whom isn't a twin), an apartment in New York and a Virginia farm, where he tries to escape from business by raising "white-faced Hereford cattle, prize Belgian draft horses, and turkeys." His Washington home is in a large, outlying hotel, but as

soon as he finishes work on Saturday afternoon he drives his own car to his farm.

STEVENSON, E. ROBERT Aug 29, 1882- Editor in chief of the Waterbury (Connecticut) *Republican and American*
Address: b. Republican and American, Waterbury, Connecticut; h. Eastfield Rd, Waterbury, Connecticut

E. Robert Stevenson (he apparently doesn't like "Elias") has been an English teacher, a novelist, an historian and almost everything in the newspaper business—reporter, feature writer, city and managing editor, editor in chief. Since 1917 he has been editor of the Waterbury (Connecticut) *Re-*

E. ROBERT STEVENSON

publican (in 1922 consolidated with the *American*), which won the Pulitzer Gold Medal this year for its exposure of graft in the city administration.

Stevenson was born in New Haven, Connecticut, August 29, 1882, the son of Elias Gilbert and Mary Ann (Tighe) Stevenson. After graduating from the Hillhouse High School in 1903 he went to Yale in his hometown, at the same time working as reporter on the New Haven *Register* and *Journal Courier*. He was graduated in 1907 and spent two years away from the newspaper game: one as instructor in English at the Georgia School of Technology in Atlanta, another as English teacher in the Hartford, Connecticut High School. But 1909 found him working as a reporter on the Springfield (Massachusetts) *Republican*, and he hasn't gone back to teaching since. In 1911 he published the *Damnation of Sandy Mac-*

STEVENSON, E. ROBERT—*Continued*

Gregor. From 1912 to 1914 he was feature writer for the *Springfield Republican*, from 1914 to 1917 its city editor, and then in 1917 he joined the staff of the *Waterbury Republican* as editor, becoming managing editor of both the *Republican* and *American* when they merged in 1922 and, in 1927, editor in chief. In 1929 he made his debut as historian with a three-volume history entitled *Connecticut History Makers*.

Mr. Stevenson, an Episcopalian and a Mason, is a member of the American Society of Newspaper Editors, the Waterbury Chamber of Commerce, and the Mattatuck Historical Society. He belongs to the Waterbury, Rotary, University, Green Mountain and Waterbury Country Clubs.

STIEGLITZ, ALFRED (stēg'līts) Jan 1, 1864- Photographer; editor

Address: b. 509 Madison Ave, New York City; h. Lake George, New York

"Philosopher, guide, teacher, discoverer of genius, inspirer of the machine age, prophet and Messiah"—that, according to John Gould Fletcher, is Alfred Stieglitz to the 25 famous people who contributed to *America and Alfred Stieglitz* (1934). To them and to many other Americans this photographer is "the man who has done the most for art in America."

Alfred Stieglitz was born January 1, 1864, in Hoboken, New Jersey, the son of a prosperous Jewish wool merchant. In 1871 Alfred's father with his family of six children moved to New York City, where Alfred was educated in private and public schools. He went to the City College of New York for a while and studied engineering because a professor there told his father it was a good field for a young man. In 1881 he was sent to Germany, to the Berlin Polytechnic, to study engineering further, but one day he saw a camera in a shop window. He bought it.

Stieglitz no longer was interested in engineering. He took courses in chemistry, with photography in view, and he used the Polytechnic laboratory for photographic experiments. He took pictures of the view from his

window, of himself, and he came "to feel for the first time that he had a right to life and a right to be living in Berlin."

When Stieglitz started photographing it was in the days when it was necessary to have daylight, and when pictures needed a long exposure. From 1887, when he won first prize in an English competition of amateur photographers with pictures of Italy, Stieglitz has deepened and enriched the resources of his medium. He was the first to introduce figures in night photography. His was pioneering work in reproducing snow and rainstorms. He it was who insisted that photography had to be used to emphasize its ability to render substance, shape, texture and motion.

"One of the most active and experimental photographers in the world," Stieglitz turned his camera on the thing itself, not sprinkled with the eau de cologne of romance. "He gave the people back to themselves. He restored their world to them. The sea that cut a pattern in the sand; the shaggy, snow-capped Alps; a girl drawing water from a well; broad steps of stone endlessly rising." When Picasso saw Stieglitz's *Steerage* he was reported to have said: "This is exactly what I have been trying to say in paint."

Stieglitz always has seen photography as an art in itself, not a weak imitation of other forms of art. "His lucid sense of the fitting and authentic," says Frank Jewett Mather, "has kept him clear of the solecism of forcing the sensitive plate to compete with the painting of lithographic stone." Because photography is an art, Stieglitz is a perfectionist. A friend once asked him for a duplicate print from a certain negative he had made. "There will be but one print," said Stieglitz. "There will be no duplicates." "A waste print?" asked the friend. "You do not understand," said Stieglitz patiently. "There will be but one print that will express me. The others will not express me. They will be nothing."

In 1890 Stieglitz returned to America. His father bought for him and his brothers the Heliochrome Engraving Company in which he spent three years experimenting with three-color work. In 1893 he married Emeline Obermeyer of New York by whom he has one daughter, Katherine Stearns. In America, while with the Heliochrome Company and after, Stieglitz kept photographing. In his pictures are recorded the growth and change in New York. In *The Terminal*, for instance, "the whole mood and character of a period are caught for all eternity in the web of a photographic second."

In the 1890's Stieglitz edited the *American Amateur Photographer* and from 1897 to 1903 published and edited *Camera Notes*. But Stieglitz was not content just to be a photographer. He threw over the accepted commercial standards of the photo societies and journals from which he had accepted many medals and honors and effected a secession from the established ranks.

In 1905, at 291 Fifth Avenue, he opened a gallery for displaying the photographs of those whose work he thought stood above commercial standards. People came and asked questions,

and Stieglitz found himself acting as official interpreter for photography, fighting for its right to life as a form of creative expression. *Camera Work*, the organ of the Photo-Secession, which he edited until its demise in 1917, has been called "perhaps the most distinguished work on art that America has ever seen."

Soon "291" widened its scope to include works of artists and sculptors. The early masters of the new art movement in France—Cézanne, Picasso, Matisse, Rodin, Toulouse-Lautrec, Picabia, Brancusi, Brâque, Rousseau—had their first American representation under the Stieglitz aegis, and this was a considerable time before the modern movement had got under way in America. He set the ball rolling in 1907 with his exhibition of Rodin drawings and gave the town another shock a few months later with a series of Matisse drawings. John Gould Fletcher gives a less flattering connotation to these activities of Stieglitz. He says that in Paris a new primitivism and abstractionism were preparing to sweep over the world and Stieglitz had merely to show examples of this new art—"in the case of selection he relied, I suspect, on the sensation-hunting energies of his friend, Miss Gertrude Stein—in order to give Americans the impression that he knew a good deal."

From 1907 until 1917, when "291" ceased to exist, an important group of American artists became associated with Stieglitz. Georgia O'Keeffe (whom he married on December 11, 1924), John Marin, Charles Demuth, Arthur Dove, Max Weber, Abraham Walkowitz are but a few of those whom he inspired, showed, helped. According to most critics, Stieglitz "has been a primary factor in forwarding the work of some of the most important of modern artists." But John Gould Fletcher feels that in surrounding himself with American painters and advising them he "probably wrecked and thwarted talents which, without his misdirection, would have found themselves engaged in more significant ways."

From 1917 to 1925 Stieglitz devoted himself completely to photography. In 1925 he opened the "Intimate Gallery" with an exhibition of John Marin, and in 1930 "An American Place" at 509 Madison Avenue, New York City, where he still is. In "An American Place" Stieglitz has continued to demonstrate the essential purpose of "291" through regular exhibitions, publications and manifestoes from time to time.

Here, as in his other galleries, he has continued to maintain the same indifference to commerce. One day, when there were pictures on the wall, a woman who had been walking about, suddenly addressed Stieglitz. "This is a very exciting show. What else ought I to see in New York?" Stieglitz replied: "I have no idea what else you ought to see in New York." The woman asked him:

Dorothy Norman

ALFRED STIEGLITZ

"Could you tell me by any chance where Mr. Stieglitz' gallery is? I hear he has the finest things in New York, but I can't find his gallery listed anywhere." The reply: "Mr. Stieglitz has no gallery." The woman insisted he was mistaken, but Stieglitz raised his voice: "Well, I ought to know. I am Mr. Stieglitz, and I tell you he has no gallery."

When she had left, someone standing there suggested that she might have bought something. But Stieglitz said: "Something more was at stake than her knowing where she was for the moment. I am not in business. I am not interested in exhibitions and pictures. I am not a salesman, nor are the pictures here for sale, although under certain circumstances certain pictures may be acquired. But if people seek something, really need a thing, and there is something here that they actually seek and need; then they will find it in time. The rest does not interest me."

STIMSON, HENRY LEWIS Sept 21, 1867- Secretary of War

Address: b. United States War Department, Washington, D. C.; h. Huntington, Long Island, New York

On July 2, 1940 the Senate Military Affairs Committee voted to recommend confirmation of Henry L. Stimson's appointment as Secretary of War. On July 9 the Senate took its advice. Senate approval of the appointment had been expected, in spite of the flurry caused in isolationist and certain Republican circles by Roosevelt's nomination of a former Secretary of State in Hoover's Cabinet to the strategic post of War Secretary the day after he had made a speech calling for governmental aid to Britain "in our own ships and under convoy if necessary."

The veteran lawyer and diplomat was born in New York City on September 21, 1867, the son of Lewis Atterbury and Candace (Wheeler) Stimson. From Phillips Andover Academy he went to Yale, spending his vacations hunting big game. He was graduated in 1888, a Skull and Bonester, and proceeded to take an M. A. degree at Harvard in 1889 and an LL. B. at the Harvard University Law School in 1890. The next year he was admitted to the Bar, and then became understudy to the late Elihu Root by joining the law firm of Root and Clarke. By 1897 he had become a partner in the firm, which was then known as Root, Howard, Winthrop and Stimson, and which in 1901 took the name of Winthrop and Stimson. From 1898 to 1907 he was also a member of the New York National Guard.

It was in 1906 that Mr. Stimson received his first appointment to a governmental post—from Roosevelt I. He became United States District Attorney for the Southern District of New York, won Roosevelt's support by his prosecution of a famous embezzler, and in 1909 resigned to become the Republican nominee for the Governorship of New York (1910). The opposition called him the "human icicle." Defeated, he was made Secretary of War the following year by President Taft upon the recommendation of Elihu Root, and it was in this office that he acquired the nickname "Light-Horse Harry." Wilson's Administration interrupted his government service, but in 1915 he was attending the New York Constitutional Convention as a delegate at large and helping Al Smith in reforming the State Constitution; during the First World War serving in the A.E.F. as lieutenant colonel of the 305th Field Artillery and colonel of the 31st Field Artillery. For the most part, however, he was occupied with his private law practice, with fox-hunting, with building up a fortune, and with acquiring Highgold, his Long Island estate. In 1927 Coolidge appointed him special representative to arbitrate a dispute regarding the Presidency of Nicaragua; from 1927 to 1929 he was Governor General of the Philippines, where he performed "one of the best jobs he had ever done"; and in 1929 he became Secretary of State in the Cabinet of President Hoover.

As Secretary of State Stimson became known both for his strong interventionist stand and as "the original anti-appeaser." He was disliked in Latin America for his book, *American Policy in Nicaragua* (1927), which was considered propaganda for the State Department's policy there. Chairman of the American delegation to the London Naval Conference in 1930, he and Ramsay MacDonald were talking naval limitation. With Japan's repudiation of the Nine-Power Treaty through the Manchukuo invasion in 1931 he tried to persuade Great Britain to help the United States crack down on Japan, finally formulated the Hoover-Stimson doctrine of non-recognition of territories and agreements achieved by aggression. The Kellogg Pact, signed the following year, he declared, was not merely a negative policy putting the United States on record against war, but a positive policy obligating our country to consult with other nations in the endeavor to make the pact a "living reality." That same year (1932) he headed the American delegation to the Disarmament Conference at Geneva, where he could still "take tactful boat rides with Mussolini."

Stimson was also something of an enigma. He spent frequent week ends—from early Friday until Tuesday—away from the State Department, and his \$800,000 estate at Woodley "was the scene of an interminable series of garden parties, dinners and luncheons"; yet he believed in the redistributing of wealth and increased income taxes for the wealthy. He advocated universal military conscription, "yet was the most hard-hitting enemy the militarists had where they opposed a naval reduction treaty." On some counts he was called "revolutionary and radical," on others "bull-headed, militaristic and inept." He had four personal secretaries, each with one or more assistants; he had a military aide—the first in history to a Secretary of State.

After 1932 Stimson resumed his long-interrupted law practice with the firm of Winthrop, Stimson, Putnam and Roberts, but continued to concern himself with the international scene. "A croquet-playing crony of Secretary Hull" (see sketch this issue), he had few complaints to make regarding his Democratic successor—indeed, it is said that he believed Hull one of the greatest of all Secretaries and would dash off letters to the *New York Times* whenever his policies were criticized. Strongly conservative, he was still sympathetic to some of the New Deal policies, made frequent trips to Washington and more than once publicly supported President Roosevelt's foreign policies and called for non-partisanship in the field of foreign relations. His radio speech in May 1934 backing a bill to give wide tariff-bargaining powers to Roosevelt was found "most untimely" by Republican Senators.

In 1937 he was elected president of the Association of the Bar of the City of New York.

In his writings Stimson grew increasingly critical of Japanese policy, called for the cessation of United States' aid to Japan. He advocated a firm attitude toward Hitler and Mussolini, bewailed the "amoral" drift of neutrality legislation, was one of the strongest opponents of the Ludlow Amendment. Shortly before the fall of the Spanish Republic he was fighting for the lifting of the Spanish embargo. Hull's proposed neutrality bill allowing the Allies to purchase munitions under the cash-and-carry plan was given Stimson's support before the outbreak of World War II. And although early in 1939 it was still his opinion that the United States "enjoyed a unique and powerful advantage in its geographical situation and freedom from bomb attack," it was also his opinion that we must drop our isolationism.

With the beginning of hostilities Stimson's quarrel with United States isolationists naturally became more serious. He became a leading member of the Committee to Defend America by Aiding the Allies, organized by William Allen White (see sketch this issue) and one of the leading "Air Plattsburgers." He was often accused of being an "interventionist," having "suggested by his tone if not his words that even war would not be too high a price to pay for Hitler's scalp."

On June 18 a speech given by Mr. Stimson at New Haven, Connecticut laid down a line for United States' foreign policy and defense. He called for immediate compulsory military training, urged the repeal of "our ill-starred, so-called neutrality venture," accelerated shipment of planes and munitions to Great Britain with the use of the United States Navy to convoy shipments, if necessary, and the opening of American ports to British naval and merchant marine vessels. On June 20, 1940 the resignation of Secretary of War Woodring from President Roosevelt's Cabinet was followed by the announcement of Stimson's appointment, at the same time that Colonel Franklin Knox (see sketch this issue) was called to the post of Secretary of the Navy.

Although the two men were promptly read out of the Republican Party, many leading Republicans expressed their approval of the appointments, while some Democrats crossed party lines to condemn the coup as a prelude to war, an effort to disrupt opposition on the political front, or a retreat from the former liberal policies of the Administration. In Great Britain and in China the press was unanimous in its approval, however.

At the session of the Senate Military Affairs Committee which recommended confirmation of Mr. Stimson's appointment, the former Secretary of State defended his views during two hours of questioning. He explained his New Haven

HENRY L. STIMSON

speech as "having been made as a private citizen and at a time when the British situation seemed more desperate than it does at present." Queried as to his accord with all the Administration's policies, he replied: "I have abandoned everything except a consideration of the defense of the country since my acceptance."

Since his appointment he has been an ardent advocate of conscription and was one of the most gratified men in Washington when he drew the first number in the Draft Lottery on October 29, 1940. Under him United States defenses in Hawaii will be strengthened, and he has already ordered 65 per cent speed-up in army munitions production by the six Federal arsenals.

Mr. Stimson married the former Mabel Wellington White. He has no children, but many pets; he is fond of exercise, and is an excellent rider and tennis player. He holds the rank of brigadier general in the Inactive Section of the Officers' Reserve Corps. He has been described as "a strange mixture of conservatism and liberalism, of pacifism and militarism, of gentility and democracy."

Who's Who in America

Who's Who in Law

Who's Who in the Nation's Capital

STIMSON, JULIA CATHERINE May 26, 1881- Chairman of the Nursing Council on National Defense

Address: b. American Nurses' Association, 50 W 50th St, New York City; h. Horse Chestnut Rd, Briarcliff Manor, New York

Major Julia C. Stimson, chairman of the Nursing Council on National Defense and veteran of the First World War, is urging young women to enter the nursing profession during the present emergency. "Even in ordinary times no highly qualified nurse need ever be unemployed," she says. "The expansion of the Public Health Service and the greater administrative positions now opening for women in the nursing field assure brilliant careers in the future."

Major Stimson herself has had a distinguished career in the nursing profession. She was born in Worcester, Massachusetts, the daughter of Dr. Henry A. and Alice Wheaton (Bartlett) Stimson, and the cousin of Henry L. Stimson, Secretary of War (see sketch this issue). She is the sister of Dr. Phillip Moen Stimson, specialist in communicable diseases, and of Dr. Barbara E. Stimson, specialist in orthopedic surgery. Julia Stimson was sent to the Brearley School in New York City and later to Vassar College, from which she received her B. A. in 1901. When she left college Miss Stimson was undecided about a career, but knew she was

interested in biology and sociology. She enrolled as a graduate student at Columbia University and spent the years until she entered the New York Hospital Training School in 1904 studying.

Miss Stimson's first job was that of superintendent of nurses at Harlem Hospital and in 1908 she became head of the nursing department of the Hospital. In this position she became interested in the possibilities of a hospital social service department and helped develop one. It was because of this interest that she received her next position in 1911—that of administrator of hospital social service at Washington University, St. Louis, Missouri.

Besides acting as social service administrator, Miss Stimson became, in 1913, superintendent of nurses of the hospitals and dispensaries associated with the Washington University Medical School. These jobs ended when the United States entered the War. Immediately Miss Stimson became a reserve nurse of the Army Nurse Corps and sailed for Europe on May 19, 1917 as chief nurse of Base Hospital No. 21, the St. Louis Red Cross Unit. This hospital served with the British Expeditionary Force at Rouen, France and much of its important and successful work has been attributed to Miss Stimson's guidance and ability.

In April 1918 Miss Stimson was ordered away from the St. Louis unit and was assigned to duty with the American Red Cross in Paris. There she was made chief nurse of the Red Cross Nursing Service in France and became coordinator of Red Cross and Army Nursing. In letters to her family she told of the trials and turmoils which had to be met, the uncertainties and anguishes. It was her success in meeting them, undoubtedly, that brought her the appointment of director of Nursing Service for the American Expeditionary Force—a job that meant the supervision of more than 10,000 members of the Army Nurse Corps.

In the United States, meanwhile, the need for nurses had greatly increased and to meet this need the Army School of Nursing had been organized. When Miss Stimson returned home from Europe in July 1919 she was made acting superintendent of the Army Nurse Corps and dean of the Army School of Nursing. Later in that same year she was appointed superintendent of the Army Nurse Corps, a post that gave her the rank of major and the coveted gold leaf on her epaulet, a post that raised her to the highest rank in the nursing field.

For 20 years Miss Stimson, the first nurse to hold the rank of major, served in this position, studying the status and opportunities of the Army Nurse Corps, the possible promotion of its place in the military service and its relationship to other nursing organizations. Due to her activities the requirements for appointments to the Corps were raised, relative rank for nurses, improved housing condi-

JULIA CATHERINE STIMSON

tions, retirement privileges, post graduate courses, and statistical studies were instituted. In May 1937 Major Stimson retired. Today she continues as president of the American Nurses' Association, a position she has held since 1938.

"A tall vigorous woman with short gray hair, deep blue eyes and the firm hand-clasp of a man," Major Stimson is now busily engaged in carrying on the work of the Nursing Council on National Defense. She continues to contribute to nursing literature in articles and continues to lecture. In her spare time she plays the violin or goes swimming.

Major Stimson is the author of *Drugs and Solutions for Nurses* (1910) and *Finding Themselves* (1919). For her work in the nursing field she has been awarded the American Distinguished Service Medal, the British Royal Red Cross, 1st Class, the Medaille de la Reconnaissance Française, the Medaille d'Honneur de l'Hygiène Publique and the International Florence Nightingale Medal.

STINE, CHARLES MILTON ALTLAND

Oct 18, 1882- Chemist

Address: b. E. I. du Pont de Nemours & Co, Wilmington, Delaware; h. 1100 Greenhill Ave, Wilmington, Delaware

Dr. Stine, the chemist who initiated the research for making big molecules out of little ones that led to the discovery of nylon, the remarkable organic material out of which chemistry can make anything from sheer silk-like hosiery to toothbrush bristles and fish line leaders, was presented with the Perkin Medal on January 12, 1940. The Perkin Medal was established in 1906 in commemoration of the fiftieth anniversary of the coal-tar products industry and may be awarded annually by the American section of the Society of Chemical Industry for the most valuable work in applied chemistry.

Directly or indirectly, from the results of intensive research in organic chemistry, Dr. Stine has been responsible for advances in the following fields: modern plastics, motion picture films using synthetic camphor, medicinal chemicals like sulfanilamide and sulfapyridine, superior dyes, improved cheap and safe refrigerant fluids like Freon, the development of synthetic rubber, safety glass, superior lubricants for motor cars, superior gasolines and fuels, better and safer explosives, synthetic urea for fertilizer, new plant hormones and vitamins.

Charles Milton Altland Stine, the son of the Reverend Milton Henry and Mary Jane (Altland) Stine, was born in Norwich, Connecticut in 1882. After some years spent in trying to prove false the saying about ministers' sons he was graduated, Phi Beta Kappa, with a B. A. degree from Gettysburg College, Pennsylvania in 1901; received his

C. M. A. STINE

B. S. there in 1903; M. A. the next year; M. S. in 1905; and Sc. D. in 1926. While studying for his M. A. he taught chemistry at the Maryland College for Women. He became a fellow at Johns Hopkins University in 1906 and received his Ph. D. in 1907. He was awarded an LL. D. by Cumberland University in 1932.

After graduation Dr. Stine started a long period of employment with E. I. du Pont de Nemours and Company, Incorporated. He was first assigned to the Eastern Laboratory at Gibbstown, New Jersey for research on explosives. From 1909 to 1916 he was in charge of chemical research and worked on many compounds used in explosives. For years all the aromatic nitro compounds used by the Du Pont Company were prepared according to processes developed under his direction. He also played a part in improving safety explosives for use in coal mines, and low freezing dynamites. The first commercial trinitrotoluol was made as a result of work done under his direction. With C. C. Ahlum he demonstrated the value of sodium sulphite as a purifying agent for extracting crude TNT and with his own hands made the first 25,000 pounds of trinitrotoluol which the company produced on a navy contract. He made the crude material, recrystallized it, dried it, sieved and packed it into boxes.

Dr. Stine devised ways to improve the manufacture of ammonium nitrate at the time when this salt was made from crude ammonia liquor. He studied leakage of nitroglycerine and other liquid ingredients of dynamite, and his work on permissible explosives resulted in a new series much safer for use in gassy mines. As a result of his study of dynamite caps he developed a method for nitrating ivory nut waste. Dr. Stine also developed methods for making tetryl from dimethylaniline; for picric acid

STINE, CHARLES—*Continued*

starting from chlorobenzene; and for chlorinating benzene.

In 1916 Dr. Stine was in charge of a group of chemists sent to England to study the manufacture of dye intermediates. Then followed a preliminary investigation at the Eastern Laboratory while the Jackson Laboratory was being built. He was in charge of all the chemical research in the early stages of this work, leading to the manufacture of dye intermediates. From 1919 to 1921 he had a large part in building up the reorganized chemical department of the Experimental Station for research aimed at the development of new industries and improvements in products beyond the scope of plant or departmental laboratories. Among the products and processes developed during the years 1921 to 1930 were finishes made with nitrocellulose and later with synthetic resins, synthetic methanol and higher alcohols; an improved process for citric acid by the oxidation of ammonia; and improved catalysts for the contact process for manufacturing sulphuric acid.

After six years, in 1930, Dr. Stine succeeded in his efforts to have the company set aside a substantial sum for basic research. He initially directed this work along with the activities of the chemical department. He felt that great promise was offered by a fundamental study of the polymerization of organic chemicals. Programs of research were also initiated in physical and colloid chemistry and chemical engineering. Out of this fundamental research there have come neoprene and chloroprene rubber and the protein-like polyamide compound known as "fiber 66" or nylon. It is made from air, water and coal, and is said to be more elastic and durable than silk, more versatile than rayon. It is already used for toothbrush bristles and may yet make United States hosiery manufacturing independent of Japanese raw silk.

In 1919 Dr. Stine was appointed assistant director of the Du Pont chemical department and became director in 1924. In 1930 he was elected a vice-president and was made a member of the executive committee and of the board of directors. At present he is serving the company in all three of these capacities.

Speaking in opposition to the popular belief that the development of science encourages warfare, Dr. Stine says that "though science is able to confer the richest blessings upon mankind, it is not able to change the heart of man and insure that the great increases in scientific knowledge will be beneficently applied." Nevertheless he believes that "the great contribution which the development of the organic chemical industry has made to the self-sufficiency of this country is a definite contribution toward the maintenance of peace."

Dr. Stine has maintained an active interest in scientific societies: he is a past councilor-at-large and past chairman of the Delaware section of the American Chemical Society, a director of the American Institute of Chemical Engineers, a life member of the Franklin Institute, a member of the American Association for the Advancement of Science, a member of the Advisory Committee of the Philadelphia Academy of Natural Sciences and a committee member of the National Research Council. He is active also as a lecturer and as a contributor to scientific and popular journals.

Fortune selected Dr. Stine as one of the "outstanding faces of 1938"; he is ranked as among the 175 most important chemists in the United States by *American Men of Science* and has received medals from the Society of Chemical Industry.

Dr. H. E. Howe, in an address on the presentation of the Perkin Medal, said: "It would be difficult to find a better example to justify the saying 'if you want something done, get a busy man to do it' than is found in the interests and activities of Charles Stine."

In 1912 Dr. Stine married Martha E. Molly of Lewistown, Pennsylvania. They have two daughters.

STODDARD, FREDERICK LINCOLN

Mar 7, 1861—Feb 24, 1940 Artist

Frederick Lincoln Stoddard, painter and muralist, who left the imprint of his work in public buildings in various parts of the United States, died at his home in Gloucester, Massachusetts, two weeks before his seventy-ninth birthday. Born in Coaticook, Quebec, Canada, he spent his youth in the West, and studied art at the St. Louis School of Fine Arts and in France under famous artists.

He returned to the United States in the '90s, and was instructor of design at the St. Louis School of Fine Arts from 1894 to 1905. His paintings were exhibited in the Paris Salon in the early '90s, and in 1904 he won a silver medal at the St. Louis Exposition, where he was chairman of art education.

He designed murals for the St. Louis City Hall, the Memorial Church in Baltimore and several high schools.

Mr. Stoddard moved to New York in 1906 and worked there until 1922, when he moved to Gloucester. In New York he painted murals for various schools, including the Hebrew Technical School for Girls and the Eastern District High School.

In Gloucester he was active in the artists' colony, serving as second president of the Gloucester Society of Artists and secretary of the North Shore Artists' Association. He was also a member of the Salmagundi Club, New York.

FREDERICK L. STODDARD

During the 17 years of his residence in Gloucester he painted murals for several public buildings there, and designed the wall decorations for the Sawyer Free Library.

Surviving him is his widow, the former Henrietta Ravet.

STOOKEY, CHARLEY May 4, 1900—Farm radio reporter for CBS and Station KMOX

Address: b. Mart Bldg, St. Louis, Missouri

Charley Stookey was born on a farm near Belleville, Illinois, and attended elementary and high schools in Belleville. Shortly after graduation he joined the navy and served until the end of the First World War. After returning home in 1919 he entered the University of Illinois and received a degree from the College of Agriculture. He is married and the father of four children.

Upon leaving the University he covered the entire Midwest as a reporter for the *Prairie Farmer*, and later was made farm director of a radio station in Chicago. He is a real veteran in radio, having started in 1929. Since 1932 he has been with station KMOX in St. Louis.

A man of tremendous vitality, he has driven the seventeen miles from his farm to the radio studio in St. Louis every morning for years to give his daily 5:30 a. m. broadcast. In these early morning programs he has supplied thousands of rural listeners in Missouri and Illinois with latest market reports and farm service features. He was the first announcer in the country to take portable broadcasting equipment into the fields and announce a national cornhusking contest direct from the scene.

Since July 1939 farmers throughout the country have become familiar with Stookey, for then CBS appointed him farm reporter. His duties take him over the entire country for his Saturday broadcasts on a nation-

CHARLEY STOOKEY

wide hook-up. These programs present a cross section of agriculture in the United States, as well as opinions of representative farmers. Whenever possible, Stookey continues with his regular KMOX early morning broadcasts.

Recently he decided to give up active farming, but he still finds time to make personal tours in Missouri and Illinois each week. Thus he is able to present firsthand knowledge of farming conditions to his 5:30 a. m. listeners.

STORR, VERNON FAITHFULL, REV. Dec 4, 1869—Oct 26, 1940 Canon of Westminster Abbey since 1921 and rector of St. Margaret's Church, Westminster, England since 1936; lectured at Cambridge University; among published writings are *The Development of English Theology in the Nineteenth Century* (1913) and *The Living God* (1925)

STOWE, LELAND Nov 10, 1899- Newspaper correspondent

Address: b. c/o Chicago Daily News, Chicago, Illinois; h. 121 Delwood Rd, Bronxville, New York

The foreign correspondent who has to date cabled the ablest, sensationallly far-reaching reports on the War in Europe, and who is expected to win a 1940 Pulitzer Award for his work, is Leland Stowe. He has already been given an award for "faithful reporting" by the Overseas Press Club.

The two most important scoops to his credit are his exposé of the "Trojan-horse" treason and treachery by which Germany invaded Norway with incredible dispatch; and his equally authentic reports of the British blundering and inefficiency that lost the Norway campaign. His story of the Nazi invasion was said to have put other European nations on guard against Fifth Column activities in their own territory. His revelations on the unprepared and tragically mismanaged British expedition—though the story was censored by the British press—led to a shake-up in the British cabinet and the ultimate ousting of Chamberlain as Prime Minister.

Leland Stowe's achievements become more interesting in view of the fact that in the fall of 1939 the New York *Herald Tribune* told him he was "too old" to be a war correspondent. Stowe was 40, youthful and physically energetic despite his shock of white hair, and had served his paper well for 18 years. But three hours after the *Tribune* had refused him a post abroad, Colonel Frank Knox (see sketch this issue), editor of the Chicago *Daily News*, sent him a telegram asking if he cared to cover the War for the *Daily News* and other papers. "There is a God!" Stowe telephoned his wife; and a few days later, September 10, he was flying to Europe.

The ace correspondent for the Chicago *Daily News*, the New York *Post* and 14 other American newspapers was born in Southbury, Connecticut November 10, 1899, the son of Frank Philip and Eva Sarah (Noe) Stowe. A Methodist, he took his B. A. at Wesleyan University, Middletown, Connecticut in 1921. He held his first newspaper job at the age of 18 as campus correspondent for the Springfield (Massachusetts) *Republican*. While at college he earned his letter as a cross-country runner—training that later made him literally a master leg-man in covering war maneuvers. Paul Mowrer, of the Chicago *Daily News*, says that when Stowe "can't get a plane, a car or a horse, he starts out to walk." He hiked 10 miles through mud and snow over a mountain range near Trondheim, Norway to reach the Swedish border and file his exclusive story of the Nazi invasion.

The year following his graduation from college Stowe was a reporter on the Worcester *Telegram*, and in 1922 began his newspaper career in New York City. From 1922 to 1926 he worked for the New York *Herald* and for *Pathé News*. He was married to Dr. Ruth F. Bernot in 1924. Mrs. Stowe, like her husband, is a New Englander. She studied dentistry at Tufts College and was a dentist at the time of their marriage. They have two sons, both born in Paris while Stowe was Paris correspondent for the New York *Herald Tribune* from 1926 to 1935.

Young, ambitious and conscientious, as head of the *Tribune's* Paris Bureau Leland Stowe became well-grounded in French politics and finance. Although censured

occasionally for over-stressing detail in his cables to the home office, it was precisely his careful attention to details that won for him in 1930 a Pulitzer Prize for his work on the Young Conference. He was decorated with the French Légion d'Honneur in 1931. In 1933 his book, *Nazi Means War*, was published.

As foreign correspondent since 1932 Stowe has covered important world events from positions ranging from London to Istanbul. He reported Pan-American conferences at Buenos Aires and Lima and covered Franco's rebellion in Spain, where his sympathies were distinctly with the Loyalist forces.

He was back at work in his office at the *Herald Tribune* in September 1939 when Germany invaded Poland and England declared war. When the *Tribune* refused him a foreign post and he got one through Colonel Knox of the *Chicago Daily News*, he flew to London and was first assigned to Finland. He sent back eloquent dispatches on the Russo-Finnish situation—stories that have been called “reportorial masterpieces—though seldom allowed to come very near the scene of the events he described so graphically. It was in Finland that he learned to use skis.”

In the spring of 1940 the alert-minded correspondent was in Stockholm, considering a trip to Riga. But something in his bones said, “Get to Oslo first.” So with his friend Edmund Stevens of the *Christian Science Monitor* he reached Oslo April 4, where the only other United States correspondent was about to leave. On hand, however, was another friend, Warren Irvin, of NBC. Everything was peaceful, but Stowe stayed on. His hunch was right—on April 8 Nazi bombers roared over the Norwegian housetops. By two in the afternoon the conquerors—not more than 1,500 of them—marched through Oslo's streets. Stowe got busy investigating this fantastically easy conquest. He found his story—that of a country infested with spies and traitors in key positions. Escaping to Stockholm, the 40-year-old veteran “too old to cover a war” cabled on April 15 his scoop on the Trojan-horse invasion.

During the Norway campaign he followed the British troops, interviewed officers and men near Namsos. They were being mercilessly bombed, with no anti-aircraft guns for defense, no field guns, few supplies. “They've let us down in London,” said a young territorial whose battalion had been decimated. The Norwegians were bitter about the B. E. F.'s lack of equipment. “It looks as if the British were going to fight to the last Norwegian,” an officer remarked to Stowe. When extracts from this news reached London (via New York) the Labor Party came out in open opposition to the government; it was said that if the full report had then been published in London the Chamberlain government would have fallen in less than a week.

LELAND STOWE

Leland Stowe was in June 1940 in Romania, cabling news of the situation in that section to his papers. He was also at work on a book, begun some time ago, on the Second World War, which his publishers reported would be ready for publication in 1940. Quincy Howe says of him that he has “tended more and more to editorialize. He hit an all-time high when he wired a long dispatch from the Balkans in late June stating that if the United States would at once send 2,000 planes to Britain, Hitler would be stopped.”

STRASSER, OTTO (shträs'ēr) Sept 10, 1897- Exiled German leader
 Address: c/o Houghton Mifflin Co, 432 Fourth Ave, New York City

For six years now Adolf Hitler has been trying to “get” Otto Strasser. According to a July 1940 Associated Press dispatch he had finally succeeded, but late in August Strasser turned up safe in Portugal, after a two months' flight across France and Spain.

This man whom Hitler hates and fears has been fighting him since 1930 as head of the German Black Front, organized to fight

Keystone—Underwood

OTTO STRASSER

the Nazis from within. Today he swears that the Black Front is a real danger to Hitler and that he, Otto Strasser, will be the leader of the "second revolution." Even when the Black Front was threatened with being stamped out after Strasser was accused of the Munich bombing plot, Strasser insisted: "We have nothing to fear. . . . The Black Front has men in it whom they will never discover. They are working not only in the Nazi Party organization, but in the Gestapo itself."

The hairbreadth story of the Black Front and of Otto Strasser, the story of Hitler and his rise to power was told by Douglas Reid in *Nemesis?* (1940) and is now told by Strasser himself in his *Hitler and I*, published in August 1940. In with Hitler from the beginning, this man whom Goebbels now calls "Hitler's Public Enemy No. 1" has finally told his whole history and the history of those with whom he was once so closely associated and whom he now so violently hates. His *Germany Tomorrow* was published in England at the same time.

Otto Strasser was born on September 10, 1897 at Windsheim in Franconia, Bavaria. His father was a "quiet, diligent, middle-rank civil servant in the judicial service," a Socialist at heart and a devout Catholic. He studied at the Realschule of Diggendorf in Lower Bavaria, and later at the Oberrealschule of Munich. There was no money for Otto to go to the university, so in 1913 he left school to spend "a terrible year" as an apprentice in a textile factory. Then came the War. When it ended Otto was captain of an artillery battery, twice wounded and decorated with the Iron Cross and the Bavarian Distinguished Service Order. He immediately entered Von Epp's Free Corps and fought with him to end Munich's Communist government.

The fighting over, he entered the University of Munich, struggling to support himself by stenographic jobs, by teaching workmen in the evenings. During these years he had been an active member of the Socialist Party, but when he left with his law degree in 1921 he had resigned from the party, disgusted with its aims and tactics.

After leaving the University Strasser entered the Ministry of Agriculture and Food Supply in a very minor position. Through his brother Gregory he had already met Hitler, in 1920, and in 1925 he joined the National Socialist Party. At that time Gregory, the party's head in the important region of North Germany, was more important than Hitler. Otto became active in the party; he edited the *Nationalsozialistische Briefe*, the *Berliner Arbeiterzeitung* and the *Sächsischer Beobachter*, Nazi organ.

During these years, however, Otto Strasser distrusted Hitler, and relations between him and his brother, who still believed in Hitler, became strained. Otto disliked Hitler personally—he even called him a fraud and a lying cheat to his face. And his own theories of Socialism differed from those Hitler was developing. He emphasized the Socialist part of National Socialism; he would abolish private ownership of land or mineral resources and the products of the earth, as well as of the means of production. The expropriated land, etc., would be leased according to modified feudal arrangements and all *Volksgenossen* would have a share in the ownership, direction and profit of the total economy according to capability and worthiness. Hitler told him: "What you call socialism is pure Marxism and your whole system is a writing-desk job and has nothing to do with real life." Actually it isn't Marxism at all. Strasser has stated firmly that: "We must be equally implacable and hostile in our attitude toward capitalism and toward international Marxism."

Strasser quarreled with Hitler, too, over "racial" theories, and although he agreed with him in considering Jews as foreigners in Germany, unlike Hitler he was "unaggressive about it." Lately, it might be added, he has favored giving German Jews a minority status and has even ventured that a very few Jews might "pass" into the German people.

As Hitler became more powerful in the Nazi Party an open breach with Otto Strasser was inevitable, and in 1930 Strasser was expelled. His brother Gregory stayed in until 1933; in 1934 he was murdered by Hitler. Otto immediately announced that he was setting up a "fighting union of revolutionary National Socialists." Hitler's reply was to close down the Kampfverlag which published the papers which Strasser edited and to announce that anyone who joined with Strasser would be expelled from the party. "So," says Strasser, "I

found myself without resources on the threshold of a new life and confronted with a colossal task."

The Black Front ("black" here means "secret") was organized from dissident groups; newspapers were set up to publish its message; and by the end of 1932 it was becoming "quite a power in the land." Shortly after the Reichstag fire, when Hitler began to rule, it was suppressed. Strasser's life was in danger.

What happened to Strasser from then on is "an astounding story of adventure and hairbreadth escape." He fled into Austria and started sending pamphlets over the border. Leaflets were smuggled into Germany by ingenious methods. Once he made 50,000 facsimiles of the envelopes of the German Medical Association, filled them with literature and mailed them within Germany itself at cheap postal rates. Always his life was in danger. One day he returned to Vienna, after a trip to Prague, to find that 19 of his assistants and friends had been arrested. He escaped to Prague.

From Prague, Strasser kept up his activities. He set up his *Schwarze Sender*, a secret broadcasting station that pestered the Nazis for a year until it was discovered by the Gestapo. He continued to organize his forces within Germany itself. He continued to escape death. Once in Prague he was invited to address some Black Front members. His hosts insisted he must want a bath after his long journey. Suspicious, as ever, Strasser examined the bathtub and found it wired for electrocution. He escaped through the bathroom window.

When Germany took over Czechoslovakia, Strasser escaped into Switzerland. When, in November 1939, the Reich was pressing Switzerland to extradite him in connection with the Munich bombing (Strasser insists it was done by Himmler and his Gestapo themselves), he skipped across the Swiss border into France. And it was there, according to all reports, that he was when the Nazis took over.

A "mild-mannered, soft-spoken Bavarian with a big, egg-shaped head, square and stocky in person, earnestly persuasive and a bit pedantic," Strasser is personally the complete antithesis of Hitler. He who talks of his "second revolution" talks of it quietly, simply and, according to some observers, makes it seem "an eminently reasonable enterprise. You just couldn't see this nice Bavarian who could talk like a Heidelberg professor making heads roll."

STRAVINSKY, IGOR (strä-vën'ske ē'gor)
June 17, 1882- Composer and conductor

Address: c/o Harvard University, Boston, Massachusetts

Igor Stravinsky, world famous composer and conductor, holds the Elliot Norton chair at Harvard University for 1940. He plans to stay in the United States and has accepted a number of engagements as guest conductor with American symphony orchestras. He conducted the Boston Symphony Orchestra at Carnegie Hall, New York, January 4 to 7, 1940; and was guest conductor of the New York Philharmonic Symphony Orchestra April 3 to 7, 1940, concluding with an all Stravinsky program on Sunday, April 7.

Igor Fedorovich Stravinsky was born at Oranienbaum, near St. Petersburg, Russia, June 17, 1882. His father was a singer at the Imperial Opera, but he was sent to the University to study law. However, at the age of 20 he began to study music with Nikolai Rimsky-Korsakoff; his first important work, an orchestral fantasy, *Fireworks* (1908), was produced just after his famous master's death. His name became known in musical circles with the performances in 1908 of his *First Symphony* and of *Le Faune et la Bergère*. These compositions brought him to the attention of Sergei Diaghilev, who was then organizing his *Ballet Russe* in Paris. Diaghilev commissioned Stravinsky to write an original work on the subject of the Russian fairy-tale, *The Fire Bird*, and the ballet, staged by the dancer Nijinsky (see sketch this issue), was produced in 1910. The audience, puzzled and outraged, staged a riot; but *The Fire Bird* remains Stravinsky's first masterpiece. His second ballet was *Petrushka*, on the pathetic hero of the Russian marionette show. Produced in 1911, it used two keys together for polytonal effect. More far-reaching was the production of *Le Sacre du Printemps* (1913). Creating entirely new musical values, it established him as a world figure in music. Perhaps its most unusual presentation was Walt Disney's (see sketch this issue) interpretation in *Fantasia*. Although it was radically cut and used as the background for the story of prehistoric life, with nightmarish monsters stalking the screen, the composer announced that it was what he had in mind all along.

A period of works typically Russian in character followed. Stravinsky's *Histoire du Soldat* (1918) was based on a Russian tale about a deserting soldier. In search of new musical resources, he wrote *Ragtime* (1918) in the spirit of American jazz, and, in 1920, a Pergolesi ballet. *Mavra* (1922) a one-act opera, was his last work based on Russian themes; but his *Les Noces*, introduced by

Musical America

IGOR STRAVINSKY

the *Ballet Russe* in 1923, belongs also to this period of his career.

Stravinsky's post-War period was marked by a new austerity and economy in composition; his music was no longer vitriolic, but cool. This was illustrated in his *Concerto* (1924) for piano and orchestra; and the negation of the esthetic code was further pronounced in the oratorio, *Oedipus Rex* (1927).

He went on his first American tour early in 1925, as conductor of his own works with the New York Philharmonic Orchestra, and as pianist with the Boston Symphony Orchestra. The world première of his *Apollon Musagètes* was performed in Washington in 1928. A new ballet, *Le Baiser de la Fée*, was produced in Paris in 1928. His *Symphony of Psalms*, written for the fiftieth anniversary of the Boston Symphony Orchestra, was completed in 1930. He wrote the music for Madame Rubenstein's ballet, *Persephone*, which had its première in Paris in 1934. For his 1937 American tour, he wrote a ballet on a poker game, *Card Party*, called "a ballet in three deals," and it was produced at the Metropolitan Opera House under his direction.

There are two opposing camps with regard to the second and third periods of Stravinsky's compositions. One feels that the new classical simplicity and restraint represents him at his best—and Stravinsky himself is of this opinion. The other group yearns for his return to the bold color and vitality of the earlier work.

Whatever the opinions regarding Stravinsky's individual periods of composition, critics and musicians in general are agreed on his importance. Of him Marc Blitzstein (see sketch this issue) writes: "A composer with genius only partially realized, with only

one or two works fixed for immortality, has nevertheless become the figure, the influence in the music of his day; and, although lacking in ultimate greatness, he occupies a position in musical time the exact opposite of, and not less important than, the position occupied by Beethoven."

Stravinsky's *Autobiography*, which appeared in this country in 1936, is the terse, candid chronicle of his first 38 years. In this volume he tells us a great deal about his childhood and youth; and his ready wit is evident in several of the anecdotes he relates about Rimsky-Korsakoff, with whom he studied.

His appearance has been described as follows: "Igor Stravinsky is small and thin; his chest appears hollow. His face, long and lean, has an expression of indefinable sadness. His eyes have a particularly piercing intensity which not even heavy lenses can obscure. An aquiline nose descends sharply from a majestic brow, and overlooks lips of uncompromising firmness." He gives an impression of enormous vitality, is very fond of good living and good conversation, but maintains usually a frigid silence with regard to his own music. Wagner he detests; his favorite composers are Mozart and Tschaikowsky. He has a keen appreciation of art and literature, and religion plays an important rôle in his life. He likes to play bridge and poker, and takes his camera with him wherever he goes."

As an orchestra conductor Stravinsky has become well known to the music-loving public. Though lean, his figure is erect and commanding, and he makes an impressive presence. He conducts his own works from a score, quietly and precisely, and with a notable grace. He has his idiosyncracies, one being his dislike of the cold. Once at a Philharmonic rehearsal the orchestra was amazed to see him peel down to his shirt-sleeves, since he dreads a draft and usually wears a couple of sweaters, snuggling into a fur-lined overcoat during rest periods. When playing the works of other composers, Stravinsky meticulously follows the score. He says he detests "star" conductors who pride themselves on their interpretations: what the composer originally wrote is good enough for him.

On April 1, 1940 *Time* reported a second marriage (his first wife died in 1939) to Vera de Bossett Sudeikine, onetime dancer with Sergei Diaghilev's *Ballet Russe*. After Disney had completed *Fantasia*, Stravinsky signed a contract to do more music with the Hollywood artist. His newest Symphony, dedicated to the Chicago Symphony Orchestra in honor of its Golden Jubilee, is described as "a gesture in the direction of Joseph Haydn."

 Who's Who

STREIT, CLARENCE (strit) Jan 21, 1896- Newspaper correspondent
Address: b. 10 E 40th St, New York City; h. 4701 Connecticut Ave, Washington, D. C.

Authors of first novels sometimes experience the thrill of leaping at once into the best-seller class. The writers of books setting forth far-reaching proposals in the field of government, however, usually must wait a long time for their ideas to be recognized as practical by statesmen, political scientists and the general public. *Union Now* was in its tenth printing six months after publication.

Completely American, Clarence Kirshman Streit was born in California, Missouri, the son of Louis Leland and Emma (Kirshman) Streit, and brought up in Montana. While a student at Montana State University, Streit enlisted for the First World War. He served overseas in the American Expeditionary Force, with the Railway Engineers because he had worked summers in the Public Land Surveys of the Rockies and Alaska. Later he was a sergeant in the

Intelligence Service and attached to the Archives Division of the American Peace Mission at Versailles. He was one of those who guarded President Wilson on his return from Paris to Washington, his job being "mainly to smell bouquets sent him to see they hid no bombs."

After he returned to Montana, while completing the work for his Bachelor of Arts (1919), he was awarded a Rhodes Scholarship. He also studied at the Paris Sorbonne.

He was foreign correspondent for the *Philadelphia Ledger* from 1920 to 1924, working in Rome, Constantinople, Paris and other European capitals. He was expelled from Romania when his frank dispatches met the disfavor of that government.

In Paris he met Jeanne Defrance. They were married on September 26, 1921 and have three children, Traven Pierre, Jeanne Emma, Colette Helen. His wife assists him in his writing.

He has been with the *New York Times* since 1925, covering the Carthage excavation and the Riff War; became first Vienna correspondent, and then in 1929 League of Nations correspondent, holding this position until 1939. While there he was elected president of the Association of Newspaper Correspondents in Geneva.

As editor of the Montana college paper, Streit had already started to develop a skeptical, questioning attitude toward war, an attitude further evolved by his experiences in the A. E. F. and as foreign correspondent at Geneva.

His ideas crystalized in the form of a book, a book that had the reputation of being one of the most unanimously rejected books in publishing history. He had spent five years, since 1933, in writing and rewriting *Union Now*, advocating a political and economic organization of all the democracies of the world into a union similar to the United States of America. Finally at Ambilly, France, in 1938, he had 300 copies, (not for sale), printed in English at his own expense.

The following year Harper & Brothers imported a modest edition and the Carnegie Foundation distributed copies to educational institutions. Simultaneously it was published in London. A *Town Hall of the Air* radio discussion in New York City aroused public interest and stimulated sales. Further championship came from Russell Davenport, then editor of *Fortune*, with an editorial in the April 1939 issue: "Mr. Streit's name was coupled with that of Mr. Cordell Hull (see sketch this issue) as co-worker in the cause of a 'free libertarian' economy. Under the somewhat unexpected caption of 'Business and Government' an outline of Streit's scheme was given as that of a gargantuan democracy of 280,000,000 people; a vast economic opportunity—the greatest political and economic opportunity in history."

Sales began to rise to 200 copies a week. In June 1939 the *Reader's Digest* carried a condensation of the *Fortune* article. In Octo-

CLARENCE STREIT

ber *Life* led off with an article on Streit and the United States of the World. Sales by December increased to 700 a week and approximately 10,000 copies had been sold by the end of 1939, with an abridged edition published in March 1940. It was awarded honors as "the outstanding book of 1939" by *Current History*. The book has been translated into French and Swedish. A German edition, published in Zurich, is to appear very soon and there are rumors of a Portuguese translation for distribution in South America.

Besides *Union Now* (1939), Mr. Streit has written *Where Iron Is; There is the Fatherland* (1920) and *Hafiz—The Tongue of the Hidden* (1928), a translation from the *Rubaiyat*. On January 3, 1941 his new book *Union Now Begins* will be published. In it he restates his plan, in view of world conditions.

On extended leave of absence from the New York Times, Mr. Streit is chairman of the National Organizing Committee of the Inter-Democracy Federal Unionists (I. F. U.), an association that was formed last July to promote in this country the plan for a federal union of free peoples throughout the world—an association that was the natural outgrowth of his book.

Mr. Streit in 1940 made a nationwide lecture tour on behalf of I. F. U. Both from its national headquarters in New York City and through affiliated local Unionist committees in many parts of the United States, I. F. U. is conducting an intensive educational campaign. Part of the purpose of the educational campaign to show that Federal union is an American idea invented by the Fathers of the American Constitution when they were faced 150 years ago with the problem of creating a workable Federal government for the United States

without depriving the various states of local autonomy for matters of purely local concern. I. F. U. maintains that the leading democracies of the world today—Australia, Canada, Ireland, New Zealand, Sweden, Switzerland, Union of South Africa, England, United States—are faced with problems, which although different in many respects, are still nevertheless fundamentally similar to the problems solved by our founding fathers at the Constitutional Convention held in Philadelphia in 1778.

The proposal is that the leading democracies of the world should form a Union which would be the nucleus around which a world union could be formed, and other nations could, by setting up a government based on freedom and equality, become a part of the Union.

The Union government would be patterned on that of the United States, with executive, legislative and judicial branches. But Switzerland would be the model for the executive branch—a board of five members, with a Premier at the top, one elected each year, three by the people at large and one each by the House and Senate; representatives, elected on a basis of population; two Senators from each country; the Premier to be selected by the Board and to hold office while he had the confidence of the majority party in Congress.

Such problems as involve trade, money, tariff (the organization believes in free trade), communication and a union defense force would come under the jurisdiction of the Union government. They predict that under this system: "Good times would come back. Taxes would be reduced. Armaments could be cut tremendously, and the Union would still be stronger than any possible combination of enemies. The Union's stable, reliable money would start new enterprises rolling, ending depression and unemployment. Goods would move as freely and profitably among the member nations as they now do among our states."

Perhaps the essential contribution this theory makes to the science of government is best summed up by the *Christian Science Monitor*: "Mr. Streit's specific proposal—interesting and well thought out as it is—is not the important part of his book. His essential achievement has been that, after years of controversy and experiment, Mr. Streit has brought the discussion of the peace problem back to a basis where it might be solved."

The Union has had a phenomenal growth. Simultaneously with the book's publication Mr. Streit spoke over the radio. Roy Frazier Potts, former diplomat and banker, on the verge of turning off the radio, listened in to the talk. After meeting Streit, a plan for organization was worked out. Mr. Potts and his brother volunteered a desk in their office for first headquarters. In a single month activity had grown so that it overflowed desk and office both. An apartment with a staff of three was the next office, and now the local office oc-

cupies an entire floor in a New York business building. Mr. Potts has given up his business entirely, devoting all his time, without remuneration, to directing the work of the Union.

Numerous chapters have been organized in 141 communities in the United States, the largest ones in California, New Jersey and Massachusetts. England has even more chapters. A Gallup (see sketch this issue) poll released on January 28 shows that two million voters would answer "union of democracies" if asked today for their solution of the problem of maintaining world peace after the Second World War.

Mr. Streit is tall and thin, with bright blue eyes and a quiet, unpretentious manner. He is an admirer of Lincoln, Beethoven and Michelangelo and often quotes from the poetry of Walt Whitman and Byron. His lectures frequently end on a note of now—or never—for the *Union*, with the following words from Julius Caesar:

"There is a tide in the affairs of men
Which, taken at the flood, leads on to fortune.

Omitted, all the voyage of their life
Is bound in shallows and in miseries."

Who's Who in America

STUART, JESSE Aug 8, 1907- Author
Address: c/o E. P. Dutton and Co, 300 Fourth Ave, New York City; h. Riverton, Kentucky

Greenup County, Kentucky is Jesse Stuart's home territory, and anyone who has been exposed to his "mountain prose" isn't likely to forget it. There's a lot that happens in Greenup County, Kentucky: sorghum making and hog killing, lard rendering and square dancing, feuds and loving and whiskey-guzzling and the birth of a lamb on a cold winter night. And always there are the hills and the cows and shacks and trees, and the way things feel and taste and sound if you live in Greenup County, Kentucky. Jesse Stuart, "whose stories smell of fresh-turned sod and smell like mountain brooks," has written his first novel, *Trees of Heaven* (1940).

No man who has not lived in the hills nearly all his life could have written this book. Jesse Stuart's ancestors lived and died in these same hills. "My father's people, the Stuarts," he says, "were feudists, killers, drinkers, country preachers, Republicans and fine soldiers. My mother's people, the Hiltons, were country schoolteachers, moonshiners, rebels, and Democrats." (Stuart himself is a Methodist and a Republican). His grandfather, Mitch Stuart, who died in ambush at the age of 80, was the biggest and

Dee Allen

JESSE STUART

lustiest of the lot—an old sinner who had had two wives and 19 kids, a man who used to shock the devout at spiritualist meetings by calling: "Come out, all you dead babies, and have a drink on old Mitch Stuart!"

The son of Mitchell and Martha (Hilton) Stuart, Jesse Hilton Stuart was born on August 8, 1907 near Riverton, Kentucky. As a child he never finished more than two-thirds of a school term in any one year. Living at the head of W-Hollow, he fished in the little Sandy, "went coon hunting with a lantern and a volume of Burns, read poetry by lantern light until a dog's barking signaled a treed coon," at 9 hired out to a farmer for 25 cents a day. From the time he was 11 until he was 15 he stopped school to cut corn and timber and to work on a paving gang, then went to high school until at 18 he succumbed to the glamor of a carnival and ran away to join it. This adventure was followed by 11 months in a Birmingham steel mill which made Jesse write, of one of his most admired poets: "Carl Sandburg, [see sketch this issue], you don't know anything about steel. You got your ideas from walking around the mills at night or talking to the Mayor of Gary, Indiana."

Ever since he was any age at all Jesse had been writing poetry himself, scribbling his earliest poems, he says, on "redhorse tobacco sacks, shoe boxes, pieces of wall-paper, sugar sacks—some on wood—and many were written on poplar leaves when I was out in the wood and one came to me." Whether they were good poems or not no one knows, because Jesse didn't bother to save them. Once he had considered becoming the American Robert Burns, but soon he knew he didn't want to imitate anybody. And he knew he wanted an education: nobody in his family

STUART, JESSE—*Continued*

had ever finished college, but he would have to manage it somehow.

He finally did. Saying farewell to steel forever, young Jesse shipped his trunk to Berea College, Berea, Kentucky, and followed on the highway with only \$30 in his pocket. They couldn't take him there, but there was a mountain college in Tennessee, Lincoln Memorial, which could. In his three years at Lincoln Memorial he wrote "about 500 poems," made a reputation as a fighter and as editor of the school paper, worked in a hay field, digging a waterline and cleaning out manholes, and finished school in 1929 owing the college "one hundred dollars and fifty cents."

After a while back home teaching school his uncle helped him rope his trunk and strap his suitcases for shipment to Nashville, Tennessee, where he intended to get his M. A. from Vanderbilt University, working seven hours and eating one meal a day. He never achieved that M. A. When he received his first grades his "legs weakened," nearly all his term papers were rejected, his final thesis was lost in a fire; but of his last term paper, an autobiography which turned out to be 322 pages long, his professor said: "I have been teaching school for 40 years and I have never read anything so crudely written and yet beautiful, tremendous and powerful as that term paper you have written." It was some comfort to Jesse to know that he had at last done "a fairly decent piece of prose," for he had always been told that he couldn't.

Next he was back home again, putting the fear of God into the town toughs as principal of the Greenup County High School. Then in 1932 he spent a year as County School Superintendent at a salary of \$100 a month, battling unhappily with the various political factions that ran the school, but still finding it as impossible to stop writing poems as to stop breathing. "The extra steam I gather from living escapes in poetry," he said. In 11 months he wrote 703 sonnets, sort of "a diary in loose-jointed verse," and was encouraged by selling some of them to magazines like *American Mercury*, *Virginia Quarterly Review* and *Poetry*. He started sending stories to magazines, too, though at first they all came back. Finally he sold his first to *Story* magazine, a story about nothing at all, just about a man who died and wanted to be buried in his shirttails, and the next thing he knew there was a book contract for his entire collection of sonnets. Jesse Stuart was "the happiest man in the world," particularly since his stories and poems kept on selling. Together with this income and the money which he saved from teaching he was able to finish paying for a farm of his own.

When Stuart's collection of sonnets appeared in 1934 under the title of *Man with a Bull-Tongue Plow* the critics began paying

attention to him. The attention wasn't entirely favorable, of course. John Gould Fletcher couldn't understand why he cast all feelings and all experiences into one single form, and spoke of an effect of "monotony and blind confusion"; William Rose Benét found the collection valuable chiefly as a "human document." But nearly all the critics were amazed at the freshness and naturalness of these technically imperfect poems, for it was true that Jesse Stuart wrote the sonnet "as if no one had ever written sonnets before."

In 1936 a collection of his short stories about Greenup County was published, *Head o' W-Hollow*, and in 1937 Jesse Stuart found himself with a Guggenheim Fellowship to travel abroad. Jerome Beatty tells a story about this year abroad in his *Americans All Over*. "In Athens Beatty strolled out from his hotel to buy a *Paris Herald*. When he asked for it a strange young man in plus-fours came up and said eagerly, 'You're an American?' It was Jesse Stuart, of whom Beatty, strangely, had never heard; and he proceeded to pour forth his loneliness to Beatty's amazed ears. He had written a book and made a little money, and gone out from his native hills to see the world. Seeing the world had made him lonely, which is as it should be."

In 1938 Jesse Stuart returned to his own country to teach school and to become principal of the McKell High School in Fullerton, Kentucky, and the following year married Naomi Deane Norris. He kept on selling stories, and that same year his autobiography, *Beyond Dark Hills*, which he had rewritten in Scotland, was published. He also wrote editorials for the Greenup County paper, managed to get into a hospital through his attack on a certain Democratic political boss who was up for re-election as Congressman, and began threatening "10,000 words for every drop of blood." Ten thousand words wasn't much of a threat for Jesse Stuart, though; it is merely his daily output when he is teaching school, and he dislikes teaching because it cuts him down from 30,000. Although he still has to write poems in longhand, he has learned to use the typewriter for prose, and now that *Trees of Heaven* has been published he probably won't be able to stop at a first novel. He has a younger brother, James, and a still younger sister who also ought to amount to something in a literary way some day.

A muscular six-footer, weighing 207 pounds, Jesse Stuart never does anything by halves. He not only loves writing, but he "loves his hills there in Kentucky; he loves his hogs and his mules; he loves to work with his hands."

America's Young Men
 Stuart, J. Beyond Dark Hills 1938
 Who's Who in America

SUESSE, DANA (swēz) Dec 3, 1911-
 Musician

Address: c/o Harms, Inc, 62 W 45th St, New
 York City

Dana Nadine Suesse, a young composer of twenty-eight, was known as the "Girl Gershwin" when she was eighteen and composed her first song when she was eight.

She was born in Shreveport, Louisiana, the daughter of J. C. and Nina Chilton (Quarrier) Suesse. A child prodigy, she began to "fool around with the piano" when she was about two. She didn't take lessons for seven years after that, but recalls that she could play the *Sextette* from *Lucia* rather creditably at five—she learned it from a phonograph record. Her first piece, redundantly called *Evening Sunset*, was composed when she was eight.

After six months of study, she gave her first concert in Kansas City, where her family had moved, when she was nine. Included on the program were the Rachmaninoff *C-Sharp Minor Prelude* and three of her own compositions. A few weeks later she won a prize given by the American Federation of Music and toured the South and Midwest, sometimes playing entire programs of her own works. She would also improvise on any theme suggested by anyone in the audience.

When Miss Suesse was 16 she refused a scholarship at the Chicago Conservatory. Instead she came to New York to study piano with Alexander Siloti and composition with Rubin Goldmark. She experimented with jazz and wrote several successes. Her first melody, *Syncopated Love Song*, written when she was 18, was a hit. *Ho Hum*, her second, was written in 15 minutes, sold half a million copies and made \$10,000, "thanks, in part, to Rudy Vallee's plugging." *Whistling in the Dark*, *You're So Beautiful*, *You Ought To Be in Pictures*, *The Night is Young*, *Another Mile* and *My Silent Love* are other popular song titles.

Paul Whiteman first presented her in the dual rôle of composer and pianist at a Carnegie Hall concert in 1933. Her composition *Valses for Piano and Orchestra* "sounded much like Ravel, with misty strings and florid piano decorations. . . There was nothing tuneful about the *Valses*, but they were ambitious enough to build up for Dana Suesse the nickname of the "Girl Gershwin."

She composes rapidly. When Whiteman asked for a piece for his concert in February 1932, she did *Concerto in Three Rhythms*

Edward Nell Jr.

DANA SUESSE

in three weeks. In 1934 she was working on a symphonic tone-poem, *Two Irish Fairy Tales*, which the New Chamber Orchestra played in Town Hall that same year, when, on November 15, Whiteman asked her for something for his annual concert. She agreed, thinking that it was to be in February again. When she learned it was just a month off "she just sat down and wrote her *Eight Valses* in two weeks," including notes for the orchestral coloring which Adolph Deutsch used for his orchestrations. She didn't know the piano part which she was to play at the concert, but she wasn't worried.

"Four days before her appearance, she'd hire a room in Steinway Hall, practice for a couple of hours and have it." That's all she ever practices for her public appearances.

"I trust to the angels," she says, and thinks she's pretty lucky to be, as far as she knows, the only girl symphonic composer in the world. "I haven't any competition," she says. "It's a cinch." Her latest work, *Young Man with a Harp*, performed by the Philadelphia Symphony in July 1939 and by the Rochester Civic Orchestra later in the summer, has recently been recorded. Other instrumental compositions are *Afternoon of a Black Faun*, *Evening in Harlem*, *Danza á Media Nioche* and *Jazz Nocturne*.

She wrote all the original music for Billy Rose's (see sketch this issue) production for the Texas Centennial at Fort Worth and the musical score for the motion picture, *Sweet Surrender*. She was WJZ's symphonic program pianist in 1935. Formerly a staff writer for Famous Music Corporation, she now is one for Harms, Incorporated.

Miss Suesse is a member of the American Society of Composers, Authors and Publishers, Authors' League of America and Song Writers' Protective Association.

SUESSE, DANA—*Continued*

She is tall, very slender, has gray eyes and reddish hair. She has an astonishing memory. She learned all of *Hamlet* and *Macbeth* merely by hearing the plays read in class, and still remembers most of them. She also has "absolute pitch," and can compose sitting in bed, not needing a piano. Shoes are her hobby, but she is equally interested in second-hand book stores, interior decoration, junkshops, tennis and sailing.

SUNER, RAMON SERRANO See Serrano Suñer, R.

SWING, RAYMOND GRAM Mar 25, 1887- News commentator

Address: b. 1440 Broadway, New York City;
h. 36 E 40th St, New York City

The solidly friendly, though somewhat pedagogical voice of Mutual's news commentator, Raymond Gram Swing, has become, with the thickening of political intrigue in Europe, a kind of *pièce de résistance*—whether comforting or not—to America's radio audience.

Raymond Gram Swing (Gram is the maiden name of his second wife, who, feministically, refused to abandon it) was born in Cortland, New York, March 25, 1887, the son of Albert Temple and Alice Edwards (Mead) Swing. He was educated at Oberlin—both at the College and at the Conservatory of Music (non-graduate)—and in 1906 began newspaper work in Cleveland. From there he went to Orville, Ohio and then joined, successively, two Hoosier papers. After some further experience in Cincinnati, an appendectomy, and a variety of nervous breakdown, he escaped to Europe with Chicago *Daily News* credentials. The Berlin Association of Foreign Correspondents was puzzled at the substitution of young Swing for Albert C. Wilkie and, suspecting Swing of some kind of unethical conduct in his capture of the Berlin assignment, refused him membership in the Association. The *News* informed the A. F. C. that Wilkie's dismissal had nothing to do with Swing's application, but the newcomer was blackballed, nevertheless. Swing was unhurt professionally, however, and the incident was soon forgotten. When he returned to Berlin in 1920 the A. F. C. received him with open arms.

One of Swing's biggest World War scoops was his story of the mysterious large-bore gun that was shelling Liège. He eluded German censorship by paying a trustworthy American student, who was

on his way to London, \$25, teaching him the "copy" word for word and then instructing him to dictate it to a stenographer in the London office of the *News*. He also had a personal interview with the U-boat captain who pierced the British blockade into Constantinople, and wrote a description of the sinking of a Turkish transport on which Swing was a passenger. An incident took place at that time that landed him in the annals of naval history. To the sub officer's query: "Who are you?" Swing, the only English-speaking passenger replied: "I am Raymond Swing, of the Chicago *Daily News*."

After his return to the United States in 1917 Swing became an examiner (1918) with the War Labor Board. He was Berlin correspondent for the New York *Herald* from 1919 to 1922; director of foreign service for the *Wall Street Journal* during the two years following; served on the London bureau of the Philadelphia *Public Ledger* and the New York *Evening Post*; and then for eight years was foreign correspondent for these two papers. From 1934 to 1936 he was a member of the board of editors of *The Nation* and in 1935 he became news commentator on American affairs for the British Broadcasting Corporation. A little later he began serving Mutual and the Canadian networks in this same capacity.

In the 20's he was writing sonnets for *Outlook* and the *Literary Digest*. In 1935 he published his political interpretations, *Forerunners of American Fascism*. And in the light of recent events there is considerable timeliness in his warning that "our size is not a reason against our submission to tyranny; we submitted to one which was strangely like a Fascist terror during the War. We accepted it then because we preferred unity in the crisis to freedom; and we would accept it again if we found we preferred unity in another crisis. . ."

He was the first radio commentator to join William Allen White's (see sketch this issue) Committee to Defend America by Aiding the Allies and in October 1940 became chairman of the newly organized Council for Democracy.

His book, *How War Came* (1939), is a collection of running commentaries—from the background events of Prague and Danzig up through the "war of nerves" era and the awful 14 days directly preceding Britain's formal declaration of a state of war.

On July 9, 1912 Swing was married to Suzanne Morin, of Paris, and by her had two children, Albert George and Elizabeth Françoise. The marriage was terminated by divorce. When he was in Berlin eight years later he married Betty Gram, of Portland, Oregon, who was studying voice from German masters. By his second wife he has three children, Peter Gram, Sally Gram, and John Temple. Now his family is augmented by Gabriel, an English lad whom the Swings have adopted.

During the whole of the politically tense period of 1938 Swing was on vacation abroad, and on his return he enjoyed the distinction of being the first eye-witness to report over a local station on the betrayal of Prague—and for this he was given an award by the National Educational Conference on Radio.

Swing has a fortunate invulnerability against news-shriek jitters. Unlike his confrère Kaltenborn (see sketch this issue), however, he manages during crises to sleep—briefly mayhap—in his own apartment. And also unlike his fellow newscaster, he refuses to go on the air without something solidly prepared in advance. Swing—and broadcasting in general—leapt into a terrific tempo on the night of Von Ribbentrop's visit to Moscow. At 7:30 p. m. he got wind of the coming Nazi-Soviet pact, chucked his comfortably written script, and in an hour and a half pounded out an entirely new broadcast of some 2,000 words.

Swing has been before a microphone since 1935. In addition to his American broadcasts, he shortwaves a weekly quarter hour on American affairs to the British Dominions—thus giving him the biggest international audience of any news expert. Swing fans include such assorted personalities as Lord Lothian (see sketch this issue), British Ambassador; Tallulah Bankhead; Supreme Court Justice Felix Frankfurter; and Nicholas Murray Butler (see sketch this issue). In 1940 Swing asked to reduce his number of radio broadcasts, giving the poor state of his health as the reason. He devotes over ten hours a day to preparation for his fifteen-minute broadcast, reading eight papers from cover to cover every day, besides press association reports, magazines and books, and making personal contacts for additional information. He has been offered a syndicated column, but he hasn't decided yet whether to accept it or not. His relaxations are ping-pong, bridge, piano playing, listening to concerts and playing poker. Never have his newscasts gone overtime and only twice have they been too short. This is a result of a peculiar system which he has worked out for timing his scripts on the typewriter.

When his program is over he leisurely travels a few blocks to New York's East Side to get to his apartment. He spends his week ends with his family in an old Connecticut farmhouse. This is the only time he is able to get away from and forget about work. During these brief respites no one is allowed to mention war or the European situation. The only other rule is absolute silence at Sunday morning breakfast. Swing takes this time to read the Sunday papers and to listen to Sunday concerts on the radio.

In New York his apartment is roomy and decorated in modern style. He col-

Ites-Biro

RAYMOND GRAM SWING

lects maps of Europe, each one showing changes in geographical boundaries. Before retiring, Swing always drinks a glass of milk and eats an apple. It helps him forget the war news of the day. He has written several classical compositions for the piano but is very modest about them—never intends to have them published.

SZIGETI, JOSEPH (sē-gě'tī) Sept 5 1892- Violinist

Address: c/o Columbia Concerts Corp, 113 W 57th St, New York City

Recently Joseph Szigeti made a remark which violin students hailed with joy. "Two hours of practice a day are enough," he said. But then he qualified the heretical statement. Those two hours should be preceded with what football coaches call "skull practice." It is because of his firm belief in "skull practice" that Szigeti has been called the "peerless thinker of the violin."

Szigeti believes that musicians should seek behind the notes to bring their meaning to the surface—just as one must look behind a writer's words for the thoughts they hide. The first step, says Szigeti, "has nothing whatever to do with music. It has to do solely with habits of thought. Would you play Bach and Schumann in exactly the same manner? Of course not! Because they represent entirely different ways of looking at the world... Certain tonal intervals, certain sweeps of melody all tell the musician something about the composer, the age in which he lived, the ideals which that age cherished; and by combining those elements, he arrives at the plan of his interpretation. . . ." The next step is to "play and read a composition until I have actually absorbed it. I analyze it with regard to its construction, its form and design. . . I imagine the whole composition from beginning to end . . . and detect its form, design and structure together with the full relationship of one section to every other section."

Born in Budapest on September 5, 1892, Szigeti comes from a country that has produced such great violinists as Leopold

Auer, Joachim and Jeno Hubay. His first violin instruction came from his father and then from his uncle. When he outgrew his relatives, he was placed under the guidance of the great Hungarian violinist and teacher, Jeno Hubay.

When Szigeti was 14 years old, his teacher brought him to Joachim, who accompanied him on the piano as he performed the Beethoven violin concerto. Joachim said that the boy was ready for concert appearances, and predicted a great future for him. He played in Berlin and Dresden, and finally went to England, where he remained five years. In England he gave concerts widely, in London and the provinces, and appeared in joint recitals with the singer, Melba, the pianist, Bachaus, and the composer, Busoni and under the batons of Sir Henry Wood, Sir Hamilton Harty, and Sir Thomas Beecham.

From 1912 to 1917 Szigeti appeared in recitals on the Continent. In 1917 he succeeded the celebrated Henri Marteau as professor of the class of violin virtuosity at the Geneva Conservatory and held this position until 1924, when the pressure of concert engagements caused him to leave.

Leopold Stokowski, conductor of the Philadelphia Orchestra, heard Szigeti play in Europe and invited him to America. In the autumn of 1925 he made his American debut as soloist with the Philadelphia Orchestra, playing the Beethoven concerto at the Academy of Music. A week later he repeated this performance in New York at Carnegie Hall. Szigeti's latest American tour opened in January 1940 with the Boston and New York premières of the Bloch *concerto*, played with the Boston Symphony under Koussevitzky (see sketch this issue). It was this work which the *Manchester Guardian* has hailed in England as "the crown of Szigeti's career." During the 1940 to 1941 season he plans 15 appearances with major American orchestras. In March 1941 he will begin a tour of Australia under the auspices of the Australian Broadcasting Commission.

From May 1931 to May 1933 Szigeti circled the globe twice, giving more than 200 performances. He played five consecutive nights in Tokyo and seven in Buenos Aires. He was invited 12 times to the Soviet Union. On this tour and on his others he was accorded many honors. In France he was made an officer of the Légion d'Honneur; in Belgium, Commander of the Order of Leopold; in Hungary he was awarded the Officer's Cross of Ordre pour le Mérite; in Japan, the Ji Ji Shimpō Gold Medal.

The critics of two continents agree on the art of Joseph Szigeti. "He is the one virtuoso able to make an 18th century masterpiece understandable to a Gershwin admirer," writes one. According to the *Chicago Tribune*: "He is superior to nearly every other practitioner in his field, both in sheer technical skill and in musical in-

JOSEPH SZIGETI

sight." His concentration on the meaning of the music he is playing and his superior technique have combined to earn him the titles of "an interpreter of genius" and "greatest musician-violinist now living."

From composers he has received innumerable dedications of compositions. Three modern concerti—those of Busoni, Sir Hamilton Harty and Casellai—were written for him, as well as a composition of Ernest Bloch, a rhapsody for violin and orchestra on Hungarian folk tunes by Béla Bartók (see sketch this issue), Bartók's *Rhapsody for Clarinet, Violin and Piano*, and a sonata for solo violin by Ysaye.

His transcriptions for the violin are included in the repertoire of his fellow artists, and his recordings of Bach, Beethoven, Brahms, Mozart and Mendelssohn are considered standards of interpretation and permanent acquisitions to recorded musical literature. The list of his recordings includes perhaps the largest number of concerti and major works of any violinist: 17 album sets. He himself says that he believes the great works of the masters must be the foundation of a violinist's equipment.

Though he ranks as one of the three or four greatest violinists in the world, Szigeti is no high-brow. There are few things he likes better than a night club where good swing is to be heard. He appreciated the ovation he got from "jitter-bugs" as well as serious musicians when he and Benny Goodman appeared together in Carnegie Hall in January 1939 to play Bartók's *Rhapsody for Clarinet, Violin and Piano*.

Tall and sparely built, Szigeti looks much younger than his years. During rehearsals he is informal and displays his keen sense of humor, but at concerts he attends strictly to business. He enjoys himself when on tour because a concert-tour isn't just a series of hotel rooms and auditoriums to him. "Traveling," he says, "is something like mental hygiene after the too-rich accumulations of a big city." He doesn't use airplanes because they get him where he has to go too rapidly. "I do all my reading and writing on trains . . . and I am unique in one way, at least. I write my wife (who lives in Paris) even while I'm riding in taxicabs. I'm like a war correspondent, sending back bulletins from the front."

SZOLD, HENRIETTA (zölt) Dec 21, 1860- Organizer of *Hadassah*, women's Zionist movement

Address: b. 1860 Broadway, New York City; h. Jerusalem, Palestine

Born in Baltimore, the daughter of a Hungarian Rabbi, Miss Szold began her career of service to the Jewish people by helping refugees from Russian pogroms. She organized the first "Americanization" classes. She also won distinction as a translator of Hebrew writings, discovering Shalom Asch and Israel Zangwill, and by her thorough knowledge of theology. But it was not until 1909 that she became interested in Zionism. On a visit to Palestine that year, she found it plagued with malaria, and with the eye disease, trachoma; she found 13 per cent of the babies in Palestine dying in infancy. Horrified, she came back to the United States and began the work of getting medical aid to Palestine.

By 1912, she and 13 other women had organized *Hadassah*, and had raised \$700 to send the first two nurses to the Holy Land. Under Miss Szold's drive *Hadassah* (the name is a variant of the Biblical heroine Esther) grew as an important factor in the Zionists' aim to recreate a Jewish homeland in Palestine. By 1919 when Miss Szold went to Palestine to direct the organization's work, its medical staff totaled more than 50. Its hospital, its medical school, its clinics and playgrounds are open to Jew and Arab alike.

Gray-haired, slight, Miss Szold has never married, has devoted herself to *Hadassah's* work in Palestine, often working 17 hours a day on the many projects by which the organization seeks to help the young colonists settle in Zion. In 1935, at the age of 74, she was considering retiring, and had her trunks packed to return to America, when she was asked to help organize *Aliyah* (Hebrew for immigration) to remove German refugee children to Palestine.

She threw herself into the work of making less tragic the plight of the children uprooted from their homes and separated from their families. She personally met boats, escorted children to the cooperative agricultural settlement which was their new home. In five years 6,200 refugee children had made their home in Palestine under her supervision. Although she has not lived in the country for 20 years, Miss Szold is known to 4,000,000 Jews in the United States as the foremost American Jewess of her time. *Hadassah* celebrated her 79th birthday December 21, 1939 by a series of luncheons and meetings throughout the country.

She was the editor of the *American-Jewish Yearbook* (1904-10) and president of

HENRIETTA SZOLD

Hadassah (1912-26). She translated *Ethics of Judaism* by Lazarus; *Legends of the Jews* by Ginsberg; and *Hebrew Renaissance* by N. Slouschz.

On November 29, 1940 Miss Szold was cited as one of the hundred outstanding women of the past century by the Women's Centennial Congress. The citation was given to her "as a pioneer in bringing American standards of health and hospitalization to Palestine."

 Who's Who in America
 Who's Who in American Jewry

TABOUIS, GENEVIEVE (täb-ōō-ē zhě'n'vyěv') 1892- French journalist

December 1940 Bulletin: In the summer of 1940 Madame Tabouis fled from her homeland and arrived in the United States. She could not stay to cover the story of France's betrayal and the German entry into Paris. On her arrival here she said: "Today, a refugee from my country, I am being tried for treason before a court at Riom. I am deprived of all rights, including the elementary right of defending myself. In my absence I have been stripped of my citizenship and my fortune. My family are today hostages to my prosecutors. But this is not my greatest misfortune. Today, after 16 years of incessant work in behalf of an

ideal, I am compelled to acknowledge that all my efforts as writer, teacher and public speaker have utterly failed." Madame Tabouis plans a lecture tour of the United States and is conducting a radio series over station WMCA in New York.

From June issue:

Called "perhaps the best-known woman journalist in Europe," in 1892 Madame Tabouis was born Geneviève Le Quesne, daughter of a well-known painter and niece of both General Cambon and Jules Cambon, French Ambassador to Germany prior to the First World War. She was educated until 15 at the Convent of the Assumption: "I regret to say I didn't learn very much—I remember I used to keep silk worms and a frog in my desk and I left it with a liking for history and poetry, and quite resolved to follow the advice of our charming poet, Alfred de Musset—'In this good world you must get to like a lot of things so that you know finally which you like the best.'"

In order to find out "which she liked the best," young Geneviève studied for three years at the Faculté des Lettres de Paris, and then enrolled at the School of Archeology at the Louvre, "convinced that there was nothing so exciting as writing books in which you revive the past." An odd off-shoot of all this learning was "one of the happiest days of my life, when I could write a love letter to my favorite dancing partner in hieroglyphs."

In 1916 she married Robert Tabouis, who later became administrator of radio for France. They have a son and a daughter. Madame Tabouis became interested in politics and through her uncle made the acquaintance of most of the political figures of the period. She began to write up interviews with some of them in Geneva during the early days of the League of Nations.

From 1924 to 1932 she became favorably known for her political and diplomatic interpretations of events in many newspapers. She became Foreign News Editor of *L'Oeuvre*, a French journal, in 1932 and since then has become a power in European journalism. She is considered a master in dissecting current events and in revealing the background in the developments of the danger zones of Europe. In this connection, the *New Yorker* of February 10, 1940 ran an amusing article under the title *What paper d'ya read?*:

"If a wise citizen of Paris wants to know what Hitler and Stalin are thinking, what will be the next fantastic episode in an improbable war, he reads what Geneviève Tabouis has to say in *L'Oeuvre*, then waits for the exact opposite to happen.—*Time*.

"Geneviève Tabouis is the Cassandra columnist of France. As the pessimistic political prophetess of the Paris press, in her daily rubric in *L'Oeuvre* she forecast with accurate melancholy this year's war, last year's Munich appeasement, the German

GENEVIEVE TABOUIS

army maneuvers that led to the Austrian Anschluss, the failure of the Franco-Anglo-Russo alliance, and on February 12, 1939, predicted that Prague would be taken on March 11—four days before even Herr Hitler got around to it.—*Harper's Bazaar*."

Madame Tabouis is described as "a delicate woman with a fine spiritual face." Her name is known in the English, German, Italian and Soviet press, and her opinions are frequently quoted. Throughout Europe her articles on foreign policy have given her newspaper, *L'Oeuvre*, a special significance.

"One of the worst snags of being a woman diplomatic writer," she maintains, "is that you can't answer the insults that your adversaries pour down on your neck" as men can by fighting a duel. "Moreover in France men don't much like being under the orders of a woman." She has neatly solved that difficulty by never appearing at the editorial offices of her paper. Before starting an article she has telephone conversations with several European capitals. Then she telephones in all her instructions to her paper as she writes day by day a record "of the European crisis in all its ramifications and involutions." By "remaining in the wings" she feels that the prestige of her men colleagues is safe.

She works constantly to accomplish all the research and writing for her French paper, special dispatches to *La Critica* of Buenos Aires and the *Sunday Dispatch* of London. To write in these critical times an interpretation of history in the making exhausts her until she says: "Mon Dieu, what petty worries, what expenditure of energy, what a terrific amount of work. I can scarcely remember an evening when I haven't worked—even over the weekends and at Christmas." Asked what her favorite

relaxation is, she replied: "Playing with my cats."

Madame Tabouis has received numerous foreign decorations for her journalistic achievements; for her three books on historical subjects—*Nebuchadnezzar*, *Private Life of Tutankhamen* and *Solomon*—she has received honors from the French Academy. In addition she has written *Blackmail or War*; *Perfidious Albion*—*Entente Cordiale* and a *Life of Jules Cambon*.

TAFT, ROBERT ALPHONSO Sept 8, 1889- Senator from Ohio

Address: b. United States Senate, Washington, D. C.; h. Station M, R R I, Cincinnati, Ohio

Even when there was a possibility of getting Robert Taft the Republican nomination for the Presidency in 1940, he was the despair of those who believe that a Presidential candidate should have color. His speeches are "prosy, clumsy, flowerless," and he has absolutely no sense of publicity. His campaign photographs show him "irreproachably garbed in a blue serge business suit holding at arm's length a wild turkey somebody else killed," or poking the head of a cow with a neatly gloved hand. He himself told a reporter: "I'm afraid you won't find much color in me. I'm too darn normal."

People found other assets for his campaign. In the first place, he had a perfect background. His father was President, and "a really great justice of the Supreme Court." What's more, he came from Ohio, which is always a good state for the Republican Party. He was about the right age—50—and he "looked like a composite picture of 16,000,000 Republicans." His failure to get the Presidential nomination was the first defeat after a series of uninspired but decisive victories.

Robert Alphonso Taft was born in Cincinnati, the elder son of William Howard Taft. When he was still a small boy his father was made Governor General of the Philippines, whither Robert accompanied him to find "his vast chuckling sire regarded by the natives as a cross between Santa Claus and Buddha." He was sent to America to his Uncle Horace's famous Taft School in Connecticut. He was "a solemn, diffident boy who never had to be told twice to go to bed, who always stood at the head of his

TAFT, ROBERT A.—*Continued*

class and who never seemed to be aware that he was not popular with the kids."

He led his class at Yale, where he "seemed to have a dread of cashing in on the fame of his father," then President of the United States. He led his class again at Harvard Law School, from which he received his LL. B. in 1913. And he passed his Bar exams with the highest mark in Ohio.

Though he had the pick of the big New York law offices, Bob Taft told his father: "I have a prejudice against New York as a place to work." He went back to Cincinnati to practice law with the firm of Maxwell and Ramsey, and married Martha Bowers, daughter of Lloyd Bowers, solicitor general under William Howard Taft.

When the United States went to War Taft volunteered twice, but his nearsightedness kept him out of the army. He thereupon became assistant counsel for Herbert Hoover's United States Food Administration, where he acquired a permanent horror of price fixing. "Whatever price we fixed," he says ruefully, "everybody howled." When the War ended he was counsel for the American Relief Administration in Europe, and for his work was decorated by the governments of Poland, Finland and Belgium.

After the War Bob Taft and his brother Charles set up a one-room law office and rapidly expanded it into the biggest and most prosperous in the city, with the leading corporations as their clients. He started politics as a precinct worker, and went around ringing doorbells and urging citizens to vote.

In 1921 Taft really entered politics as a candidate for the State Legislature, was elected, and stayed in the House until 1926. He went to Columbus "with a reputation of a silk stocking politician and astonished his fellow lawmakers by choosing as his specialty, of all disagreeable and laborious tasks, the revision of the antiquated Ohio tax system." In 1925 he became Republican House Leader, and Speaker in 1926. In 1931 he spent a term in the State Senate. Except for the work in tax revision, Taft's stay in the State Legislature has been called "three fireless terms."

In 1936 Taft was Ohio's favorite son at the Republican Convention. By then he and his wife were pleasantly well off: they had four sons, many friends, an agreeable, bustling sort of life. He decided to run for the Senate in 1938, even though Roosevelt had just piled up a huge Democratic majority in Ohio.

He got the Senatorship through plugging and, according to one commentator, through the "injudicious expenditure throughout Ohio of a couple of hundred thousand dollars, plus the wit, will and wisdom of his politically acute wife, Martha Bowers Taft." His wife was a tremendous aid to him then. If Senator Taft hadn't

come into her life, Mrs. Taft might have spent her years as a language teacher. After passing her examinations for Bryn Mawr, she decided instead to go to Paris where she studied for two years at the Sorbonne and obtained her certificate as a teacher. But instead of a language teacher, she became Robert Taft's wife and political campaigner.

Like Mrs. Roosevelt (see sketch this issue), Mrs. Taft received her early training in public affairs from the National League of Women Voters. She was the first president of the Cincinnati, Ohio League. She began to campaign for her husband in the 1938 Senatorial race because state chairman Ed Schorr told her she shouldn't, causing her to march straight from his office to the platform of an opposition meeting in a Negro church.

Between them Bob and Martha Taft visited every county in the state, traveling 30,000 miles and sometimes making as many as a dozen speeches in a day. Her speeches, unlike his, were brilliant and witty. There was the time she told a group of coal miners who felt Taft wasn't a man of the people: "My husband is not a simple man. He did not start from humble beginnings. My husband is a very brilliant man. He had a fine education at Yale. He has been trained well for his job. Isn't that what you prefer when you pick leaders to work for you?" And the day after Taft was elected one Ohio newspaper announced: "Bob and Martha Taft were elected to the Senate yesterday."

Probably one of the most important factors in Taft's vote-getting was his success in the debates between him and Senator Bulkley, his opponent. Bulkley was a good speaker, Taft a dull one, and Bulkley was way in the lead when the debates started. At the first debate in Marietta, Bulkley was booed when he talked. He waited for the audience to subside, meanwhile letting the radio audience hear the boos. When Taft, in turn, was booed, he hugged the microphone close and talked into it, so the much larger radio audience could hear only him. "He all but obliterated Mr. Bulkley in that contest."

In his first year in the United States Senate, despite the tradition that new members should lie low their first year, he has "talked out on the floor, hit headlines, and rushed into some of the bitterest debates." And he has been appointed to important committees—Appropriations, Banking and Currency, Education and Labor. But neither in the Senate nor in Ohio, according to Oswald Garrison Villard (see sketch this issue), has he fathered one proposal of a progressive and constructive character.

In the spring of 1939 Taft debated by radio with the New Deal Texan, T. V. Smith, professor of philosophy at the University of Chicago. Mr. Smith has "a golden tongue, a silver wit," but when the series were over a Gallup (see sketch this issue) poll between "Professor Smith's

Peter A. Nyholm

ROBERT A. TAFT

soufflé and Senator Taft's economic pork and beans" showed that 66 per cent of the people felt that in his plodding way Taft had the best of the arguments. In 1939 as joint author with Thomas V. Smith, he published his debates under the title, *Foundations of Democracy*.

Everybody seems to agree that Taft is shy and that he is a "plain" man, but on the other sides of his personality there's a lot of disagreement. One commentator says: "Nature did not give him the singularly great charm of his parent," while another insists that "Taft is his father's son under a smiling and, for the most part, charming exterior." Partly because he is near-sighted, he is not quick to greet people on the street—and even when he does there's no professional smile on his face, nor is his handshake a hearty one. He is tall, large-framed, slightly paunchy, with sandy eyebrows and wispy hair, and self-contained to the last drop. He doesn't smoke, has no favorite foods, authors, singers, artists or movie stars. He's never "without a large brief case out of which he can pull any paper the moment calls for without looking. About the only things he ever forgets or loses are his hat, umbrella, galoshes and the names of the people he met at Mrs. Quimp's reception last night."

Probably the most effective facet of his personality is his rather quiet sense of humor. "He has a nice grin which discloses rows of large protruding teeth," and he sometimes makes funny comments. One of the most appreciated stories is about the time he and Martha, who live modestly, emerged from a stately Washington reception. The splendid doorman shouted: "Senator Taft's car." "Thank you," said

Taft. "It's a good car, but it doesn't come when it's called."

TATE, ALLEN (tāt) Nov 19, 1899- Poet; author

Address: c/o Princeton University, Princeton, New Jersey

Allen Tate is one of the three "regulars" on CBS's *Invitation to Learning* broadcasts, a program designed to stimulate listeners to read or re-read the classics. Each Sunday from 4:30 to 5:00, "books which the world has not been willing or able to let die" are discussed, not technically or pedantically, yet without talking down. Mr. Tate, author, poet, critic and teacher, along with Huntington Cairns and Mark Van Doren (see sketches this issue) is now bringing to the public the thoughts of the world's great men, a job for which he is eminently equipped.

Allen Tate, who was born in Clarke County, Kentucky, the son of John Orley and Nellie (Varnell) Tate, has given all but three months of his life to literature since his graduation from Vanderbilt University in 1922. These three months he worked for an elder brother in the coal business. Because he had his mind on poetry instead of coal, young Tate shipped some anthracite that should have gone a hundred miles North to the remote West. The company lost \$700 and he was fired.

It was while he was in college that Tate became one of the founders of the *Fugitive*, a journal of poetry published at Nashville, Tennessee. This magazine grew out of the literary and philosophic discussions of seven friends who issued their first cooperative number in April 1922 and continued to publish it until December 1925. Considered by many critics one of the most brilliant groups in American letters since the New England group in the nineteenth century, they tended to foster original expression and mature and intricate verse form.

During the period he was active on the *Fugitive* and for some years after Tate was a free-lance reviewer. In 1928 he was awarded a Guggenheim Fellowship and with his wife, Caroline Gordon, the novelist, whom he had married in 1924, went abroad. It was while he was in Europe that his first books were published: *Stonewall Jackson—The Good Soldier* (1928) and *Jefferson Davis—His Rise and Fall* (1929), biographies springing from his great interest in American history of the nineteenth century; and *Mr. Pope and Other Poems* (1928), a collection of his poetry.

In 1930 Mr. and Mrs. Tate, with their small daughter Nancy Meriwether, returned to America and bought a farm in Tennessee, near Clarksville. Here Tate did some of his best writing and his wife produced some of her distinguished novels. Tate continued

ALLEN TATE

to increase his reputation as a poet and at the same time was developing those critical powers which later led Louis Untermeyer to call him "the best critic in America." His essays in criticism have appeared in the *Yale Review*, *The Nation*, the *New Republic*, the *American Scholar* and other distinguished publications, and when his *Reactionary Essays on Poetry and Ideas* was published in 1936 London's *Time and Tide* called it "the best book that has come out of America in many years." Mark Van Doren didn't hesitate to say that it represented "contemporary criticism at its best," and other critics pointed out the thoughtfulness and freshness that illuminate the book.

Tate's poetry continued to appear, too—in 1930, 1932 and in 1936 when *The Mediterranean and other Poems* was published. It was with the publication of this volume that adverse criticism began to be loudly heard. Tate, who at one time was "the most highly praised poet of his generation with the exception of Hart Crane," was criticized for his lack of emotional impact, for being "heavy and sententious." And these same criticisms were leveled against *Selected Poems* (1937). His poems here "are difficult, partly because of the great amount of specialized knowledge they contain, partly because of the language in which they are cast." Despite the evidences they give of "an acute critical intelligence, hard at work on the most stubborn and invigorating problems of our time," their obscurity hindered their impact on some, an obscurity frequently attributed "to a lack of poetic ability, a lack of any deep passion or intuitive grasp of life," as Eda Lou Walton put it in the *New York Times*.

Few poets make a living with verse, and a poet who is also a critic with a knowledge of literature naturally drifts into teaching.

Tate's first teaching job was at Southwestern College in Tennessee in 1934. His next, during the academic year of 1938 to 1939, was as professor of English at the Women's College of the University of North Carolina. From 1939 on he has been a resident fellow at Princeton University, in charge of creative writing under the Creative Arts Program. He has, of course, lectured frequently on modern poetry and criticism—at Yale, Harvard, Columbia, Cornell and other colleges.

The Fathers, Tate's first and so far only novel, was published in 1938, its theme "the conflict between a strong man who is not rooted in the peculiar Virginia culture of the period and the ancient traditions of the culture itself." Only one critic pointed out the book's "indirection and inconclusiveness"; the others called it "beautifully written and profoundly searching", "a fine novel by a fine poet." In it Tate's knowledge of the South, previously shown in his biographies of Jackson and Jefferson, is clearly apparent; the physical scene is minutely reconstructed, though the story's elements are imaginatively combined. Here Tate gave proof of his belief that literature, poetry as well as fiction, comes of observing things that nobody but the literary artist takes the trouble to see.

Tate is blond and has a youthful mildness which those who know him say is deceptive. Actually he has strong and definite convictions on matters literary and political, and has no hesitation in expressing them "with incisive and sometimes demolishing wit."

TAYLOR, DEEMS Dec 22, 1885- Music commentator; composer; author

Address: h. 2 E 60th St, New York City

A man of many musical activities, including commenting on and writing about music, Deems Taylor conducted a new half-hour radio program from January to August 1940 called *Musical Americana*. It was an all-American program, with a large symphony orchestra and a mixed choir, and a policy that all compositions played were to be exclusively by Americans—the only criterion that it be good of its kind, with no discrimination between the popular and the serious. Taylor served as master of ceremonies on the program. His performance as commentator for Walt Disney's (see sketch this issue) *Fantasia* received much favorable critical comment.

His new book of interpretations of music, *The Well-Tempered Listener*, appeared early in February 1940. Much of its material has been addressed to radio audiences in the intervals of symphony concerts. The book starts with the thesis that however beautiful music may be, the listener should be credited with a certain amount of courage and endurance. He says that the listener should give ear to and try to like and understand modern music. Besides listeners, Mr. Taylor's book also considers the composer and the performer.

Joseph Deems Taylor (he has discarded his first name) is a native New Yorker. He was born in New York December 22, 1885. He attended Ethical Culture School and New York University, where he wrote musical shows that were performed at student gatherings and was also on the track team. He wanted to be an architect, but found that it took too much mathematics. He can subtract, he says, but he can't add. He got a job as an assistant for the *Nelson Encyclopedia*. Meanwhile, however, he had collaborated with an undergraduate on a musical comedy good enough to reach Broadway, so decided to teach himself composition and orchestration. He studied counterpoint and harmony with Oscar Coon, an Oswego, New York bandsman. After winning a symphonic contest he decided on a joint career of journalism and music.

In 1916 to 1917 he was a war correspondent for the *Sunday Tribune*, and for some time after 1917, associate editor of *Collier's Weekly*. His first public success as a composer was with his prize tone poem, *The Siren Song* (1913). Other early successes were two choral works, *The Chambered Nautilus* and

DEEMS TAYLOR

The Highwayman. His orchestral suite, *Through the Looking Glass*, attracted attention, and he was commissioned by Walter Damrosch to compose the symphonic poem, *Jurgen*. He served as music critic on the *New York World* from 1921 to 1926, when he resigned to compose his first serious opera, *The King's Henchman*, with libretto by Edna St. Vincent Millay. It was given for three seasons' performances at the Metropolitan Opera House. Taylor's second opera, *Peter Ibbetson*, was given for four seasons.

In the field of musical literature, Taylor has acted as editor of the magazine, *Musical America*, and as music editor for the *Encyclopedia Britannica* and the *Nelson Encyclopedia*. He has written incidental music for the theatre, and has been by turns writer, critic, linguist and artist. As a radio commentator, he was for some time narrator for the opera broadcasts from the Metropolitan Opera House and is the well-known commentator for the New York Philharmonic Sunday afternoon broadcasts. The predecessor to his present book of comment on music, *The Well-Tempered Listener*, was *Of Men and Music*, which appeared in 1938. It is a book of observations written with the amateur music audience in mind, and discusses diverse personalities in music, with an insistence on the entertainment value of good music.

Deems Taylor is a versatile man in many fields. He has now given up his newspaper jobs; but in his spare time he does translating from three languages, paints for his own "amazement," is a candid camera fiend and a good cabinet maker. He practically built his own home in Stamford, Connecticut. Though a smallish, witty, mild-appearing man, he is forced to be firm when pestered by advice seekers, and won't help any aspir-

ing young musician who is not well recommended. He has one daughter, Joan, by his second wife, Mary Kennedy, the actress, from whom he is now divorced.

His occasional visits to the *Information, Please* program have been most successful. As a commentator Taylor is humorous, chatty, informal—with a casualness actually hard to achieve. Preparing the comment, he first looks up the subject. Then, in the modern study-bedroom of his old-fashioned Fifth Avenue apartment, he starts talking to himself, repeating a sentence over and over until he is sure it sounds completely natural. He pecks out—"I type by ear," he says—the final version. Once in a while, broadcasting, he makes a tongue slip, as when he turned "Kern fans" into "fern cans" and the Holy Family into the "Homely Family." Of his future he says: "I'll stay in radio until I'm thrown out, and I'll keep on writing music because I can't help it."

TAYLOR, FRANCIS HENRY Apr 23, 1903- Director of New York Metropolitan Museum of Art

Address: b. Metropolitan Museum of Art, New York City

The Metropolitan Museum of Art is a dusty, gray edifice stretching over four city blocks and crammed full of art masterpieces of the ages. Herbert Eustis Winlock, former director and famed as an Egyptologist, resigned in April 1939 because of ill health. In May 1940 the new director, Francis Henry Taylor, took over one of the most important museum posts in the country.

He has many problems to solve in his new undertaking—shrinking income; heavy operating expenses; fallen attendance;

FRANCIS HENRY TAYLOR

mounting public interest in the new shiny Museum of Modern Art. However, Mr. Taylor, who since 1931 has been director of the rather small but very distinguished Museum of Art in Worcester, Massachusetts, seems to be the man for the job. He made art history by sponsoring a Flemish painting exhibit at Worcester, which was acclaimed as the most comprehensive ever shown in America. Also, it is said, that the average American enters a museum once in five years. In one year Taylor disproved this statement considerably by raising the attendance at the Worcester Museum from 37,000 to 145,000.

In September 1940 he accepted the President's invitation to head the council formed to carry out National Art Week, which took place from November 25 to December 1. During this time about 1,000 exhibits of the work of American artists and craftsmen were held. The object, according to Mr. Taylor himself, was to "bring to the attention of the public the fact that works of art may come within the reach of the most modest pocket."

Mr. Taylor was born in Philadelphia on April 23, 1903, son of the late Dr. William Johnson Taylor, former president of the College of Physicians, and president of the Library Company in Philadelphia. His mother was the late Emily Buckley (Newbold) Taylor. He prepared at the Kent School for the University of Pennsylvania, from which he was graduated in 1924. He taught English for the French government in the Lycée de Chartres in 1924 to 1925, and from 1924 to 1926 did graduate work in the Universities of Paris and Florence, the Institut d'Estudis Catalans, Barcelona, and the American Academy in Rome. He traveled extensively in central Europe and in 1926 to 1927 was a Carnegie Fellow in the

Graduate College of Princeton. From 1928 to 1931 he was curator of medieval art and editor of publications at the Philadelphia Museum of Art.

While director of the Worcester Museum he served as regional director and advisor of the Federal Arts Project for the New England states. He is the author of numerous monographs and critical articles on art history and archeology. In 1928 he married Pamela Coyne of Watertown, New York. They have three children, two girls and a boy.

Mr. Taylor, an "amiable, rotund" man with prominent nose and thinning hair, thinks that a museum's function is not merely to acquire art objects. In addition, it must lure people in to see the objects and must endeavor to teach them to make art a part of their daily lives.

TAYLOR, MYRON CHARLES Jan 18, 1874- Retired steel executive; appointed envoy (1939) to the Vatican

Address: b. United States Senate, Washington, D. C.; h. Gooding, Idaho

Myron C. Taylor, retired chairman of the United States Steel Corporation, was appointed during Christmas week 1939, by President Roosevelt as his personal envoy to Pope Pius XII to work for world peace. He sailed on February 17, 1940.

Taylor was born in Lyons, New York, the son of William and Mary Morgan (Underhill) Taylor. Although he was educated as a lawyer, it is as a businessman that Taylor is best known. He has been prominent in banking, finance, insurance and industry. For a time he practiced law and then ran a group of New England textile mills. As a banker he aided in forming a two billion dollar merger. In 1932 he entered the United States Steel Corporation, replacing J. P. Morgan. He is credited with making notable changes in that company and achieved first-page attention in 1936 when he sat down with John L. Lewis, CIO leader, and effected a peaceable agreement between the labor leader and a great corporation, long non-union, and thus averted a serious strike.

In 1939 he resigned from the corporation and told his friends that he planned to spend "a sabbatical year of philosophic meditation on the problems of modern civilization." This pleasant project was soon given up when President Roosevelt asked him to head the United States delegation to the Evian Refugee Conference, and to undertake refugee work, which has occupied a good deal of Mr. Taylor's time. He

MYRON C. TAYLOR

became the American member of the Intergovernmental Committee for Refugees in 1939.

In the new appointment to the Vatican, Mr. Taylor, an Episcopalian of early Quaker stock, received the rank of Ambassador, but without portfolio. He was the first United States envoy to visit the Vatican officially since Rufus King left Rome in 1868. The restoration of relations with the Holy See had been proposed, since the Vatican is now a temporal State.

"The new ambassador of peace," said one writer, "is more than a businessman of action. Although he looks like a caricaturist's tycoon type with a buffalo build, an aggressive chin and heavy jowls, his manner is just the opposite, gentle, modest and self-controlled. He is the kind of person who enjoys having only one overworked photograph of himself, who takes a great interest in all art institutions (especially the American Academy in Rome, the Metropolitan Opera Company and the Metropolitan Museum of Art), and who feels lost unless he is playing a leading rôle in world affairs."

His appointment was viewed with favor by most newspapers and church leaders, although some Baptists and certain other Protestant groups vigorously opposed Mr. Taylor's appointment. The *Christian Century* said: "To strip away all camouflage, the President has, in reality, established diplomatic relations with the Vatican without legal authority. He has done so, we believe, not as a peace move but as a political move." The Methodist Conference meeting in April 1940 asked President Roosevelt to revoke the appointment. The *New York Herald Tribune*, however, said: "The President has found a way of symbolizing the fact that peace and good will are practical prin-

ciples, as much deserving the services of a special envoy as are other principles that operate in the affairs of men." *Time* called Taylor "the first industrialist to match minds with the thoroughly schooled and skillful Catholic diplomats. But the wise pouches under Mr. Taylor's sad, deep-set, clear-green eyes are there by no accident; his stubborn, pugnacious nose, his mailbox-slit mouth, his underslung jaw are all testimonials of the strength and judicial balance of his mind."

Mr. Taylor returned from Italy after seven months' stay which was marred by a serious illness. He brought with him the Pope's assurances that the Vatican was "doing everything it possibly can to bring about world peace"—with little hope of success.

TEMPLETON, ALEC July 4, 1910-
Pianist; composer

Address: 200 E Chestnut St, Chicago, Illinois

Alec Andrew Templeton, (he does not use his middle name), has been called "one of the musical marvels of modern times." He was born in Cardiff, Wales, July 4, 1910, blind from birth. Although his father and mother were amateur musicians and there were musicians on both sides of the family, none were concert artists.

"When I first got over the shock that I had a little boy who would never see," said his mother, "I decided I would never let him realize he was handicapped. We treated him exactly as we treated his sisters." The little boy had to put his toys away himself and was often sent to get things from upstairs bedrooms. This early training made him self-reliant. No mention of his blindness was made at home, and he was eight before he heard the word "blind" from an outsider. At the age of two he imitated perfectly on the piano the sound of the bell in a nearby church. At four he composed a lullaby which he still remembers as his "first known composition." His mother used it to put him to sleep. His family early noted that his ear became phenomenally sharp as a natural compensation for his loss of sight. At five he directed a choir of his playmates and showed promise as a piano student. "When he was six," his mother says, "he was so far advanced

musically that the rest of the family practically gave up playing. He made us all feel silly."

The family moved to London so that the amazing child could start his musical education. Enrolled as a student in the Royal Academy of Music when he was 12, Alec studied under excellent masters; became acquainted with musical literature by playing hundreds of records which he borrowed; and learned to read the Braille texts of music. He auditioned for the British Broadcasting Corporation in 1922. He was promptly engaged, and his novelty musical acts were presented almost daily for more than 12 years. At 16 he won a piano contest in which 20,000 pianists competed. Upon graduation from Worcester College, Oxford, where he made brilliant progress in the almost forgotten art of musical improvisation, he studied for four years at the Royal College of Music.

Templeton joined Jack Hylton's band as a specialty performer in England and came to the United States in 1935. His success on the air, in recordings and concerts, both as a serious pianist and as a musical satirist, has been remarkable. Critics have mentioned "his unorthodox way of holding his hands flat, his arms stiff," but they admire "his sure, supple tone." In appearances at New York's top-flight night clubs, Carnegie Hall and such radio programs as Rudy Vallee's *Variety Hour*, the *Chase and Sanborn Hour*, *Kraft Music Hall* and *Magic Key*, Templeton became known not so much for his classical piano playing as for his tricks.

Humor in music is a very difficult art and rarely practiced. Templeton, through satire, imitation and caricature, has convulsed audiences with his take-off on Wagnerian opera, in which he portrays "the guttural 'ich's' and 'ach's' of a strangling German tenor, the shrill high notes of the famous soprano, the grunting shouts of the basso; and the Wagnerian orchestra is there, too, introduced with marvelous insight into some of the harmonic and instrumental mannerisms peculiar to the master." Another favorite is his satire on an actual performance of *Pinafore* which he once heard in Connecticut. The chorus came in off key and one whole beat behind the orchestra. He asks his audience to name five notes, and then swiftly builds them into a theme "with variations in the manner of Bach, Mozart and Chopin." Critics have been amazed at his uncanny versatility as he plays a Mozart concerto and then goes into a swing version of one of Bach's major works. He can improvise in any classical composer's style and sound so much like the composer that most listeners are fooled. A favorite trick of his is to take a popular tune and play it in the individual styles of Mozart, Puccini, Debussy and Johann Strauss.

Once at a party Templeton was asked to accompany Nathan Milstein, the violinist, in Lalo's *Symphonie Espagnole*. The blind

Musical America

ALEC TEMPLETON

pianist said he did not know the work but would play it if someone ran over it first. While the 32-minute-long work was played, Templeton listened carefully, then accompanied Milstein easily, making only one error. Milstein, considerably awed by such an amazing memory, declared the error was an improvement over the original.

Templeton thoroughly understands the jazz idiom and thinks "it will set its stamp more and more upon the musical production on this side of the Atlantic." "The music of such American composers as Ferde Grofé, Cole Porter (see sketches this issue), George Gershwin and Jerome Kern," he declares, "is certainly very fine; and it will have a definite influence on music of a more serious character." Templeton has written many improvisations on classical works. In the realm of swing music his *Mr. Bach Goes to Town* is a classic, part of a pentateuch that includes *Mendelssohn Mows 'Em Down*; *Mozart Matriculates*; *Haydn Takes to Ridin'*; and *Debussy in Dubuque*. In August 1940 he made his Lewisohn Stadium debut delighting the audience with his *Grieg's in the Groove*, and the critics with his brilliant performance of the *Rachmaninoff Concerto*.

Critics describe Templeton as "an exceedingly affable, brown-eyed young man." Everything is associated with music in Templeton's mind. He thinks of people in terms of music—cataloguing the key of their voices and remembering them by name as soon as they speak to him. He says: "I adore people, and jokes, and music, and the fresh feeling of the wind. What I can't have, I don't think about."

He married Juliett Vaiani, a singer, on August 25, 1940.

A French critic has summed him up in the following words: "Alec Templeton has never

TEMPLETON, ALEC—*Continued*

in his life seen the sun, nor the moon, nor the stars. He does not know what light is. The names of the colors have no meaning for him. Still, he hears, he feels, he receives countless impressions; he evaluates, he comes to conclusions, with an accuracy that is a subject for wonder. Throughout his successes he has remained unaffected, simple and gentle. He is an authentic genius; a genius in the full and exceptional French meaning of the word *génie*."

THOMAS, LOWELL Apr 6, 1892- Radio commentator; author; lecturer

Address: b. RCA Bldg, Rockefeller Center, New York City; h. "Clover Brook," Pawling, New York

Possibly no one person in America has been longer, oftener, or more successfully in the public eye than Lowell Thomas. He has been a radio news commentator for the National Broadcasting Company since 1930 (on September 30, 1940 he observed his tenth anniversary as a news broadcaster), and a commentator for Twentieth Century-Fox Movietone since 1935. Renowned as a globe-trotter, he has lectured on subjects gleaned from his travels to millions of people in nearly every English-speaking city in the world. He is the author of some 20 books; and was an editor of the *Commentator*. He was recently awarded the bi-centennial medal of the University of Pennsylvania.

Lowell Jackson Thomas (he does not use his middle name) was born in Woodington, Ohio, April 6, 1892, but grew up in the world-famous Rocky Mountain mining camp of Cripple Creek, Colorado. His training for his lecture and radio career actually began here, since his father, a scholarly physician, had a horror of slovenly speech, and taught the boy to speak clearly and correctly. In his home was one of the finest libraries west of the Mississippi. Contrasting with this richly cultivated atmosphere were the shafts, shacks and dance halls of a mining town.

When he was 11 years old, Lowell Thomas worked for a while in the gold mines; before that he had sold newspapers in the

gambling halls and saloons. Associating with all types of adventurers, his imagination was fired by their many stories of far corners of the world, and his boyhood ambition was to see more of the earth and its people than anyone who ever lived. He began by attending as many as four universities: Valparaiso in Indiana; the University of Denver, where he took a degree; the Kent College of Law, where he later became a professor; and Princeton, where he took postgraduate work in English literature. He worked his way through these colleges by holding various jobs, such as cow-punching, tending furnace, acting as a cook and waiter, mining, assisting a geologist, reporting on daily newspapers.

In his early twenties he outfitted and headed two private expeditions into the sub-Arctic, taking along camera and notebook. He soon became known as an authority on these regions, started lecturing first before small groups, later before such organizations as the Smithsonian Institution. During the First World War he became known as a brilliant reporter and speaker; and Franklin K. Lane, then Secretary of the Interior, asked the President to assign him to record the history of the War. Financed by a group of wealthy men, Lowell Thomas with a staff of cameramen and assistants set out to do so. He was attached in turn to the Belgian, French, Italian, Serbian, American, British and Arabian Armies.

It was while with the Italian Army in the Alps that Thomas first heard of the appointment of General Allenby as commander of the Allied Forces in the Near East. On joining Allenby in the Holy Land, he kept hearing stories, half myth, of a man who had united the Arab tribes against the Turks. Then, in Jerusalem, he saw a man garbed as an Arab, but beardless and blue-eyed. Thus he met Colonel T. E. Lawrence, and soon after joined him in the Arabian Desert. On his return to New York Thomas had the exclusive story and pictures of the famous Revolt in the Desert. Later he showed the films in the British Isles, where over a million heard him. His best-known book, *With Lawrence in Arabia*, appeared in 1924; he wrote also *A Boy's Life of Colonel Lawrence*.

At the end of the World War, after 16 attempts, Lowell Thomas was the first person to enter Germany and bring back an eyewitness account of the German Revolution. President Wilson called upon him to make a special report to the Peace Delegates. From 1919 to 1922 he made an extensive tour of the world, during part of which time he accompanied the Prince of Wales on his famous trip through India. Thomas has traveled among the pygmy tribes of the East, penetrated the bush country of Australia and the Himalayan fastness of Upper Burma.

On the lecture platform Thomas has spoken in almost every town of over 5,000 population in the United States and Canada.

LOWELL THOMAS

On the radio he has talked to countless millions more. He likes broadcasting, and prepares his broadcast up to the last second before he steps before the microphone. It is said that his sponsors never see the script, which is a rare proceeding in radio. He is one of the most factual and objective of commentators, and tries not to take sides in any issue. His voice is friendly, virile, typically American, but without a trace of accent. Radio broadcasting is a form of reporting; and, as Thomas says, "I've always liked reporting. And I've always tried to write the kind of story that would enable me to come back and get another if that should be necessary... It is getting the story, watching it unfold, that fascinates me."

Thomas is a Fellow of the Royal Geographical Society, a Fellow of the American Geographical Society, an honorary life member of the English Speaking Union and of the Chicago Press Club, and a member of the Explorers' Club, the Princeton Club and the New York Advertising Club.

Among his books are: *Beyond the Khyber Pass* (1925); *The First World Flight* (1925); *Count Luckner, the Sea Devil* (1927); *Raiders of the Deep* (1928); *The Hero of Vincennes* (1929); *India, Land of the Black Pagoda* (1930); *Rolling Stone* (1931); *Kabluk of the Eskimo* (1932); *Adventures Among Immortals* (1937); and a number of travel books such as *Seeing Japan with Lowell Thomas* (1937). His latest books are *How to Keep Mentally Fit* (1940), about the benefits of public speaking; and *Pageant of Adventure* (1940).

Thomas married Frances Ryan of Denver in 1917; they have one son, Lowell Jackson Jr. Thomas takes a great deal of interest in his home in the Berkshires at Pawling, New York. There he has a library of 3,000 volumes, runs a local softball team, likes to

THOMAS, LOWELL—*Continued*

ride and, when he can, breakfasts in his riding boots. He tamed an unmanageable outlaw horse, so that now it is one of the best performers in his stable. He likes opera, the theatre and the one cigar he allows himself each day. And, among the treasures gathered from his travels, he particularly likes a magnificent teak chest covered with 30 thin layers of gold, given him by the abbot of a Buddhist monastery.

THOMPSON, DOROTHY July 9, 1894-
Columnist

Address: b. New York Herald Tribune, 230
 W 41st St, New York City

In October 1940 Dorothy Thompson amazed quite a lot of people and dismayed the New York's Republican *Herald Tribune* for which she works by coming out for President Roosevelt. As a poet in *The Sun Dial* (New York Sun) commented:

"Willkie's good
 And plenty hotty
 To all the Reids. . .
 But not to Dotty."

"The mistakes of the New Deal," she wrote, "have been mistakes in the right direction. . . The President *knows* the world . . . better than any other living democratic head of a state. . . No new President could acquire this knowledge in weeks or in months or in four years." She claimed that the President can be a great man in an emergency, looming "above that of any statesman except perhaps Churchill" (see sketch this issue). After endorsing the President, Miss Thompson rolled up her sleeves and waded into the battle with characteristic ardor. She crusaded on the air and in political rallies, enlivened the campaign by trading verbal punches with playwright Clare Boothe, and suggested that Wendell Willkie be put in the Cabinet now that the elections are over. Because her prognostications and advice mold the opinion of a vast number of readers, the influence of such a Thompsonian endorsement was by no means slight.

Dynamic Dorothy Thompson has, next to Eleanor Roosevelt (see sketch this issue), the "most power and prestige of any woman in America today." Since 1936 her widely-

syndicated thrice-a-week *On the Record* columns have convinced not only women, for whom they were originally intended, but men readers of her vigor, brilliance, enthusiasm, uncanny knowledge and judgment of the world situation and uncompromising sincerity. A selection of these articles, *Let the Record Speak*, appeared in 1939: they include, with an I-told-you-so air, mostly those of her pronouncements that came true. Of the book Raymond Gram Swing (see sketch this issue), a staunch admirer, wrote: "Reading her comments in the light of what did happen becomes a fascination so that it is hard to lay down this collection. They move with the drama of history. . . The book contains some first-class writing. It has body and texture, clarity and feeling. It is good writing because it conveys its meaning smoothly and directly." Besides her column, Miss Thompson writes each month for the *Ladies' Home Journal* and occasionally for other periodicals. In 1938 and 1939 she had a radio program, but her sponsors worried about her violent attacks upon Hitler, Stalin *et al*, and her contract was not renewed. Up to the last year or two she has done much lecturing; she is an excellent speaker and receives yearly some 7,000 invitations to speak, with proffered high fees. Her combined earnings are considerable.

She returned late in May 1940 from a trip abroad to observe war developments in France, England, Italy, Holland, Finland and the Balkans. She could not go to Germany: Hitler expelled her from the Reich in 1934 because of her writings; and for her viewpoints on Communism she is *persona non grata* in Russia. Belligerently non-isolationist before her trip, back came her cabled columns whose increased "war mongering" (her direct ancestry is British, the fixed object of her hatred is Hitler) alarmed many besides isolationists. A prophesying Cassandra is less dangerous than a crusading one. "Her emotional zeal runs away with her intellectual analysis," John Chamberlain (see sketch this issue) has said, since she wants to preserve the British balance of power by destroying Hitler, when it was this same statecraft that created Hitler and may create another like him in the future.

There is a perpetual dualism in Dorothy Thompson's personality and mental make-up that colors her political observances. She is the torch-bearing Great Mother out to protect the Status Quo; she is also the rebel kicking with childish vehemence at restraint and opposition. She deplores some of the New Deal, but approves wide-scale planning on a strict non-political basis; she approves sound, private ownership. Old-style capitalism, she says, is doomed, but her capitalist friends do not mind her saying so; they know that at heart she is a conservative, or, as she prefers to call it, "preservative." Nor are they alarmed when she says that the present War is just one

manifestation of a world revolution going on for some time. What opposition and attack Miss Thompson gets come consistently from the Left. Many women are highly flattered by the fact that most of her column readers are men. But to the latter sex her rapid leaps from subject to subject are disconcerting, as are her equally rapid shifts in judgment. She remains thoroughly feminine in reserving the right to change her mind. She changed it on Hitler, on Lindbergh, on Roosevelt. Of Roosevelt she has said: "When he is right I am for him. When he is wrong, I'm against him." Her humor is usually pretty heavy-footed; as a satirist she often misses the boat. Occasionally she gets back neatly. Father Coughlin (see sketch this issue) once referred to her as "Dottie," so when she wrote of him thereafter she always called him "Chuck."

It is proof of her influence and vitality that rival columnists (masculine) make numerous quips about her. *Time*, via Hugh Johnson (see sketch this issue), has called her the "No. 1 United States Breast-beater." Sir Wilmot Lewis says that she "has discovered the secret of perpetual emotion." The late Heywood Broun wrote: "Dorothy Thompson is greater than Eliza because not only does she cross the ice but breaks it as she goes. Moreover, she is her own bloodhound." Miss Thompson, an aggressive extrovert who has never had the time to look at herself with any sort of objectivity, takes all this in her stride. Men also admire her and know that she is a good fellow.

A study of Dorothy Thompson's childhood might give a psychologist the cue to her career and viewpoints. She was born in Lancaster, New York, July 9, 1894, eldest child of Peter and Margaret (Grierson) Thompson. Her father, from England, was a Methodist minister who transferred from one parsonage to another in upper New York State. Dorothy became the mentor and protector of younger brother and sister: Peggy, small and gentle; Willard, fat and adoring, fall-guy for Dorothy's "Little Lulu" escapades and rebellions. She was gawky and a tomboy: everything a parson's daughter shouldn't be. When her mother died, the 10-year-old Cassandra prophesied darkly that the church organist, Eliza Abbott, was setting her cap for the minister. It was true: father married Eliza, who turned out to be a typical terror of a stepmother whom Dorothy hated and rebelled against. She adored her father, whose idea of punishment was the memorizing and reciting of Bible passages. His coaching of her recitations doubtless helped make her the effective speaker she became.

Young Dorothy's feuds with her stepmother were over when she was sent to her aunt in Chicago. There she went to high school and to Lewis Institute: not a brilliant scholar, but popular as captain of the basketball team and a social leader.

G. Maillard Kesslère

DOROTHY THOMPSON

Entering Syracuse University in 1910, she got a reputation as a joiner and a cause-embracer. She worked her way through the college, became a more thoughtful student, and showed marked ability as an orator. The boy students remember that she wasn't a girl who had many dates, however: romance, to her, was discussing politics and economics while strolling in the moonlight. She had prepared to be a teacher but failed in grammar and, interested in the suffrage movement, went all over the state making stump speeches. When the War broke out she wanted overseas service but was turned down. She supported herself doing social work, which she didn't like, but she managed to save up \$150 to sail for Europe. On the boat she met a group of Zionists, and got International News Service to let her cover their conference. This was the start of her adventurous career, reading much like the *Perils of Pauline*, in free-lance journalism.

Traveling over Europe, Miss Thompson managed to sell pieces at space rates to various papers. Luck was usually with her: she had some knack or instinct to be on the spot when news broke. Important events so nearly coincided with her arrival that other correspondents, when they heard she got into town at noon, would ask what happened at one o'clock. Through Wythe Williams, then editor of the *Philadelphia Public Ledger*, she got the post of Vienna correspondent. There, a year after the Karlist *putsch*, she succeeded, by flattering a guard, in getting into the castle and interviewing Empress Zita and getting her story past the censor. She followed rumors and revolutions, blazing through Europe, as John Gunther said, like "a blue-eyed tornado." Her get-there-or-else maneuvers

THOMPSON, DOROTHY—*Continued*

won the respect of the newspaper boys. If she had to hit below the ethical belt to get a story through, she hit; but if she was able to do a fellow correspondent a good turn, she always did.

Blonde and buxom, Dorothy Thompson fitted ideally into Vienna, where she was the center of a lively cosmopolitan literary group. She gave superb parties which women didn't usually like: these soirees had an unscented, intellectual aura. They were dominated by a hostess who, as Phyllis Bottome remarked, "had no foliage: she was like a tree rooted in the earth and reaching in a straight line to the sky." In 1923 she married Josef Bard, a romantic Hungarian writer. Their matrimonial difficulties came to a head during the World Economic Conference. The Thompson idea of marriage was Methodist, the Bard's Bohemian; at any rate, the wife's output and personality soon eclipsed the husband's, and they were divorced in 1927.

In 1925 she was appointed head of the New York *Evening Post's* Berlin office, and met Sinclair Lewis at a tea given for Stresemann. Lovesick and airsick, Lewis pursued her by plane all over Europe, proposing to her every chance he got. When Moscow reporters asked the distinguished author of *Main Street* what he found most important in the European situation, he replied, "Dorothy." They were married in London in 1928. In 1930 their son Michael was born. Mrs. Lewis is a devoted mother, and goes often to visit him at his school in Arizona.

On their return to America Dorothy Thompson led a domestic life for a few years—in the summer on their farm near Woodstock, Vermont; in a New York apartment for the winter, where she arranged books, easy chairs and cheery logs around a fireplace that turned out to be phony. She read a great deal and wrote her book, *I Saw Hitler* (1932). This was based on a Berlin interview with the future Führer, when he made so slight an impression on her that she called him an insignificant "little man" who could never be dictator. Since that gross error in judgment Miss Thompson has spent about three-fifths of her column attacking his régime. From her long residence in Germany and Austria, she grew to love the German scene and its people; her feeling about Hitler's desecrations is deep; she meant it when she said she would have given her life to save Austria from the Nazis. She speaks and writes excellent German and delights in German cooking. She makes Viennese dishes in her Vermont kitchen, where the shelves hold containers marked *Salz*, *Pfeffer*, *Brot*, etc. Most of her servants are blond Germans—and Nazis: she says she hired them for their service, not for their politics. But since the Vermont house often harbors a good many refugees from Nazi Germany, the harmony between these

and the Nazi servants must be a trifle strained.

Begun in 1936, Dorothy Thompson's column for the *Herald Tribune* was popular from the start. Miss Thompson had a talk with the *Tribune's* Mrs. Ogden Reid when she heard that Walter Lippmann (see sketch this issue) was being paid more than she was; she emerged with a new contract. The columns are done with the help of three secretaries, all named Madeline. Miss Thompson often dictates in bed just after breakfast, leaving blanks for statistics which the secretaries look up and fill in. She has a large "brain trust" which she consults by telephone and cable, among them David Sarnoff, Morris Ernst, Wendell Willkie (see sketches this issue) and Alexander Sacks. German intellectual refugees bring her grapevine information. Her interest in these refugees and their plight was embodied in her book: *Refugees: Anarchy or Organization?* (1938), which influenced Roosevelt to call the refugee conference at Evian, France. She also wrote, in collaboration with Fritz Kortner, *Another Sun* (1940), a play for refugee benefit, about a Teutonic actor who came to New York. "So what?" several critics rudely said. Another wrote: "So many things happened at once to so many people that when one of the characters died in the middle of the stage the audience didn't notice it for 10 minutes." The play ran a little more than a week. Miss Thompson gave the actors large bonuses, but has not yet forgiven the critics.

In person Miss Thompson is imposing, femininely handsome with soft gray hair, dresses expensively, but with a visible disregard for clothes. "She is a master of the dramatic entrance and immediately makes herself the center of attention whenever she enters a roomful of people. This seems to be as unconscious and automatic with her as it would be with a Barrymore. . . Women who go to the same social affairs begin by being annoyed and wind up by sitting things out in cold fury. The men surround Miss Thompson and hang on her words." She is a noted spotlight stealer. At a huge 1939 Madison Square Garden Bund meeting she heckled the speaker with strident roars of laughter and was highly pleased when police escorted her out of the meeting. Her favorite pastime is discussing the international situation. This, as expounded by his wife, Mr. Lewis calls "it." When she has guests and he drops in (they are living amicably apart) he first asks someone in the hall, "Is she talking about it?" If the answer is yes, Lewis quietly steals away. When the American Women's Association suggested forming a "Dorothy Thompson for President" club, Lewis made the remark that has since become classic: "I wish they would elect Dorothy; then I could write *My Day*." It is probable that Dorothy Thompson, without running for President, will find enough interests. Besides Hitler, she has only one aversion: New York intellectuals. She likes hard work and she likes

life, socially and in a larger sense. She says she would like best as her epitaph: "Died of extreme old age."

THOMSON, VIRGIL Nov 25, 1896-
Composer

Address: c/o New York Herald Tribune,
230 W 41st St, New York City

Virgil Thomson, one of America's most important modern composers, has known three phases of society, and each has left its mark on his work. He was born in Kansas City, Missouri and spent his youth in the Midwest. From there he went to Harvard, received his degree in 1922 and in the austere intellectual atmosphere of Boston alternately taught at Harvard and performed as organist and choirmaster of King's Chapel. From Boston he migrated to Paris in 1925 and stayed there until 1932, studying under Nadia Boulanger and coming under the influence of Eric Satie and the "French Six."

Most of the ideas, attitudes and opinions he developed in those many years are presented in *The State of Music* (1939), "a witty and at times brilliant book." The most striking section and the one which aroused the most controversy is called "How Composers Eat," in which Mr. Thomson analyzes the categories of musical jobs and considers the possibilities of enlisting financial security or of marrying it. "I have never known an artist of any kind who didn't do better work when he got properly paid for it," he writes, and in this chapter and a later one he discusses as sources of economic maintenance, a composer's own income, his wife's, other people's and finally the different categories of patronage—Mr. Thomson himself was supported for a number of years by the Naumburg and Payne Fellowships from Harvard, and fellowships from the Ecole Normal de Paris and the Juilliard School. He also gives advice to subsidized composers—the work done, he says "should be difficult to listen to and very difficult to comprehend, yet withal skillful enough in instrumentation that nobody could call the work incompetent."

In *The State of Music* there are, too interesting data on music for motion pictures, and a lamentation for the fact that Wagner came so many generations too soon for them. His own work with films includes the incidental music for *The Plow That Broke the Plains* (1936) and *The River* (1937), and critics agree that much of the effectiveness of these pieces was derived from his score.

The same brilliance that lightens Virgil Thomson's book is apparent in his other writings (he has been a music critic for the *Boston Transcript*, *Vanity Fair* and *Modern Music* and is now music critic for the *New York Herald Tribune*) and in the various comments on music and its phases which he occasionally makes. About conducting, for instance, he has some very definite ideas. Although he himself is on occasion a conductor, still he deplures the modern qualifications for this "national sport." "The first requirement," says he, "is a figure. The second is interpretive ability. The successful

Toppo

VIRGIL THOMSON

leader must depict in his own person at least the spirit of the pieces played. Josef Stransky, an admittedly incompetent leader, delighted the ladies of the Philharmonic for seven years by putting symphonies to gesture, quite regardless of sound or rhythm. Mr. Stokowski, on the other hand, panting in a frock-coat over the love music from *Tristan*, is giving his own show, just as if the director of the Louvre were to exhibit himself to visitors, posed and breathing through his nostrils, before a Rubens' *Venus*."

Mr. Thomson's greatest interest, however, is in opera. "No art form is so little understood or so stupidly practiced as the opera in this age of decline," he comments. His own idea is that a successful composer should see that the musical and dramatic elements in his opera completely balance each other. He should not create a vehicle for a virtuoso to bellow from one *arpeggio* to another; nor should he devise a sequence of incidents set to music. What he should achieve is a normal blending of both musical and dramatic elements.

Virgil Thomson's own opera, *Four Saints in Three Acts*, was presented in 1934, its libretto the work of Gertude Stein, whose *Capital Capital* he had already set to music. Beyond the fact that it seemed odd for a man whose music is as well formulated as Mr. Thomson's to choose for his libretto poetry as obtuse and apparently senseless as Miss Stein's, there wasn't much comment on this. There was, however, a good deal of comment on the music. Mr. Lawrence Gilman described the opera as "deceptively simple, a little self-consciously candid and naïve, actually very wily and deft and slick, often subtly and wittily illusive. . . This is a suave and charming score."

Other critics agree with Mr. Gilman—one says the score was written "in a mood

of cerebral sadism," in which Miss Stein presents her composer with a stream of words and he matched her, sound for sound and utterance for utterance. He almost dared her to continue the contest. She did so, again and again, from act to act and Mr. Thomson's score soared around and about her words. There were critics, too, who said that Mr. Thomson's music was a direct outgrowth of the liturgical music of the past 100 years. It was cited that since the atmosphere of *Four Saints* was religious and since Mr. Thomson had once been a church organist, he was writing simple and modern music to an ecclesiastical theme.

It is true, of course, that Mr. Thomson knows church music. His chorals would not be so sonorous, nor his harmonies so clear if he did not. But it was felt, too, that no composer whose purpose was seriously religious would accept as companion piece to his music a continuity which includes stage settings like that of Act II: "Might it be Mountains if it were not Barcelona," or that of Act III: "Barcelona—St. Ignatius and one of two literally," and texts like the often quoted: "Let Lucy Lily Lily Lucy Lucy let Lucy Lily Lily Lily Lily let Lily Lucy. . ." etc.

Mr. Thomson has produced but this one opera, but there are a great many of his other compositions which are performed extensively in the United States and France, especially the scores for incidental music for stage productions. Some of this music expresses "sparkle, wit and malice"; some of it is sober and meditative. Among his compositions are two sonatas, a set of *Synthetic Waltzes*, *Five Inventions*, a set of *Seven Portraits*; *Two Sentimental Tangos* for piano; a *Sonata da Chiesa* for trombone, horn, viola, trumpet and clarinet; *Symphony of an American Hymn Tune* and four variations and fugues for organ on songs like *Shall We Gather at the River*. He has also written *Symphony Number Two*, *Missa Brevis*, *Filling Station* and *Three Antiphonal Psalms*.

Virgil Thomson is blond, slightly bald, square-faced and young-looking. He is "a gifted cook, a specialist in the preparation of salad dressings and in the treatment of rice." He is said to possess great social charm and his flow of conversation, often amusingly ironic, is facile. Little of it is about music, however; much of it is about food; and gossip is perhaps his favorite subject.

THORBORG, KERSTIN (tor'borg kûrs'-tîn) Operatic contralto

Address: c/o Metropolitan Opera Assn, Broadway and 39th St, New York City

On January 20, 1940, Gluck's opera *Orfeo ed Eurydice* was broadcast from the Metropolitan stage. The cast was headed by the brilliant Swedish contralto, Kerstin Thorborg, acclaimed by critics as one of the great Orfeos in operatic history.

This young contralto, who takes more pleasure in her singing than in anything else, has known from earliest childhood that she wanted to be a singer. She was born in the little town of Hedemora, in the north of Sweden. Both her parents had been musicians; her father, a newspaperman, had been ambitious to become an opera singer, a career denied him by the social prejudices of his parents; her mother was an accomplished amateur pianist. The story is told that, while Kerstin was little more than a baby in her carriage, she was singing one day when Madame Karolin Oestberg, reigning Swedish operatic idol, happened to pass by. She listened to the little girl's voice and predicted that she would some day become a great singer.

Kerstin Thorborg's childhood recollections are of late afternoon choir practices, when she sang the solo stanzas of the hymns. All through childhood and adolescence she practiced singing. At home, her mother played while her father, two brothers and she sang four-part vocal harmonies. The quartet, still intact, functions again when the great prima donna goes home for vacations. Her first professional singing teacher was a violinist, the Baronin Karin von Rosen.

Her stage career began at the Royal Opera in Stockholm. At that time she sang one performance of Amneris with a relatively obscure Norwegian soprano as Aida. The two did not meet again till an evening in 1936, when at the Metropolitan Opera House in New York, Flagstad and Thorborg sang the first of their many memorable *Walküres* together. A great many people are confused, in reading billings of their names, to see the odd juxtaposition of the Norwegian "Kirsten" and the Swedish "Kerstin."

Madame Thorborg made her London debut in May 1936 at Covent Garden in Wagner's *Ring* cycle. She appeared subsequently in Vienna, Salzburg, Berlin, Prague, Munich and Buenos Aires. She has given recitals on the Continent and has been soloist with major symphony orchestras.

Her American debut was at the Metropolitan Opera House in New York as Fricka in *Die Walküre*, December 21, 1936. Present was her Stockholm colleague, Gustav Bergman, who, as stage manager at the Royal Opera, had bet the young artist five kroner

Musical America
KERSTIN THORBORG

the first time he heard her sing that she would be called to the Metropolitan before very long. When the wager was won he had a hard time collecting, for in the meantime the lady had become his wife. They recently celebrated the twelfth anniversary of their marriage. Herr Bergman has given up his own career to become Madame Thorborg's coach, accompanist and business manager, and (she says) most feared of her critics.

Her rôles have included Fricka, Magdalena, Brangäne, Waltraute. She sang Klytemnestra in the Metropolitan revival of *Elektra* (1938); and Octavian in the *Rosenkavalier* revival. During the 1939 to 1940 season she appeared in several Wagnerian rôles, and in the rôle of Orfeo. In the latter, her favorite rôle, she wears a vivid blue tunic—for blue is the color of fidelity—with a bronze cloak. The rôle of Orfeo was added to Madame Thorborg's repertory early in her career, when she first sang in Prague. It was an immediate success: whenever *Orfeo* was billed, Madame Thorborg's name became a box-office enthusiasm. Later Bruno Walter revived *Orfeo* for her when she became a member of the Vienna Opera Company.

Until World War II Madame Thorborg and her husband traveled around the world filling concert and opera engagements during eight months of each year. They work together at the piano four or five hours a day. They have other mutual enthusiasms also: bridge, the stage shows at the Radio City Music Hall, tomato juice and strong coffee. The rest of the year they used to spend at home—a medieval style Swedish peasant farmhouse set among the birch forests along the River Dal.

THURBER, JAMES Dec 8, 1894- Author
Address: c/o The New Yorker, 25 W 43rd
St, New York City

Before he became popularly associated with drawings of melancholy hounds and contentedly frustrated humans, James Thurber, as old-timers know, began his career as a writing humorist. *Is Sex Necessary?* has gone into the history of the libido; many who found the owl in the attic and the seal in the bedroom now let their minds alone. But they still turn to the pages of the *New Yorker* for those fascinating Thurber line sketches, with captions, drawn from the prankish edge of the subconscious. Now they can also be found in *PM*—every Tuesday and Thursday, illustrating the ramblings of the Thurber mind on any subject from football to the Martians.

Perhaps it is quite in the order of predestined things that some of the Thurberiana should take the form of a play. *The Male Animal*, coauthored by James Thurber and Elliott Nugent, opened on Broadway, January 9, 1940. It is a happily mad, semi-scan- dalous comedy hit with a sweet-water college setting. Nonplotted, nonconforming, frailly motivated, untidy, with some satire and much good-natured comment, *The Male Animal* depends for effect on its astral aura. For characters: a meek professor and his wife, with other stock campus figures. For action: a party, a football re-enactment, a fight, a drunk scene. When the mildly liberal professor wants to read one of Vanzetti's letters to his class, he is branded as a Red. But worse looms on the horizon when his wife's ex-sweetheart, an old football hero, comes to town. Fortifying himself with the emboldening cup, the professor decides he is man, not mouse, and fights for his mate. The play is directed shrewdly and brilliantly by Herman Shumlin; and coauthor Nugent, as the professor, is in perfect Thurberian fettle from his first entrance cue. Remarkably enough, the characters manage to sound the way Thurber's drawings look, preserving that same quality of grave lunacy combined with moronic, God-like yearning.

James Grover Thurber (he does not use his middle name) was born in Columbus, Ohio in 1894, and grew up with a fondness, legend has it, for peppering passing legis- lators with electric light bulbs dropped from the State House dome. Apparently he came by his talents honestly, since it is rumored that the doings of the Thurber household, from Grandfather on down, are still re-

membered with real awe around Columbus. He began to write at the age of 10, producing *Horse Sandusky*, the *Intrepid Boy Scout*, and to draw when he was 14.

Thurber attended Ohio State University (there is a chapter on his college career in *My Life and Hard Times*, leaving in his senior year to become a code clerk, first in Washington, then in the American Embassy in Paris (1918-20).

This was in the nature of war service, since in a childhood accident the loss of the sight of one eye made him unfit for front-line duty. He worked thereafter as a newspaperman on the *Columbus Dispatch*, the Paris Edition of the *Chicago Tribune*, and the *New York Evening Post*.

Having contributed a couple of pieces to the *New Yorker*, he found his real home on that magazine when Editor Harold Ross hired him (according to a trial-and-error method) as managing editor. Thurber, knowing nothing of the problems involved in running a magazine, had to work his way down to a position on the paper where he felt safe. He took care of the *Talk of the Town* department, which left him time for his own writing as well. There he developed a fruitful friendship with E. B. White, who was writing the *Notes and Comment* department. As his first book, Thurber in combine with White wrote a parody on the books-on-sex fad, the Schmalhausen-Wittels-Calverton popularizations. *Is Sex Necessary?* (1929) became a success, selling 40,000 copies—a success due not only to its hilarious satire, but to its embellishment with those odd drawings which marked Thurber's first appearance as a humorist-artist. It seems that the editor, on seeing these limp, neolithic, gap-mouthed figures, was doubtful. Thurber has become more widely known since for his drawings than for his essays, though he prefers to think of himself as a writer. The story is told that at a recent showing of his sketches in London, where the sales were high, a remark by a lady spoiled it all for Thurber. When someone to whom they were both talking mentioned one of his books, she exclaimed in surprise, "Oh, you write, too, then?"

After *Is Sex Necessary?* came *The Owl in the Attic* (1931) and *The Seal in the Bedroom* (1932), both collections of nonsense essays with appropriate illustrations. In 1934 appeared Thurber's "autobiography"—*My Life and Hard Times*. Here he affirms that humorists, far from being carefree and gay of heart, lead an existence of twitchy apprehension. "In the House of Life, they have the feeling that they have never taken off their overcoats." He recalls the night the bed fell on his father, and his mother's strange fear that the Victrola might blow up; he tells of Grandfather's brother Zenas, who died of the same disease that was killing off the chestnut trees; and of the night a ghost got in the Thurber house. Though he sometimes fails to make these episodes in his life convincing, Ernest Hemingway called this book "superior to the autobiogra-

JAMES THURBER

phy of Henry Adams." *The Middle-aged Man on the Flying Trapeze* (1935) was another collection of short pieces containing some major triumphs. In *Let Your Mind Alone* (1937) Thurber satirizes the best-seller inspirational books on the how-to-wake-up-and-win-friends order.

In 1939 he wrote *The Last Flower*, an antiwar fable in pictures, with the drawings telling most of the story. It shows the cyclic progress of humankind from civilization to war, from war to barbarity and destruction (the happy dogs leave, rabbits grow huge and swaggering), back again to civilization through the rediscovery of love when a girl finds the last flower on earth, etc. The drawings, first-rate Thurber, make a profoundly eloquent argument. His latest book is *Fables for Our Time, and Famous Poems Illustrated* (1940), with typically daft morals and dough-like illustrations.

Thurber's first marriage in 1922, to Althea Adams of Columbus, was dissolved in 1934. The following year he married his present wife, the former Helen Wismer. The Thurbers have traveled a great deal, and live in New York only a small part of the time. They contemplate owning some day a place in the country, but at present just rent places for winter sojourns. It is said they go winters instead of summers because Thurber always works in reverse, such as sleeping during the day and getting up at night. Mrs. Thurber, however, has succeeded in getting him onto a more normal schedule.

His self-portraits reveal him as a harassed, wild-haired, hand-on-chin brooder-type. But he has been thus described by his friend, Robert M. Coates: "Tall, shy, loose-jointed and absent-minded, he has the physical equipment for getting into involuntary mischief and the artist's detach-

THURBER, JAMES—*Continued*

ment for making the most of it after it has happened." His fellow playwright, Elliott Nugent, who has known Thurber since they were at Ohio State together, says that there are several Thurbers, probably six. In college days he wandered around on cold winter days in an old pair of pants, no vest, no overcoat, no hat. Now in New York he does likewise. Thurber, in fact, suffered more from the California sun on a recent Hollywood trip, when he took umbrage with a green umbrella, than he does from New York's cold. As for his character: "Unstimulated, he is the mildest of men," writes Nugent. "When a cloud is over him he reacts to nothing. Even with friends he is shy and reluctant to disagree when in this mood of low vitality. . . The whirlwind comes later. Suddenly the mild, patient Thurber is gone like a forgotten zephyr, and a new piercing hurricane is upon you, piling up waves of argument and invective. . . Next day, while you are patching your sails and cutting away the wreckage, Thurber appears in a canoe bearing fruit and flowers."

Fond of rifle shooting but unable to concentrate, he usually fires the gun off into the air when handing it to the next marksman. He was recently blackballed when brought up for membership in the Fairfield County, Connecticut, Skeet Shooting Club. He has never been defeated at singles in crokinole. He can hold a grand slam hand in contract and be set six, but he has never been taken at fan-tan.

Thurber never listens when anybody else is talking, preferring to keep his mind a blank until the other finishes so he can talk. His favorite book is *The Great Gatsby*. His favorite author is Henry James.

Caught in their off-moments, humorists may sometimes be philosophers. Thurber really has a philosophy of humor—and of life. He defines humor as "a kind of emotional chaos told about calmly and quietly in retrospect." He feels that the answer to where we are going if anywhere, and why, has eluded everyone from Francis Bacon to John Kieran (see sketch this issue). Asked to state his beliefs in a series of *Intimate Credos* edited by Clifton Fadiman, he did so in a nutshell: "I have never been able to maintain a consistent attitude toward life or reality, or toward anything else."

THYSSEN, FRITZ (tis'sən) Nov 9, 1873- Former German industrialist

In December 1939 there was an official announcement in Berlin: "On the basis of the law of July 14, 1933, regarding confiscation of property inimical to the state and nation, the entire movable possessions of Dr. Fritz Thyssen, formerly of Mühlheim in the Ruhr and now abroad, as well as his real estate, are confiscated by the state of Prussia. No legal appeal can be made against this action."

This was the final break between Fritz Thyssen and the Third Reich. Thyssen, once one of the wealthiest men in Europe and an industrialist whose support did much to raise Adolf Hitler to power, was made a man without a country. But his Rhine Valley industries continue working for the Reich, and his factories and mines have been incorporated into Goering's four-year plan.

For many months there was speculation as to what were the exact reasons for Thyssen's leaving Germany in September 1939. Then Thyssen himself told them in the correspondence between himself and Nazi leaders published in *Life* (April 29, 1940). He told them because he said he felt that "everything should be done that might contribute to ending the War, that might prevent the useless sacrifice of countless young lives, that might spare Europe so much sorrow, so many tears."

Fritz Thyssen was born in 1873, the son of August Thyssen, a "hard-headed, ruthless and brilliant businessman who forged spectacular industrial empires during the years of German economic expansion before the [First World] War." August Thyssen was both a tycoon and a "character." He was miserly, always shabbily dressed and used to drink beer and eat wurst with his workmen. Always he kept away from politicians and society, and when it was suggested that he appear at the German Imperial Court, said he had no suitable clothes. When August Thyssen died in 1926, he left as a monument 160,000,000 marks, coal mines, rolling mills, private railroads and ports, power stations and iron foundries.

He left them all to his son Fritz, for his other two sons had been a disappointment to him. Heinrich, the eldest, who had married a Hungarian noblewoman, was made a baron of the old Austro-Hungarian empire and spent his time collecting art. August, the youngest, wanted an empire of his own and was sent into bankruptcy by his father. In retaliation he spent much money in aiding the workers when they went on strike at his father's plants. But Fritz was a son after his father's heart.

When he received his father's empire, he was a "tall, impressive figure" who had served through the War in the German Army and had been jailed for shutting down his mines to resist the French occupation of the Ruhr. Within a year he had merged his own with other companies into the Vereinigte Stahlwerke, the largest mining trust in the world, reaching out into France, India, Russia and Brazil. This was supposed to be an imposing stroke of business, but the important industrialist Krupp von Bohlen refused to join because he felt that it "suffered from top-heavy bureaucratic organization to an unparalleled degree." There were so many people at the directors' meetings that people used to say they had to be introduced to one another.

As early as 1923 Fritz Thyssen joined the National Socialist Party, and in 1929 he admitted it, which was a daring thing to do. Thyssen believed in Hitler and liked Goering. These, he felt, were the men to make the strong, united Germany for which he longed. As the depression came on, he felt even more strongly that the Nazi way was the only way out. "None of us can get the country out of this mess," he would say defiantly. Thyssen knew that the continuation of liberal, capitalistic, economic measures would have meant, in 1931, "announcing his company's bankruptcy" and reducing its common stock by about 50 per cent. He also felt very strongly that the "Socialists are our great enemies," and feared the spread of socialistic ideas in the Reich.

He urged his fellow industrialists to support Hitler, and his persuasiveness smoothed Hitler's way in quarters which were naturally averse to revolution. Within a short time he had swung the backing of the most powerful industrial combines behind him. By the time the Presidential elections of 1932 were under way the big industrialists contributed to Hitler's and not Hindenburg's election funds. When, in November 1932, the National Socialist Party lost 2,000,000 votes and was broke, the big industrialists footed the bill for a last-minute effort. Fritz Thyssen alone is "reported to have spent 3,000,000 marks on the Nazis in 1932." There is no doubt but that he was "the most potent single factor behind Hitler's struggle for power."

Soon after Hitler reached power in 1933, all was rosy for Thyssen. The reorganization of the Vereinigte Stahlwerke was carried out, in the course of which the Reich's holdings of stock were reduced from 80 per cent to 22 per cent and Thyssen's grew correspondingly greater. There were no labor troubles and German rearmament meant money. When Thyssen was made economic dictator of the Ruhr, he felt that his position as capitalist was firmly secured. His first statement was: "Wild competition has no place in the new professional order."

FRITZ THYSSEN

Under Hitler, Thyssen received other honors and other important positions. He became Prussian state councilor, leader of the Amalgamated Union of West German Industry and supreme state authority for West German Industry.

As early as 1936, however, there were rumors of trouble between him and Hitler, as the "Socialism" of the Nazis ran counter to Thyssen's ironclad capitalism. There were complaints that his mail had been opened and telephone wire tapped. When, in this year, Thyssen spent some time in South America, some thought he had left Germany for good. "His departure, it was said, followed an interview at which he and other big industrialists had handed a memorandum to Hitler. The Führer was reported to have trampled the memorandum under foot and shouted angrily, in effect: 'Did you saps really believe that I would go to all this trouble just to make Germany safe for the steel barons?'"

Thyssen, too, strongly resented Hitler's persecution of the Jews and the Catholics. Fritz Thyssen had Jews among his friends and close business associates, and his father had been a devout Catholic. He himself said, in a letter to Goering: "I was a good Catholic and I shall always keep allegiance to my faith, and now even more so than ever before." "To Hitler's industrialist friend, religious and racial persecution seemed a stupid and unnecessary degradation which was losing Germany the good-will of the world."

More and more Hitler went counter to Thyssen's political creed, which was that Germany must be capitalistic, anti-Bolshevist and friendly with Great Britain. When the German-Soviet pact was signed, Thyssen was vocal against it. Before the War began he was against it and after it started

THYSSEN, FRITZ—*Continued*

he said: "Germany ought to try to put an end to it as soon as possible, for the longer it lasts, the worse will be the peace terms for Germany." Its outcome, he told the Führer, could only be Bolshevik chaos all over Europe. A few days after the War broke out Thyssen and his family crossed the frontier into Switzerland. According to anti-Nazi sources he bought his way out by turning over much of his fortune to the Nazis.

In a letter dated December 11, 1939 Thyssen told Hitler that he has "been pressed for an explanation of the reasons that prompted me to leave," and that he had not spoken as yet. "I do not intend to at a time when my Fatherland is struggling so hard to furnish the enemy with moral weapons. . . I shall keep silent." But if this letter to the German people does not reach them, "I shall call upon the conscience of the world and shall let the world pass judgment."

In Switzerland he established a residence at Locarno and told the world that he was "still a German" though "no longer a Nazi." In December 1939 the official confiscation announcement was made and the German government got from him an estimated 300,000,000 marks of property.

When Thyssen left Switzerland for France in March 1940 it was reported that it was because the strict rule of silence imposed on all political refugees was too much for him. In that country, unlike humbler German refugees in wartime, he was wine and dined and fêted. From Paris he published his correspondence with Nazi leaders in which he protested that the confiscation of his property was "an undisguised and brutal violation of law, a measure contrary to the Constitution, to law and to rights," and declared that "the time will come when my rights will be unrestrictedly respected."

"My conscience," said Thyssen, "is clear. I feel free of any guilt. My sole error was that I believed in you, Adolf Hitler, the Führer, and the movement you led. I believed with all the ardor of one passionately German." And then he begged Hitler to "listen to me and you will hear the voice of the tormented German nation that is crying out to you: 'Turn back, let freedom, right and humaneness rise again in the German Reich.'"

A few days before the fall of France Thyssen stated by radio to the *American Magazine* that Hitler would lose the War eventually, that the German people would get rid of him when they understood how they had been betrayed. Since that time no news of his fate has been received.

TOLEDANO, VICENTE LOMBARDO
See Lombardo Toledano, V.

TOLISCHUS, OTTO DAVID (tō-līsh'ūs)
Nov 20, 1890- Journalist

Address: c/o New York Times, 229 W 43rd St, New York City

If the authorities of the German government had anything equivalent to the Pulitzer Prize it is fairly certain that it would not be awarded to Otto D. Tolischus, long-time member of the *New York Times* in Berlin, for Mr. Tolischus is now forced to do reporting far from Berlin, at their request. But on May 6, 1940 it was Mr. Tolischus, then in Stockholm, who was announced as the winner of the American 1939 Pulitzer Award for best foreign correspondence.

In July 1940 he published his book, *They Wanted War*, in which he looks back over the years he spent as *Times*' correspondent in Berlin. Called "a vivid, truthful, most objective account of Herr Hitler's preparations for a successful war," in it Mr. Tolischus gives firsthand accounts of life in Germany during the Second World War, "brilliant chapters" on the economics of war and rearmament, close-up studies of Hitler, analyses of the operation of Fifth Columns outside Germany, and of the workings of domestic propaganda.

Mr. Tolischus is Lithuanian by birth. He was born November 20, 1890, in Russ, the Memel territory which belonged to Germany before the First World War and which was recently taken back from Lithuania. When he was 17 he renounced his German citizenship through his father and came to America. Five years later he was attending the Columbia School of Journalism, paying his way by working in factories in Syracuse, New

Globe Press

OTTO D. TOLISCHUS

York and Trenton, New Jersey, and when he was graduated in 1916 he promptly entered the newspaper business as a cub reporter on the *Cleveland Press*. During the First World War he was a member of the Training Corps of Camp Gordon, near Atlanta, Georgia, but the Armistice came before he saw service in France. He returned to the *Press*, and in 1923, when he joined the Berlin staff of Hearst's Universal Service after a trip to Europe, he was managing editor of the *Cleveland paper*.

Tolischus was with Universal for eight years, then joined International News Service as Berlin correspondent. In 1931 he spent a year as head of International in London; returned to the United States in 1932 to work as a free-lance magazine writer for another year; and in 1933 joined the Berlin staff of the *New York Times*, where he has been until recently.

He watched the rise and expansion of the National Socialist régime, and covered it in its economic, political and cultural aspects. Before the War he made extensive studies of Poland and Czechoslovakia. He predicted the Nazi-Soviet pact three months before it happened. In July 1939 a casual appendage to one of his "learned, heavily statisticized" summaries of an official survey of Nazi economics, giving unofficial estimates of the German secret debt, caused the SEC to embarrass the German government by asking it to tell all about its "hush-hush bookkeeping." He covered the German angles of the outbreak of the present War and remained in Poland during the German campaign there.

Finally, in March 1940, the Nazi government told him that his permit to remain in Germany would not be renewed, but that if he would leave the country for six weeks he would be readmitted. When Mr. Tolischus,

traveling in Scandinavia, applied for re-admission he was told he would be permitted only eight days—just long enough for him to obtain any personal belongings he might have left behind and to settle any business affairs. In the meanwhile he had gone from Copenhagen to Oslo and thence to Stockholm. He was in Stockholm—still in the center of events—when the German Army invaded Norway, and there he remained as keen, analytical *New York Times* correspondent until his arrival in the United States in August 1940. Back in America his plans included a badly needed vacation and what he calls "taking a look at the American scene." Before the winter is over, however, Tolischus expects to be back in a foreign post. Whatever the post, readers of his dispatches and his book know that his reports will be solid, able, readable and often brilliant.

TONE, FRANCHOT (frän-shō) Feb 27, 1905- Actor

Franchot Tone is back in Hollywood in November 1940 after having bought back his contract for Ernest Hemingway's *The Fifth Column* because he felt his throat could not stand the strain of regular performances.

This play, most critics agreed when it opened in New York in March 1940, owed a good deal of its force and conviction to the acting of Franchot Tone. Mr. Tone, who has acted rôles of boyish charm as well as tough gangsters, in *The Fifth Column* "turns in the best performance of his stage career." He gave the part all the bitterness, frustration and passion that it needs, and according to the *New Yorker* played the ex-journalist and counter-espionage agent of Hemingway's play "with maturity and a disregard for romantic attitudes that would never have got him anywhere in Hollywood."

Tone, who went to Hollywood in 1932, returned to the stage in 1939 and went back to Hollywood again in 1940, is "crazy about the stage. You get a chance to go deep into a character, work on it, and find out what sort of person a character is when you play it over and over." But he still feels that the movies are a better medium for telling a story. "On the screen you can do something with the flick of an eyelash," he says. "You can get close to an idea and you can direct the camera at a bit of action or an idea and the audience just has to look where you make them. They have no alternative. . . The realm of possibility expands so greatly when you tell a story with the films."

Franchot Tone's statement of loyalty to the screen is important because of his success in both fields of acting and because of "the shabby way Hollywood has treated

FRANCHOT TONE

him in recent years." When he first went there he was given a variety of rôles, most of them in good or nearly-good pictures—*Gabriel Over the White House*, *Dancing Lady*, *Lives of a Bengal Lancer* and *Mutiny on the Bounty*, among others. After *Mutiny*, in 1935, he began to have difficulty in getting the sort of parts he wanted, and when he found himself appearing in "B" pictures, he quit.

While in Hollywood, Tone made a reputation for himself as an actor—he was nominated by the Academy of Motion Picture Arts and Sciences as one of the ten best performers in 1935—as a liberal and as the husband of Joan Crawford. He was director of the Screen Actors' Guild, its vice-president in 1937, and because of his frequent outspokenness got himself called a Red by the producers. He was called one, too, when he sent money to Spain and got other actors to do the same.

It was in his first Hollywood picture, *Today We Live*, that he met Joan Crawford, the former wife of Douglas Fairbanks Jr. He married her two years afterward, in October 1935. On April 11, 1939 they were divorced "after one of the most denied, affirmed and re-denied romances Hollywood ever had witnessed."

Franchot Tone was born in Niagara Falls, New York on February 27, 1905, the son of Frank Jerome and Gertrude (Franchot) Tone. His father has been awarded medals for valuable work in applied chemistry, and is president of the Carborundum Company of America. When he was five his father took him with him on a business trip to Paris, where Franchot saw his first movie, a flickering, green sort of an affair. Then his father became ill and he and his brother Jerry were taken to Tucson, Arizona, where they were given a

burro. "The poor beast had a horrible existence," says Franchot. "We were never off his back for a moment."

In 1919 he was sent to the Hill School in Pottstown, Pennsylvania, where he was manager of the football team and only a "subtle influence for disorder" until he ran afoul of the Rules Committee in 1923. Then he went to Cornell, where he was graduated with Phi Beta Kappa honors in 1927. At Cornell his only interest was in the dramatic classes taught by Professor Drummond, the head of the public speaking department, and before he left he had played 40 different rôles.

From Cornell, Franchot Tone went to Buffalo, where a cousin, Pascal Franchot, headed the Garry McGarry Players. There he was assistant stage manager until the juvenile lead became ill. Then he became an actor. His first real chance came when Eleanor O'Reilly saw him in *Holy Night* and suggested him as a possibility to Guthrie McClintic, who was then (1928) casting Katharine Cornell in the *Age of Innocence*. The play was a success. Franchot saved \$2,000 but lost it in the 1929 stock market.

From 1929 to 1931 he acted in Theatre Guild plays—*Red Rust*, *Meteor*, *Hotel Universe*—and played his first starring rôle as curly McLain in *Green Grow the Lilacs*. When the Group Theatre split off from the Theatre Guild in 1931, Tone went along with the Group and for them played Will Connelly in *The House of Connelly*, Frederico in *Night Over Taos* and Raymond Merritt in *A Thousand Summers*. He said then and still says that the Group Theatre and Lee Strassberg taught him more about acting than he had ever known.

When, after 15 screen tests in New York City, Franchot Tone was finally signed by MGM and left for Hollywood, Stark Young wrote: "Mr. Tone is one of the best of the young actors in the New York Theatre and the most promising in his chances of development. He does not have to go to Hollywood to get a good rôle, many rôles in the theatre are open to him. And for the same reason he doesn't have to stay in Hollywood when he gets there."

When he came back, after seven years, it was to act in a Group Theatre play, *The Gentle People*. In it he took the part of Goff, a menacing citizen who "protects" his neighbors for so much a week. Tone was told by George Jean Nathan that he had reached his "top achievement." His rôle in *The Gentle People*, however, didn't receive the unanimous acclaim which his work in *The Fifth Column* has evoked.

Franchot Tone, who is six feet tall and weighs 160 pounds, finds his pleasure and exercise in golf and swimming. His interests are in music, in little theatre groups. He's far from a back-slapper or hail-fellow-well-met, though he is the kind of man who can "strain the seams of staid Baltimore hospitality in the early hours of the morning." And he is the kind of person who

enjoys Hemingway's play, not only for its acting opportunities, but because "my own sympathies were on the same side as Hemingway's so far as the civil war was concerned."

TOTTY, CHARLES H. 1874—Dec 6, 1939
 Horticulturist

Charles H. Totty was born in England, and came to the United States in 1893. After 10 years with commercial firms and private estates, he established his own business and

CHARLES H. TOTTY

eventually was conceded by horticulturists to be the leader in the field. His widely-known work with English, Australian and French hybridizers resulted in his origination of new roses, chrysanthemums, delphinium and a wide range of perennial plants. These plants were in time distributed to foreign lands.

Totty's nurseries at Madison, New Jersey became a mecca for garden lovers from the whole country. Thousands of prizes were awarded for plants grown under his supervision. For 30 years he was associated

with garden shows and believed that the advancement of American gardening could be directly traceable to such shows. Some years ago 500 gardeners from the whole United States gathered in New York for a dinner to honor Mr. Totty.

TRAMMELL, NILES (trä'měl) July 6, 1894— President of National Broadcasting Company

Address: b. 30 Rockefeller Plaza, New York City; h. 730 Park Ave, New York City

In July 1940 Niles Trammell was elected president of the National Broadcasting Company after 12 years with the company and 17 in the radio industry. David Sarnoff (see sketch this issue), chairman of the board of NBC, said when the election was announced: "The directors of the National Broadcasting Company have promoted to the presidency a man who has risen from the ranks of the company. . . . His intimate knowledge of broadcasting, his popularity and wide acquaintanceship in all segments of the industry and his contributions to the development of nationwide broadcasting are important assets of the company he now heads."

Niles Trammell's career in radio covers the rise of the industry from an infant entertainment art to the position it now holds. Born in Marietta, Georgia, the son of Bessie (Niles) and William J. Trammell, he received his education at Sewanee Military Academy and the University of the South. When the United States entered the First World War he was commissioned a second lieutenant in the regular army at Fort Leavenworth, Kansas. Later he served at Fort Snelling, Minnesota, Camp Devins in Massachusetts and at the infantry school at Fort Benning, Georgia. When the War ended he was a first lieutenant in the 36th infantry of the 12th Division.

Mr. Trammell remained in the army until 1923. In that year he married Elizabeth Huff of Greensburg, Pennsylvania and re-

NILES TRAMMELL

signed from the army to become commercial representative in the traffic department of the Radio Corporation of America. This early job in San Francisco wasn't an easy one. Trammell tells how he used to be "out prowling through smelly importers' places trying to persuade some Japanese to use our facilities instead of the cables." After a year of it, however, he was made district manager of the Pacific Northwest for RCA and by 1925 had risen to assistant sales manager.

In 1928 Trammell joined the staff of NBC as a salesman and sailed right up to the top. His first main job was that of manager of NBC in Chicago and in a few months he was made vice-president in charge of the central division. When he came to Chicago NBC headquarters consisted of one studio and two offices. "Combining talents of resourceful program producer and forceful salesman," Trammell quickly accomplished revolutionary changes in radio programs. It had been hoped he could raise the income of his office to \$1,000,000 annually; within a year he had raised it to \$1,000,000 a month, with more than 1,800 programs originating in his studios.

In his years in Chicago Niles Trammell "left a lasting imprint on the program structure. . . . He comes as close as anyone to being the father of the soap operas, the serials that fill most of the networks' mornings and afternoons." It is these serials that are now a cornerstone of the radio business, much more successful than recipes and household aids ever were in selling products. Trammell started on their way *Clara, Lu and Em, Fibber McGee and Molly, Betty and Bob, Ma Perkins, Today's Children* and many other programs. But he is pretty modest about it: "Pushing those serials," he says, "was no sudden inspiration

of mine. A number of things made them inevitable. First of all out in Chicago we couldn't compete with the Broadway names the networks put on from New York. Chicago did have a lot of actors available. . . . And we had the great success of *Amos and Andy* to point the way." Incidentally, it was Trammell who was responsible for the commercial success of *Amos and Andy*.

Among the firsts for which he gets the credit are the commercial network series of Eddie Cantor, Al Jolson (see sketch this issue), Phil Baker, Ben Bernie, Jane Froman and Wayne King. He was responsible, too, for securing sponsorship for orchestral music, though his first venture in this line wasn't too successful. The Chicago Symphony Orchestra was to play and the top floor of the old Masonic Temple had been rented, hung with drapes and filled with baffle boards to kill echoes. "The night the orchestra was to present its first broadcast," Trammell still remembers, "the makeshift studio was so hot that the musicians played in their undershirts. But things went along well enough until, right in the middle of a Wagnerian opus, a hail storm struck. And then we realized that we had overlooked one thing—the Masonic Temple had a tin roof!"

Other important programs which originated under Trammell's direction are the University of Chicago *Round Table*, the *Farm and Home Hour*, the Chicago Opera Company programs and the famous Grant Park concerts.

In January 1939 Trammell was transferred to New York by NBC and elected executive vice-president. Until his election as president he was in charge of the whole network operation, "obviously the man chosen for the day when Lennox R. Lohr should decide to retire from the arduous seat at the head of NBC." Soon after he became executive vice-president Trammell set up separate sales staffs for the Red and Blue network groups, each with its own vice-president, and during his year and a half in this position increased sales and reduced operating expenses.

Trammell is the kind of man who "inspires a quick confidence and affection in business associates. A great deal of work passes across his desk every day without destroying his even-tempered air of casual leisure." Even newspaper interviewers have been known to come away from him and write stories "with the warmth of praise usually reserved to house organs."

Trammell works hard, but he plays hard, too. In school he played football and in the years since then has always relaxed with golf and fishing. He won't tell his golf score, but it is rumored to be in the low 80's; he won't tell about his fishing, either, but there is a 30-pound muskellunge on the wall of his office in Radio City which seems information enough.

TRAUBEL, HELEN (trou'bel) Soprano
Address: c/o Metropolitan Opera Assn,
 Broadway and 39th St, New York City

One of the largest Metropolitan Opera House welcomes of the 1939 to 1940 season went to Miss Helen Traubel when she sang her first Sieglinde in New York in *Die Walküre*, and her Town Hall concert in October 1940 was called "the first major recital event of the season."

Miss Traubel is an American and went to public school in St. Louis, Missouri. In her childhood home, her parents, though good Americans for two generations or more, spoke German among themselves and spent their evenings in typical German music making. Her mother, Clara (Stuhr) Traubel, gave up a professional concert career at her marriage, but her critical instincts as a lieder singer were not forgotten. Grandfather Stuhr had brought the classical dramatic repertory of his native land to St. Louis in founding the Apollo Theatre, the first serious German stage in the Midwest. "The home atmosphere tingled with artistic appreciation."

After Helen Traubel left school she studied for seven years with Madame Vetter-Karst, an old friend of her mother's. Miss Traubel made her debut with the St. Louis Symphony Orchestra under the direction of Rudolph Ganz in 1925 and in the summer of the same year in a Wagnerian concert with the New York Oratorio Society and Philharmonic under Stock at the Lewisohn Stadium. She was successively soloist at a Worcester Festival, with the Philadelphia Symphony under Stokowski, and with the Minneapolis and St. Louis Symphony Orchestras.

Besides her first teacher two other personalities made a profound impression upon her future. One was Walter Damrosch, who was officiating as conductor at an orchestral concert of the National Saengerfest in St. Louis in 1935. After a few measures of her *Liebestod* he turned to the rehearsing soloist and smiled. "You are not made for concert work alone," he said. "You will be an opera singer, and your first part must be the heroine of my own opera, *The Man Without a Country*."

Thus Miss Traubel was introduced to the Metropolitan in the spring of 1937 as leading soprano in the rôle of Mary Rutledge. She sang in both New York and Chicago. But it was an "ungrateful rôle," and she did not sing at the Metropolitan again until 1939. In the meantime she studied with Giuseppe Boghetti, who also trained Marion Anderson (see sketch this issue) and who is famous for making "Philadelphia debutantes easier to listen to."

Kirsten Flagstad is the other influence which Miss Traubel recalls with much gratitude. Her introduction to the great Norwegian took place at the outset of her opera career at her first

Abresch

HELEN TRAUBEL

performance of *Die Walküre* in Chicago. The young soprano, at once terrified and thrilled by the thought of singing with such famous stars as Flagstad, Melchior and List, approached her task with trepidation. She will never forget the "kindness of the great Brünnhilde, her whispered stage directions, and the support she gave the young Sieglinde as she half carried her from the stage at her fainting exit in the third act."

In the fall of 1939 Miss Traubel "bowled over concertgoers at her Town Hall (New York) recital and at her appearance as soloist with the Philharmonic Symphony." She had much the same effect on the Metropolitan's audience. Her Sieglinde "put her high in the scale of Wagnerian singers," and the first-nighters who trooped in droves to hear her stayed to cheer, for they heard what one critic called one of the "finest heavyweight Wagnerian soprano voices to turn up at the Metropolitan since Kirsten Flagstad's debut in 1935."

As Elizabeth in *Tannhäuser* she "won the manifest approval of the audience. She is not only fortunate in the qualities of her voice, but also in her musicianship and in her evident capacity for thorough study. Every detail of her interpretation has been thoughtfully prepared and brought its well-considered results." But the *New Yorker* reported: "Miss Traubel demonstrated her remarkable voice, her clean unaffected German diction, and the sincerity of her singing. It wasn't a complete impersonation, but that wasn't to be expected from a singer whose stage career began so recently."

Helen Traubel has reddish hair and hazel eyes. In a city of women trying to look small, fragile and sensitive, her handsome figure stands up straight to its full five-feet-eight and one-quarter inches and her expression

TRAUBEL, HELEN—*Continued*

is one of slightly amused serenity. She laughs a great deal, but on the days when she is going to sing she tries to achieve solemnity because a big laugh opens the mouth and stretches the throat muscles.

She works hard at the slow business of learning opera parts and practices two hours a day, six days a week "to keep her voice going." The exigencies of caring for her voice regulate her life in a way that might be thought dull in the extreme. She does not smoke; her drink is a modest glass of sherry; she cannot afford ever to go short on sleep. Her recreations are walks, the movies and good food. "Nature has done a marvelous job on her," says *Cue*. "Here is a fine, big voice, amply housed and managed by a good brain."

She was formerly the wife of Louis F. Carpenter, a St. Louis automobile dealer whom she divorced in 1938. Later she married William Bass, a New York real estate and investment broker.

TUNNEY, GENE (tŭn'ĕ) May 25, 1898-Ex-heavyweight world champion

Address: b. 135 E 42nd St, New York City; h. Stamford, Connecticut

Winner of the world's heavyweight boxing championship in 1926 and only champion to retire undefeated from the ring, James Joseph "Gene" Tunney has recently put on the gloves to challenge the "Americanism" of the American Youth Congress. One of the attacks was the announcement that he would serve as temporary national chairman of a National Foundation for American Youth, a new organization which would "serve as a clearing house and coordinating center for the pro-American youth groups" opposed to the AYC.

That was on August 13, 1940. The month before he had lost his first bout in political fisticuffs when he challenged the AYC meetings at Lake Geneva, Wisconsin held from July 3 to July 7. Mr. Tunney is a director of the Boy Scouts and of the Catholic Youth Club, organizations which have refused to affiliate with the Youth Congress under its present set-up. Taking up the cause of Murray Plavner, a founder of the Congress who has now been appointed national director of the rival organization, the one-time prize fighter headed a drive to purge the AYC of its "pro-Communist" forces. Tunney deplored the fact that the AYC had been under "the protective arms of certain well-meaning but misinformed people of prominence" without naming Mrs. Roosevelt (see sketch this issue), who was one of its staunch defenders. Tunney also

GENE TUNNEY

claimed that the AYC was led by "professional youths" over 30. The organization's leaders replied that Tunney himself, at 42, was scarcely a youth, and had not been interested in youth activities until very recently.

When Tunney's "pro-American" group arrived at the Congress meeting place the executive secretary of the AYC announced that his delegates had not complied with the registration rule that registration blanks be sent to the AYC office not later than June 24. Hence the Congress refused to honor the credentials of Tunney's anti-Red bloc. Tunney called his delegates to a separate meeting at Lake Geneva at which he condemned all enactments passed by the Congress. Instead of taking a peace stand he said he thought that young men should pledge themselves at once to universal selective service. Plans were announced for a rival group to the "Trojan horse AYC"—a group to be organized on a strictly "American" basis. While at Lake Geneva, Tunney was invited by officers of the AYC to address the Congress, which he refused to do.

Tunney continued his youth work in September 1940, when he set up a Young Voters' Exchange to bring 9,000,000 first voters to the polls in November.

Gene Tunney's life is a true Horatio Alger story of a poor lad's rise to fame, a million dollars (which he made in 40 minutes by the clock) and marriage to a wealthy society girl. As extra trimmings to Arrow-collar looks and two-fisted glory were his cultural and literary qualifications. A seeker of sweetness and light, a prize fighter who also read Shakespeare, Tunney violated the popular concept of a pugilist and had to overcome real antagonism in his ring career.

He was born May 25, 1898 in Greenwich Village, New York City, of Irish Catholic parents, John Joseph and Mary (Lydon) Tunney. He was a graduate of St. Veronica's Parochial School in 1911 and of La Salle Academy in 1915. The handsome but obscure young man held a job as clerk with the Ocean Steamship Company of New York until the outbreak of war in 1917. He enlisted with the Marine Corps and went to France with the American Expeditionary Force. He soon demonstrated his fistic ability behind the lines, and in Paris in 1919 won the A. E. F. light heavyweight championship.

Back in America in 1924 he knocked out France's idol, Georges Carpentier, and after that entered the heavyweight class. When he stepped into the arena at Philadelphia in 1926 to meet Champion Jack Dempsey, Gene Tunney had behind him a record of having lost only one of some sixty bouts. Although the bets were all on Dempsey the latter was in a nervous, run-down condition after having gone through a legal battle instigated by his former manager, Jack Kearns. The ex-marine bravely arrived by plane for the fight, which was held in a downpour of rain. It was in the tenth round that the "Manassa Mauler" went out on his feet. Gene Tunney was the new champion.

Just a year later (September 1927) Dempsey fought Tunney in a return battle. Things went well for Tunney till the seventh round, when he went down under seven smashing blows. But because Dempsey failed to go to a neutral corner the referee gave Tunney extra time on the "long count" and he was on his feet again, to out-guess and out-general his opponent and win the bout. Tunney fought once more, scoring a technical knockout over Tom Heeney in 1928; then he retired from the ring. Boxing experts agree that, while Tunney was not a "natural" fighter, he won because he made of boxing an exact science. His style was correct by the book; he left nothing to chance. Tunney himself has written: "The way to know about championship quality is to learn from the champions, and that I did, studying them with professional purpose during my time in the ring and from habitual interest afterward. . . My slant always put emphasis on the mental side of prize-fighting."

In Rome, Italy on October 3, 1928 Gene Tunney married Mary Josephine (Polly) Lauder, a debutante heiress, of Greenwich, Connecticut. They have four children. In July 1940 Tunney purchased a 375-acre Rapajo farm on the Choptank River near the Chrysler and Du Pont (see sketch this issue) properties in Maryland.

Since 1938 Tunney has been board chairman of the American Distilling Company. He has written numerous magazine articles on boxing, on championships and on the psychology of fighting and in 1932 published a book, *A Man Must Fight*. In much that he has written he has embodied his philosophy of life. "Religion is my highest and most

encompassing ideal," he has said. Next to that he lists patriotism, human friendship and the rules of health.

TWEEDSMUIR, JOHN BUCHAN, 1ST BARON See Buchan, J.

UNDSET, SIGRID May 20, 1882- Author Address: c/o Alfred A. Knopf, Inc, 501 Madison Ave, New York City

The famous Norwegian novelist and Nobel Prize winner, Sigrid Undset, and her son Hans arrived in the United States in September 1940 to fill lecture engagements and probably to take up permanent residence. She came from Sweden where she had been an exile since the Nazi invasion of Norway in April 1940 and the destruction of her home at Lillehammer. Prior to her flight into Sweden she had finished her new novel, *Madame Dortha*, now published (August 1940) in this country.

With the valiance of one of her own fictional heroines, Sigrid Undset in her late fifties met the fury of sudden war and resisted the aggressors until forced at peril of her life—she had taken an anti-Nazi stand in her writings—to leave her home. When the first German bombers flew over Oslo she returned to her Lillehammer retreat, an old Norse dwelling dating from the year 1000. She offered her services to the government and worked as a censor. Her youngest boy joined an ambulance unit; her eldest son entered army service and was killed in action three weeks later. When the Norwegians were forced back and the fighting lines drew near to Lillehammer

SIGRID UNDSET

she left with a neighbor family, going by auto to the coast at Andalsnes. They lay in the snow for hours near Dombas to escape machine-gunning planes, then pushed on over bomb-cratered roads to the sea at Molde. From that destroyed port they took a boat to Mo at the edge of the Arctic Circle. The last stage of the journey, through snow and ice across the frontier, with a sick companion on a stretcher, was the worst. Finally they reached Sweden.

Sigrid Undset was born May 20, 1882 in Kallundborg, Denmark. Her mother was a Dane; her father, Dr. Ingvald Martin Undset, a distinguished Norwegian archeologist. Eldest of three daughters, she assisted her father in his research work, developing her interest in Scandinavian life of earlier times. She was educated in the Oslo public schools, and at her father's death attended a commercial school there. From 1899 to 1909 she supported herself doing clerical work in business offices. Her evenings and holidays she devoted to a study of fiction writing.

Her earliest writing showed those two special interests which she was to develop richly in later work: the Middle Ages and modern living. Her first novel, *Frau Marta Oulie*, published in 1907, received only mild praise. It was a story of marriage, parenthood, and human relationships—a theme that was to underlie many of her subsequent novels. With the publication of her second book she decided to devote herself wholly to writing; and in 1911, when her novel, *Jenny*, appeared it won a popular ovation. In 1912 she married A. C. Svarstad, a painter. Three children were born to them; but the marriage was dissolved in 1925. After this unsuccessful marriage, and despite her Lutheran upbringing, Madame

Undset entered the Catholic Church. This faith, to which she has paid tribute in several essays, including the collection *Men, Women and Places* (1939) has given her work its moral focus.

Several of her novels have had a modern setting, among them *The Wild Orchid* (1931) and *The Faithful Wife* (1937). It has been remarked by critics that the events of her own life do not wholly explain the richness of emotional understanding found in her work. She is an instinctive artist. "Her realism is so delicate and serene, and the direct, unflinching candor of her vision is so sweetly softened by native tenderness, by infinite pity . . . that the final effect of her novels is as unforgettable as the spectacle of a human heart laid bare."

But her great historical novels have overshadowed her work in the modern field. Her talents found their finest expression with the publication, in 1920, of *The Bridal Wreath*, the first volume of the great Kristin Lavransdatter trilogy, the succeeding two being *The Mistress of Husaby*, 1925 and *The Cross*, 1927. The study of Kristin Lavransdatter, a splendid woman who loves an essentially unworthy man, set against a background of the Middle Ages, was immediately recognized as an outstanding work not only in Norway but throughout the world. It has been translated into almost all European languages, and the American edition ran over 300,000 copies. Equally important was the Olav Audunsson historical tetralogy, called in English *The Master of Hestviken*, the first volume of which appeared in 1925. It has been said that in her studies of the "contemporaneity of the past" Madame Undset has made the thirteenth and fourteenth centuries as timely as the latest war bulletin. The Nobel Prize for literature was awarded Sigrid Undset in 1928, the citation mentioning especially her remarkable delineation of medieval life.

Since 1937 Madame Undset has written many essays and articles. Her ideas have been given a great deal of publicity in Europe; up to the coming of Hitler her works were widely read in Germany. But the Nazi papers have angrily denounced her defense of racial and religious tolerance. Today her novels are banned throughout Norway on the grounds that she is in sympathy with the exiled Norwegian government in London.

In her speeches in this country Mme. Undset has warned America to preserve its democracy, has warned Americans "against feeling too safe." "The United States," she said, "has something to learn from what happened to the small countries of Scandinavia. It must act before it is too late."

Those qualities of human nature that are universal and timeless, remarked in her previous work, pervade Sigrid Undset's *Madame Dorthea*, a story of Norwegian life at the end of the eighteenth century. At forty, vigorous and capable, Madame

Dorthea has a second husband, Jorgen Thestrup, seven children, and lives a conventional middle-class life. The story opens one late winter night when her two oldest boys have been away all day with their tutor and fail to return. The boys later turn up safely at their grandmother's, but their father who has gone in search of them never comes back. Dorthea is left to cope with the loss of her husband, the subsequent loss of their farm and income and the necessity of finding work for the older boys. Most of the story concerns her relations with her children, her lusty mother and various neighbors in the little community. Because the novel ends inconclusively, with Dorthea's character just approaching development, several critics feel that it may be the first in a new historical series.

 Who's Who

UNTERMYER, SAMUEL (ün'ter-mī'er)
 June 6, 1858—Mar 16, 1940 Lawyer

Samuel Untermyer died in his Palm Springs, California home on March 16, 1940 at the age of 81. He was a man "whose career was unique and made a lasting impression on his times."

Mr. Untermyer was born in Lynchburg, Virginia on June 6, 1858, the son of Isadore and Therese Untermyer. His father was a Bavarian-born tobacco planter who fell dead at the news of Lee's surrender. Both his father and mother had planned for Samuel to become a rabbi, but instead when he moved to New York after his father's death, he attended the College of the City of New York. In 1873 he entered a law office as

SAMUEL UNTERMYER

clerk and office boy and continued his studies at Columbia Law School, from which he received his LL. B. in 1878.

While young Untermyer was in college, when he was only 17, he appeared in court wearing a beard he had grown to conceal his boyishness. When he was 21 years old he was admitted to the Bar, and he proceeded in his twenty-first year to earn \$75,000.

Before he was 24 Mr. Untermyer was representing many important business interests and had acted as trial counsel in some of the most important cases of that time. He defended Asa Bird Gardiner when an attempt was made to remove Mr. Gardiner as District Attorney of New York County. He was counsel for the Wertheimers, English art dealers, in their controversy with the Count de Castellane. As counsel for James Hazen Hyde in the struggle to oust Mr. Hyde from the control of the Equitable Life Assurance Society, Mr. Untermyer helped to bring on the great insurance investigation of 1905, conducted by Charles Evans Hughes. Another case which Mr. Untermyer handled and which was said to have resulted in the largest fee ever paid to a lawyer in this country up to that time, \$775,000, was the merger of the Utah Copper Company with the Boston Consolidated and the Nevada Consolidated Companies.

In private practice Untermyer brought about the settlement which resulted in the formation of the Bethlehem Steel Corporation, and argued before the Supreme Court the case of William Randolph Hearst in a suit brought by Hearst's International News Service against the contention of the Associated Press of a property right in news.

UNTERMYER, SAMUEL—*Continued*

In December 1911 Mr. Untermeyer delivered before the Finance Forum in New York an address entitled "Is There a Money Trust?" In it he expressed his opinion of financial conditions in this country and suggested legislative enactments to remedy what he considered abuses. This address was followed by a Congressional investigation for the purpose of formulating remedial legislation, which was known as the "Pujo Money Trust Investigation" from the name of the committee's chairman.

Mr. Untermeyer was counsel of the House Committee on Banking and Currency which conducted the inquiry. He called the banking giants of the day, including J. P. Morgan, to the stand and fearlessly pursued his questioning. As an outgrowth of his exposures the Federal Reserve Bank law came into being, and Untermeyer had a prominent part in the preparation of the bill and in advocating its passage before Congress.

Mr. Untermeyer worked for the public good, too, as counsel of the Lockwood legislative housing investigating committee. Serving without pay, he uncovered abuses in the building trades which resulted in the conviction and imprisonment of Robert P. Brindell, "czar" of the Building Trades Council. The investigation was followed by remedial housing legislation and extended from time to time under constant hammering by Mr. Untermeyer. During the investigation "there were many who whispered that he was not far from being the committee itself."

One of Mr. Untermeyer's most conspicuous efforts in public service was as special counsel of the Transit Commission. The commission undertook to prepare a plan for unification of the New York Rapid Transit Railways and Mr. Untermeyer conducted an exhaustive investigation while at the same time fighting strongly for the maintenance of the five-cent fare. In a resolution on his death the Transit Commission said: "It was through his invaluable services that the five-cent fare was saved."

Mr. Untermeyer's career was a strange combination of paradoxes and contradictions. One of the highest paid corporation counselors in the country, serving men like J. D. Rockefeller, William Randolph Hearst and the Lewisohn banking interests, he earned for himself a reputation in the Pujo investigations as a foe of the trusts. He who denounced Wall Street made six million dollars profit from the purchase of 15,000 shares of Bethlehem Steel before the War. He who advocated the public ownership of utilities also devoted some of his shrewdest and most expensive advice to entrenching Tammany in office. In the pay

of the largest capitalists in the country, he devoted time and money to defending labor unions.

Toward the close of his life Samuel Untermeyer devoted more and more time to the championing of humanitarian causes. The coming of Hitler to power and the German drive against the Jews found a strong antagonist in him. He was one of the earliest and most outspoken critics of the Hitler régime and in July 1934 was elected the first president of the World Non-Sectarian Anti-Nazi Council. He was one of the first Americans to urge a boycott against Germany and once carried on a one-man demonstration on board a Bermuda bound liner when he found that the table decorations at the captain's dinner had been made in Germany. He was active against the use of German steel in the construction of the Triborough Bridge and was successful in getting the order for its use rescinded by Mayor La Guardia (see sketch this issue).

In politics Untermeyer was a progressive Democrat, but refused to play any very active part, with the exception of making speaking trips for Woodrow Wilson in 1912 and 1916. He was a delegate to the national conventions of 1904, 1908, 1912 and 1916 but is reported to have refused the offer of Ambassador to France under Wilson.

When Untermeyer grew older he used to go to Palm Springs for the winters "to sit in the sun and not worry." Even in his old age he looked as dapper as in his youth. Five-feet-five in height with martial moustaches, he had the neat and erect appearance of a much younger man. He was seldom seen without an orchid in his lapel. His fellow lawyers used to say that he carried a damp bag of orchids into court so as to have a fresh one whenever the one he was wearing wilted.

He "lived with a flair for the sumptuous and the picturesque." His gardens at Greystone, his estate near Yonkers, were filled with rare flowers. The walls of his home there and in New York City were hung with choice Old Masters. He was a connoisseur of the arts and a patron of them.

In 1880 Mr. Untermeyer married Miss Minnie Carl of New York, who died in 1924. She was a Gentile who became converted to Judaism. There are three children: Alvin Untermeyer, a lawyer; Irwin Untermeyer, justice of the appellate division of the Supreme Court; and Mrs. Irene Richter.

VANDENBERG, ARTHUR HENDRICK
 Mar 22, 1884- United States Senator from Michigan
Address: h. 316 Morris Ave, Grand Rapids, Michigan

It has been said that a Hollywood director would cast Arthur Vandenberg, re-elected in November 1940, for a United States Senator on sight. He not only looks the part, he acts it. On every political issue of the past 12 years his voice has been heard and listened to, for the Republican Senator from Michigan plays an influential part in the determination of this country's political activities. This was proved in the spring of 1940 when his name was frequently mentioned for the Presidential nomination and was brought before the Republican Convention.

Recently Senator Vandenberg raised his voice against the Burke-Wadsworth (see Burke sketch this issue) selective service bill. "Say what you please," he said, "something precious goes out of the American way of life and something sinister takes its place under conscription." To many people this stand is consistent with the reputation for being an isolationist which Senator Vandenberg has achieved since the last War. His natural Mid-west isolationism fortified by his service as a member of Senator Nye's committee which investigated munitions in 1934 and 1935, Vandenberg came out in 1939 as the leader of the battle against modifying the Neutrality Act. In his campaign for the Presidential nomination he accused the New Deal of jeopardizing the nation's peace "by meddling internationally where it is none of our concern." Yet this isolationist Senator was in favor of the World Court and was the author of a Senate resolution to terminate the 1911 treaty of amity and commerce with Japan—according to Walter Lippmann (see sketch this issue) "the longest step on the road to war that the United States has taken since . . . 1915." He, too, demanded that we withdraw our recognition of the Soviet Union when Russia invaded Finland. And in June 1940, calling himself an "insulationist," he urged all help to the Allies short of war.

Other governmental issues seem to have been approached in the same way. As one editorial writer puts it, "Vandenberg has stood squarely on both sides of every issue of the past 10 years." Some call him an "opportunist" and a "trimmer"; others say he is a "liberal conservative." In the New Deal, according to one observer, he "discards what seems to him to be the bad and accepts what strikes him as the good, always proposing a substitute for what he discards." But in a different interpretation, based on his article, *The New Deal Must Be Salvaged*, his idea is "that the New Deal must be scrapped, melted over, recast into a new engine, going slowly and rather on the bias in slightly different directions."

Actually the record supports both points of view. For instance, Senator Vandenberg

ARTHUR H. VANDENBERG

voted for the creation of the Securities and Exchange Commission, a measure hated by "Big Business," and as a member of the Senate committee investigating munitions he won the hatred of the Du Pont (see sketch this issue) and other big interests. But on the other side of the scale are his consistent opposition to the excess-profits tax, his defense of holding companies, his fight against the TVA.

Vandenberg voted against the Wagner Act, yet he has repeatedly stated that collective bargaining is labor's bill of rights and is here to stay. He voted against the NRA, the AAA and the Wage and Hour Act, yet was the sponsor of a liberal anti-child-labor amendment and helped get the revision that made Social Security benefit payments more liberal and more quickly available. The way he himself explains it is that frequently he is in favor of New Deal objectives, but irked by the methods used to achieve them—by government in business, by the theory of spending into prosperity, by punitive taxation, by government handling of relief. After Roosevelt's re-election he announced that he didn't want unity "at the expense of constructive criticism."

It has been said that when Vandenberg argues about matters like the Florida ship canal and the Passamaquoddy development, both of which he strongly opposed, he is a good and convincing speaker. However, "in matters where public opinion is uncertain, he becomes uncertain, too. He starts out boldly, then wavers, qualifies, draws back until it is hard to follow him." Once he delivered a long and laboriously prepared speech on the work relief bill. When he had finished Hugo Black said he had listened fully and carefully and had

only one question to ask—"Was Vandenberg for or against the bill?"

Vandenberg still talks and writes in the "sometimes florid, sometimes pedantic style of the small town editor," and has been called "one of alliteration's most conspicuous and pitiable victims." Still he is an effective speaker and his desire to polish off a period or present the *mot juste* is often successful. He is good at phrases like "Dr. Jekyll and Mr. Hyde Park," for instance. And his speeches are always conspicuous for the amount of study and research he puts in them. For the Supreme Court fight of 1937 he wrote an address of 80,000 words as "a prelude to a real speech"—and never got a chance to deliver it.

It has been reported that on his deathbed Senator Vandenberg's father said to him: "Son, always be a good Republican." Aaron Vandenberg was a harness manufacturer, the descendant of Dutch settlers of New York, who was ruined in the panic of 1893 and attributed the disaster to the Democrats. Vandenberg's mother, Alpha (Hendrick) Vandenberg, was also of Dutch pioneer descent and her father was a delegate from New York to the convention which nominated Lincoln for President in 1860.

Arthur Vandenberg was born in Grand Rapids, Michigan and went to school there. He was only nine when his father lost his factory and his mother opened a boarding house, but he went to work. He bought himself a pushcart and started in the delivery business. Soon he was successful enough to buy another cart and hire helpers. In 1900 he was graduated from high school. There he had made his first speech, on Alexander Hamilton's greatness, his firm belief in which inspired three "fiercely partisan" books written later—*Alexander Hamilton, the Greatest American* (1921); *If Hamilton Were Here Today* (1923) and *The Trail of a Tradition* (1925).

After high school he got a job as clerk in a cracker factory. When he was fired for going to see Theodore Roosevelt in a parade he went to work for the Grand Rapids *Herald* as office boy and copy boy. Later he was promoted to the job of state editor and general reporter, at \$8 a week. After 12 months of this he went to the University of Michigan in 1901, but after a year of studying days and working nights had a breakdown and returned to Grand Rapids, to the *Herald*. In his spare time he wrote stories that were accepted by *Lippincott's* and *Pearson's* magazines and on the basis of this success got himself a job on *Collier's Weekly* in New York. A year of this was enough for him and he went back to the *Herald* as City Hall reporter. He got to know the political bigwigs and, when in 1906 one of them, Representative (later Senator) William Alden Smith, bought the *Herald*, 22-year-old Arthur Vandenberg was made managing editor.

As the *Herald's* editor Vandenberg wrote editorials, solicited advertising, pepped up the circulation. At the same time he joined the Masons, the Shriners, the Elks and the Woodmen. He broadened his interests in politics and at 26 was a member of the Grand Rapids Charter Commission and at 28 a member of the Michigan Republican Central Committee. Before he was 30 Vandenberg was "the editor, oracle, orator and big shot of Grand Rapids."

Vandenberg's first wife, Elizabeth Watson, died in 1916 and Vandenberg, the father of three small children (the two girls are now married and the boy is now his father's secretary and "spittin' image"), didn't enlist when the War came. Instead he made hundreds of speeches in Liberty Loan drives. He also courted and married a second wife, Hazel H. Whittaker, a newspaper woman. When the War was over he was an important Republican. He consulted with Warren G. Harding on the 1920 Republican plank on the League and helped write parts of his campaign speeches. His paper helped build up the Michigan Republican machine and was strong enough to put Fred Green in the Governor's post. When Senator Woodbridge Ferris died Vandenberg was appointed to succeed him and in 1928 was elected for a full term "with the largest plurality ever given any Michigan candidate."

When Vandenberg first came to the Senate it was said he "could strut sitting down." He took himself very seriously and the boys in the press gallery gleefully nicknamed him "the pouter pigeon with the kewpie smile" and quoted the fancy verbiage in his *Alexander Hamilton*. But Vandenberg settled down soon enough and in 1930 was largely responsible for the decennial reapportionment law which requires Congress to remake the Congressional districts after each national census.

In 1934 Vandenberg was one of the very few Republican Senators to be elected, "a feat that is still the basis of his prestige among politicians," and according to some from 1934 to 1938 was the Republican Party, rising to the top "by the simple expedient of being the only man in it." After the Republican defeat of 1936, when he had been mentioned for the Presidency, he began to talk coalition—coalition of the conservative Democrats with the loyal Republicans—and "as much as anyone" he was responsible for the success of the coalition in the Senate. James Farley was among the many who realized his effectiveness and went so far as to say in 1938, "Senator Vandenberg is the Republican to defeat in 1940."

Vandenberg has always "worked slavishly" as a Senator. He attends Senate sessions and committee meetings conscientiously and stays up long nights reading, studying and pecking at his typewriter. According to the night porters, "he's the workin'est man" in Washington. Yet he and Mrs.

Vandenberg manage to get in a good deal of social life. And the Senator occasionally gets off to bowl duckpins or read Sax Rohmer and E. Phillips Oppenheim.

A big man, more than six feet tall and weighing more than 200 pounds, Senator Vandenberg is "good looking without the conspicuous handsomeness of a McNutt" (see sketch June issue). He has "dark brown eyes under heavy black brows" and graying hair parted far to one side to conceal his baldness. He smokes denicotinized cigars, drinks highballs (he hates cocktails and cigarettes) and chews gum vigorously. And yet, "during Senate inquiries, his rimless spectacles, his quizzical glance, his trick of shrouding the lower half of his face with his hand and his extreme patience in questioning witnesses often create the feeling of an extraordinarily wise, kindly professor."

VAN DOREN, HAROLD LIVINGSTON

Mar 2, 1895- Industrial designer

Address: b. 1217 Madison Ave, Toledo, Ohio; h. 604 Winthrop St, Toledo, Ohio

According to Harold Van Doren, the goal of industrial designing "stripped of hocus-pocus . . . is sales—at a profit." For more than 10 years he has been considering our modern machine-made appliances and equipment and remaking them. He has increased the adaptability of their form to their function and the esthetic appeal of their shape, color and texture. Sleds, meat grinders, a dough divider for bakeries—these are only a few of the items he has changed for us.

Like most industrial designers, Van Doren trained for another branch of the arts. He started as a painter. He was born in Chicago, Illinois on March 2, 1895 the son of Charles Luther and Harriet (Clark) Van Doren; moved to East Orange, New Jersey in time to go to high school there; and was graduated from Williams College in 1917. He spent a year as art editor of the *Survey Graphic* but left

HAROLD VAN DOREN

to become a member of the Art Students League.

Then, in 1922, came the conventional years abroad, with Van Doren financing himself by lecturing at the Louvre, serving as artist on the *Chicago Tribune's* Paris edition, acting in one of the films produced by Jean Renoir, translating biographies of Cézanne and Renoir.

Back in New York after two years, he began to ghost-write articles for the *Saturday Evening Post* and for the *Encyclopedia Britannica* and to contribute to a good many magazines. From 1927 to 1930 he was at the same time assistant director of the Minneapolis Art Museum and art editor of two Minneapolis newspapers.

In 1930 Van Doren set up as an industrial designer in Toledo, Ohio, with the Toledo Scale Company his one and only client. His first fame was achieved in the field of plastics, and it wasn't long before Harold Van Doren and Associates were being called in to meet the designing problems of many companies.

In 1933 he married Mary Huggins of Emporia, Kansas. They have one daughter, Patricia.

In the 10 years he has been in business he has become one of the nation's leading and most articulate stylists. *Industrial Design, a Practical Guide* (February 1940) is the summary of his years of work and discovery. In it there is little of the press-agency that so often distinguishes discussions of industrial design. *Industrial Design* shows that the daily job of designing merchandise for appearance is a serious profession requiring persistence, industry, technical skills and knowledge. Its first part surveys the field, its second is an elementary presentation of designing in

three dimensions, its third deals with the technique of design production, and the fourth offers various problems for the beginner, concluding with case histories of several products now on the market. There are chapters on streamlining, fees, materials and processes, design patents, color technique and the operation of a free-lance studio. There also are descriptions of how to make art renderings and presentation models.

Van Doren himself is a "shirt-sleeve" designer—the kind who gets out in overalls and learns how a product is built before he touches pencil to drawing paper. With him industrial design is no penthouse product. Today, his agency in Toledo is one of the three or four largest in the country. Last year he stole a march on fellow designers (nearly all of whom were trying to outdo each other in display architecture at the New York World's Fair) by walking off with commissions to do the 1940 models of some of the largest electrical appliance products—a Westinghouse range, a Maytag washing machine and Philco refrigerators.

Who's Who in America

VAN DOREN, MARK June 13, 1894-
Author

Address: h. 393 Bleecker St, New York City

Last year it was Carl Van Doren who was honored with a Pulitzer Award of \$1,000 for his biography of Benjamin Franklin. This year his younger brother Mark has achieved the same recognition for his *Collected Poems*. Even this does not exhaust the list of literary Van Dorens, however, for there remains Irita, former wife of Carl, editor of *Herald Tribune Books* as well as Mark's wife, Dorothy, who does the brief book reviews for the *New Yorker* and who is herself the author of several books.

"More the artist, less the literary figure" than his brother, Mark Van Doren is a "spare, shrewd, genial gentleman with a wide mouth, bright, dark eyes and close-cropped head" who is associate professor of English at Columbia and one of the three "regulars" on CBS's *Invitation to Learning* Sunday broadcasts. He seems to belong to the English tradition, and a large part of his poetry was surely bred in New England, but facts state that he was born in Hope, Illinois on June 13, 1894, the son of Charles Lucius and Dora Anne (Butz) Van Doren. Mark grew up in the university town of Urbana, where the family moved when he was six. Like Carl, he attended the University of Illinois there, was graduated Phi Beta Kappa in 1914 and received his M. A. in English literature the following year, and then, still like Carl, proceeded to desert the Midwest permanently for New York City. While still working for his

Doctor's degree at Columbia University he published his first book, entitled *Henry David Thoreau—a Critical Study*, in 1916. The War interrupted scholarly pursuits, however. He spent two years in the Infantry, in 1918 spent a year abroad with Joseph Wood Krutch on a traveling fellowship from Columbia, and it was not until 1920 that he received his Ph. D. and joined the English department at Columbia. He had already published that same year his second book, another critical study entitled *The Poetry of John Dryden*.

In 1922 Mark Van Doren married Dorothy Graffe, and two years later he published his first book of poems, *Spring Thunder and Other Poems*, and became literary editor of *The Nation*, a position which he held until 1928. A poet himself, Mark Van Doren's scholarly preoccupation continued to be largely with poets. He published critical analyses of American and British literature, a biography of Edwin Arlington Robinson, several anthologies, and was editor of a number of works, for the most part early Americana. The three volumes of his poetry published up to 1928 have probably won more praise from critics than anything he has published since, unless it is *Winter Diary* (1935). In 1928 Allen Tate (see sketch this issue) named him "if not the most brilliant stylist of our time, one of the most accomplished craftsmen." In 1931 there appeared a long narrative poem, *Jonathan Gentry*, which received mixed reviews, and in 1935 he published his first novel, a puzzling and poetic psychological fantasy entitled *The Transients*. From 1935 to 1938 he was motion picture critic for *The Nation*.

Last year most critics found Mark Van Doren's *Shakespeare*, a collection of 36 essays on what is usually considered a scholarly subject, not only thoughtful and stimulating, but a positive delight to read—probably for the same reasons that fill his classes in English 35 and 36 at Columbia, where all the plays of Shakespeare are read through one after the other, and make his occasional lectures at the New School for Social Research so well attended. The appearance of his *Collected Poems* last year was also well received, and a second psychological novel, *Windless Cabins*, published in 1940, served to focus more critical attention on him. The awarding of the 1939 Pulitzer Prize for poetry to Mark Van Doren on May 6, 1940 was merely a form of tangible recognition for a long and distinguished literary career.

Mark Van Doren once said: "My only conception of the poet is that he is a person who writes poetry," and certainly aside from writing poetry he himself has little in common with the common conception of the poet. He has never had the opportunity to starve in a garret and has never sought the opportunity. He believes, in fact, that the best physical conditions for writing poetry include neither too

MARK VAN DOREN

many material comforts nor too few—just about as many as he has always had. With his "husky wife, Dorothy," and his two sons, Charles Lincoln and John, he lives in a pleasant Bleeker Street duplex apartment in New York City's Greenwich Village during the winters and spends his summers on the 150 wooded acres of their farm in the mountains of Connecticut. There is much of the past and the present of this New England in his poetry, and some critics have found an elegiac note in his voice. John Peale Bishop once said: "He seems while young to have become accustomed to the fact that his own particular world was already lost. And these things make him not altogether of our time. He is not solitary, but remote." Another critic attempted to describe him as a poet by saying: "He has no furies; rather a few fireside ghosts." As for Van Doren himself:

"Wit is the only wall
Between us and the dark.
Wit is perpetual daybreak
And skylark
Springing off the unshaken stone
Of man's blood and the mind's bone."

VARGAS, GETULIO DORNELLAS (văr'-găsh zhě-tōō'yōō) Apr 19, 1882- President of Brazil

Address: Rio de Janeiro, Brazil, South America

On June 11, 1940 President Getulio Vargas of Brazil made a speech, the reverberations of which rolled around the world. He said in it: "Virile people must follow the line of their aspirations instead of standing still and gazing at a structure that is crumbling down. . . . There is no longer a place for régimes founded on privilege and distinction; only those subsist which incorporate all the nation in the same duties and offer social justice and opportunities in the fight for equality."

Immediately, United States' reaction was that Vargas had aligned himself "morally" with Mussolini; that Brazil was, more than ever, a totalitarian state with pro-Nazi, pro-Fascist sympathies. Germany was quick to remark about the speech: "It is not accidental that those valiant words were announced by the chief of one of the greatest and most advanced American nations." But the Brazilian government issued a formal statement insisting that the speech referred only to Brazil's internal life ("it was addressed to Brazilians and those who feel that Brazil is their own country") and that Brazil's foreign policy was based on "full Pan-American solidarity and common defense of the Western Hemisphere against any attacks from the outside."

Secretary of State Cordell Hull (see sketch this issue) backed this up, for his reaction to the speech was that relations between the United States and Brazil "have never been more intimate, whole-hearted, understanding, friendly and cooperative than now." This is a state of affairs the United States has been working hard to achieve, for our

interest in Brazil has been to counteract the economic and political influence of Nazi Germany there. With the recent successes of Hitler in Europe, "the Nazi cause in South America has been tremendously strengthened" and our task has become a more complicated and difficult one.

The consensus of opinion here is that although Nazi ideology and Nazi forms play a part in Brazilian government, nevertheless this government is "following a distinctly nationalistic policy." Vargas, according to many commentators, wants merely to build up a strong Brazil "and will play ball with the side most likely to realize that ambition for him." Symbolical of his attitude is the fact that he sent one son to Germany and Italy for his education and another to the United States; that his Foreign Minister, Oswaldo Aranha, is pro-Democratic and pro-Ally, while his War and Marine Ministers are pro-Nazi. "Vargas, the dictator of Brazil for 10 years, is playing the rôle of a man walking a tight rope with democracy on one end and dictatorship of vague promise on the other."

For 10 years Getulio Vargas, a "mild appearing, soft-spoken, gentle little man," has been supreme dictator over 44 millions of South America's 88 million population, over a territory larger than the United States. Of Spanish ancestry, he was born in the prairie town of São Borja in the state of Rio Grande do Sul, the son of Candida Dornellas Vargas and of General Manoel do Nascimento Vargas, who played a distinguished part in the overthrow of the monarchy and the establishment of the Republic in 1889. Young Vargas attended the Brazilian school of Porto Alegre and the Military School of Rio Pardo in his home state and was graduated from it with distinction in 1900.

From 1903 to 1907 he was a law student in Porto Alegre and in 1907 received the degree of Bachelor of Juridical and Social Sciences. He began to practice law in São Borja and in 1909 was made a Deputy for the state of Rio Grande do Sul. Immediately he became a leader of the Republican Party but refused re-election in 1911 because he wanted to devote himself to his law practice. It wasn't until 1919 that he ran for State Deputy again. Once in the State Legislature, he became a member of its budget committee and in 1922 president of its committee on ways and means.

Vargas organized the Seventh Provisional Corps which defended the legal government in the revolutionary movement of 1923 and shortly after was elected Federal Deputy from the state of Rio Grande do Sul. In the Federal House of Deputies he distinguished himself by his legal writings and opinions and was one of a committee of 21 appointed to revise the Constitution in 1926. In that same year he was made Minister of Finance.

In 1927 Vargas was "unanimously" elected President of his state of Rio Grande do Sul

and his political shrewdness was immediately apparent. His native state had been for years a battleground for opposing political factions. To these he came as a peacemaker—already one of the smartest politicians in South America.

In 1930 Vargas ran for President of Brazil, as the candidate of the Liberal opposition, against Julio Prestes, the administration candidate. He ran as a friend of the people, building his campaign on a fight against "the plutocratic coffee barons" of the São Paulo. He was badly defeated, but instead of accepting the defeat or charging that the ballot boxes had been stuffed or that the election had been dishonest, he got together a few of his friends and quietly took over the country. In October 1930 he was named provisional President by a junta of army and naval officers. His revolution had personified a popular reaction to the misdeeds of a political caste which had come to dominate the country like feudal magnates, but when Vargas took power the result was not quite what the nation had expected.

The time-honored Republican constitution of 1891 was abrogated and, for the alleged purpose of maintaining law and order, dictatorship was declared, Congress was dissolved, civil rights suspended and Vargas' own appointees put into state offices. In 1932 the state of São Paulo led a revolt with the objective of restoring the constitution, but the revolt was crushed. Still, Vargas saw it would be necessary to have a constitution of some sort and so summoned a Constituent Assembly in 1933, securing a majority by "carefully selected processes."

A constitution was finally adopted on July 16, 1934 and under it Vargas was elected President for four years. One Brazilian said that this constitution "with its Bolshevik, Fascist, Syndicalist and Clerical ideas" was "an absolutely indigestible fruit salad." Shortly after it was adopted Vargas discovered a "Communist plot" against the government, declared martial law—and continued martial law.

Under it Vargas did something to improve conditions in Brazil. He established minimum wages, restricted immigration, set up an eight-hour, six-day-week, encouraged the extension of manufacturing, abolished internal tariff duties, tried to improve the prices of sugar, coffee and other basic products, reformed the schools to some extent and improved the utilities. In fact, it has been said that President Vargas "has shown unusual diligence in working to improve the condition of his country." In 1940 he has been very active working out plans to develop the rich resources of the Amazon Valley and to expand Brazil's rubber industry. On the other hand, however, 80 per cent of his country is illiterate and according to most commentators exploited—Carleton Beals calls it "a brutal slave system."

Under the constitution a Presidential election for Brazil was set for January 1938.

Wide World

GETULIO VARGAS

On November 10, 1937, using the economic situation and political unrest as an excuse, Vargas canceled the election, set aside the constitution and proclaimed a "corporative" one to be approved by plebiscite. The plebiscite was never held.

This *coup d'état* merely ended the fiction that Brazil was a free republic. Actually, since he first seized power in October 1930 Vargas "had been paramount in Brazil." Now he became "a dictator with more absolute power in Brazil than Mussolini in Italy or Stalin in Russia." The 1937 constitution began with the words: "Political power emanates from the people," but ended with "a state of emergency is declared throughout the country." It abolished the parliament, replaced it with "two impotent handpicked, consultative bodies" which Vargas could dismiss or jail. It established Vargas' complete control over "written communications and the spoken word," his power to make treaties valid without recognition and his power to nominate his successor after his six-year term is up.

Shortly after it was declared that "movements of political thought directed or oriented by private persons cannot be tolerated," and all political parties, domestic and foreign, were abolished, as well as all brown shirt and black shirt uniforms, swastika flags, insignias and Nazi and Fascist salutes. The only exception was the green shirt Integralist Party which had helped Vargas to power. At the same time Vargas decreed nationalization of a large number of German, Italian and Japanese private schools and forbade them to receive subsidies from their governments, to engage in political propaganda, to fly or to salute foreign flags. Vargas also established military posts of non-German troops in southern Brazil and

VARGAS, GETULIO—*Continued*

ruled, recently, that the pilots of domestic airlines must be native Brazilians. Nevertheless, he continued to allow and encourage economic ties with Germany, he bought many arms from her and continued to allow Germans to own dye works, paint plants, machine factories and to run retail establishments in Brazil.

When the Integralists, irked by the government's failure to respond fully to Nazi and Fascist influence tried a *Putsch* on May 11, 1938 they were defeated, the Green Shirts were put in jail by the hundreds and they were ordered disbanded except for cultural purposes. In the *Putsch* the Presidential palace was attacked and Vargas, armed with a pistol, moved from window to window sniping at the rebels until rescuers came.

Vargas was now free of threats from the Right. In April 1940 he freed himself from threats from the Left. The chiefs of the Brazilian Communist Party—about 200 of them—were captured, their newspaper was shut down, documents were seized and the Party dissolved.

Vargas is complete master, though his power, some think, is not endorsed by the masses and so rests on a shaky foundation. The states nominally have Governors, but the ruling is actually done by "Federal interventors" who work "always with both ears glued to the Palace in Rio." A national propaganda bureau tells the newspapers what to print; there is no free speech; there is an efficient secret police which taps telephone wires and snoops about. And all this is supported by the army, which, paid well and well-treated, is strongly behind Vargas.

There is a saying in Brazil that this "swarthy, stocky, little" dictator is so clever he can take off his socks without removing his shoes. He has been clever in always seeming more able and plausible than most dictators. "He isn't given to casual shooting or hanging and he says very little and this in a low voice, never in a sports palast or on a balcony." Conciliatory of manner, quick to forgive and forget, Vargas "goes about running Brazil with old Portuguese courtesy."

Vargas is happily married to Darcy Sarmanho and has a large family of children. His tastes are simple—his hobbies are walking and going to the movies. Sometimes he has private film showings or with a friend or two goes to the nearest movie house, scorning a bodyguard, to enjoy the excitement of a wild West picture.

VIERECK, GEORGE SYLVESTER Dec
31, 1884- Journalist; poet

Address: 305 Riverside Drive, New York
City

During the First World War George Sylvester Viereck was a staunch partisan of Germany, vilified, expelled from professional associations. He is just as staunch a partisan of Germany today, and the same hue and cry against him has been raised. Accused of spreading pro-Nazi propaganda, of furthering Germany's interests, Mr. Viereck issued a strong denial. "I am a poet, a journalist, I have even mixed in politics in a small way," he said, "but I am not a propagandist."

Actually, there doesn't seem much doubt that he is. In 1934, before a group investigating Nazi propaganda he admitted that an American publicity firm was paying him \$1,750 a month for swinging a contract with German interests to that firm and that he had received \$2,000 from the German Consul in New York for services "concerning the general aspects of public relations." Today he is registered in Washington as the American correspondent of the *Münchener Neuste Nachrichten*, a German newspaper.

According to *PM*, Viereck is employed by the German Library of Information, his job to prepare news for *Facts in Review*, "official Hitler upper level propaganda organ, to hold himself at all times for consultation on Nazi propaganda problems in the United States and to interpret the news to favor Germany." What he says about Nazi Germany is made to seem, according to *PM*, "superficially harmless, legal, even praiseworthy, to millions of Americans." For instance, in an article in *Nation's Business*, Viereck points out that although he doesn't suggest that we imitate the systems of government of the totalitarian countries, still they have many things we might well adopt—things such as the strength through joy movement, athletic facilities, parks, etc. And he himself has admitted: "Behind the scenes I do all I can to better relations between Germany and the United States."

George Sylvester Viereck, poet, author, journalist, propagandist and naturalized American, was born in Munich, Germany. His maternal grandfather, William Viereck, emigrated from Germany to the United States in 1848 and went to San Francisco, where he was a journalist and where he founded the German Theatre. His daughter Laura returned to Germany and married her first cousin, Louis, a son of Edwina Viereck, the famous German actress. Louis Viereck, George Sylvester's father, was a

GEORGE SYLVESTER VIERECK

Socialist member of the Reichstag whose political activities got him into difficulties, and after a term in prison he came to New York. His wife and son followed a year later.

George was 11 when he arrived in New York and had already attended school in Munich and a Gymnasium in Berlin. In New York he went to public school and later to the College of the City of New York, from which he was graduated in 1906. In college he was the class poet and on the staff of the college papers, but steadily flunked or squeezed through physics, mathematics, geometry and the sciences. There was one examination he passed by writing a scornful sonnet against the subject in question.

Viereck's first job on *Current Opinion* was obtained for him by the late John H. Finley (see sketch this issue), then president of City College, and he stayed with this magazine until 1915. In 1912, however, he began to edit *International* and in 1914 *Fatherland*, the name of which was later changed to the *American Monthly* and which was published until 1927. *Fatherland* was undoubtedly a pro-German magazine and when Viereck printed in it (1917) one of his own poems, *William II, Prince of Peace*, with the line, "For if thou fail a world shall fall," the fireworks began. Immediately the Authors' League and the Poetry Society of America expelled him. When to this expulsion was added the charge that he was receiving money from the German government, a mob threatened to lynch him and stormed his house in Mount Vernon, New York. Viereck left his wife, Margaret Edith Hein (whom he had married in 1915), and escaped to New York City, there to hide out in a hotel. Persecution of himself and his family continued—they used to call

VIERECK, GEORGE SYLVESTER— Continued

him things like "venom-bloated toad of treason."

The uproar was the greater because Viereck was well-known as a poet and author. His first book of poems, *Nineveh*, had appeared in 1907 and was followed by others, and in 1911 Viereck was the first exchange lecturer on American poetry at the University of Berlin. The poems he wrote in those years and continued to write—the latest, *My Flesh and Blood*, "a lyric autobiography with indiscreet annotations" (1931)—called forth an extraordinary amount of favorable criticism. Richard Le Gallienne once called him "a poet of original mind and an exceptionally forcible and magnetic literary gift," and Frank Harris went so far as to term him "the most distinguished poet in America." Viereck himself points out that "few poets have met with more instant recognition than I . . . I have given a new lyric impetus to my country." Also he informs us, "I am perhaps the only American poet whose book of lyric verse has made money for himself and his publishers."

In the years since the First World War Viereck has continued as a journalist and author, sometimes using George Four Corners as a pseudonym. One of his many books and the one that has in recent years roused much comment was *My First 2000 Years* (1929), written in collaboration with Paul Eldridge. This book, its hero the Wandering Jew, was confiscated and burned in Nazi Germany in 1934. But Viereck, who states "I have always liked the Jews," said that was "entirely logical." "What," he asked, "is the fate of a book compared to the fate of a nation? Although I have warmly defended National Socialist Germany, I do not accept its anti-Semitic doctrine. Why should National Socialist Germany accept my Wandering Jew?"

Another of Viereck's books that caused a stir was *Spreading Germs of Hate* (1931), published with a foreword by Colonel Edward House. This study of propaganda was discovered to be "straightforward and objective," and called "the most effective history of war propaganda yet written and one of the most valuable antidotes for war hysteria." His two latest books are *The Kaiser on Trial* (1937) and *The Temptation of Jonathan* (1938).

George Sylvester Viereck is a "slim, blond man who looks 10 years younger than his age. . . . His gray eyes seem small behind horn-rimmed glasses and he is given to restless gestures. He is almost oppressively neat in his dress." On the walls of his study in his 10-room, \$3,500-a-year apartment hangs a surprising collection of photographs—Kaiser Wilhelm, Hitler, Goebbels, Freud and Albert Einstein. He explains it by saying: "All these people I have known and admired."

VILLARD, OSWALD GARRISON (vil-lard') Mar 13, 1872- Journalist

Address: h. Thomaston, Connecticut

On June 29, 1940 Oswald Garrison Villard's valedictory to *The Nation* was published nearly 47 years after his first contribution appeared in that magazine. His retirement was precipitated he says, "by the editors' abandonment of *The Nation's* steadfast opposition to all preparations for war, to universal military service, to a great navy, and to *all* war, for this in my judgment has been the chief glory of its great and honorable past."

In the 47 years that Oswald Garrison Villard has been associated with *The Nation* he has fought for peace, he has fought for civil liberties, he has fought for the rights of the underprivileged. His platform has been "to be opposed to war, to hold no hate for any people; to be determined to champion a better world; to believe in the equality of all men and women; and to be opposed to all tyrants and all suppression of liberty of conscience and beliefs."

A list of the causes for which Villard battled covers most of the major controversies of the late nineteenth and of the twentieth centuries. He worked to improve the status of the Negro and was one of the founders of the National Association for the Advancement of Colored People; he lifted his voice for the emancipation of women; he struggled to keep America out of the Spanish-American War; he fought long and hard to keep America out of the First World War and later sought to secure just treatment of Germany; he battled for the conscientious objectors in that War and for the victims of the Espionage Act and Palmer's Red Raids; always he attacked tariffs, trusts, Wall Street, corrupt politics. Today he is again fighting to keep America at peace.

More often than not Villard was fighting a lost cause—one commentator said that "Villard had a genius for choosing the unpopular side of every issue." More often than not it cost him dearly to fight it. To some there has always been a touch of the dilettante reformer about him—he is "the aristocrat of liberalism." To others he has been a surviving voice of an "old-fashioned democratic liberalism, a genuine liberalism which they feel can alone preserve democracy through the ominous and regimented years ahead." But this liberalism to which Villard has been devoted has

also been called "an inadequate weapon, for pacifism and passivism are not enough," and Max Lerner says that hard as he fought, Villard had "no clear outlines of a conception of social causation, a theory of history, a program of action."

Most of Villard's outspoken liberalism appeared in *The Nation*, which he received from his father, Henry Villard. Henry Villard came to America as a refugee from Germany unable to speak a word of English. Within five years he was reporting the Lincoln-Douglas debates. He became one of Horace Greeley's bright young men on the New York *Tribune*, explored the West and married the daughter of the famous abolitionist, William Lloyd Garrison.

Within thirteen years Henry Villard had become president of the Oregon Railway and Navigation Company and two years later of the Northern Pacific Railroad which he completed in 1883. He and his wife gave their son Oswald, born in Wiesbaden, Germany, a legacy "compounded of New England abolitionism, the German Revolution of '48 and Northern Pacific Railroad shares."

Oswald Garrison Villard's was a "boyhood of wonder and hope," made up of New York in the '80s, country life at Dobbs Ferry, trips across the wild West on the Northern Pacific, journeys to Europe and Harvard from which he received his B. A. in 1893 and his M. A. in 1896, and at which he was an assistant in the history department from 1894 to 1896. From Harvard young Villard went to Philadelphia where he spent half a year as reporter for the *Philadelphia Press*. From there he went, in 1897, to the New York *Evening Post* which his father had bought, together with *The Nation* which thereafter served as its weekly literary supplement, in 1881.

As editorial writer and president of the *Post*, Villard had "a sharp nose for news and an extraordinary talent, amounting almost to genius, for presenting it in a manner that would attract attention in places of power." He and his paper came out strongly against the Spanish-American War and played a large part in uncovering the insurance scandals and corruption in the New York legislature. "Single handed he drove Senator Allds, acting Lieutenant Governor of the state, out of public office." He and his paper came out strongly for Wilson. Villard who was an early admirer of Wilson, also supported him for the Governorship of New Jersey and in 1912 and in 1916 for the Presidency. When Wilson was nominated Villard said "my joy was greater than that I have ever felt over any political happening."

In Wilson, Villard saw the best promise of the liberal spirit and in Wilson, Villard found his greatest disillusionment. "I have long since come to believe," he said once, "that it would have been better for the country had Champ Clark been nominated." Always a strong pacifist, Villard fought

OSWALD GARRISON VILLARD

against our entrance into the War and as late as 1921 had to be smuggled out of Cincinnati by the police after a speaking engagement before the American Legion of the town could get him. His wife, Julia Breckinridge Sandford, whom he married in 1903, and his children suffered all the discomforts of ostracism.

A staunch independent like Villard, running a staunchly independent paper like the New York *Evening Post*, making no concessions to the popular mood of the moment, had a hard row to hoe. By July 1918 Villard had sold the *Post*, while retaining *The Nation* which he edited and owned until 1932.

The Nation under Villard in the 1920's was avowedly and outspokenly a fighting, muckraking magazine. Villard wrote then: "I had the complete satisfaction of molding my historic journal according to my exact wishes and beliefs." After the War *The Nation* worked at getting the Allies out of Russia; it called for a just peace of reconciliation and for tolerance and fair play. Villard dashed into Germany in 1919 and furnished his magazine with evidence of starvation under the blockade; it denounced the Versailles Treaty; it urged the freedom of Eire. This was called "treason" and "Bolshevism" by many and there were batches of cancellations from "grieved and scandalized oldest subscribers."

Villard's financial and intellectual independence made him a thorn in the side of other journals. The *Times* and the *Tribune* "pursued him with inveterate hate," and the *Times* went so far as to describe *The Nation* as "if not actually Bolshevism, so near it that the distinction is not visible to the naked eye." Villard was unperturbed. He continued his "infectious moral

VILLARD, OSWALD G.—*Continued*

indignation," and his paper had then, and continued to have, a power far beyond its circulation.

In 1932 he and others contributed to *The Nation's* support and in 1935 it was sold. But from 1933 until June 1940 each week, "in sickness or health, whether I was here or in Europe," Villard's *Issues and Men*, was a weekly feature of the journal.

During these years of editorship Villard wrote a number of books, three of them about Germany. *Germany Embattled* appeared in 1915; *The German Phoenix* in 1933 and in 1940 he wrote *Within Germany*, a firsthand account of conditions under Hitler in which he pulled no punches. He has written *John Brown, 1800-1859: a Biography Fifty Years After* (1910); *Some Newspapers and Newspaper-men* (1923); *Prophets True and False* (1928). In 1939 two books by him appeared: *Our Military Chaos*, a sharp criticism of our defense policy, and *Fighting Years*, a personal narrative and a record of contemporary history, a "brave, fine story," which has been compared by some with Lincoln Steffens' *Autobiography*. In it is a record of his life as a fighting liberal; in it is his philosophy. And part of his philosophy is this: "I have never been able to work happily with men or women who are incapable of hot indignation at something or other—whether small or big, whether it stirred me personally or not, if only it was *something*."

WALKER, FRANK COMERFORD May 30, 1886— Newly appointed United States Postmaster General

Address: b. Post Office Building, Washington, D. C.; h. 1035 Fifth Ave, New York City

"Quiet, diffident" Frank Walker, who in December 1935 resigned his position as

FRANK C. WALKER

works-relief chief to return to private life, is the man appointed by President Roosevelt to succeed Postmaster General James A. Farley. The announcement came as a "surprise" at the annual meeting of the Franklin D. Roosevelt Club at Hyde Park on August 31, 1940, although actually Mr. Walker has been mentioned for years as Mr. Farley's probable successor. Said President Roosevelt of his old friend: "He came from Montana and lived in New York and then, because of his interests, became a citizen of Pennsylvania, which is a pretty good record. In other words, he knows the country and is going to know a lot about the mails and communications of the country from now on."

Frank Walker, together with James Farley and Edward Flynn (see sketch this issue), has for a long time been a member of a triumvirate both personally and politically intimate with the President. Up to this time, however, his Washington service has been intermittent: he has been virtually drafted to the important posts which he has held under the New Deal, and has left them "as expeditiously as possible." One of the wealthiest men in the New Deal, a Roman Catholic who for years has been active in Roman Catholic charities, Mr. Walker is vice-president and general counsel of the Comerford Theatres, Incorporated, the Meco Realty Company and the Comerford-Publix Corporation. The conservative *New York Times* greeted his appointment with approval, finding him a "cool-headed pioneer" in the New Deal who nevertheless "has no share in the fads and fanaticisms of some of its acolytes."

He was born in Plymouth, Pennsylvania on May 30, 1886, the son of David and Ellen (Comerford) Walker. He was only three when his family moved to Montana,

however, and it was in Butte that he grew up. At one time during his boyhood he was hired as a grocer's delivery boy, and the story goes that his only fault was that he could never make the horse back up! After attending Gonzaga University at Spokane, Washington from 1903 to 1906, young Walker went to Notre Dame's Law School, starred in its debating society, acquired his LL. B. in 1909 and was admitted to the Montana Bar the same year.

Six months after Walker had hung out his shingle in Butte he ran for assistant district attorney of Silver Bay County, was elected and held the office from 1909 to 1912. In 1913 he was elected to the Montana legislature and the following year married Hallie Boucher of Butte and became a member of the firm of Walker and Walker. (His older brother, State Senator Thomas J. Walker, was also an attorney.) Soon he acquired an imposing list of clients, among them the late John D. Ryan, head of the Anaconda Copper Company, whose chief aide he became. His law practice was interrupted only by service as first lieutenant in the army during the First World War.

In 1920 Mr. Walker had first encountered Franklin Delano Roosevelt, when as the head of a local committee he received the Democratic Vice-Presidential candidate. In 1925 he came to New York City with his wife and two children, Thomas and Laura, to be general counsel and manager of Comerford Theatres, Incorporated, a chain of movie houses in New York and Pennsylvania owned by his uncle. There he met Roosevelt once more, became a Roosevelt booster and in 1928 contributed \$10,000 to his re-election as Governor of New York. One of the inner circle of friends and advisers even before the 1932 Democratic nominating convention, Walker was one of three raisers of a pre-convention fund to promote the Roosevelt boom, once more contributing \$10,000 himself. He helped to organize the Northwest for Roosevelt, and in 1932 served as treasurer of the Democratic National Committee. He was so retiring, however, that no one seemed to know quite who he was, and at Chicago the local press had him spotted as a hired field agent.

With Roosevelt's election it was well-known that Frank Walker could have had any government position he wanted except a Cabinet post. And although he showed no desire for office high or low, in July 1933 Roosevelt made him executive secretary of the Executive Council set up on his arrival in the White House—sometimes known as the "Super Cabinet." As such Walker was known as the coordinator, "the central point of contact with the Cabinet and the new recovery agencies." It was his duty to decide questions of "function, jurisdiction, duplication and administration." Liberals thought of him as an "enlightened conservative," conservatives thought of him as a sort of brakeman who would keep one eye on excesses and almost everybody thought of him as "Assistant President."

Then in December 1933 Walker was given an even more important coordinating position: head of the National Emergency Council. Said the London *Evening Standard*: "He will be more powerful than any Cabinet Minister. His real function will be that of Lord High Coordinator." Codes needed to be coordinated; information furnished; Consumers' Councils set up all over the country; the Central Statistical Board created. But the authority that had actually been delegated to Mr. Walker was very vague, and he resigned some time later, perhaps "somewhat discouraged by his inability to coordinate the various governmental agencies" and also anxious to return to private life. He had been commuting from New York to Washington for a stay of three or four days each week, devoting the rest of his time to the theatre business.

It seemed that his services were indispensable, however. He and his wife were in Atlantic City in April 1935 when he was called to Washington unexpectedly again—this time to serve as head of the Division of Application and Information of the \$4,000,000,000 works relief program, a position no less important than those of Harold Ickes and Harry Hopkins. Colloquially he was sometimes known as Roosevelt's "fall guy," for it was his job to say "no" to all kinds of projects for spending the government's billions, picking out only the good ones. But in December 1935 personal affairs forced him to resign this post, too, though he promised to return when it was possible.

Mr. Walker has since been chairman of a committee that raised funds to establish the memorial library at President Roosevelt's Hyde Park estate which houses his personal papers, was one of a group of third-term strategists at the Chicago convention in July 1940 and has worked with the new Democratic National Chairman in helping to get him started in his new office.

"A chunky, round-headed, large-jowled man, Walker is as tight-lipped as an earthworm. . . . He knows Big Business and Wall Street finance, and he knows how the average man feels about them, being more than inclined to share that opinion. . . . Walker is a man of the Tom Walsh ('Teapot Dome' Walsh) type: tenacious, patient, and scrupulously honest." He can be seen cheering at prize fights and football games, but is as "phlegmatic as a Joffre in the face of trouble," never makes speeches, gives interviews nor holds press conferences, and probably goes by the slogan that no publicity is good publicity. Everyone agrees that he is an extremely able man for his new job.

WALLACE, HENRY AGARD Oct 7, 1888- Vice-President-elect of the United States

Address: h. 3821 John Lynde Rd, Des Moines, Iowa

On November 5, 1940 former Secretary of Agriculture Henry Wallace was elected Vice-President of the United States. With President Roosevelt's backing he had won the Democratic nomination in July against a strong and vocal field. The lack of cheering demonstrations and the occasional boos when his name was presented to the Convention were not, most commentators agreed, directed against Wallace personally: some of the reaction was sectional; some of it strictly political. It was felt that he wouldn't add as much pulling power to the ticket as some of the

Acme

HENRY A. WALLACE

other Vice-Presidential possibilities, despite his farmer support.

The choice, however, was far from unexpected. Ever since 1933 Henry Wallace's name has cropped up from time to time as a Presidential possibility, and in 1937 Stanley High wrote: "A good many people believe that Henry Wallace is Mr. Roosevelt's heir apparent." They believed that because "no other department of the New Deal is so deeply indoctrinated with New Deal ideas or has so faithfully sought to make those ideas work" as Wallace's. They believed it because of Wallace's ardent support of the New Deal program beyond agriculture (his *America Must Choose*, 1934, is "a remarkably clear exposition of New Deal philosophy"). Today he is not Roosevelt's heir, but his partner, working with him in even closer harmony than he has for the past seven years. This was shown by his presence in Mexico at the inauguration of Comacho (see sketch this issue), at which he represented the United States Government in an effort to establish the utmost friendliness between our country and its neighbor.

Henry Agard Wallace holds a position in the government today which his father, Henry Cantwell Wallace held before him, under Harding. His grandfather was a member of President Theodore Roosevelt's Country Life Commission. Henry Wallace I, was a United Presbyterian preacher who at the age of 60 launched the magazine, *Wallace's Farmer* with the masthead "Good Farming. Clear Thinking. Right Living." In his 80's he was "Uncle Henry" to half of Iowa, "the idol of prairie men throughout the West."

Henry Wallace II took over *Wallace's Farmer* when his father died and stayed with it until 1921 when he went as Secretary of

Agriculture to Washington and "wore himself out in jurisdictional disputes with Hoover's Department of Commerce." He died in 1924. Henry III, like his father, was born in Iowa, on a farm in Adair County, the eldest of six children. He went to Iowa grade schools and to high school and then to Iowa State College where he majored in agriculture and from which he was graduated in 1910. While there he already demonstrated his "painfully acquiring mind." When a corn judge picked out certain corn as producing the highest yields, Henry set to work and proved that this corn was not as high yielding as corn which was less attractive in appearance.

As soon as he left college Henry went to work on the staff of *Wallace's Farmer*. In 1914 he was married to Miss Ilo Browne of Indianola, Iowa whom he had met in college. While on his father's journal, Henry began to study prices and price trends and produced the first corn-hog ratio charts which indicated the probable course of the markets. Because of his studies, in 1919 he was able to predict the agricultural collapse of 1920 and to write *Agricultural Prices* (1920). In 1921, when his father went to Washington and the editorship of *Wallace's Farmer* was his responsibility, Henry began to hammer home to his thousands of farmer-readers the same policies of farm relief which his father was enunciating in the Capital, and after his father died he continued to hammer them home until he gave up *Wallace's Farmer* (in 1929 incorporated with the Iowa *Homestead*) when he came to Washington in 1933.

All this time he was leading the life of a practical agriculturist. He devised a system for forecasting corn yields on the basis of rainfall and temperature records and, most important, conducted experiments which succeeded in producing high yielding strains of corn. His experiments are now ranked among the four or five important contributions to genetics in the last twenty years, and for many years farmers throughout the Corn Belt have been using his strains of hybrid corn, distributed through the Hi-Bred Seed Company which he organized and of which he was president.

Like his father and grandfather, Henry Wallace was a Republican while editing *Wallace's Farmer*, but in 1928 he bolted to Al Smith because he thought he had "social vision." It was for the same reason that he supported Roosevelt in 1932 and "is credited with having been a major factor in swinging Iowa into the Roosevelt column on election day." He wasn't actually registered as a Democrat until 1936, however.

Henry Wallace, whose ambition as a child was "to make the world safe for corn breeders," was, because of his clear-cut farm policies and practical farming contributions, a "natural" for the position of Secretary of Agriculture. "A tall young man with a lantern jaw and a logical, scientific turn of mind," Henry came to Washington, "first and last a friend of the farmer." One of

his earliest statements was: "This department will make good for the farmer or I will go back home and grow corn."

"With his hat tilted well back on a head of unruly reddish-brown hair, a folksy manner of speech and a general appearance of being constantly attired in his Sunday best, Henry Wallace looked for all the world like the dressed-up country jake of the Eastern school boy's imagination." People didn't think too much of him at first—to them he was "a corn-hog farmer from Iowa virtually without political experience and with little more influence."

But Wallace proceeded to evolve the Agricultural Adjustment Act—and both farmers and Washington politicians took sharp notice. He called together farm leaders and created a program to raise farm prices. When the Act went into effect it was praised as "the most farsighted and heaven-sent piece of remedial legislation ever conceived by the mind of man" and "damned as the most vicious class-ridden measure which ever saddled some people's burden on other people's backs."

Under Wallace's direction corn and cotton were ploughed under, pigs killed, crops controlled; farm prices rose and millions of checks poured into the farmers' pockets out of the Federal Treasury. He who had worked years to produce high-yielding corn now told the farmers why they must grow less. He traveled all over the country, explaining the AAA in terms of simple horse sense; he wrote articles and books. He broadcasted on *The Farm and Home Hour*; he held frequent conferences with farm leaders to get agreement on farm legislation; and he held referenda on governmental policy among the farmers themselves.

When the first AAA was declared unconstitutional Wallace rewrote the act as it now stands on the books. Its major objective is to stabilize farm income at satisfactory levels and to bring about a better division of this income among all farmers, this to be achieved mainly through soil conservation, the storage of reserves, the control of price and production. Wallace and his department of 67,490 people pioneered, too, in the problem of farm tenancy, "the first venture of the American government into the field of economic and social uplift for agriculture's downtrodden."

During the years since Wallace took office until he resigned in August 1940 to campaign for the Vice-Presidency the policies of his department have remained largely unchanged. In his latest report he stated firmly. "There is no question of going back to *laissez-faire*. For agriculture the program is simply to get the nearest approach to a permanent equitable farm adjustment with the least drawback in national disadvantage." Today when the world and world trade are in a difficult situation he believes that the government should be in a position to adopt rigid price controls, if necessary, to prevent collapse in markets.

With this program, most of the farmers and much of the country agree. But there is and always has been a strong opposition which believes, as stated in the *New York Times*, that this policy of pegging prices "has kept American crops off the world markets; it has stuffed warehouses. . . . The Treasury has tied up or lost hundreds of millions of dollars through the policy, but it has still not prevented farm prices from falling."

Undeterred by criticism, Wallace has always gone ahead with "intense sincerity and burning idealism." One of his friends in commenting on his devotion to his ideals said: "What gripes me most of all about Henry is that you know he would cut off his hand for an abstract ideal, and cut off yours, too, just as readily." Somehow he seems to believe himself *called* to his mission in a way that the ordinary politician does not.

"One of the best writers in the New Deal" (his latest book is *The American Choice*, 1940), according to Arthur Krock, Henry Wallace relies heavily on a Biblical simplicity of style for his articles and many books. He is a deeply religious man, the Bible his most frequent source of quotation. He tells critics that "the Biblical record is heavily loaded on the side of the Progressive Independents," and he is supposed to have evolved his fundamental theory of the "ever normal granary" from the *Bible's* story of the lean years and the fat.

Wallace is one of the most widely read men in public life. Within one page of his writing, for instance, he can applaud observations by Pope Pius XI and Karl Marx. He "has an insatiable curiosity and one of the keenest minds in Washington, well-disciplined and subtle, with a range of interests and accomplishments from agrarian genetics to astronomy." He also likes to climb Pike's Peak.

According to Peggy Bacon (see sketch this issue) he "looks as if he were going somewhere on a bus, possibly to the fair, self-conscious, all dressed up and scrubbed, determined to behave, taking it all in and simply thrilled." He is a non-smoker and non-drinker and sometimes is seen at Washington parties gingerly holding the highball his host has given him, unwilling to hurt his feelings by refusing it.

In Washington Wallace lives a quiet life in a hotel with Mrs. Wallace and one of his two sons and daughter. The other son, now married, lives in Iowa. But he still keeps a farm in Iowa and still carries on experimental work there.

Who's Who in the Nation's Capital

WALLENSTEIN, ALFRED (wāl-n-stīn')

Oct 7, 1898- Radio musical director; con-
ductor; cellist

Address: 333 E 57th St, New York City

It is his "nose for music" that has enabled Alfred Wallenstein, WOR's musical director and guest conductor during the season of 1940 and 1941 of the NBC symphony orchestra to present new and original programs and to discover new talent. He has won the approval of the radio audience by playing the works not only of unknown composers, but those of the great masters which have been allowed to fade into limbo. During 1940 Wallenstein performed two radio series that exemplify his love of unknown, classical music. One was his Sunday night concerts of the entire Bach Cantata series which is relatively unknown outside of Leipzig, and nowhere to be found in this country in orchestrated form. The other was the Mozart piano concerto series, which Wallenstein performed in its entirety for the first time. Each Tuesday night WOR brings to the air as part of its weekly musical agenda concerts featuring guest soloists accompanied by full symphony orchestra.

Alfred Franz Wallenstein, the son of Franz Albrecht and Anna (Klinger) von Wallenstein, was born in Chicago October 7, 1898. Shortly after his birth, his family moved to California. When he was eight years old his father gave him a choice between a bicycle and a cello; son Alfred (with a little persuasion on the part of his father) chose the cello. Studying music with the mother of the composer Ferde Grofé (see sketch this issue), he made such remarkable progress that he became known as a child prodigy and won a contract to tour the country. He made his debut as a cellist in Los Angeles in 1912.

In 1916 Wallenstein was invited to join the San Francisco Symphony Orchestra—on condition that he don long pants. The following season the young cellist was en-

gaged by dancer Pavlova as her accompanist on her tour of Central and South America. Then he studied with Klengel at Leipzig; later he played with the Los Angeles Philharmonic. For seven years (1922-29) he played in the Chicago Symphony Orchestra as first cellist. In 1929 he came to New York with his wife Virginia Wilson, whom he had married in 1924, to play with the Philharmonic as solo cellist under Arturo Toscanini, and remained till 1936. He has appeared as guest conductor with the Philadelphia Orchestra, Cleveland Symphony and Los Angeles Philharmonic, and also has been one of the principal conductors at the Hollywood Bowl. He has been active in radio work since 1931, but it was not until 1935 that he assumed the musical directorship of WOR.

Neither hackneyed programming nor music that has already an assured acceptance by the listening public are to be found on Wallenstein's WOR programs. Tuning in on any one of his programs, the listener is almost certain to hear at least one piece of music he has not heard before. But the audience likes it—enjoys particularly the seldom-heard symphonies of the great composers. Communications pour into the studio, Wallenstein says, asking for the performances of whole symphonies and for the music of Bach, Wagner, Debussy.

According to him, radio enables an enterprising conductor to go far in his field. "Through radio you get a much more symptomatic cross section of opinion than you do by using the concert hall as a medium." He quotes the responses to an appeal for suggestions made in the hinterlands of Canada. There were requests for the second symphony of Tchaikowsky, the second of Mahler, Sacchini's *Oedipus Coloneus* overture and Scarlatti's *Ballad of Good-humored Ladies*. A good many of these selections had never previously been given over the air.

Wallenstein likes nothing so much as to present the work of a contemporary composer, especially if the musician happens to be an American. Of American talent he has this to say: "We have a large percentage of excellent raw talent here waiting to be utilized. And yet it is much harder for an American artist to get a start in his own country than it is for any foreigner. I don't mean to be chauvinistic, mind you. But we have been loath to make the most of our native musical resources. One encouraging factor is that leading talented composers are now looking to radio even more than to orchestral associations for the playing of their new works. During the past year I examined more than 300 scores, many showing great signs of promise. I do not believe that orchestra societies receive more than our average of 20 new compositions each week."

As a sample of what a typical day brings, Wallenstein lists a viola concerto by George Steiner, a composition by Rudolf Forst, a *Political Suite* by Arcady Dunesky, and *Harlequin and Columbine* by Robert Braine.

ALFRED WALLENSTEIN

An example of Wallenstein's interest in young talent is the case of 27-year-old Morton Gould. Wallenstein encouraged Gould to compose "American" symphonies, using musical idioms native to this country. Negro, Western and jazz expressions are to be found in his music; his works have been performed by Fritz Reiner, Leopold Stokowski and Eugene Ormandy; during the season of 1939 to 1940 the Pittsburgh Symphony offered the première performance of his composition written for that organization's celebration of the Stephen Foster centennial. Among the groups Wallenstein has encouraged are the *Song Spinners*, a troupe of four vocalists specializing in folk songs from the deep South, the plains and the hills.

Wallenstein hopes to do much to make radio a tool of unparalleled influence in shaping the cultural destinies of America. Under his direction, the Mutual Broadcasting System outlet now has a concert program every night in the week and since there are some 20 million radio homes in America, the potential audience for a young composer's new work is tremendous.

WALN, NORA June 4, 1895- Author
 Address: c/o Provident Trust Co, Philadel-
 phia, Pennsylvania

In April 1938 Herr Hitler flatteringly ordered 35 copies of a book about China written by Nora Waln. And before Nora Waln left Germany she had finished her *Reaching for the Stars* (1939), a layman's observations on Nazi society. She mailed—each from different postal stations—her only three copies of the manuscript. None of these was ever delivered. Every word of the book had to be rewritten from notes.

In *Reaching for the Stars* she tried to portray impartially and from all sides Germany today and the German people. Troubled by what she saw of totalitarianism in action, she still believed in the real Germany, convinced that the philosophy of Hitler and the heart of the German people are two distinct things.

Nora Waln was born on June 4, 1895, at Grampian, Pennsylvania, the daughter of Thomas Lincoln Waln, descended from Nicholas Waln whose house appears in the first plan of the city of Philadelphia, and Lillia (Quest) Waln, one of whose forefathers was a signer of the Declaration of Independence.

When she was nine she discovered some 1805 issues of the *United States Gazette* in her grandmother's attic. The marine notices listed a number of brigs, sloops and schooners serving one J. S. Waln; Canton, China, became her "favorite port of purchase." She began to read Chinese philosophy, memorized analects from Confucius, collected maps, log-books and old letters and wrote a "sad ballad" about the Emperor.

She entered Swarthmore College with the class of 1919; and left on our entry into the War to conduct a newspaper page in Washington called *Woman's Work in the War*. For two years she was publicity director of the Near East Relief Committee, New York.

In 1920 she sailed for China, proceeding from Peking by sledge-boat to the *House of Exile*, the homestead of the Lins, an old family in Hopei Province, with whom the early Walns had been traders. On a brief return journey to America she met an Englishman, George Edward Osland-Hill, who was in the foreign service at Peking. With this "alarmingly self-assured" gentleman she soon found herself "most confusedly in love." Because she, a Quaker, had never been baptized, the Dean of the Cathedral of the Church of England (in Shanghai) at first threatened to refuse her the Christian sacrament of marriage. But he was directly won over. They were married in 1922.

With the rise of the Nationalists, anti-Westernism became unbearably tense at Canton. Nora Waln went to England in the fall of 1926, and when the Nationalists began to aim at control of Tientsin her husband cabled her not to return to China until there was some glimmer of safety. She stuck it out as long as she could in Italy, but on March 2 of the year following she boarded a German vessel bound for the Orient. At Manila word came to her that the Nationalist army had marched to the Yangtze almost without battle. She went eventually to

C. LeRoy Baldridge

NORA WALN

Tientsin, and here passed two years of "waiting for what might happen."

By May 1931 it was rumored that Nanking officials were demanding the surrender of all foreign concessions—those few square acres which had become oases during perpetual civil war—in China. Early in 1932 Nora Waln and her daughter Marie left Tientsin and by way of Nanking and Shanghai went on to Japan. She was on the high seas bound for America, however, when fighting began at Shanghai. And she has returned once since for a stay in the *House of Exile*. It was on this occasion that the Family Council of the Lins passed judgment on her illuminating day-book covering those years in China. Ninety-six-year-old Kuei-tzu said curtly: "Scholarship is useless to a woman. All she needs to know is how to manage men, which any woman can do if she is a good cook." Others damned it with faint praise but did not forbid her to submit it for publication: *House of Exile*, issued in 1933, lost no time in finding its audience.

In June 1934 she went to Germany with her husband, who had meanwhile retired from the British civil service and wanted to study music. She has always had a solid admiration for the German people themselves, and four years of Hitlerism in no wise weakened her faith in a fundamental Quaker belief that "peoples can be a society of friends living peacefully and profitably together in a frontierless and unfortified world."

In the fall of 1940 Miss Waln is doing war work in London. Her college sorority has established the Nora Waln Fund for Refugee Children and cables money to London regularly.

WALTON, WILLIAM TURNER Mar 29, 1902- Composer

Address: 56A South Eaton Pl, S. W. 1, London, England

Long regarded as the most important of the younger English composers, William Walton first received international notice when his fiery oratorio, *Belshazzar's Feast*, was produced at the Leeds Festival in 1931. An even stronger impression was made by the performance of his *First Symphony* in 1934 (its finale was completed a year later) by the London Philharmonic Orchestra. That it showed the influence of Sibelius was regarded by critics as evidence of the young composer's growth.

Among those impressed by his work was violinist Jascha Heifetz, who asked Walton in 1936 to write him a violin concerto. In three years' time the manuscript was completed, and in December 1939 Heifetz, with Artur Rodzinski's (see sketch this issue) Cleveland Orchestra, gave the first performance of the new concerto. Intricate, but solid and warm in feeling, the opus won enthusiastic reception. And of it Rodzinski said: "This is one of the most important violin works of the century." Walton, unfortunately, did not hear the performance, since he was busy driving an ambulance somewhere in England. The concerto was not broadcast; but at Walton's request Heifetz planned to make a private recording for him.

Born in Oldham, Lancashire, March 29, 1902, William Walton, son of a music teacher, revealed considerable talent early in childhood. He studied at Christ Church Cathedral Choir School at Oxford. He was influenced by Edward J. Dent, who brought him to the notice of the International Society for Contemporary Music, at whose Salzburg Festival in 1923 his *String Quartet* was performed. This, though described by some critics as "horrible," nonetheless showed technical assurance.

For a series of satirical poems by the English poetess, Edith Sitwell, Walton wrote his brilliant musical parodies, *Façade*, produced in London in 1926. Adding new numbers, he turned the work into two orchestral suites (1936 and 1938). In this form it has been used as a comic ballet.

Outstanding among Walton's earlier works are: *The Passionate Shepherd* for tenor and small orchestra (1920); *Dr. Syntax*, pedagogic overture (1921); *Bucolic Comedies* for voice and piano (1924); *Siesta* for chamber orchestra (1926); *Portsmouth Point*, concert overture (1926); and two songs, *The Winds* and *The Tritons*.

At Liège in 1929 his viola concerto was produced and accredited as a fully matured work. Walton was now seen as "an artist capable of lyrical and sometimes poignant expression as well as of high spirits tempered

by fine taste." He was no longer imitating and experimenting, but had achieved originality by being himself.

Belshazzar's Feast and the *First Symphony*, mentioned above, assured Walton's position as one of the noteworthy composers of his time. Among his compositions since the *First Symphony* are *Crown Imperial*, written for the coronation of George VI in 1937; and *In Honor of the City of London*, for chorus and orchestra, produced at the Leeds Festival of 1937. These consolidated his position; but the 1939 performance of his violin concerto seems to have made an indelible impression of real genius.

WANG CHING-WEI (wäng' jing-wā) 1883- Puppet ruler of Japanese-sponsored Chinese National Government

Wang Ching-wei was considered a great Chinese revolutionist and patriot until he declared himself at peace with Japan, and was chosen the puppet ruler of Japanese-occupied China in 1940. Then he was berated as a traitor to his country. Chinese patriots in Chungking, provisional capital of the fighting part of China, circulated chain letters asking for money to be used for Wang's assassination.

The chain letters asked receivers to contribute a dollar to a "kill Wang Ching-wei Fund," and to send 11 copies of the letter to friends. Funds would be collected by the Kuomintang, or Nationalist Party, according to the letters, and would go to a successful assassin. Men who attempted to kill Mr. Wang but failed and fell into Japanese hands would have the satisfaction of knowing that one percent of the fund would go to members of their families.

What gauge of popular opinion the letters were, it would be hard to make out in the complex situations arising from China's long war with Japan. But certainly they reflected the general opinion, shared strongly in America and Britain, that Wang Ching-wei had sold his country down the river when he made secret terms with Japan and became head of Japanese-occupied China. In November 1940 he was formally recognized by Japan as China's ruler, and made a "last" plea for peace in China.

As a young law student, Wang had joined the forces of China's George Washington,

WANG CHING-WEI—*Continued*

Sun Yat-sen, founder of the Chinese Republic. Wang and Chiang Kai-shek (see sketch this issue) were Dr. Sun's foremost disciples. Wang was a favorite student of Dr. Sun, wrote many of his manifestoes, and even took down the famous will the great revolutionist delivered on his deathbed.

On Dr. Sun's death in 1925 his party split, and Wang and Chiang Kai-shek fought for the mantle of their leader. Wang joined the Cantonese and led several revolts. Chiang Kai-shek, with the aid of Communist advisers, won in the vicious, bloody civil war. Politics eventually brought the two men together again. After Canton made peace with Nanking, Wang became Premier of China.

Wang resigned as Premier in 1932, and ironically enough it was with loud charges that Chinese generals should fight Japan more aggressively. The following year he again took the post of Premier, and again resigned in 1935, giving ill health as his reason.

When the war with Japan started Generalissimo Chiang Kai-shek and Wang continued together. As deputy leader of the Nationalist (Kuomintang) Party, Wang followed the Chinese government from Nanking to Hankow and to Chungking, as the Japanese made inroads into China. But in 1938, in the mountain fastness of Western China's provisional capital, Wang addressed peace pleas to Chiang Kai-shek and members of the embattled Kuomintang. Chiang refused to consider cessation of hostilities as Wang advised. Wang then took his two sons out of school, sent them out of the country, packed his own belongings and one night left Chungking secretly for Hanoi, French Indo-China. Chiang Kai-shek read him out of the party, branded him as a traitor and arrested his followers. Wang was found in Indo-China and several attempts on his life were made.

But the erstwhile Chinese patriot had declared himself at peace with the Japanese. From Indo-China he went to Hong Kong, then Shanghai, and later to the Japanese-conquered Kankow. The Japanese recognized him as a good catch for their puppet régimes in China. And since he was the only Chinese leader they could win over, they entered into negotiations with him to set up a central Chinese government in those parts of China which they had occupied.

The "all China" Japanese-sponsored régime headed by the former Chinese Premier Wang Ching-wei was proclaimed March 30, 1940 in brief ceremonies at Nanking. The purpose of the new régime was to establish peace between China and Japan and to put an end to the 33 months of war. It was a strange installation of what Wang and the Japanese declared was a new Chinese government. With the exception of Japan, no foreign nation sent diplomatic representatives to the ceremony. The American, French, British and Soviet

Ambassadors were in Chungking, where Generalissimo Chiang Kai-shek's government was recognized by their countries as the sole legal government of China, although the British Ambassador had made a speech conciliatory to Japan two days before.

The installation was not without its incidents. Wang's home in Shanghai for months had been ringed with pill boxes in which Japanese soldiers stood guard. Five Japanese boats escorted the steamer bringing Wang from Shanghai to Nanking. And a Japanese-operated train bringing Japanese officials and foreign correspondents to the Japanese-guarded walls of Nanking was derailed by unidentified persons, believed to have been Chinese guerrillas. Chungking held a huge outdoor demonstration, burning wooden effigies of Wang and his wife.

In a broadcast from Chungking, President Lin Sen of China bitterly denounced Wang as a traitor, and declared that he (Lin) and Chiang Kai-shek would lead China to fight "to the end for her liberty, sovereignty and territorial integrity." He appealed to the world to continue to support China, which he declared would live despite the Japanese and their puppets.

President Lin Sen pointed out that Wang was already under death sentence as a traitor, and ordered all responsible government organizations to arrest him. Wang was carrying on a large scale rebellion under cover of a peace campaign, he declared.

A peculiar phase of the Wang situation was that Lin had been elected as President in the Japanese conference with Wang in Nanking, and Wang merely named as acting President until such time as Lin might decide to "play ball" with the Japanese. Lin's speech was his first personal answer to the Nanking election. Wang, despite all this, at his inauguration as the puppet premier blandly acted as if he represented all China. While Japanese armed soldiers guarded the city, he spoke of cooperation with "our Japanese neighbors so that our sovereign independence and territorial integrity may be safeguarded." He suavely proclaimed the new Chinese government at Nanking the only legal government of the country. Hereafter, he announced, any decree issued to the nation and any treaty or agreement entered into by the Chungking régime with foreign powers will be automatically invalid. "Chungking," he said, "has now been reduced to the status of a regional refugee régime." He formally ordered the cessation of the 33 months' hostilities with Japan.

The domestic political strategy Wang sought to use to win over the Chinese was revealed when he called on all civil servants still serving Chungking and various local governments to report for duty at the capital within the shortest possible time. He added that on proper identification they would be appointed to the same rank they now held and at the same salary.

But although Wang set himself up as the successor to the Chiang Kai-shek govern-

ment, his authority actually extended only to the areas occupied by the Japanese Army, the seaports and principal cities of North and Central China. In those areas he contemplates a system of stringent passport control in order to raise revenue and to refuse to return to China persons considered anti-Japanese.

In his 50's, the new puppet ruler looks about 20 years younger. He is handsome, a dapper dresser, witty, and an eloquent speaker. Japanese-educated, a graduate of the law college at Tokyo, he has traveled often in Europe. He learned to speak French fluently and several times took diabetes cures in Germany.

He has gone a long way since his early days as a young revolutionist seeking to overthrow the Manchu dynasty. As a young man he was imprisoned in 1910 for plotting the assassination of the Prince regent of Imperial China. Meanwhile the revolution of 1911 led by Dr. Sun Yat-sen broke out, and he was released. The chains which he wore in prison were displayed in a Peking museum.

By 1940 the "Chinese patriot" was proclaiming peace with Japan. He did not make public his terms with Japan, however. His inauguration had been put off for months. The terms which Wang's followers gave out sought to prove that Wang stubbornly refused to head a Central Chinese government unless the Japanese lived up to certain pledges to respect China's territorial integrity and independence.

He was said to have held out against Japanese political and military advisers for his government, accepting only economic advisers. His agreement also is said to have called for the eventual withdrawal of Japanese troops in China. And he was said to have insisted on the use of the Chinese flag, with pennants attached to distinguish it from the old Chinese Nationalist flag. Rumors were current in November 1940 that fighting had broken out between Wang's troops and Japanese troops and that rather than accede to harsh Japanese demands Wang has twice tried to give up his régime and leave for Hong Kong.

But in Chungking they are still sure of what Japan meant when she spoke of "the new order in East Asia." No one can change Japan's traditional policy of conquest any more than the leopard can change his spots, Chiang Kai-shek declares.

International Who's Who
Who's Who in China

WARING, FRED June 9, 1900- Orchestra leader

Address: b. 1697 Broadway, New York City

Five times a week at 7 o'clock Fred Waring and his Pennsylvanians appear over the NBC network for Chesterfield cigarettes. The program features no outside talent or visiting stars; it is made up only of the orchestra and chorus, spiced with impromptu gags and general madcapping. Fred Waring, who has been a successful band leader for 21 years, "directs production, helps write continuity, coaches the gang in rehearsal: 'come lively, lively', 'stay with me', 'give it rapture!'"

Frederic Malcolm Waring (he uses only Fred) has been a success for 21 years because his orchestra has "never gone too hot or too sweet for catholic tastes"; because he has always managed to produce "admirable precision and nuance in his numbers seldom duplicated on radio shows and certainly not eclipsed." He gets this precision through plenty of rehearsals. There have been times when he has spent hours on a single passage until it reached that state of perfection he wanted. All his shows, whether for radio, stage or screen, are built with infinite care.

Fred Waring's orchestra started when he failed to make his college glee club. He was born in the little town of Tyrone, Pennsylvania, the son of Frank M. and Jessie (Calderwood) Waring, and spent much of his life before college on a farm there. Even before he went to Pennsylvania State College, which his great-grandfather William G. Waring founded, he and his brother Tom, together with two neighbors, had formed a band to play for local parties. It was a small affair, but Fred kept it up while he was studying engineering and architecture. When the Pennsylvania Glee Club refused to have him he began to work seriously at an orchestra.

He began signing up promising collegiate musicians and he began getting engagements for them. In 1921 Fred landed a date for his band at the University of Michigan. A "name" band had been hired to play for the dance, and his band was supposed merely to handle the overflow crowd. But it stole the show and a Detroit theatre offered him a two weeks' engagement that lasted four weeks. By 1924 his band was really going. Fred figured out a novelty number called "Collegiate." Dressed in knickers, loud striped sweaters and big flowing ties, he and his men "put themselves definitely on the entertainment map as collegiate hot stuff." After they appeared in Harold Lloyd's picture, *The Freshman*, and started the fad for bell-bottomed trousers, they were definitely made.

FRED WARING

In 1929 the Pennsylvanians appeared in *Syncopation*, one of the first big movie musicals. They continued playing all over the country and in 1932 were a six months' hit at the Roxy Theatre in New York. Their first big radio engagement came in 1933 when they appeared for the Old Gold program. The next year they started a three-year, radio engagement for the Ford Motor Company and the year after that were hired by Bromo-Quinine. Ford paid them \$13,500 a week and Chesterfield is now giving them \$12,000 a week. Between radio contracts and movie engagements (they starred in *Varsity Show*) Fred Waring and his Pennsylvanians are kept busy making personal appearances on hotel roofs and in theatres.

Waring, who is a "small dark man with wavy hair and blue eyes," spends his winters with his wife, Evalyn Nair Fall, (whom he married in September 1933) and three children in a Park Avenue duplex penthouse. His summers he spends in a lodge at Shawnee-on-Delaware, where his whole orchestra romps during vacations. But most of his time winters and summers is spent in his Broadway offices in New York, which take up a whole floor in the theatrical district.

Twelve hours a day five days a week he works—with his orchestra and with his other enterprises. His main side lines are a music publishing business called "Words and Music," which specializes in glee club arrangements that the Pennsylvanians have popularized, and a mixer, called the "Blendor", "that will turn you out an icy frappé while you look at it." Right now he is busy with a new steam electric iron which he expects to put on the market in the fall of 1940. When he relaxes from his business and his music, it is to play golf in the 70's. His musical friends say he probably "spends more time hanging around

with big-name golfers than he does with members of his own profession."

WATSON, THOMAS JOHN Feb 17, 1874- President of International Business Machines Corporation

Address: b. 590 Madison Ave, New York City; h. 4 E 75th St, New York City

For many years Thomas J. Watson, president of the International Business Machines Corporation, honorary president of the International Chamber of Commerce and trustee of the Carnegie Endowment for International Peace, has believed that "the only solution to the problem of peace must come through sound economics between countries." He has worked hard most of his life for international trade and in 1940 was twice honored for his efforts: he received the Captain Robert Dollar Memorial Award for his contribution to the Advancement of American foreign trade and he was honored at the Court of Peace exercises at the New York World's Fair in May 1940 "for his important contributions to the laying of a solid foundation on which a permanent world peace of the future may rest."

Year after year Mr. Watson has been traveling all over the world to build up trade. In 1937, for instance, he made a five months' tour of Europe in which he visited and talked with Hitler, Mussolini, King Leopold of Belgium; in which he was decorated by Sweden, France, Yugoslavia and Italy; in which he talked to financial leaders from all parts of the world. He came back from that trip believing that "it is important to think in terms of moving goods, not armies, across borders." Less than three years later he sent back to Hitler the Merit Cross of the German Eagle "because the present policies of your government are contrary to the causes for which I have been working and for which I received the decoration."

Even today, when armies and not goods are moving across borders all over the world, Thomas J. Watson stoutly maintains, "I believe the world is going to improve." And he is sure that "when this War is over there will be enough intelligent people in the world to get together and see to it that the settlements which are made are just to the small as well as to the large countries."

Mr. Watson, who heads one of the most profitable corporations in the United States with factories and branches in many parts of the world, was born in Campbell, New York, the son of Thomas and Jane (White) Watson. Young Tom went to Addison Academy until he was 17. His father, a lumber dealer and a very strict Methodist, wanted him to go to Cornell to study law, but Tom wasn't interested in education. He wanted to get a job and make money right

THOMAS J. WATSON

away. Father and son compromised on a year at the Elmira School of Commerce.

After Elmira, Watson spent two rather humdrum years as a clerk in a piano-sewing-machine-organ store in Painted Post, New York. He left this to go to Buffalo, where he eventually landed a job as a salesman with the local office of the National Cash Register Company. When he started he was "a lanky, earnest youth given to rationalizing his actions and ruminating upon his experiences. His general appearance and behavior were those of a somewhat puzzled divinity student."

In his first 10 days of selling for the Cash Register Company, Tom Watson earned nothing but refusals. Disappointed, he "took earnest counsel with his sales manager" and started all over again. Within 15 years he had become sales manager. Most of his experience came under John Henry Patterson, head of the company, who has been "conservatively described as an amalgam of St. Paul, Poor Richard and Adolf Hitler." He was Patterson's right-hand man and both he and Patterson benefited from the association.

In 1913, after a disagreement with Patterson, Watson left the National Cash Register Company. In 1914 he was offered the job of running the Computing-Tabulating-Recording Company, "an ineffective struggling outfit" then employing 235 people. Watson took over this company and the various enterprises under its control and it prospered. Renamed the International Business Machines Corporation in 1924, in 1940 it employs 11,250 persons and in 1938 earned a profit of \$8,700,000.

As president of this corporation, Thomas Watson earns a fixed salary of \$100,000 a year plus five per cent of the net profits after a \$6 dividend has been paid on the

WATSON, THOMAS JOHN—*Continued*

stock. The income tax report of 1937 salaries showed that his (\$419,938) was the highest for any ordinary businessman. His company has always prospered, for it has a virtual monopoly on many intricate business machines. Watson says: "The IBM is a world institution and is going on forever."

It has been said that Watson's "personality and force have saturated the IBM until now the personality of the man and the personality of the corporation are so closely identified as to be practically one and the same." Watson has always believed in the value of stimulating phrases for selling and his salesmen and employees live by them, too. On the walls of the classrooms where new workers are trained are signs reading: "Aim High and Think in Big Figures"; "Serve and Sell"; "Ever Onward"; "Be Better than Average." But the most successful and all-pervading motto is the single word: "THINK."

This word is on the most conspicuous wall of every room in every IBM building. Each employee carries a THINK notebook in which to record inspirations. The company stationery, matches, scratch pads all bear the inscription, THINK. A monthly magazine called *Think* is distributed to the employees.

There is a photograph of Mr. Watson in every room of IBM buildings and all employees are expected to have a copy of *Men, Minutes and Money*, a collection of Mr. Watson's speeches and essays. Mr. Watson dresses with "relentless conservatism—a dark suit of expensive worsted relieved by a timid stripe, a decorous tie of moiré knotted perfectly in a dazzling collar"—and IBM employees, whether in the New York main office or in the factory at Endicott, New York, "shave their faces and shine their shoes daily, are never without a haircut and whenever possible wear white shirts."

Mr. Watson, the super-salesman of them all, doesn't look like a salesman. When he begins to talk he is "the kind of slightly bashful, dignified gentleman who would be the last person on earth to try to sell you anything." What happens is that those who talk to him forget their sales resistance and only when they leave discover the size of the order they have given.

Mr. Watson never takes a vacation, works about 16 hours a day and spends many evenings at the functions of his many employees' clubs. His wife attends most of the company affairs with him; his son Thomas, who joined the sales force of IBM a few years ago, is now a crack salesman, member of the select Hundred Per Cent Club. Mr. Watson has another son, still in Yale, and two daughters.

His main interest apart from his business is art. Mr. Watson was only 24 when he bought his first painting, a pleasant scene on a Maine farm, and since then has

acquired quite a number. He believes that "directly or indirectly artists must depend on business for support. It is our opinion that mutual benefit would result if the interest of business in art and of artists in business should be increased." Toward that end he presented, first at the San Francisco World's Fair and then at the New York World's Fair, an "exhibition of contemporary American art," selected by local art juries throughout the country as representative of the art and character of their respective localities. One critic called it "a random assemblage with no common characteristic save a distinct lack of offensiveness." After the Fair was over the pictures were exhibited in the IBM clubroom.

WEBSTER, MARGARET Mar 15, 1905-
Theatrical director; actress
Address: b. c/o Theatre Guild, 245 W 52nd St, New York City

Recently listed as one of America's 10 outstanding women, Margaret Webster, for her distinguished work as a theatrical producer, has been called the feminine Belasco. She began staging and directing plays in London, but resounding success came to her in New York when, in 1937, she directed three notable Shakespearean productions starring Maurice Evans (see sketch this issue). Actress as well as director, Miss Webster played a memorable rôle during the 1939 season in *Family Portrait*, a story of the life of Jesus, which she also staged and directed.

Margaret Webster comes of a distinguished line of theatrical folk. Her great-grandfather, Benjamin N. Webster, was a leading English actor-manager. Her mother, Dame May Whitty, and her father, Ben Webster, are famous Shakespearean actors today. Margaret (known to all her friends as "Peggy") was born in New York City March 15, 1905; her parents had come to this country on one of their American tours. When Peggy was three they returned to England. She was sent to Queen Anne's School, Caversham, and studied for the stage at Eltinger's Dramatic School. Her first speaking part on the stage was at the age of seven or eight, in a play starring the great Ellen Terry; in 1917 she appeared as Youth in *Women's Tribute*. She contemplated going to Oxford to take a degree, but changed her mind, decided on a career in the theatre and went to Paris to study plays.

Her stage debut in London was as the Gentlewoman in John Barrymore's *Hamlet*. Since Barrymore was incessantly playing tricks in the wings, young Margaret was in constant terror that she might giggle just as she walked on the stage in her sedate rôle. In 1924 she acted with Sybil Thorndike in *The Trojan Woman*. Thereafter she played a number of parts in stock, met Maurice Evans and in 1931 played with him in *After All*. It was the following year that she decided to become a director, and her first assignment was with a stock company. Then she directed several West End plays. Since her own opportunity to direct plays came through London Sunday night performances, she feels that for this one reason the London stage is superior to the American. It has "more amateur productions where young people have a chance to work, to rehearse and to get experience."

In 1937 Evans heard glowing reports of her directing talents, and called Margaret Webster to New York to help with his *Richard II*. During two years (1937-39) she directed three Shakespearean plays for him: *Richard II*, immediately a success, averaged \$17,500 weekly for 23 weeks; an uncut production of *Hamlet* did almost as well; and *Henry IV* soon earned \$17,000 a week. Miss Webster had discovered how to make Shakespeare live, to be breathlessly absorbing to the modern audience. The Webster productions were fresh and exciting, swiftly paced and lacked the confusion often encountered in Shakespearean staging. At the New York World's Fair, during the summer of 1939, Miss Webster staged several tabloid Shakespearean dramas for popular entertainment. The versions of his better-known comedies were condensed to 45 acting minutes, and seven performances a day were given.

Despite her directing successes, Miss Webster is, at heart, an actress. She played successfully several rôles in London; and besides her work in New York in *Family Portrait*, will be remembered as Masha in the Lunt-Fontanne production of *The Sea Gull*. "I never get the kick out of directing," she has said, "that comes from being out in front, playing a part." Her solution at present is to be both director and actress.

Margaret Webster is "a slender, pretty girl with hair that is perhaps more brown than red, and with a booming laugh. At work, she is undeniably grubby. She gets smudges on her face, and her hair is soon a tangled mess due to her habit of running her hands through it." As a director she is sane, calm, cheerful. But there is that bit of red in her hair, and on occasion she can lose her temper. She comes nearest to doing so when an actor is late for rehearsal. Once Mr. Evans, the star performer, was late. "A star has finally risen," said Miss Webster as he walked in, just loud enough for everyone to hear. Evans hasn't been tardy since.

Miss Webster has a definitely established credo as a director. She believes that the

Vandamm

MARGARET WEBSTER

director can only be judged according to whether or not the show he directs emerges as a satisfying whole. She emphasizes the differences in directing Shakespearean and modern plays, and says that the direction of the latter is actually handling an author. It means seeing that what the author says is said more cogently and dramatically in terms of the theatre. There must be close collaboration between director, author and scene designer. With regard to the actors, the director should remain flexible, since actors, even the most inexperienced, have personalities of their own which are a vital contribution to the play. The greatest thing the Anglo-Saxon director has to overcome, she believes, is self-consciousness. The director must make his actors trust him, and feel both easy and safe in his hands. "Stamina, the courage of a lion and the hide of a rhinoceros" are the qualities she lists as being most essential for a good director.

During the summer of 1939 Miss Webster directed summer theatricals in Maine. It is her ambition, with Maurice Evans, to establish a permanent repertory theatre of both classic and modern plays at the St. James Theatre in New York. After putting the finishing touches to his 1940 production of *Richard II*, Miss Webster left New York for Hollywood in April to begin a six months' period "without assignment," during which she "may write, act or work with any producer or director" in filmdom. She said that she was not deserting the theatre, however, but has a "definite yearly period, September to January, kept sacrosanct for Broadway." After five months with Paramount Miss Webster canceled her contract in October 1940 because of disagreement on contractual arrangements. She devoted her-

self to staging *Twelfth Night* for Maurice Evans and Helen Hayes. Critics praised the direction, saying: "The highest praise of all must go to Margaret Webster, who once again has proved herself a brilliant Shakespearean director."

She will start work on *Battle of Angels* for 1941 production. Having directed both of her parents in London productions in the past, she will also direct her mother's play, *Viceroy Sarah*, when it comes to Broadway. She is now working on a book of reminiscences about her parents.

"No, I'm not married—or anything," is the only information she will give about her private life. Her public life keeps her happy and busy; and her office is a hive of activity. Her dream, she says, is to live peacefully in the English countryside, sometime, and grow cabbages.

WELD, JOHN 1905- Author

Address: c/o Charles Scribner's Sons, 597 Fifth Ave, New York City

There have been a good many American novels written about American pioneer life and the trek of covered wagons across the plains. One of the latest of these, *Don't You Cry for Me* (March 1940), has been called by some reviewers "the best of all the native migratory literature," and a "tremendous achievement" even by those who find it far from a great or faultless novel.

Don't You Cry for Me is the story of the memorable and tragic Donner party which set out from Independence, Missouri in 1846 for California. They were a group of gay and hardy people, more than 100 wagons and almost 500 persons strong when they started, loaded down with cooking implements, trunks of pretty clothes and china, food supplies, cosmetics and drugs. Beyond Fort Laramie the party split. A scatterbrained writer named Hastings persuaded the more adventurous members of the group to try a new trail south of Great Salt Lake, claiming that it would cut off 200 miles and contact with dangerous Indians. He did not tell them that it would lead past his own trading post.

The little band became caught in an endless sea of salt, its members dropping out as they dragged their way across. Then fearful mountain passes had to be traversed, the way often hacked out of virgin wilderness. After the mountains came the desert, and after the desert the foot of the Sierras. The terrible winter descended on them, already stripped of their possessions, of half the flesh on their bones, of the will to live. And out of this degradation came forth one of "the most desperately heroic ventures in the annals of American pioneering."

Some reviewers agree with John Breen that "the first 300 pages are crowded with infinite detail," but all are unanimous on the "powerful effect," the "tragedy and high drama" of the last push over the mountains, of the epic of human fortitude that it reveals.

This is not only the story of the band itself, but of the individual people who were part of it. There is the indomitable Captain Dan Johnson with his family and magnificent slave Amos. There is the frail, kindly George Lansing, a 42-year-old schoolmaster with a disturbingly beautiful wife. There is Asa Harper, who joined the party as it wound its way out of Independence, and who fell in love with Lansing's wife. There is the octoroon, Ida, who wore a veil and masqueraded as a white woman. And there are many others. The details of their daily lives are told, gauged to the speed of the slowly rolling ox-drawn wagons. All the individual hates and loves of these people combine with hopes and hardships to mold the novel into "an extraordinary and moving piece of historical realism."

John Weld, the author of *Don't You Cry for Me*, was born in 1905 in Birmingham, Alabama, and went to school there until, at the age of 12, he was sent to a ranch in

Joseph McElliott

JOHN WELD

Colorado, where he worked as a "half cattle-hand and chore boy." After attending two military schools and spending a year at Alabama Polytechnic Institute he set out at the age of 16 to see the world. Lots of times he just scraped along. For instance, in the days when "Dishwasher Wanted" signs still showed on Third Avenue in New York City he answered one after he hadn't eaten for 48 hours. "He started on a few dishes, and hunger barely let him stand up. He asked for a chance to eat. He ate all he could. Then he got so filled he couldn't work. He just departed via the alley, leaving his hat and coat."

Except for a voyage to Europe, as bell-boy on the United States liner *President Monroe*, he didn't see the world until much later. What he did see was America, a large, varied, exciting part. "I worked at a number of jobs," Mr. Weld recalls, "including pitching steel in Kansas City, selling candy through New England and soap through New York State. I landed in New York in January 1922 with 15 cents in my pocket, determined to go on the stage. I wrote a vaudeville act and made my only appearance on the stage of the famous Palace Theatre."

"In February 1923 I came to California in one of the early jallopies. I dove 137 feet from a cliff on Santa Cruz Island (for \$60) and for three years thereafter continued working in moving pictures as a stunt man." Three years of doubling for Tom Mix, Buck Jones, Gloria Swanson, Leatrice Joy, Anna Q. Nilsson and others left Mr. Weld with a fortune of \$100 with which he proceeded to New York to start his writing.

In New York Weld got a job on the New York *American*, then on the *World*, the *Paris Times* and the *Paris Herald*. He covered the Rothstein and the Snyder murders, the

WELD, JOHN—*Continued*

Communist riots, and got one of his jobs, on the *World*, after a stunt of his identified the body of a murder victim of 1929.

The idea of *Don't You Cry for Me*, which is Mr. Weld's first major work, "although he has had two others luridly and unsuccessfully published," grew out of a movie experience. He'd been on location on Donner Lake, along the trail of the famed Donner Party. "The picture was planned as an ice-skating picture but the lake turned out to be unfrozen. There was some snow on the hills, so everybody set to work and re-wrote the script on the back of some envelopes to make it a skiing picture. Mr. Weld had to learn hastily to ski. While he did, he saw a monument to the Donner caravan and got absorbed in its history." After his years of newspaper work he returned to California, spent a year on research, made 100,000 words of notes and then spent four years writing *Don't You Cry for Me*.

WELLES, SUMNER Oct 14, 1892- United States Under-Secretary of State

Address: b. Department of State, Washington, D. C.; h. Oxon Hill Manor, Oxon Hill, Maryland

On February 17, 1940, Sumner Welles, Under-Secretary of State, sailed for Europe as diplomatic emissary from the United States to discuss political and economic problems with European leaders. The President did not authorize Mr. Welles to make any proposals or commitments for the United States; the journey, and the conversations, were to be "strictly on business." Mr. Welles' main object was to try to formulate an approach to a method of settling international disputes; if possible, to ascertain some method of guaranteeing freedom from threats of force. Long diplomatic experience, an acute mind and firm character are qualities Mr. Welles brought to his important mission. An accomplished linguist, and also able to keep a secret, it has been said of him that he "can hold his tongue" in English, Spanish, French, Italian and German.

On March 28, 1940 Sumner Welles returned from his month-long European trip "radiating elegance and uninformative urbanity." He had talked with Halifax, Daladier (see sketches this issue), Mussolini, Hitler, with all the leaders of Europe's great nations, but he had nothing to say to reporters when he returned. He gave them a polite, "No comment," and hustled to the

State Department, and thence to the White House. The next day President Roosevelt told his press conference that there was "scant prospect for the establishment of any just and lasting peace." But he added that when the time comes for such a peace, the information collected by Mr. Welles "will undoubtedly be of the greatest value in helping solve problems that must be solved if the world is to be saved from conflict. . ."

One of the conspicuously able men of the State Department, Sumner Welles has the background and equipment of the perfect diplomat. He was born in New York City, October 14, 1892, the son of Benjamin and Frances (Swan) Welles. He was educated at Groton and Harvard and was graduated from the latter in 1914. He married Mathilde Townsend of Washington, D. C., and has two sons, Benjamin and Arnold.

Welles' diplomatic career began with his appointment as Secretary of the Tokyo Embassy (1915-17). It soon became evident that he was studious, brilliant and a natural diplomat. With these qualifications he might have gone on to Paris or London, but instead he asked for a post in the Argentine capital. Welles had come to the conclusion, soon after entering the Foreign Service, that the destiny of the United States lies largely in the Western Hemisphere. In Buenos Aires, 1917 to 1919, he mastered Spanish so that he could speak directly with the people. He also learned the essentials of the inter-American problem, for in Argentina Pan-American solidarity faces its most difficult economic obstacles.

Welles became assistant chief, then chief of the Latin American Affairs Division, (1920-22); was sent on a commission to the Dominican Republic in 1922; subsequently went there on the Dawes mission in 1929. He was also commissioned to offer mediation in the Honduras Revolution in 1924. His skilled negotiations in the Dominican Republic and in Central America laid the groundwork for the American "Good Neighbor Policy."

His most difficult assignment came in 1933 when he was appointed Ambassador to Cuba. He arrived at a moment when Leftist elements were in the saddle. The story of Welles' activities there is still a controversial one: he has been accused of exerting pressure in favor of conservative elements, contrary to the dominant Cuban radicalism, temporarily hindering the cause of Cuban-American good will. And he had the doubtful pleasure of seeing himself hanged in effigy. After the Machado régime, Welles made De Cespedes President and picked a Cabinet for him; but the Cubans turned him out, putting in Grau San Martin. Welles would not yield, despite the unpopularity of his act, and worked until the Leftists were forced out of power. His supporters say he refused to recognize the régime of Grau because of the instability of Grau's government, not because of ulterior sympathies or motives.

Harris & Ewing

SUMNER WELLES

Welles is known to be sincerely devoted to the promotion of human and political liberty as he interprets them. His basic viewpoint is conservative, as might be expected from his background and training. But in his handling of the recent Mexican oil dispute, he sought to maintain fair balance. Sympathetic to the oil companies, he recognized at the same time the value of the Leftist Cárdenas government and preferred to take a middle-of-the-road policy.

Because of his work in the Latin-American countries, Welles played an important part as a delegate to the Pan-American Congress at Buenos Aires in 1936. At these consultations he displayed an understanding of Latin-American ways that impressed all who worked with him. In May 1937 he was guest of honor at a luncheon given by the Pan American Union on the occasion of his promotion to Under-Secretary of State and in 1940 he was awarded the gold medal of the Pan American Union on the occasion of his contribution to good will among the American republics.

Sumner Welles is playing a more and more important part, too, in the other activities and negotiations of the United States Department of State. It was he who announced our firm stand in the Far East and our willingness, at the same time, to resume negotiations on American extraterritorial rights in China. It was he who discussed problems of American defense, of colonial possessions of conquered nations in this hemisphere, of Spain's position in the present War. And it has been he who has been holding conferences with Soviet Ambassador Oumansky to try to establish more harmonious relations.

Welles has a personality formal and austere, forbidding to all but his closest friends. He is reserved, his will inflexible.

His figure is tall, correct, disciplined. "Aquiline of feature, clear-blue of eye, clean-shaven except for a crisp white moustache matching the white at his temples, he has the vigor of youth tempered with a maturity that seems always to have been his." He has had an exceptionally full and distinguished career. He is a hard worker and takes his only relaxation on his estate at Oxon Hill Manor, Maryland. There he reads, rides horseback and is an enthusiastic amateur gardener.

WENDT, GERALD LOUIS Mar 3, 1891- Chemist; educator

Address: 320 E 42nd St, New York City

Famed as a humanitarian, scientist, author of articles and books on the social consequences of new scientific knowledge, Dr. Gerald Wendt became in 1939 director of science and education at the New York World's Fair, which position he held during the 1940 Fair season. His most recent book, *Science for the World of Tomorrow* (1939), highly praised by critics, and written in terms that the layman can understand, deals with the main aspects of modern living. It explains how science affects our present life, with clear accounts of important technical processes, and of the workings of transportation, communication, agriculture, medicine, etc. Dr. Wendt maintains that some of the main evils of modern life—war, poverty, unemployment, mental disease—exist because we do not

GERALD WENDT

recognize economic interdependence and follow from the fact that use of new scientific devices has not affected our thinking. He has drawn upon the World's Fair for the book's title, has paralleled the chapters of the book with the main divisions of the Fair and utilized the exhibits as illustrations of his thesis.

Since Dr. Wendt's task at the Fair was presumably made difficult by the fact that the managers of the Fair assumed that the industrial exhibits were in themselves so scientific no special Hall of Science was necessary, and since only the external aspects of social science were represented, the present volume effects the integration that a Hall of Science would have effected at the Fair. *Science for the World of Tomorrow* is a book that should be read with profit by those who visited the Fair.

Gerald Wendt was born in Davenport, Iowa, March 3, 1891. After being graduated from the Davenport High School he went to Harvard University, where he took the advanced degrees of M. A. and Ph. D. He was research student in radioactivity at Gif, France, in 1916. In that year he married Elsie Paula Lerch of Davenport. They have one son, Robert Louis. During the War Wendt was captain of the Research Division, Chemical Warfare Service.

He has been associate professor of chemistry at the University of Chicago and dean of the School of Chemistry and Physics as well as assistant to the president in charge of research at Pennsylvania State College. In the industrial world he has been director of research for the Standard Oil Company, Indiana; director of research for the General Printing Corporation; and president of the Coffee Products Corporation. He was associate editor of the *Journal of Radiology*

(1920-21), and served as editor of *Chemical Reviews* (1927-38). He has reviewed books on science for the New York *Herald Tribune Books* since 1925. Prior to his appointment at the New York World's Fair, he was director of the Battelle Memorial Institute for Industrial Research at Columbus, Ohio and director of the American Institute of the City of New York.

Dr. Wendt does considerable lecturing before clubs and organizations. Among the subjects on which he will speak for the 1940 to 1941 season are: *The World at War and After*; *The Challenge of Science*; *The Science Revue for 1940*; and *Looking Into Science*. The last named is illustrated with three-dimensional pictures in color.

Besides *Science for the World of Tomorrow*, Dr. Wendt is also the author of *Matter and Energy* (1930) and of the article on science in *America Now* edited by H. E. Stearns (1938). In this article Dr. Wendt states that the age of science still lies in the future. He believes that if science is to give us anything in terms of human happiness, 'research must be conceived not as the technical study of electrons and atoms, i.e., of nature, but as the best use of human intelligence to improve the conditions under which we live. It is in science that research has proved its value. If civilization can learn that lesson from science it stands at the threshold of a great new epoch. Thus will science at last be justified when it has revealed its true spirit and humanity.'

In between lecture engagements, Dr. Wendt is at present working on a six-volume survey of science for colleges, entitled *The Sciences*, which is to be published soon. He is general editor of the series and the writer in particular of the volume on chemistry.

WERFEL, FRANZ (vē'r'fl fränts) Sept 10, 1890- Author; playwright; poet
Address: c/o Viking Press, 18 E 48th St, New York City

Among the distinguished exiles from war-torn Europe—poets, writers, diplomats now without a country—is Franz Werfel, whose plays have been produced in the United States, and whose *The Forty Days of Musa Dagh* caused a sensation here when it was published in 1934. His latest novel, *Embezzled Heaven*, which was chosen as the Book-of-the-Month-Club selection for December 1940, is a revealing one. It chronicles the wanderings of an exiled writer uprooted from his country—the Nazified Austria—and desperately seeking a refuge

where he can rebuild his philosophy of life on a newer, stronger foundation. Representative of a new type of literature—exile literature—the hero of this book seeks to find a homeland in something that transcends nationalism: in humanity at large.

Probably many of Werfel's own plans and ambitions could be found in this book. "Would the day ever come," one passage reads, "when we of the modern age were no longer condemned to hypercritical materialism but could at last take our place without supercilious mental reservations in an ordered universe, in a radiant cosmic system reaching from the skies above to the earth beneath." The hero of *Embezzled Heaven* finds his solution in Catholicism. Franz Werfel's visa for Mexico describes his own new faith as Roman Catholicism.

One of the proscribed writers whose lives were endangered by Hitler's occupation of France, Werfel had to make his way to Spain by secret pathways. In the course of his wanderings he had to destroy about 20 of his manuscripts because it was too dangerous to have them in his possession. He hoped, however, to be able to get some of his writings back and in the meantime to go about getting American citizenship "and a little peace." His wife, Alma Marie Schindler, widow of the great composer Gustav Mahler, came with him to the United States.

Franz Werfel used a Czechoslovakian passport to get to the United States. Although famous for his German-language works, he is a Czech. He was born in Prague, in 1890, a son of a wealthy and cultured Jewish manufacturer, Rudolf Werfel. From his youth he showed signs of great intellectual attainment, for which his proud parents provided every opportunity. Young Franz traveled extensively. After he was graduated from the Gymnasium at Prague he attended the Prague University and later the University of Leipzig. His *Fakultät* was philosophy and that proved a solid grounding for his later literary works. At the same time he became well-known in the famous literary circles of Prague, rubbing elbows with Max Brod, Gustave Meyrink and Otakar Brezina, the great national poet whose works Werfel later translated. It was when he was studying in Hamburg, in 1911, that he made his first bow as a poet with a volume of poems called *Der Weltfreund*. His other volumes of poetry, entitled *Wir Sind* (1913) and *Einander* (1915), added to his reputation as a poet. Mystic, tragic in tenor, his poetry brought him fame as a "new spirit of spiritual renaissance." In 1915 he translated Euripides' *Troades*. His work of that period showed signs of what later became his most striking characteristic—love for the symbolic, a tragic fear of evil and the strange feeling of "personal responsibility for all of mankind's shortcomings."

The First World War found Franz Werfel teaching at the University of Leipzig, after having served his term in the army in

Foyer

FRANZ WERFEL

1912 and entered the civil service. He fought on the Russian front from 1915 to 1917. The experience had a shattering effect on him. It was as if he had seen in actual crystallized form all the evil of which the premonition had always haunted him. After the War was over he settled in Vienna, where he lived in studious retirement, writing copiously. His first novels of that period dealt mostly with the then-popular theme of revolt of youth—among them *Nicht der Mörder, der Ermordete ist Schuldig* (1915); *The Man Who Conquered Death* (1927); and *Class Reunion* (1929). He broke into the American market with his historical novel, *Verdi* (1925).

It was natural for Werfel to turn to the theatre as a medium for his ideas, "not as a dramatist hoping to amuse or excite but as a prophet whose word must be carried to larger audiences." His first attempt was a "magic trilogy in verse" called *Spiegelmensch* (1920). It expressed his doctrine of abnegation of self as a means of attaining perfection, of the conflict of the individual against the evil inherent in himself. Other plays with profound psychological implications followed: *Schweiger* (1922), a study of split personality; *Paulus unter den Juden* (1925); *The Goat Song* (1926), which was produced by the Theatre Guild in New York. His *Juarez* and *Maximilian* (1926) was a series of dramatic tableaux.

Werfel as a dramatist is perhaps best known for his *Goat Song*, a symbolic drama. An extraordinarily effective stage production, its hidden thesis was that natural impulses held down by traditional shackles of shame grow evil and eventually destroy their jailers. Pan, shackled, becomes an evil monster, in whose train follow "arson, revolution and rape."

WERFEL, FRANZ—*Continued*

Werfel is an unusually prolific author, counting something like 35 books to his credit. Best known in the United States are: *The Hidden Child* (1933); *The Forty Days of Musa Dagh* (1934); *Pascarella Family* (1935); *Twilight of a World* (1937). All of these works are remarkable for the lucidity of their style and the profundity of thought and emotion. The *Forty Days of Musa Dagh* was hailed in the United States as "a contemporary novel full of the breath, the flesh and blood, and bone and spirit of life." Another critic said: "It raises the name of Franz Werfel to new dignity in letters. . . It could make a great poem. Werfel has made of it a noble novel." It also set the style for mammoth novels like *Anthony Adverse* and *Gone with the Wind*. The book was placed on the Nazi "undesirable" list shortly after its publication.

Not so successful as his novels was his play, *The Eternal Road*, which was produced in New York by Max Reinhardt in 1937. George Jean Nathan described it spitefully as "a super Sears-Roebuck catalogue of Old Testament gods with an elaborate index of Reinhardt mobs, Bel Geddes (see sketch this issue) scenic devices and Westinghouse Electrical Company 'dinguses.'" Werfel's preoccupation with Biblical subjects continued, however, and in 1938 his *Hearken unto the Voice*, dealing with the life of Jeremiah, was published in America.

Werfel is a diffident, dark-haired, moon-faced man with dark brown eyes behind round horn-rimmed glasses. He has a rather withdrawn air, and has been very retiring ever since he fought in the War in his youth. He hates to talk about himself. When Georges Schreiber asked Werfel to write a brief autobiography to accompany a sketch of himself in the former's book, *Portraits and Self-Portraits*, Werfel wrote the briefest and most reluctant one in the book. He said: "I have an insuperable aversion to writing my autobiography. . . My lifework is to be objective and to formulate ideas but not to chat idly about myself. Aside from that I have nothing more to say except that I was born on September 10, 1890, that I have written many books and that I took part in the War."

WEYGAND, MAXIME (vā'-gäN) Jan 21, 1867- Former commander in chief of the Allied Armies

On May 19, 1940 General Weygand replaced General Gamelin (see sketch this issue) as commander in chief of the Allied Armies. Just as in 1918, the Germans were threatening Amiens; as in 1918, its possession would separate the British and French forces, with tragic consequences to the Allied cause. It seemed entirely appropriate for the French to turn to General Weygand when nothing less than a miracle was expected, for as Foch's chief of staff he had once assisted at this same miracle. And about this "bandy-legged, undersized, tight-lipped, hard-boiled" little general had been woven the kind of personal legend that inspires belief in his wonder-working qualities. Less than one month later General Weygand and his army had capitulated to Germany.

There is a dash of mystery in Weygand's parentage. He was born in Brussels, Belgium on January 21, 1867 above Waterloo Tavern, but brought up on the Belgian estate of the childless Empress Charlotte. Germans say he is "supposed to be the illegitimate issue of a Hapsburg, namely of that Emperor of Mexico, Maximilian, who met such an adventurous end"—and although this is hardly possible, it is true that his mother was a German from the Saar district. After attending preparatory school at the Lycée Louis-le-Grand, he was sent in 1886 to St. Cyr, French training school for officers, by old Leopold II of Belgium. Here he showed a remarkable talent for mathematics that might have made him a great tactician, but Maxime Weygand was not primarily interested in the academic side of military life; he wanted to be a cavalryman, and eventually to command. When he was graduated in 1888 with high honors he was posted as sub-lieutenant to the 4th Dragoons at Chambéry, and since as a foreigner his opportunity for advancement in the army would be limited, he elected to become a French citizen.

Next Weygand was found at the Cavalry School at Saumur, where he emerged a

captain; he was second in command of a squadron, a squadron commander, aide-de-camp to General de Broissia; in 1902, back at Saumur as an instructor; in 1907, a major in the 7th Hussars; in 1909, chief instructor in tactics at Saumur. He was now eligible for the Ecole de Guerre, but his ambition had not changed: he still wanted to lead troops. In 1913 he finally attracted the attention of General Joffre, chief of the general staff, during a course at the Centre des Hautes Etudes Militaires, was taken by Joffre on a mission to Russia, found himself commander of a Hussar Regiment—yet when the World War actually came, it was no command that he was given, but the position of chief of staff to Marshal Foch. On September 21, 1914 a 47-year-old cavalryman, "slightly bow-legged, black-haired, with soft brown eyes and a clipped mustache," began to serve as Foch's official shadow, and was to remain in Foch's shade until 1923.

Weygand adjusted himself to his position so well that the combination of Foch and Weygand has since become one of the most famous in French history, and Foch has given credit to Weygand as chief organizer of victory. The great marshal often said: "Weygand, il est moi." But, as Liddell Hart (see sketch this issue) suggested: "That he fitted his rôle so perfectly, not only in work but in self-effacement, was a jest of fate at the expense of a man who, imbued with the cavalry spirit, longed to command troops." With unflinching tact he protected his chief from annoyance and from the irritation of detail, carried out orders, was available when Foch told others, as he often did: "See Weygand about this." The two men were so close that "toward the end of their association it was said that Foch could mutter a few unintelligible syllables, wave his hands a few times and Weygand would produce a fully detailed order for the movement into battle of half a million men." Foch's military theory of "attaque, attaque, attaque" left an indelible impression on Weygand which was invaluable when added to his own strategical caution and insistence upon detail.

In 1916 Weygand was made brigadier general; in December 1917 he succeeded Foch on the Supreme Inter-Allied War Council at Versailles; and when, in the spring of 1918, there was appointed one supreme commander for the Allies and America, and that commander Foch, Weygand's title was chief of the general staff of the Allied Armies. At the end of the War he was a lieutenant general, and in 1918 he was made commander of the Légion d'Honneur, cited for "activity, vigilance, decision."

For a short time after the War Maxime Weygand remained in obscurity; then in July 1920, at a time when the Allied Armies of Intervention were determined to crush the Bolsheviks, Foch received word from Marshal Pilsudski of Poland: "Send us Foch or we perish." Pilsudski had marched on Kiev with his forces, but in the Ukraine his armies had been routed by the Russians,

International

MAXIME WEYGAND

the tide had been turned, and the Red cavalry was now storming the gates of Warsaw. Foch announced: "Send them Weygand. He will do just as well as I would." Rushing across Germany in a special train, taking with him 600 French Army officers, Weygand arrived in Poland to act as adviser (and, in fact, commander) for the Polish Army. That his tactics were remarkably sound is shown by his terse report: "August 16: Start of the offensive. August 21-24: Surrender of routed Bolshevik troops." When he returned to France, hailed as the "Savior of Poland," he gave credit to "the heroic Polish Army" for the victory.

Weygand was at one time particularly hated by the Germans as a leading figure in the "tragi-comedy of disarming and humiliating Germany," and is said to have represented the spirit of the military clauses of the Peace Treaty. In 1923, in the chaos following the French occupation of the Ruhr, he was acting as sort of a "high coordinator" in that region, but was called from Germany to Syria in April of the same year, appointed high commissioner in Syria. He was not in Syria long either, for his clerical and royalist background made him suspect to the French government that came to power in 1924 (he had been accused by Clemenceau of being "knee deep in Priests," went to Mass nearly every day, and there had always been those in France who feared that "Weygand the militarist may be Weygand the monarchist"). He was immediately made director of the Centre of High Military Studies, however, and, since French governments change, he was to be chief of the general staff in 1930. Before his death in 1929 Foch had advised a certain French Senator to call on Weygand

WEYGAND, MAXIME—*Continued*

if military peril ever threatened France—"You will be tranquil," he said.

In 1931 Gamelin took Weygand's place as chief of the general staff and Weygand became vice-president of the Higher Council of War and general inspector of the Army. Aggressively nationalistic, in May 1933 he was advocating the plan of a preventive war against Germany. But this did not mean that the political (as opposed to the military) implications of Hitler's rise to power upset him, for after 1934, when the Stavisky scandal brought a near-revolution in France, Weygand himself was continually expected to emerge as the "man on horseback" to overthrow the republic and to proclaim a dictatorship. He was a patron of the *Jeu-nesses Patriotes*, a semi-fascist youth organization; he was one of the guiding spirits of the *Cagouards*, or "hooded men," who plotted to overthrow the French Republic, and who were supposed to be subsidized by French industrial magnates and a foreign country. The expected *putsch* never took place, however, and the following year, having reached the retirement age of 68, Weygand was relieved of all active duties, though continued by special statute on the active list of the Army.

Retirement was not easy for Weygand; although nearly 70, he still demanded activity. But everyone believed his military life over. Sir George Aston's dedication to his biography of Marshal Foch strikes a conclusive note: "Dedicated to General Weygand in token of admiration of the example of loyalty and devotion to a great chief which he set to the staff officers of all armies for all time." Weygand announced: "I can still serve the Army by writing its history. An old soldier can make a historian of military affairs"—and began working industriously on his *Histoire de l'Armée Française*. In 1936, when Hitler marched into the Rhineland, he proclaimed from out of his semi-retirement: "I am not pessimistic—if only France will learn the lessons of her experience." He wrote dozens of articles and delivered countless speeches on military affairs, analyzing France's situation, and before the War made the assertion that her military strength was geared primarily for a defensive war.

In August 1939, with war imminent, 72-year-old Maxime Weygand "at last realized his lifelong ambition to command a great French Army: he was returned to Syria as commander in chief of the French Forces in the Levant." When war came a month later he was commander in chief of the Theatre of Operations of the Near East. In this office it was necessary for him to get along not only with his British allies and his near-allies, the Turks, but to preserve friendly relations among his strangely mixed French colonial troops and to retain the loyalty of the colonials. "The touch of mystery about the man himself" helped, and "the whispers that he is of royal, perhaps even

of Napoleonic descent" were magnified into "splendid and alluring mysteries in the mystery-loving East." When he went to horse races, the Arabs whom he passed en route to the bookmaker were likely to salute him by falling on their knees. A man of great personal magnetism, Weygand was said to be idolized by his own soldiers as well, and there was little but confidence in the generalship of France's Eastern commander.

In December 1939 it is reported that Weygand came uninvited to a session of the Allied Supreme War Council and wanted an immediate declaration of war against Italy and Russia. The Russians also believed that their old enemy for nine months plotted the seizure of the Baku oil fields while stationed in the East.

By May 1940 there had been no action in the East. Holland had been conquered by the Germans, Belgium occupied; the Germans were rapidly moving toward the Channel, threatening to separate the British and French forces. French Premier Paul Reynaud (see sketch this issue) announced that in such a crisis changes in leadership might have to be made; on May 19 he followed his announcement with the appointment of General Maxime Weygand as commander in chief of the Allied Armies, replacing the less aggressive General Maurice Gamelin. It was expected that if any commander could save the situation Weygand could. He did not save the situation, for after complaining privately that he had been called in two weeks too late to correct "Gamelin's blunders" and that there was little chance of holding out, after emphasizing the menace of a Communist revolution in France, he joined with Pétain (see sketch this issue) and other members of Reynaud's Cabinet in voting for an armistice with the Germans. In the succeeding Pétain government he was made Minister of Defense.

Apologists say that Weygand was misled by others, that he underestimated the strength of France's ally, Britain, and that he was persuaded that Hitler would really grant honorable peace terms to France. There are rumors that he afterward realized his mistake and that he is not thoroughly trusted by the Vichy government. In October 1940, having recovered from minor injuries sustained in an airplane accident in September, he left France to take up his duties in French Colonial Africa as general delegate of the Vichy government for civil and military affairs—supposedly to bolster the allegiance of the French colonies to Vichy and weaken the influence of De Gaulle's (see sketch this issue) "Free French" movement there. Some say that this is not precisely what he is doing, however.

This "small, spare, bullet-headed general with the quizzical smile" once defined his job, to a correspondent (who found the rest of the interview productive of "all the professional satisfaction of a quiet chat with King Tut-ankhamen," and who stated in despair that Weygand has "the most unreadable face east of Damon Runyon"): "I am a fireman. If a fire breaks out anywhere within my reach, I shall try to put it out."

He has preserved the energy of a man much younger. Until recently he rode every day of his life; as a retired officer his chief exercise was a five-mile morning walk. During his first term in Syria he was celebrated for his ability to vault into the saddle of his Arabian horse without touching the stirrups, and he is known as a tennis player. Although he doesn't smoke, he drinks wine with every meal except breakfast and is something of a gourmet. His favorite food is corn on the cob, however, and in Paris, on Sunday nights when the servants had gone out, he and his wife used to have a private banquet. He has always been intensely interested in the press and reads every word written about him and his army, perhaps because he himself has published many books: *Turenne* (1929); *Le 11 Novembre* (1932); *Histoire Militaire de Mohammed Aly et de Ses Fils* (1926) and *Histoire de l'Armée Française* (1938). For several years he has been a member of the French Academy, taking the seat of Joffre, who died in 1931.

In 1900 Maxime Weygand married Renée de Forsanz, and they have two sons, the younger of whom was an officer in the regular army, now in the War Office, the other a civil engineer.

Who's Who

WHEELER, BURTON KENDALL Feb 27, 1882- United States Senator from Montana, 1923-

Address: b. United States Senate, Washington, D. C.; h. Butte, Montana

The man whom the La Follette brothers called "a fearless fighter for the common people" was born in Hudson, Massachusetts on February 27, 1882. He was the tenth son of a poor shoemaker, Asa Leonard, and his wife, Mary Elizabeth (Tyler) Wheeler, and the descendant of Quakers who had settled in Massachusetts in the seventeenth century. Burton took a commercial course at Hudson High School, was graduated in 1900 and then worked as a bookkeeper in Boston until by the second September after graduation he had \$750 in the bank. With the money he had earned he intended to study law at the University of

BURTON K. WHEELER

Michigan (he had relatives in Ann Arbor), and although before he left for the university he lost \$500 of his fortune in a bank crash he managed to work his way through by waiting on tables, hiring himself out as a stenographer to the dean, and peddling *Old Doctor Chase's Receipt Book* around the countryside during summer vacations. He was president of his class, leader of the anti-fraternity group, but when he received his LL. B. in 1905, "an overworked, emaciated lad of 23," there was no job waiting for him.

During one vacation he had met Lulu M. White, the daughter of an Albany, Illinois farmer, while trying to sell her father a book. *Old Doctor Chase* had unwittingly brought about a romance. Lulu's uncle was in Colorado, and for a while Burton worked in a law office in Telluride, but then was off again—to Salt Lake City; to Portland, Oregon; to San Francisco; Los Angeles; Tucson, Arizona. On October 15, 1905, he reached Butte, Montana, with just \$50 in his pocket. The only job offered him there was one collecting bills for \$50 a month. He refused it and was planning to catch a train for other parts when he was fleeced of his \$50 in a poker game. There was nothing to do but to accept the job, stay in Butte. Burt Wheeler stayed there for a long, long time.

His office was in the same building with that of the prosecutor, and from time to time Wheeler was appointed to defend someone without counsel, taking labor cases for the most part. In 1906 he was actually admitted to the Montana Bar, and by September 1907 he was able to marry Lulu. Butte was the general headquarters for the copper kings, notably the Anaconda Copper Company. In the panic of 1907 the mines were shut down, and the young attorney found himself with a jobless clientele. Offered a partnership, he accepted it, and in turn found himself shoved

WHEELER, BURTON K.—*Continued*

into politics by his partner as delegate to a local convention from the Seventh Ward. The smell of Butte politics he found "almost as noxious as the sulphur dioxide burned from the ore before it was sent to the smelter." As a philosophic rancher once observed, "no one in Montana really sets easy 'till he decides whether he's for or agin' the Company." But Burton Wheeler was to be in politics, too, for a long, long time. In 1910 the copper barons staged one of their periodic fake "reform" campaigns, and innocent of what was expected of him, in 1911 Wheeler was elected on their ticket to the State House of Representatives.

During the first session (he was in the Legislature until 1913) he voted generally with the conservatives, but then he began to rebel, to fight for laws to better working conditions in the mines. When ordered not to support for Senator "mustachioed, fearless Thomas J. Walsh," who was opposed to the copper interests, Wheeler turned around and campaigned for him. Walsh was defeated in that election, and so was Wheeler when he ran for Attorney General, but in 1913 Walsh, grateful for Wheeler's support, induced President Wilson to appoint him United States District Attorney for Montana. In the next election Walsh himself was elected Senator.

Wheeler was a "born prosecutor": while he was in office it was one indictment after another. But in Butte they didn't consider his victims well chosen. Before and during the First World War he refused to take action against the pacifists and the I. W. W., and upon investigation of a violent labor conflict in the mines reported that the strikes were being provoked by the mine owners as part of a scheme to force the government to raise the fixed price for copper. During the War he was considered a dangerous radical, was once driven out of a Montana town when he tried to speak. In 1918 Walsh was threatened with defeat in the next election unless he sacked Wheeler; Wheeler resigned, was offered a Federal judgeship, refused, saying he wanted "to fight it out with the people of Montana."

He did. In 1920 Wheeler ran for Governor on a Non-Partisan League ticket which included also a Negro and a Blackfoot Indian. It was a Republican year, and in addition "every weapon was used against him except the Anaconda smokestack." Posters charged him with fealty to both the Kaiser and Lenin; it was said that if he were elected the mines would close. He was not elected, but even so the depression that followed closed the mines, the Red scare began to abate, and people began to wonder. In 1922 the charge brought by Wheeler's enemies that he wanted to introduce free love into Montana didn't alarm anyone very much, and when he ran for the Senate the farmers and miners and railroad men elected him. They have stuck by him, and he has been Senator from Montana ever since.

Within his first three months in the Senate in 1923 Wheeler became spokesman for a group of "New Democrats," corresponding roughly to the La Follette group among the Republicans. In 1924 he got a whiff of the Teapot Dome scandal, introduced a resolution asking Attorney General Daugherty to resign, demanded an investigation of the Department of Justice. Daugherty was eventually forced out, but he didn't forgive Wheeler. His Department of Justice agents were sent to Montana, and after several months and an expenditure of \$250,000 indicted Wheeler on a charge of unlawfully receiving money as a retainer fee to influence the issuance of oil and gas prospecting permits. The indictment came just in time to embarrass him in the coming election. A Senate Committee headed by Senator Borah (see sketch this issue) reported "no foundation" for the charge, however, and Wheeler was acquitted in ten minutes—just as a telegram arrived telling of the birth of one of his three daughters, Marion Montana. Several times since, Wheeler has requested that his dossier in the files be either returned or destroyed, but his requests have been refused.

"During the subsequent doldrums of the Republican heyday, Wheeler was one of the most militant dissidents in Congress." In 1924, "sickened by a party that found John W. Davis the best it could do" (at that time Franklin Roosevelt was the Vice-Presidential nominee on the same ticket), he strayed from the Democratic fold, became La Follette's running mate on a Progressive ticket that advocated public control of natural resources, labor legislation, federal aid for farmers and subordination of the Supreme Court to Congress. Oswald Garrison Villard (see sketch this issue) was with him in the 1924 campaign and found him "sound by my tests and beliefs, courageous, quite willing to be on the unpopular side and an extremely effective campaigner . . . a remarkable actor, with a great sense of the dramatic."

In 1928 Wheeler was back with the Democrats, supporting Alfred E. Smith, and he was for Roosevelt for President even before his re-election to the New York Governorship in 1930—the first member of the Senate to propose him for the office. In the spring of 1932 he toured the West, convincing many liberals Roosevelt was the man to support, lining up votes from Northwest and mountain delegations. He even won Huey Long over to the Roosevelt camp. There was little patronage for Wheeler after Roosevelt reached the White House, however, and it is said that as Wheeler had hopes of being rewarded with the Vice-Presidential nomination and was disappointed when it went to Garner, likewise he was disappointed when Tom Walsh died and his post as Attorney General was given to Homer Cummings, an intimate of Wheeler's bitterest enemy in Montana. The support of the Railroad Brotherhood had kept Wheeler on his feet when the Democratic Party was collapsing all around him; in turn, Wheeler was faithful

to his supporters; he didn't understand any other brand of political loyalty.

Nevertheless he supported the greater part of the New Deal legislation. His first move of public opposition to Roosevelt was over the creation of the NRA, in which he saw the negation of the Sherman Antitrust Law and its supporting legislative and judicial interpretations. In 1935 he, more than any other man, got the Public Utilities Holding Company Act, for which President Roosevelt was fighting, passed intact with the death sentence clause. But in 1937 came Roosevelt's proposal to "pack" the Supreme Court. Almost immediately after it was proposed, before much opposition had become evident, Wheeler declared himself against it, denouncing it as a reactionary scheme to acquire "dictatorial power." He argued that although he thought the present Court wrong more often than right, if the Democrats destroyed the respect for the Court by adding enough justices to attain a majority, there would be nothing to prevent a more reactionary administration from enlarging it to their advantage when an opportunity came. He found particular danger in the section permitting any administration to send special hand-picked judges anywhere in the country to try cases in which the government was interested. "Where would anybody's civil liberties be?" he asked.

There were powerful conservative forces aligned against the measure, and the leadership of Wheeler, a Democrat, a Westerner, and a progressive, was immensely helpful. The bill was garroted; the conservatives were grateful. But the mildest name labor spokesmen called him was "traitor." It became a political fashion to point out that Wheeler's "past career had been done with mirrors and that he really was a 'reactionary' at heart." His support of Jacob Thorkelson, who as a Congressman had turned out to be a bitter anti-Semite, was remembered. Although Wheeler's voting record couldn't have given the vested interests much comfort, although he was even then conducting a major investigation into railroad financing in which he attacked the House of Morgan and the Guaranty Trust Company, it was almost universally claimed that he had "sold out to Anaconda." For years Wheeler had been saying: "When you see my name on the front pages of the corporation papers you will know that I have sold out." Now his picture and name were "a fixture in the corporation press of Montana." Students in Montana State University formed a "Wheeler for Ex-Senator Club," miners and railroad men in his own state vowed they would never vote for him again.

Said Wheeler: "I will be fighting for democracy with a small 'd' when many of the office-holding liberals of today will desert the New Deal ship for fat jobs with economic royalists in the caves of Wall Street." And when the wife of one influential citizen congratulated him on his "change," he told her: "Madam, I haven't changed. Perhaps

you have changed, perhaps the times have changed, but the Wheeler you now want to put in the White House is the same one you wanted put in jail a few years ago."

When the storm blew over Wheeler was found still sitting in the Senate and supporting liberal measures, although he was one of those who voted against the New Deal "spend-lend" bill in the summer of 1939. Roosevelt regained his support. In 1939 he said: "Franklin Delano Roosevelt is the one President since Lincoln who has done more for the workers and average people than any other." It was only with the coming of World War II that another break came. Before the War Wheeler had been concerned mainly with domestic problems—as chairman of the Senate Committee on Interstate Commerce, as a student of the railroad problem, as an opponent of the extension of Hull's (see sketch this issue) reciprocal trade agreements, as an advocate of the remonetization of silver. He had never labeled himself an isolationist. But he voted against the repeal of the arms embargo, he mildly denounced Roosevelt for paying more attention to matters abroad than to United States affairs, and later he came out publicly against permitting the United States to rearm the Allies. Finally, after giving his approval to Roosevelt's *fait accompli* of sending planes to the Allies, he almost immediately reversed himself by saying: "I do not want to have to break with the Democratic Party, I shall break with it if it is going to be a war party."

On June 30 Wheeler declared that a "new and great antiwar party" would be formed unless the Democrats pledged not to send American soldiers "to a foreign shore." He opposed Roosevelt's Cabinet appointments of Knox and Stimson (see sketches this issue), suggesting a coalition of "peacemakers"—not "war-makers." And on the same day Senator Johnson, Democrat from Colorado, made the statement that Wheeler was the only Democrat who could defeat Willkie (see sketch this issue), and that if a non-interventionist Democratic candidate was not selected, a third party, a "peace party," would be created. Shortly afterward John L. Lewis threw in his full support, and Wheeler announced himself as a candidate for the nomination whether or not Roosevelt was a candidate for a third term. Actually, by the time of the convention, he was no longer in the running.

After the convention, Wheeler began a campaign against conscription. "Conscription" he said, was "the farthest step yet in the direction of war" and might lead to a "military tyranny," might "ruin our entire industrial establishment by building a false economy." He lost his campaign, but was, nevertheless, re-elected to the Senate in November 1940.

It is said that on many issues Wheeler finds himself more at home with Senators Norris and La Follette than with most members of his own party. "A politician with principles," he is a firm believer in what he

WHEELER, BURTON K.—*Continued*

calls "Economic Democracy." "The principles of democracy," he has said, "can become effective only if they prevail in the industrial as well as the political life of a nation." He is against great corporations dominating the business of the United States and would bring about decentralization by heavy taxes. He believes that the people should own all natural resources, that public utilities should be operated by federal, state or municipal government. (But he has repudiated the public ownership of railroads, one plank in his 1924 La Follette platform.) While supporting Roosevelt's enormous defense budget, to Wheeler "the solution of our domestic problems is the first line of our defense. Give to a people who already enjoy the blessings of liberty and freedom the opportunity to live in modest comfort and we will need to fear neither foreign aggression nor the penetration of economic and social ideologies."

Methodist, Mason, Elk, Wheeler is something of a "joiner." He is "a lanky, rumped man who walks with a rapid shamle, smiling quizzically, his glance a friendly, direct glare through octagonal spectacles, smoking a cigar with the superb nonchalance of Groucho Marx." His hat is a dented Stetson. Talkative, jovial, with only a hint of Massachusetts in either enunciation or manner, he has "no more stuffing to his shirt than husky arms and chest provide," is democratic in behavior without being a backslapper." He has been around the world twice; on Lake MacDonald in Glacier National Park he has a log cabin whose woodshed and sleeping porch he built with the help of his three sons; says he consults his wife on every important political move. Occasionally he threatens to retire from politics, but such threats are "like a sea captain growling against the sea." In spite of occasional stress and strain he manages to remain philosophical, saying "nearly everything, except perhaps dinner, seems less important after a nap."

WHELOCK, WARREN Jan 15, 1880-
Artist

Address: 1931 Broadway, New York City

Warren Wheelock, known for his paintings and sculptures of men who have made American history, was represented at the Whitney, Museum's Contemporary American Art Show, January 10 to February 10, 1940, with a painting, *Washington at Valley Forge*. The painting shows Washington, as general, standing in the bitter cold, leaning against the blowing wind, his cape flying out behind him; and stern upon his face the weight of the problems before him. It has aroused much noteworthy critical comment.

An exhibition of his sculpture was held at the Robinson Galleries, March 18 to April 7, 1940. Of the 37 pieces on display, several were casts in bronze and plaster; others were carvings in walnut, applewood, oak, teakwood, satinwood, ebony, butternut and mahogany. Among these were his *Black Dancer*, *Dictator*, *Roosevelt Head*, *Sailor and Girl*, *Eve*, *Walt Whitman* and several *Lincoln* subjects.

He has exhibited his works in numerous one-man shows, such as at the Western Museum Association, Ehrich Galleries, Dudensing Gallery, American Group Galleries, Dartmouth College, and also at many group shows in New York and other cities.

Wheelock was born in Sutton, Massachusetts, January 15, 1880, of an old New England family. His first American ancestor was the Rev. Ralph Wheelock, born in 1600 in England and educated at Cambridge, who came from Shropshire to the Massachusetts Bay Colony with his wife Rebecca in 1637. Later he founded and taught the first public school in America. Dr. Eleazar Wheelock, founder and first president of Dartmouth College was also a direct descendant of the Rev. Ralph Wheelock but is not in the same direct line of descent as Warren Wheelock. Other ancestors were Simeon Wheelock, who led a company of Minute Men at Lexington and Concord at the beginning of the Revolutionary War; an uncle Simeon who distinguished himself during the Civil War. Warren Wheelock himself enlisted in the Spanish American War. This background no doubt accounts for his absorbing interests in the American historical scene. From boyhood on, American leaders have been his heroes, especially Paul Revere, who became the subject of his famous carved sculpture *Paul Revere's Ride*.

Growing up at Webster, Massachusetts, young Wheelock was accustomed to con-

structuring things out of wood: his father was a carpenter and house painter, and he had access to his tools. During his high school days he built a rowboat and even made the oars for it; with the help of other boys he designed and constructed an indoor running track. He considers carpentry an excellent foundation training for sculpture.

He enlisted in the Spanish-American War two months before he was graduated from high school. On his return he worked at several jobs: in a woodworking shop, as a plumber's helper and as a draftsman for a civil engineer.

In 1902 Wheelock went to Pratt Institute, Brooklyn, where he studied painting for three years; and from 1905 to 1910 he taught drawing there. In 1910 he entered the field of commercial art, in which he was intermittently engaged for 12 years. During this period he spent several years in North Carolina where he remodeled houses and designed and built a house for himself. Most of the work he did himself, splitting shingles by hand, and even making tools for special windows and doors. His first carving was the wood pattern or model for andirons for his fireplace.

During these years in the South he painted a few landscapes, and several portraits of Blue Ridge Mountain folks. Wheelock is noted for his many sculptures of Lincoln; among these Carolina mountaineers he observed Lincoln prototypes: men long, lean, lanky and round-shouldered; men with large feet and powerful hands; men who had little schooling, whose faces were molded by hard work, who made their fences out of split rails just as Lincoln did.

In 1917 he returned to New York and worked three years in the art department of a magazine, painting in his spare time. He began free-lancing in 1920, his work including covers for *Current Opinion*, drawings for the *New York Times* and other publications and advertising illustrations. He first showed paintings in the Society of Independent Artists in 1921 and again in 1922. In that year he began to carve in wood and stone. He is self-taught in sculpture.

Having decided to devote himself entirely to painting and sculpture, Wheelock in 1923 went to Woodstock, New York, where he has lived and worked several years. In 1925 his painting *Old Man and Child* received honorable mention at the Pan-American exhibition in Los Angeles and was acquired by the Los Angeles Museum. Since then his work has been extensively exhibited; his paintings and sculptures have been acquired by numerous private collectors such as Juliana Force, Edsel Ford, M. R. Goldsmith, Mrs. Eugene Meyer, C. B. Warren, David

WARREN WHELOCK

Jacobson, Walter D. Teague and by museums and public institutions. Wheelock is also an inventor and has created several industrial designs for American manufacturers.

He married Marinobel Smith in 1925. They have no children.

In strong contrast to his interest in American leaders who have devoted their lives to liberty and democracy are Wheelock's paintings of other subjects and personalities. Of his carving of Hitler, *Voice of Destruction*, a dictator who has no consideration for human rights, Wheelock has said: "Here is the rudimentary upraised arm, and the large hole for torrents to pour through; no eyes—only holes, for this robot doesn't see; but jutting brows are there—a small front for skull and brain that does not exist."

WHITE, MARGARET BOURKE (bûrk) June 14, 1906- Industrial photographer
Address: c/o Life Magazine, Time Life Bldg, New York City; h. Darien, Connecticut

Because Margaret Bourke-White (she does not use the library form of her name above), a woman, made better pictures of factories, smoke stacks, bridges, water tanks and other industrial and more or less masculine subjects than most men, the world literally beat a path to her door. Her pictures have the artistic and realistic quality of bringing out the feeling and atmosphere of an industry or country.

Although she had taken art courses and photography courses, photography as a livelihood was more or less of an accident for Margaret Bourke-White. She was born in New York City, the daughter of Joseph and Minnie Elizabeth (Bourke) White. Her father was a naturalist, and she had started her college career with the idea of becoming

a biologist. In her junior year her father died, and she was faced with the responsibility of earning her own way. She began taking pictures of campus buildings and campus scenes. Everyone exclaimed, "how extraordinary", "how wonderful," and she sold many pictures. Next she did some work for an architect. In 1927 she tucked her diploma from Cornell University under her arm, and came to New York.

She succeeded in getting a prominent architect to look at her photographs. It was the beginning of her career as a successful industrial photographer. Since then Miss Bourke-White has been commissioned to take pictures of the 1934 drought in the Dakotas, of America's Cup yacht races in Narragansett Bay, and of the smoke stacks, turbines and flywheels of the country's largest industries. She has made three trips to Russia to record photographically the progress of the Five Year Plan. Her two travelogues, *Eyes on Russia* (1931), and *Red Republic* (1934) were the first moving pictures to be made in Soviet Russia with full permission of Soviet authorities. She has written and illustrated *U. S. S. R., A Portfolio of Photographs* (1934). She "has taken photographs in 21 countries, including the Arctic region."

The first large permanent photo-mural for the NBC studios in Rockefeller Center was done by her in 1933. She is unable to fill all the assignments sent her by leading magazines, advertising agencies, and private business moguls. She is a contributor to national magazines using photographs. In 1936 she was selected by American women as one of the ten outstanding women in the country. She was married first to Everett Chapman in 1925 and after a divorce married on February 27, 1939 to Erskine Caldwell, the writer (see sketch this issue).

Prerequisites for an industrial photographer, Miss Bourke-White says, are good health and strength, ability to do hard work, and readiness to work under unusual and sometimes dangerous conditions, such as standing on cranes, atop freight cars or rafters, lying in the snow to get just the right shot.

Early in October 1939, shortly after the start of the War in Europe, *Life* sent Miss Bourke-White on an assignment abroad. Her first stop was London, where she remained until early December. While in London she took pictures of the blackouts, of Winston Churchill (see sketch this issue) on his birthday (a full-sized one appeared on the cover of the April 29, 1940 issue of *Life* and of Emperor Haile Selassie. From London she traveled to Romania, taking pictures of the oil fields there, and through Bessarabia, where, she says, "I nearly froze my legs off while I was working in a blizzard." From Romania she sailed to Constanta on the Black Sea, then on to Istanbul, Turkey, where she took pictures of the President of Turkey, and was arrested for taking pictures in a Moslem

MARGARET BOURKE-WHITE

Temple during a prayer meeting. In Beirut, Syria, she took pictures of General Weygand (see sketch this issue), then commander of the Allied Forces in the Near East, and learned to ride a military camel. From Syria she went to Egypt, where she photographed the King of Egypt and the numerous French and British colonial troops stationed at the foot of the pyramids near the Nile.

"Kit," as Miss Bourke-White is called by her close friends, is an intense person. She loves her work, leaves no stone unturned in the accomplishment of an assignment. Besides being a distinguished artist in her field, she is an extremely able and devoted wife. When at home in Connecticut, she gets much pleasure from working about in her garden, and takes great pride in managing her home, Horseplay Hill.

In April 1940 her appointment as chief photographer for the new publication *PM* was announced. Previously she had been associate editor of *Fortune* (1929-33) and of *Life* (1933-40). In the fall of 1940 she left *PM* and returned to *Life* Magazine.

Her name, Bourke-White, is a combination of her mother's maiden name, Bourke, and her paternal name. She attended Columbia University (1922-23), the University of Michigan (1923-25), and received her B. A. from Cornell in 1927. In 1934 she illustrated Terhune's *Book of Sunnybank*. She also has illustrated *Freighter of Fortune*; *Story of Steel* and *One Thing Leads to Another*. In 1937 she collaborated with her husband in writing and illustrating *You Have Seen Their Faces*, a record of a trip through the cotton states from South Carolina, west to Arkansas and Louisiana. It has been called "a stirring and painful document, magnificently produced." The 64 photographs which Miss White took to illustrate her hus-

band's *North of the Danube* (1939) are called by critics the best work she has ever done. "Without them this memorial fresco could never have attained its breadth of expression nor its fullness of power. Words cannot capture the breathless beauty of some of these pictures or convey their peculiar moving quality."

WHITE, PAUL W. June 9, 1902- Radio director of public affairs for Columbia Broadcasting System

Address: b. 485 Madison Ave, New York City;
 h. 400 E 52d St, New York City

Director of public affairs for the Columbia Broadcasting System, Paul Welrose White has a highly responsible position in these days of national tension and international crises. Since the Czechoslovakian crisis of 1938, which commanded all of radio's resources, White has made elaborate reconstruction and reorganization plans; he is now all set for the next crisis to come up. A trained newspaperman, White hates to go home, even to leave his desk, when something seems to be brewing, for fear the *big* story will break the minute he takes his eyes from teletype machine, cables, reports of foreign broadcasts and other details connected with his job.

He was born in Pittsburg, Kansas, June 9, 1902, the son of Anna (Pickard) and Paul Wichard White. He was already a reporter when he entered high school—on the Pittsburg *Headlight* and the Salina *Sun*. By the time his college career was under way at the University of Kansas, he was telegraph editor for a while on the Kansas City *Journal*. He married Sue Taylor of New York City in 1937 and they have two children, Joan and Susanne. He attended the Columbia University School of Journalism from 1921 to 1924.

After graduation White joined the city staff of the New York *Evening Bulletin* and in August 1924, the staff of the United Press. He remained with the UP in various capacities for more than six years. Then he was editor for a year of the United Features Syndicate and also head of the UP mail service. During these years White's name became one of the best known by-lines in the country. He covered the Hall-Mills trial, the anthracite coal strike, the Snyder-Gray trial, and the transatlantic flights of

PAUL W. WHITE

Lindbergh, Byrd, Ruth Elder, Chamberlin-Levine and others.

In December 1930 he was named news editor of the Columbia Broadcasting System, and became successively publicity director, vice-president and general manager of news service and director of public relations for the Columbia Broadcasting System. Studio 9 is his stronghold as public affairs director. From its efficient confines come strictly factual, unsensational reports of every last moment's news, by a staff which maintains a seven-day, 24-hour schedule.

White directs CBS's European commentators. Before these go on the air each evening, there is a brief period of five to ten minutes during which White chats informally and privately with his men in London and Paris. This is made possible, as are the subsequent broadcasts, by means of what radio technicians call a "cue channel": a two-way short-wave hookup which White arranged while in Europe during the summer of 1939. It is all part of his preparation for the string of 1940 history-making European war crises. A remarkable thing about the "cue channel" is that it enables White to converse with England and France simultaneously. To him, trans-Atlantic conversations are by this time a routine matter. He is ready for any big news which breaks and which electrifies the studio into action. The job of the director of public affairs for CBS is, in 1940, more than a full-time proposition.

WHITE, WILLIAM ALLEN Feb 10,
1868- Editor of *Emporia Gazette*
Address: Emporia, Kansas

William Allen White, called "Bill" by everyone who knows him, has since 1895 been editor of a paper in a small Kansas town of less than 15,000 population. But his *Emporia Gazette* has become one of the most famous papers in the world, and Bill White's influence on national affairs cannot be gauged even by the number of his readers. There are very few twentieth-century issues that he hasn't taken a strong position on—his wife once confided that "he can't be an hour on an ocean liner without telling the captain how to run the ship"—and when he takes up the cudgels in any cause there are always people to listen. As an ardent Republican since pre-voting age he threw his editorial weight behind Wendell Willkie (see sketch this issue) in the 1940 Presidential election.

Editor White is short, fleshy, white-haired, with "a small, pinkish bald spot," and in his 70's looks like "an apple dumpling with a smile carved into its outer crust"—or, as he himself expressed it, "like a rear view of Cupid." He has lived in Kansas all his life and around newspaper offices nearly as long. Born in Emporia on February 10, 1868, the son of Dr. Allen White, a Jeffersonian Democrat, and Mary Ann (Hatton) White, a Republican Abolitionist, as a boy he earned his first dollar playing for dances in Butler County (his family moved to El Dorado when he was a year old). After graduation from the El Dorado High School in 1884 he went back to Emporia for a while, attending college; in 1885 he was back in El Dorado, working as a printer's devil on the *Democrat* and learning to compose copy while setting type by hand; then he was in Emporia again, setting type on the *News* and the *Democrat*, working as reporter on the *News*; and from 1886 to 1890 he attended the State University of Kansas, taking tramp trips over the country when not in school.

He didn't graduate because he quit college to take a job on the weekly *El Dorado Republican* at \$18 a month. At the *Republican* he was successively printer, circulation manager, reporter, advertising hustler, finally manager, and with no more heights to aspire to he left to become editorial writer and Topeka correspondent for the *Kansas City Journal*; later (1892) editorial writer for the *Star*. At that time his aspirations were apparently more purely literary than later, for in 1893 he published a volume of poetry with Albert Bigelow Paine—*Rhymes by Two Friends* (which he afterward regretted and tried to buy up). The same year he married a school teacher, Sallie Moss Lindsay (which he has never shown any signs of regretting at all). Their honeymoon being contemporary with the crash of '93, all the young couple's savings vanished in a bank at Manitou, and Bill came back to Kansas to find himself jobless.

In 1895 he showed up in Emporia with \$1.25 in his pocket, promptly borrowed \$3,000 and bought the *Emporia Gazette*—"and so they lived happily ever after." Their son, William Lindsay White, a "taller, more stalwart" edition of his father and also a newspaperman, was born in 1900. Mary Katherine White was born in 1904 and is still remembered by readers of her father's moving, much-anthologized tribute to her which was published at the time of her death in 1921.

The young editor's statement of his editorial purpose that first year wasn't unusual: "The main thing is to have this paper represent the average thought of the best people of Emporia and Lyon County in all their varied interests." Only a year afterward his paper became famous. William Jennings Bryan's free silver-Populist following was growing everywhere: Kansas had already elected a Populist Governor, a Populist legislature. But the growing spirit of economic revolt made Bill White angry. On August 15, 1896 his paper came out with an editorial, written in haste and heat after an argument. "What's the Matter with Kansas?" was the title, and in hard-hitting, effectively turned phrases he described the struggle for social change as "raising hell," suggested "raising corn" instead. Mark Hanna got hold of the editorial, put over a million copies in circulation in pamphlet form, and it was reprinted all over the country. McKinley was elected, and Bill White began to find himself besieged with requests to back political campaigns and candidacies, to write articles and editorials on what's the matter with life, death and women's hats, to leave Emporia and edit everybody else's newspaper, to take any office he wanted under McKinley. The last requests didn't interest him, but he did become interested in politics "and took a hand in state matters," becoming known as "the Sage of Emporia."

During the Spanish-American War Editor White was writing: "Some great sentient power—destiny, evolution or the Lord of Hosts—is guiding the course of this war." When his editorials were collected into a book in 1937 his footnote to that was: "Probably the devil." He was persistent in calling Bryan "a shallow fellow" and Eugene V. Debs "a charlatan," phrases he was also to apologize for later. He started his career as a reactionary. But from supporting such mild reforms as the short ballot, anti-pass laws for railroads and the direct election of United States Senators, he later came to acquire the "bug" of Rooseveltian progressivism. In 1912, elected Republican national committeeman, he broke away temporarily from the party to join the Bull Moose movement. And although he came back to his party, he was never quite the same.

White's attitude toward the First World War was at first isolationist, gradually grew more belligerent, until on the day war was declared he, too, was declaring it a war "to

WILLIAM ALLEN WHITE

save the soul of humanity." In 1917 he was sent to France by the American Red Cross as an observer; he was at the Paris Peace Conference in 1918, sending back articles; in 1919 he was a delegate to the Russian Conference at Prinkip. He came back persuaded that another war could be prevented not through isolation but through participation in European affairs, and became an advocate of the League of Nations. He was also one of the first to declare for recognition of Russia by the United States.

White's career from that time on has been summed up in the phrase: "the patient liberal." Some found him too patient. William Clugston is bitter: "No living journalist has done more to uphold the existing order of society by preying upon the emotions of the people and patting the Main Street Overlords upon the back." Admittedly he has been inconsistent. And party loyalty brought him back into the Republican fold at the time of every election, regardless of the admiration he has expressed for certain things he believed Wilson, La Follette or Roosevelt II stood for. Although he voted against Harding at the Republican Nominating Convention, he grew to think of him as "honest and courageous" until the Teapot Dome scandal broke; he supported Coolidge; Hoover was and is his great friend; he told Kansans to vote for their native son, Landon, in 1936. It is true that in 1924 he ran independently for Governor of Kansas—"in order to have my say against the Ku Klux Klan," he said—though Clugston claims it was in order to split the liberal vote so that the Republicans could get power back from the dirt-farmer dynasty then in control.

To some he has seemed contradictory. He wrote an editorial upholding the guilt of Sacco and Vanzetti (though changing his

WHITE, WILLIAM ALLEN—*Continued* mind after their death), and yet, during the period when the "Red scare" was at its height, joined a delegation asking for Eugene Debs' pardon, proclaimed the innocence of Tom Mooney. In 1922 he won a Pulitzer Award for an editorial on freedom of speech—written after he himself had been arrested as a test case for displaying a placard expressing sympathy with striking railroad workers. He favored the graduated income tax, old-age pensions, abolition of child labor, "social security" and similar measures of social legislation before they became commonplace; yet opposed many others. On the whole he seems to be equally shocked by the present-day behavior of large-letter Capital and large-letter Labor: to him it is the "ordinary everyday man" who keeps the world going. In 1938 he made the statement that "our American experiment has succeeded in bringing comfort, some luxuries, to probably 85, certainly 80 per cent of the American people," figures which Upton Sinclair claimed were incredibly optimistic.

Editor White is not always preoccupied with politics. A great deal of his energy has gone into defending Emporia and towns like it against all challengers, including H. L. Mencken. He has written also in defense of unmarried mothers, the younger generation and swing (which he, personally, detests); he has eulogized babies, the latest scientific discovery, movie stars and corn-syrup. A collection of his editorials, *Forty Years on Main Street* (1937), is described as "an interesting bit of Americana combining a Main Street diary, a graph of the devious political path of a Progressive of Roosevelt's 'Bull Moose' Class of 1912, and an all-but-extinct type of personal journalism."

Considering his other activities, Bill White has published an amazing number of books—one every two or three years since *The Real Issue*, a collection of short stories which came out in 1896. Other short story collections and even novels have followed, but he has become most noted for Sullivanesque commentaries on American statesmen and politics. Taft, Wilson, Harding, Coolidge and Al Smith have been "ground under the keys of his typewriter again and again" in such books as *Politics: The Citizen's Business* (1924); *Calvin Coolidge: The Man Who Is President* (1925); *Masks in a Pageant* (1928); *Woodrow Wilson the Man* (1929). In 1938 appeared a second biography of Coolidge, *A Puritan in Babylon*, and in 1939 came *The Changing West: An Economic Theory About Our Golden Age*. All are distinguished by his "vigorous and pungent style," but one critic claims that the book which has most chance of living in "the literature of the future" is still *The Court of Boyville*, an imaginative juvenile published when he was only 31.

Editor White knows other countries than the United States and other states than

Kansas, even though he is thoroughly sold on both. In 1930 he was a member of Hoover's Commission for Conciliation which went to Haiti. He has been abroad several times, in 1933 visited Russia ("I think the Russians are mad" was his verdict) and in the fall of 1935 sailed to the Orient. A Congregationalist and a Rotarian, he is an untiring "joiner." The list of educational and philanthropic associations of which he is a director is almost endless. In 1931 he was a member of President Hoover's Organization for Unemployment Relief and in April 1938 was elected president of the American Society of Newspaper Editors. He is in 1940 head of the Committee to Defend America by Aiding the Allies.

Never "high hat," never inhospitable, never afraid to change his mind, known for his "kindly, generous tolerance in his personal contacts", "Ol' Bill White" and his family are undoubtedly Emporia's best-loved and most-consulted citizens. In 1933 he wrote: "I have never had a major quarrel with anyone." The Whites live in a rambling house built of sandstone from the Garden of the Gods. Money doesn't mean much to them—"it has come easy and gone easy"—but the editor of the *Gazette* keeps his bills paid on the tenth of the month, "shaves every Sunday, Tuesday, Thursday and Saturday," and still writes even three-line "locals" himself.

WIART, ADRIAN CARTON DE See Carton de Wiart, A.

WICKARD, CLAUDE RAYMOND Feb 28, 1893- United States Secretary of Agriculture

Address: b. Department of Agriculture, Washington, D. C.; h. 2101 New Hampshire Ave, N W, Washington, D. C.

In his first speech after he was made Secretary of Agriculture in August 1939 Claude R. Wickard stated: "I intend to carry out the policies of Henry A. Wallace." For more than six years Mr. Wickard has been a member of the Department of Agriculture under Wallace (see sketch this issue) and his promotion was made, according to Stephen Early, secretary to the President, because of Roosevelt's desire to have the department directed by someone from within its own organization. Whether Mr. Wickard will play the part in broad administration policy-making that Mr. Wallace has played has been doubted in some quarters; but there is no doubt that this "thorough-going New Dealer" will "continue and strengthen" the programs initiated by his predecessor.

According to Secretary Wickard the Federal farm program has enabled American agriculture to right itself, regain its strength and "look to the future with renewed hope." In these days of war and possible famine he feels that more than ever we must have a strong American agriculture, based on the "tried and sound two-horse team of soil conservation and production control." Right now agriculture is better prepared than any other industry to help bulwark democracy, he says, and it must remain so.

The Department of Agriculture in the past years has had its share of theorists; it also had members "with honestly calloused hands." Claude Wickard, whose 380-acre farm in Carroll County, Indiana grows wheat, corn, and alfalfa and raises Hampshire hogs and Aberdeen Angus cattle, came to the Department of Agriculture as a farmer and during the years he has risen from a minor administrative job to the department's head he has stayed a farmer. As director of the North Central Division, Secretary Wickard stressed farmer-administration of the AAA and was chiefly responsible for developing the effective farmer-committeeman set-up which now exists in the corn belt.

Claude Wickard was born on an Indiana farm near Camden, Indiana which his family has owned since 1840. His father, Andrew Jackson Wickard, still helps run the farm. His mother was Iva L. Kirkpatrick. Claude went to high school in Delphi, Indiana and later to Purdue University, from which he received his Bachelor of Science degree in agriculture in 1915. After Purdue, Wickard went back to his family's farm to put to practical test the scientific theories he had learned at college. He found they were practical and he was able to do important pioneering work in the growing of soil-

Peter Killian

CLAUDE R. WICKARD

building crops. He also gave time to farm-bureau work.

After three years on the farm, Wickard married Louise E. Eckert of Logansport, Indiana, and the Wickards, with their two daughters, continued to live on the farm until Mr. Wickard went to Washington in 1933. The farm was a success and Wickard himself had the honor of being listed by the *Prairie Farmer*, a Midwestern magazine, as "Master Farmer of Indiana." In all these years Wickard's only political experience was as a member of the Indiana State Senate, to which he was elected in 1932.

In 1933 Wickard, who still looks and acts like a dirt farmer, came to Washington as assistant chief of the corn and hog section of the AAA and in 1935 he became chief of this division. In 1936, after the Supreme Court had invalidated the old AAA, he was named assistant director and then later in the same year appointed director of the North Central Division of the new AAA, which includes most of the corn-belt states. This post was an important but not a very prominent one, and eight months ago Wickard was comparatively unknown. Yet, though credit wasn't always given him, he is supposed to have been responsible for several of the New Deal's agricultural programs. His ability and effectiveness were recognized in February 1940 when he was made Under-Secretary of Agriculture and in August 1940 when he was promoted to the head of his department. In all these years Wickard has demonstrated that he understands the "mystic mathematics of agriculture." A few weeks ago he impressed his associates by forecasting the 1940 corn yield, hitting very close to the later official estimate.

Wickard is a thick-set man of medium height with blue eyes and dark brown hair

WICKARD, CLAUDE R.—*Continued*

that is starting to thin. He looks as though he "might well be named O'Leary." He has been devoted to his old jobs and will be to his new one, but nothing is going to make him happier than to steal away for a few days to his farm and help the hired hands with the haying, the hog feeding or the planting.

WILHELMINA, QUEEN OF THE NETHERLANDS (wīl'u-mē'nu) Aug 31, 1880-

On May 10, 1940 the Germans invaded The Netherlands. Immediately Queen Wilhelmina addressed a proclamation to her people: "I herewith direct a flaming protest against this unprecedented violation of good faith and violation of all that is decent in relations between cultured states. I and my government will now do our duty." On May 14 The Netherlands surrendered.

For 100 years The Netherlands had been at peace. For 42 years, through troubled times, Queen Wilhelmina had kept it at peace. This

was not too difficult in the first years of her reign. It is true there was some friction with Venezuela over the Dutch-owned islands of Curacao; there was the problem of protecting trade interests in Turkey and China; there was concern over Mexico's program, even then taking shape, of annexing foreign oil properties. But it wasn't until the World War in 1914 that Queen Wilhelmina found herself faced with real problems. Then came a food shortage because of the British blockade. Then, trade was disrupted, Dutch ships were sunk, the country was full of refugees. Yet Wilhelmina kept The Netherlands at peace.

She intended and hoped to keep it at peace during the Second World War. Before Holland's invasion the Queen "has opened her mouth in many a peace appeal, but kept it closed in many a case of violated neutrality during the past few months in a desperate effort to keep her political hot corner out of the war play." Because of forces beyond her control, she has failed.

Her little country, which has a population of 8,639,000 and is no larger in area than Connecticut or Massachusetts, had most to lose from the War. With "its little policeman's army" it hadn't the barest fighting chance of defending itself. With defeat its valuable colonial empire is now endangered, its high standard of living will go. Yet Wilhelmina's subjects trust her now, as they have always trusted her, to guide them and to save whatever can be saved from the debacle of defeat.

Queen Wilhelmina, in Holland and now in England, has a cabinet of able advisers and a corps of efficient officials, but they themselves are the first to admit "that for statecraft, diplomacy, energy and experience the Queen is their superior." The final responsibility is hers. "The only King in Europe," a French diplomat once remarked, "is the Queen of The Netherlands." Her ministers consult her on every move, for she knows as much or more than they about most national problems. When she receives her ministers, "woe be to him who does not know his subject well." If he can't answer her difficult questions he is asked: "Don't you think you had better study that a bit more?" and sent home.

Until the Germans took over The Netherlands they were a constitutional monarchy with a Parliament and a government responsible to it. Wilhelmina, who had more rights than most of her fellow sovereigns, had the power of absolute veto, which she never used, of dissolving Parliament and of appointing the 14 members of the Council of State. Only once was her reign in danger. In 1918, just after the War, the Socialist movement had an upswing in Europe and her country, impoverished by the British blockade, called upon the government to resign. Thousands gathered outside the palace in The Hague to overthrow the monarchy. But Wilhelmina rode out to the crowds in an open carriage. Demonstrations started for her on the street and troops drew

her landau through the parade grounds in triumph. There was no revolution.

That evening, however, she issued a proclamation: "Social reforms shall be carried through with a speed fitting to the pulsations of our times." And she kept her promise. "Nowhere in Europe has so thorough a social program been completed—slum clearance, community housing and hospitalization, unemployment and old age insurance, wage and hour control—all with a maximum of efficiency and a minimum of noise."

Under Wilhelmina, too, The Netherlands as a whole progressed materially. Its population increased from 5,000,000 to over 8,500,000. The country changed from an agricultural to a predominately industrial economy. It still produces cheese and tulip bulbs, there are still dikes and wooden shoes, but it is mainly a country of busy manufacturers and an international banking center. It is richer abroad, with "a colonial atmosphere hailed as far healthier than the British." And Wilhelmina herself "has a moneyed finger in the pie of nearly every enterprise of magnitude in Holland."

Wilhelmina is the eleventh of her line to govern The Netherlands. The House of Nassau can trace its origin to 800, and its members settled in the Lowlands in 1400. The Orange-Nassau line barely missed dying out with Wilhelmina's father, William III. William's first wife and two sons died one after the other. At 62 he married the 20-year-old Princess Emma of Waldeck-Pyrmont, a small German state. Of that marriage the sole issue was Wilhelmina Helena Pauline Maria, born August 31, 1880. A repeal of the Salic law forbidding female rulers allowed her to succeed to the throne.

She became queen when she was 10, with her mother acting as Regent. On her first appearance on the balcony of the royal palace in Amsterdam she is said to have asked: "Mamma, do all these people belong to me?" Queen Emma answered: "No, my child, it is you who belong to all these people." Wilhelmina was brought up to be a queen. Her childhood wasn't a happy one, for Queen Emma allowed her no playmates and laid out a course of studies that would have staggered the average grown-up. At 16 she spoke German, French and English and was learning military and naval strategy from generals and admirals. Her economics lessons were so practical that she manages her own estate, which is reported to bring her about \$5,000,000 a year.

When Wilhelmina was 18, in 1898, she was crowned in the New Church at Amsterdam, swearing to support the constitution and uphold the liberties of the people. Characteristically, she refused to allow her Prime Minister to write her first public speech. One year later she began her peace and neutrality offensive by offering her palace at The Hague for the first International Peace Conference at which many of the present conventions governing war, the rights of neutrals and the principles of arbitration were laid down.

QUEEN WILHELMINA

Two years after her coronation Queen Wilhelmina married a young lieutenant of the Prussian Guards, Henry Wladimir Albert Ernst, Duke of Mecklenburg-Schwerin—"a young man as round and pink as herself." "Prince Henry was fond of meeting up with sea captains and artists and led a hard life playing second fiddle for 33 years in a severely formal and moral court." Parliament steadily refused to make him a Prince of The Netherlands or to grant him funds, and his duties were limited to being the president of the Dutch Red Cross. In 1934 he died.

Juliana, the only child of this marriage, was born in 1909. She didn't lead the lonely life her mother suffered. She had friends, went to camp like any other girl, attended the University at Leyden for two years and took a degree in constitutional law. In 1937 Princess Juliana was married to Prince Bernhard zu Lippe-Biesterfeld, who met the specifications of royal blood, Protestantism and perfect health. It was at their marriage that Queen Wilhelmina had a run-in with Adolf Hitler. When the Nazis confiscated the passports of the German bridesmaids and guests at the wedding she told him firmly: "This is the marriage of my daughter to the man she loves, whom I have found worthy of her love; this is not the marriage of The Netherlands to Germany." The passports were returned.

At first there was a bit of scandal about the marriage. Prince Bernhard had a few mildly modern ideas. He liked an occasional cocktail, for instance, and liked to speed in his car. There was almost a government crisis when an indignant Dutchman once discovered Juliana and Bernhard on the French Riviera sipping cocktails on a Sunday afternoon and communicated with his newspaper, which broadcast the horrible

WILHELMINA, QUEEN OF THE NETHERLANDS—Continued

news throughout The Netherlands. After Bernhard got over the shock of suddenly finding himself minus debts and with a yearly allowance of \$106,000 and after his and Juliana's two daughters, Beatrix and Irene, were born, both Wilhelmina and her people softened. Juliana and the children have been in Canada since the summer of 1940, while Bernhard has remained in London in a military capacity.

The exemplary private life that Queen Wilhelmina herself has lived blended well with her shrewd qualities as a ruler. Not a breath of scandal has ever touched her. "Few if any bits of gossip ever got through the cold, exclusive circle of Dutch nobility that surrounded the court. She was the good mother, the conscientious leader, the faithful church-goer." Because of her strong Calvinism, her words came to carry "almost a scriptural weight among the nobility of The Hague and Utrecht, the patrician families of Amsterdam, and all the older townspeople and villagers in the strongly Protestant North." Even Jews and Catholics "came to idolize her."

Because of her exemplary private life, the court at The Hague was called the dullest in Europe. At official receptions so much as a light laugh caused eyebrows to rise. "A lady-in-waiting turned up one day in a gorgeous Paris creation. Wilhelmina took one look. 'Where did you get that hat, young woman?' she asked in the Victorian manner. 'In Paris, Your Majesty,' the unfortunate answered. 'We wear Dutch clothes here,' said the Queen with an unforgettable look."

Dressed in a worn raincoat and a shapeless hat she used to pedal gravely on her bicycle through the streets of The Hague. Her Majesty's grocer used the same entrance to her Palace that she did. She was often seen by the people of The Hague sewing by the palace window. One of her greatest charms for her people is the fact that she is such a good housewife. She was that particularly in her white rambling Palace of Het Loo near Apeldoorn, where she skated in winter and worked in her gardens in a droopy old felt hat and cotton gloves. Her relaxation there was always painting, and when Wilhelmina painted a tree you knew it was a tree.

When the War between Germany and the Allies began, Wilhelmina continued to be both housewife and leader. Her only excursions were to the frontier posts where The Netherlands Army was mobilized. She poked into the troops' living quarters and if the blankets were too light or the kitchen not clean enough, there was trouble. When the War reached her country the lights in the palace could be seen burning all night as she went over dispatches and issued her quick, clear and final orders.

On May 13, 1940 Wilhelmina, Princess Juliana, Prince Bernhard and the two children

arrived in London, advised to go there by her Cabinet, for "the German military authorities, with every intention of completing their nefarious practices, had started bombing her Majesty's destination." It was then Wilhelmina's intention "to return as soon as possible to her people in their great distress and their heroic fight against overwhelming odds."

On May 14 the Dutch surrendered to the invading German forces, but Wilhelmina, who is now guiding the destinies of her people from abroad, declared that the spirit of The Netherlands is unbroken because its conscience is clear. Netherlanders will never give up their faith in the cause of freedom and justice. And she prayed "that the dawn of the day when freedom will be restored to The Netherlands and to other victims of German aggression is near."

WILLIAMS, ALFORD JOSEPH JR. July 26, 1896- Aviator

Address: b. Gulf Oil Corporation, Gulf Building, Pittsburgh, Pennsylvania

"I get a great kick out of being in trouble," Al Williams once confided. He has been amazingly successful at getting into it. The commander of the 400,000 Scripps-Howard Junior Aviators, writing a daily aviation column for the Scripps-Howard newspapers, has been recently stepping on the United States Navy's toes.

Since April 1935 Williams had been a major in the United States Marine Corps Reserve, after a long career of navy service. In February 1939 his column tore into the navy's selection board for having arranged to dismiss eight flying officers who were not Annapolis trained. A few months later he received a memorandum: "Further destructive criticism . . . will be considered sufficient cause . . . that your commission . . . be revoked." After an angry inquiry he was notified that he wasn't actually subject to control but was under the navy's orders by "custom and usage." Unable to restrain himself from campaigning with increasing vituperation in his columns for a strong and independent air force that would be free from army or navy interference, in July 1940

Williams finally resigned his commission, writing: "My services will always be at the command of the United States Marine Corps." In the summer of 1940 *Airpower* was published—developing this same unpopular plea for an independent air force into a book length thesis.

Lewis Gannett calls *Airpower* "a book filled with eloquently intimate descriptions of Europe's air forces, fantastically ignorant dogmatism about politics and economics, and with that right-to-the-chin pattern of rhetoric which passes for argument among the fraternity of Scripps-Howard columnists," but, says, too, that no reader "is likely to doubt the Major's knowledge of aircraft or his passionate faith in the air as the battleground of the present and of the future."

Al Williams in his book lights into the admirals and generals who cling to their prejudices "with the tenacity of a glue distilled from the roots of ignorance." Although he doesn't believe Germany can attack the United States, he finds the present defense program based on an outworn theory—that sea power is more important than air power. He knows the Nazi air power well: in 1938 he was flying their Messerschmitts and Storchs before they flew across Poland and Flanders. He has inspected German air plants, noted their methods of production and believes we could profit by imitation.

Italians, too, Williams admires, but he has little but contempt for the British, who shrugged off the specific information and warnings he brought them about the development of German aircraft. He was disgusted with French delay and thinks the Soviets incapable of producing first-class planes for 10 or 15 years. His political views are rather strange: he believes that during the Ethiopian War England was scared off by the Italian air fleet, states that the British favored the "Red" cause in Spain (which he very definitely did not). But in aviation he knows his way around. Eddie Rickenbacker (see sketch this issue) called him "an airman's pilot, with true contempt for armchair goggles."

He was born in New York City on July 26, 1896, the son of Alford Joseph Williams, a civil engineer influential in New York politics, and of Emma Elizabeth (Madden) Williams, a gifted singer and musician. After attending public schools he entered Fordham Preparatory School at the age of 14, soon became its best baseball pitcher, but in his last year decided he was through with studying. His father gave him permission to quit school in order to work, but said he would do the job-finding for him. He did. After a summer at a steel foundry in Long Island City, Al found himself quite willing to start studying again and entered Fordham College. He was graduated in 1915 and by that time a career was cut out for him. As Fordham's star pitcher he had been spotted by Sam Crane, a sports writer, who called up Manager McGraw of the New York Giants to announce his "find."

ALFORD WILLIAMS JR.

McGraw offered young Williams a job and until the United States entered the First World War he pitched for the Giants.

Then he left to learn to fly for the navy, took a ground course at the Massachusetts Institute of Technology before going to the aviation camp at Bay Shore, Long Island, took to flying as if he had been made for it, but never got abroad. He was too useful in training pilots at the advanced flying school at Pensacola, Florida to be spared and by the time the Armistice came that was what he was still doing.

Williams remained with the navy as research aviator. There has been much talk of his "stunts," but Williams himself is rather contemptuous of stunts and calls what he did "aerobatics . . . the scientific investigations which take the mystery out of any and every situation in the air." It was Williams who wrote the first report on how to right a ship after getting into an upside-down position (in the past there had been crashes when this happened); he put his ships into innumerable tailspins without crashing, after the number of previous accidents had made officials fear the fault was the plane's; he became noted for inverted flights; and he showed how the human body could adjust itself to the unusual positions and stresses it was subjected to in out-of-the-ordinary flying situations.

In 1922 Williams was a navy entry in the Pulitzer Races at Detroit. His plane burst into flames in the air but he landed safely, beat out the flames—and then proceeded to discover something about faulty ignition. He tested out new ideas at the Naval Air Station at Hampton Roads, Virginia and then in 1923 helped design a new racing plane which won the Pulitzer Race at St. Louis, Missouri and established a new world's speed record which remained official until 1931.

WILLIAMS, ALFORD JR.—*Continued*

He was next called to Washington to help design a new combat plane and risked his life to test out the new designs. His first real crash found him miraculously unhurt.

In 1926 Williams won the Pulitzer Trophy; that same year he received his LL. B. from Georgetown University (he had been studying evenings), was admitted to the New York State Bar and married Florence Hawes Selby. Both in 1927 and 1929 he was working on a navy speed plane which was to enter the International Schneider Cup Races, and though something went wrong both times and the plane never was fit for the races, the Distinguished Flying Cross presented to him on May 17, 1929 was some consolation. Williams' articles both in the Scripps-Howard papers and in magazines had already made his name a familiar one. The naval citation said: "In his articles written for the public he has shown himself to be a scholar as well as a master pilot, and the beneficial effect on the public mind of his example, his clear exposition and his loyalty to the service has been great and it has reflected untold credit to the service." That same year he received the trophy of the American Society of Mechanical Engineers.

It was 1930 when Williams resigned his lieutenantancy in the navy to become a consultant engineer. Manufacturers came to him for the correction of faults in newly designed ships; engineers brought him their problems. In July 1932 he became a captain in the Marine Corps Aviation Reserve, on their inactive list, but continued to fly for the Gulf Oil Corporation, becoming the manager of their aviation department in 1933. In April 1935 he was promoted to the rank of major in the Marine Corps Reserve.

Williams is more than six feet tall, young-looking, with reddish-brown, closely cropped hair and straight, firm features that might make him look as grim as Dick Tracy if it weren't for his Irish blue eyes. When he is around planes he doesn't like to be interrupted and some people mistake his concentration for unfriendliness. Flying is almost everything to him; it is his religion. He is inclined to be as poetic about the construction of a dive-bomber as about a sunset experienced from the air. In the year 1940 he can write a passage such as this: "What lucky people we are, born at the right time, breathing and living in this particular period of the world's history and, without effort or merit, entitled to live the dreams of only the greatest poets of the ages." He continues: "The flying man all but forgets his wings and motors. Spiritually he is enraptured with Nature's might and beauty in the great church of the universe, where all men think alike. And in this great church, where all men think alike, he is on wings."

 Who's Who in America

WILLIAMS, AUBREY Aug 23, 1890-
 Social worker; head of the National Youth
 Administration

Address: b. Washington Bldg, New York Ave
 and 15th St, Washington, D. C.; h. 5107 Wilson
 Blvd, Arlington, Virginia

"The most dangerous man in the government," according to Hamilton Fish, is Aubrey Willis Williams, head of the National Youth Administration. Mr. Fish made this statement before the House of Representatives on March 25, 1940 and, together with other representatives, urged that Mr. Williams be ousted from his position. Referring to the proposed good will tour to South America to be led by Leopold Stokowski, Representative Taber of New York said that Mr. Williams was "planning to take 109 American youths and turn them over to a man whose record is Communistic." But Representative Tarver of Georgia assured the House that Mr. Williams himself was no Communist, merely "a dreamer and an idealist who needs to be guided and restrained."

Aubrey Williams, "the gaunt, zealous, wavy-haired, hollow-eyed social worker" who is head of the NYA, has had a faculty for getting himself into hot water. In June 1938, addressing 800 delegates of the Workers' Alliance in Washington, he made what has been called "one of the most injudicious and foolish extemporaneous speeches that any New Dealer—including even Messrs. Harold L. Ickes and Robert Jackson (see sketch this issue)—has made." To these delegates he said: "You know who your friends are. Keep your friends in power!" There was a good deal of disturbed comment throughout the country when the man who was at that time temporarily in charge of the relief administration urged people on relief to vote for the New Deal on the ground that the New Deal would continue to give them money.

Williams' next important *gaffe* came in November 1938, when he was addressing the Southern Conference for Human Welfare. To them he said: "I am not sure that class warfare is not all right." He did explain that by class warfare he meant such accomplished facts as collective bargaining, "the clash of employee and employer, the clash of one industrial group against another," but concluded, "there are other forms than class warfare of solving these

problems, but realistically it may not be possible to avoid it."

In June 1935, President Roosevelt created the National Youth Administration to meet the needs of the three and one-half million boys and girls between the ages of 16 and 24 who are unemployed, who can get neither jobs nor schooling. Aubrey Williams was put in charge as part of his duties as WPA deputy administrator, and took this over as his only job in December 1938.

It is probably because of his inability to "coddle Congressmen" and his rather tactless single-mindedness that Aubrey Williams is now head of the Youth Administration. Before Harry Hopkins became Secretary of Commerce, Williams had been his Deputy Administrator and "right-hand man" in the WPA. He seemed in line for the job of Administrator when Hopkins left in December 1938. But because Colonel Harrington was a "first-rate politician" he got Hopkins' job and Williams became NYA head.

Aubrey Williams was born in Springfield, Alabama on August 23, 1890, the son of Charles Evans and Eva (Taylor) Williams. According to his mother, he is a "self-made man." His grandfather had freed a thousand slaves and lost all his possessions in the Civil War, and Williams had to start work early. "When he was a little fellow, he went to work on a laundry wagon at \$1 a week." But that was only a part-time job, and when he was 10 years old Williams had to leave school to take a full-time one. He worked in a Birmingham, Alabama department store as a stock boy at \$3 a week, and he worked in a coal mine while going to night school.

With church aid, and by taking a number of jobs ranging from sign painting to social work Williams was able to attend Maryville College in 1911 to study for the ministry. When the War began he eagerly took the opportunity to go to Paris with the Y. M. C. A. With America's entrance into the War he enlisted in the artillery and remained in France until the Armistice. Then he got leave to attend the University of Bordeaux, from which he received a degree in 1919 while still officially in the army.

When Williams returned to the United States he became pastor of an Evangelical Lutheran Church near Cincinnati, and from there he moved on to Cincinnati to enter recreational work and get his B. A. from the University of Cincinnati in 1920. In this year he married Anita Schreck of Cincinnati. They have four sons. From 1922 to 1932 he was executive director of the Wisconsin Conference of Social Work, where he introduced many civic advances, including the first complete State Children's Code. In 1932 he became the field representative of the American Public Welfare Association.

Williams' first job under the New Deal was as field representative for the Federal Emergency Relief Administration in 1933;

AUBREY WILLIAMS

his second was as assistant administrator of the FERA and Civil Works Administration (1933-35); his third, as assistant administrator of the Works Progress Administration and executive director of NYA; his fourth, as deputy administrator of the Works Progress Administration, appointed December 31, 1936; and, finally, his single job as head of the National Youth Administration.

For hundreds of thousands of destitute boys and girls the NYA under Aubrey Williams has "meant work, self-respect, and the opportunity to continue their education on at least a part-time basis." It has taught them to build parks, to make surveys, to run farms, to manage libraries, to cook, sew and carpenter. It "has done more to create a feeling of self-reliance in young America than anything since the Alger books."

Aubrey Williams points out that in the services of the NYA "we have the means for supplying the young people, on an honorable basis, with some of that indispensable cash which all civilized persons, even young ones, have to have to get along. We have helped young people escape from the dilemma of no experience, no job; no job, no experience, and most important, we have made a new and valuable addition to our means of education for citizenship."

WILLKIE, WENDELL LEWIS Feb 18, 1892- Nominated by Republican Party for President June 29, 1940; lawyer; public utility executive

Address: h. 1010 Fifth Ave, New York City

On November 5, 1940 Wendell L. Willkie was defeated for the Presidency of the United States by Franklin Delano Roosevelt. More than four strenuous months of campaigning had resulted in over 22,000,000 votes for him. On November 12, one week after his defeat, he announced to the American people in a radio address that their "function during the next four years is that of the loyal opposition." "Ours," said Mr. Willkie, "is a two party system. Should we ever permit one party to dominate our lives entirely democracy would collapse." An opposition party is necessary, but, he emphasized, its opposition must be constructive, working honestly for the betterment of the nation.

In his message Wendell Willkie hoped that the many Willkie clubs formed all over the country would be continued. "It is not, however," he said, "appropriate to continue these organizations in my name. I do not want this great cause to be weakened by even a semblance of any personal advantage to any individual. I feel too deeply about it for that."

As early as 1939 General Hugh S. Johnson (see sketch this issue) called Mr. Willkie a "very strong candidate" for the Presidency of the United States. To this Willkie, who has tangled frequently with New Deal agencies—especially the Tennessee Valley Authority—replied: "If the government continues to take over my business, I may be looking shortly for some kind of a new job. General Johnson's is the best offer I have had so far." On January 30, 1940 he said further: "If the nomination were given to me without any strings I would have to accept it. No man in middle life and in good health could do otherwise."

By May 1940 Wendell Willkie had become the chief Republican dark horse for the nomination. Oren Root Jr. (see sketch this issue), impressed by Willkie's idea of a platform for America called *We the People* which appeared in *Fortune*, organized a Willkie-for-President group in New York and issued petitions which were signed widely all over the country. Russell Davenport, managing editor of *Fortune*, resigned his position to devote his full time to furthering his nomination. By June, men like Raymond Clapper (see sketch this issue) were saying that Wendell Willkie was the only man the Republicans "can put

up who would have a ghost of a chance in the campaign." And on June 27 he received the nomination on the sixth ballot.

Almost immediately Willkie started his campaigning. Almost immediately the Democrats began presenting their opposition arguments. They, and others, criticized the combination of Willkie and McNary; they pointed out that he was a Big Business man, a utilities leader ("a simple barefoot Wall Street lawyer," Ickes called him); that he had never held public office; that his foreign policies actually differed little from Roosevelt's; that his labor policies were "paradoxical." As the campaign progressed Willkie was charged with making a number of "blunders," such as that in which he accused Roosevelt of selling "Czechoslovakia down the river." But with the aid of Joseph Martin Jr., (see sketch this issue), his campaign manager, it wasn't long before the trend began to swing more and more in his direction.

During the campaign ("there had never been anything like it," said *Time*. . . "It was an extraordinary phenomenon almost certain to make a notable exhibit in the museum of political history") Wendell Willkie stumped up and down the country, smilingly meeting hecklers ("Boos don't hurt me. . . All I ask is a square shake"), his voice growing hoarser and hoarser, his platform becoming more and more clear. Perhaps its main idea was that while wanting to preserve New Deal reforms, he felt they should be enforced along lines that would help business and encourage investment.

The New Deal's tax structure, he declared, was unscientific, repressive, loaded with punitive measures. The answer was "to stimulate production immediately and revise the tax system so that it will not act as a brake upon industry." In foreign policy he favored aid to Great Britain and China but condemned the Administration's reckless statements in foreign affairs and executive secrecy. He also condemned its "negligence in the face of great national need" in the matter of defense, favored conscription and suggested that the Defense Commission be given more authority."

Willkie advocated the public development of power. He said, too, "I stand for the National Labor Relations Act and the right of free collective bargaining. I stand for minimum wages and maximum hours, and for legislation to enforce them. I stand for social security benefits and believe that they should be extended." But over and over again, his main thesis was that the only real remedy for labor problems, for farm problems was an Administration that would encourage business to launch the enterprises that would make more jobs. Unemployment is the greatest American problem, he stated again and again. It was probably because of belief in his labor statements that John L. Lewis endorsed Willkie shortly before the elections.

WENDELL L. WILLKIE

As a boy, Willkie called himself Lewis Wendell Willkie. When he entered the army in 1917, his first and middle names became transposed on the records. He remonstrated and was advised: "By the time we get them corrected through all the red tape of Washington, the War will be over." Although later Willkie was to challenge the government on many scores, that time he meekly changed his name to conform to the records.

His family is a very unusual one. His ancestors in Europe were in frequent conflict with their several governments, for as he says: "Those who did not observe the restrictions under which they were forced to live got into trouble; one had to flee his native land because he adopted the religion of his choice; another was ostracized because he believed in the principles of the French Revolution; and still another was jailed for expressing his own opinions. In 1848 my father and grandparents [who spelled their name Willcke] came to America to escape this repression of individual liberties." This ancestry may explain the character of Willkie, a very articulate man who likes to "talk back" to the government, and who has become the leading critic of the business and power utility decisions of the New Deal.

Willkie was born in Elwood, Indiana, third in a family of six children. His father, Herman, was a prosperous lawyer and landowner in the then booming manufacturing town. Natural gas was used for its industries—indeed so plentiful was it that it was cheaper to allow street lights to burn all day than to pay a man to turn them off. At the exhaustion of the natural gas wells, the town fell into desolation and with it the fortunes of the Willkie family. His mother, besides taking care of her children,

WILLKIE, WENDELL—*Continued*

taught school and practiced law. She was the first woman ever admitted to the Indiana Bar. His grandmother was a Presbyterian minister. Again Willkie showed his non-conformity by becoming an Episcopalian. One brother (6-feet-5) was all-American tackle while at Annapolis and also an Olympic wrestler, and is in 1940 in charge of salmon-canning for the Libby Company. Willkie explains that he always buys Libby salmon, and also orders Seagram whisky because two of his other brothers are with Seagram, one as vice-president. One sister is a wine merchant; another is married to a naval attaché at the Berlin Embassy.

As a boy and college student Willkie helped support himself by harvesting grain, acting as "barker" for a tent hotel during a land boom in South Dakota, and moving houses out of the fast-disappearing town of Elwood to nearby farms. In their home the Willkie children led a stimulating life: "They kept more than 6,000 books around the house and old Herman Willkie . . . woke his children in the mornings by shouting quotations from the classics. Their home was a sort of perpetual debating society."

Willkie attended Culver Military Academy, then went to the University of Indiana in 1909. There he "became known as a red-sweatered campus radical spreading socialistic ideas, including the abolition of all inheritance as unfair to persons who inherit nothing. He raged against fraternities . . . and fumed against the law faculty." Paul Vories McNutt (see sketch this issue), prominent 1940 possibility as United States Presidential candidate was a fellow student, a conservative, snobbish fraternity man and no friend of the radical Willkie.

In 1913 Willkie received a B. A. degree and in 1916 his LL. B. degree. Then he joined his father in the practice of law but quit to enlist in the army. He likes to tell that when he met Edith Wilk, librarian in Rushville, Indiana, he told her: "Edith, I'd like to change that Wilk to Willkie." Their wedding on January 14, 1918 was delayed for two days by a blizzard, but he finally arrived, clutching a frozen, disheveled bouquet which she carried to the church. They have a son, Philip, at 20 a senior at Princeton, voted the "most likely to succeed" of his class.

After making a brilliant record as a lawyer in the legal department of the Firestone Company and the law firm of Mather and Newbitt, the president of the Commonwealth and Southern, a giant utility holding company, wrote of Willkie: "Do not let this young man get away from us. . . He is a comer and we should keep our eye on him." Willkie in 1929 was summoned to New York to become the attorney for Commonwealth and Southern. When the president retired in 1933, Willkie took his place. He made an enviable record as a utility executive until his Tennessee utility system be-

came embroiled with the New Deal—a spectacular feud which ended when the TVA paid his company \$78,600,000 for its Tennessee properties. For an attitude typified by warnings against concentration of power in either industry or government the National Institute of Social Science honored him with a gold medal award "for distinguished services to humanity" on May 7, 1940.

Although a lifelong Democrat who gave \$150 to the Democratic Campaign fund in 1932 ("I wish I had my money back," he said in 1935) he voted against Roosevelt in 1936. "I won't be dropped into a mold. I want to be a free spirit. If I wasn't one, I would be still sitting on a cracker box in Indiana," he says.

In 1940 "the biggest political figure in United States business," until his resignation to campaign he received from the Commonwealth and Southern Company \$75,000 a year, not considered a high salary for a billion-dollar corporation president. He has never owned an automobile, goes downtown from his Fifth Avenue, New York apartment by subway or taxi. "It is an asset in my business," he explains, "to look like an Indiana farmer." So he accounts for his "unpressed, shiny-seated suit, his disheveled mop of graying hair."

He is widely read and has done research on the economics of the South before the Civil War; the early settlement of Indiana; the rise of trade-unionism, communism and socialism. Fishing, a little poker and "fussing around" on his five Indiana farms give him his relaxation. He hasn't played golf for years, he says: "That's no fun, just chasing a pill around."

**WOOD, EDWARD FREDERICK LIND-
LEY, 3RD VISCOUNT** See Halifax, E.
F. L. W.

WOOD, GRANT Feb 13, 1892- Artist
Address: h. 1142 Court St, Iowa City, Iowa

Grant Wood, the "most celebrated white
hope of 100 per cent Americanism in art,"
created quite a stir with *Parson Weems'
Fable*, one of his latest paintings. This portrait
of George Washington, complete with powdered
wig and all the attributes of father of his
country, chopping down the cherry tree while
Parson Weems looks on slightly cynically
from behind the curtain he is lifting, raised
the dander of serious patriots all over the
country. But Grant Wood denied any charge
of debunking: "I have taken a tip from the
good parson," he says, "and have used my
imagination freely." The next American
legend he is tackling is the story of Captain
John Smith's rescue by Pocahontas. Wood
and a group of eight American artists went
to Hollywood to paint scenes from Walter
Wanger's film, *The Long Voyage Home*, in
1940. Wood's picture, *Sentimental Ballad*,
was very well received by critics.

It was as a painter of the Midwestern
scene of Iowa, however, that Grant Wood
won national recognition. He has painted
the Iowa fields at the time of spring plowing
and harvest; he has shown threshers at din-
ner, children planting a tree in a country
school yard, the strong faces of Iowa men
and women. Grant Wood paints "out of the
land and the people he knows best." He
believes in regional art and especially in "the
encouragement given to it by the United
States government." But he cautions us—
"the same artists who did fake impressionist
pictures in Paris a few years ago are now
busy with the American scene. God save
it from them!"

Of course Wood himself is one of those
artists who 10 years ago were painting misty
impressionist pictures of southern France.
He is that no longer. His painting now
steers clear of impressionism and gives the
literal, sharpened image. The color is clear,
the outlines unblurred and the surfaces un-
polished. His is a "brittle objective style
that is at once adapted to his own matter-
of-fact personality and to the homely sub-
jects with which he has chosen to deal." It
is a style of which "the mechanical perfec-
tion would enchant the neatest of interior
decorators." In some of his landscapes the

Arthur O'Neill

GRANT WOOD

criticism is: "the design half consumes the subjects, and the trees and natural forms arbitrarily forced into a fixed pattern lose their specific character and become implements in a scheme of self-conscious stylization." But always the intent is easily understood—Wood's work is popular among simple people.

"Precisely meticulous in detail," Wood paints on the average two pictures a year. He works slowly. First he picks his subject and then he mulls it over in his mind. He may think a picture out in detail for a year before lifting a pencil. Then comes a series of sketches and one or more detailed working drawings; then the canvas itself on which he applies eight coats of paint. Wood has a fetish for authenticity. He uses mail order catalogues for details of hay rakes and milk separators; he checks even the rightness of the kinds of hay in wagons; and once he advertised in Chicago newspapers for a pair of genuine red flannel drawers.

Grant Wood's father, too, was a factual man. It is told that in his youth he returned a copy of Grimm's fairy tales to the giver saying, "We Quakers can read only true things." He died when Grant was only 10. The farm at Anamosa, Iowa where Grant was born was taken away, and Grant, with his mother and sister, moved to Cedar Rapids.

Here he mowed lawns, milked cows, was a truck gardener, house painter and carpenter for nine years, teaching himself to draw at night after the day's work was over. He finally decided to depend on crafts for a living until he could support himself with his art and in 1910 enrolled in the Handicraft Guild of Minneapolis, taking advanced courses in wood and metal work. Part of the year he worked by day as a paid assistant

in the forge and studied design in night classes. The rest of the term he studied by day and worked nights as a watchman in a morgue.

After 18 months of this Wood returned to Cedar Rapids and started a handicraft shop of his own. It prospered and Wood was able to paint more. One day he turned up at a life class at the University of Iowa, taught by an absent-minded instructor. When asked for his admission ticket he said he had forgotten it. The teacher didn't ask for it again, and Wood stayed there for a whole academic year without being enrolled or paying tuition. His conscience never hurt him: "When you don't get anything," he said, "you shouldn't pay. That's the way to run a college."

This session made him realize more than ever that he wanted training and in 1912 he went to Chicago where he worked days in a jewelry shop and attended night classes at the Chicago Art Institute. While there, he and a friend started a shop to design and execute beautiful metal objects. The War interfered and Wood, who had invested all he had, again found himself back in Cedar Rapids with no job and no money—at 23 merely a handy man around town.

Then came America's entrance into the War. Wood remained in this country, with the camouflage division. At training camp he made sketches of the soldiers and sold them—25 cents for a doughboy and \$1 for an officer. After the Armistice Wood got a job teaching art in Cedar Rapids and stayed at it for six years.

During these years and after he traveled to Europe and even spent some months studying at the Academy Julian in Paris. He became bohemian and grew pink whiskers. As he put it: "I lived in Paris a couple of years and grew a very spectacular beard that didn't match my face or hair and read Mencken and was convinced that the Midwest was inhibited and barren." His work was full of "the sleazy artifices of impressionism." He painted fragments of nature, old French doorways and "picturesque landscapes slumbering in veils of atmospheric tone." But he soon saw that his canvases were indistinguishable from thousands of others. He went to Germany where he saw the works of the early German masters—patient, detailed characterizations of simple folk. "I started out to analyze what it was I really knew . . . it was Iowa. Suddenly I realized that all the really good ideas I'd ever had came to me when I was milking a cow. So I went back to Iowa."

Back in Cedar Rapids he began to sell some of his work—at prices from \$10 to \$40—and the people there paid him \$2 an hour for advice on the improvement of their homes. It was there that he painted his first important picture, *John B. Turner, Pioneer*. Turner was a undertaker who had befriended him and who, the year before, had lured him to Chicago to address the National Selected Morticians on "The Interior Decor-

ation of Mortuaries." "I had a jolly time," Wood said, "and the selected morticians bought a picture."

After his portrait of Turner, Wood was determined to paint his own Iowa people with all the integrity that had gone into the old European masterpieces. *Woman with Plants* came next, a portrait about which Thomas Craven says, "In draughtsmanship and sheer control of medium this picture of Wood's mother is superior to Whistler's *Mother*; and in vitality and endurance, substance of sacrificial devotion it reduces the Whistler tribute to a fragile silhouette."

With *American Gothic* Grant Wood became famous. This picture, exhibited in Chicago in 1930, was the most popular painting at the Century of Progress Exposition a few years later. With its typical and gaunt Iowa farmer and his tight-lipped daughter standing in front of their typical Gothic farmhouse, this picture "at once became the chief icon of the past decade's resurgent move to 'paint America.'"

Since *American Gothic* Grant Wood has produced not a large number of pictures, but "a substantial body of work in portraiture and figure painting." *Dinner for Threshers*, a design for a mural, is one of his more famous, "original in conception and superbly planned." *The Midnight Ride of Paul Revere* and the *Birthplace of President Hoover* are landscapes in which a "decorative realism prevails, mixed with a delightfully humorous fantasy." *Young Corn* is pure Iowa and *Spring Turning* is again Iowa, though in it the country has been "simplified into an abstraction." A portrait of Vice-President-elect Henry Wallace is his latest work.

Frequently in Wood's paintings there is a touch of satire, but the only thoroughly satirical painting he ever did was *Daughters of the American Revolution*, which shows three elderly, hard-bitten ladies, one holding a tea cup before a portrait of Washington crossing the Delaware. This caused a furor, and Wood believes that only the fact that he is a member of the American Legion and that his ancestors on both sides came to America in colonial times saved him from patriots who threatened him with arrest.

In 1933 Grant Wood founded "one of the nation's most significant art colony experiments at Stone City, Iowa," and under the New Deal's Public Works Art Project he supervised 24 of the 34 Iowa projects. It was he who was one of the first men appointed to do a decoration for the Post Office Department Building in Washington.

In 1935 he was married to Sara Sherman Maton, from whom he was divorced in 1940.

For a good many years, until the fall of 1940 when he resigned in order to take a year off just to paint, Grant Wood has been teaching art at Iowa State University, trying not to teach any special style or technique of painting but only to help young artists paint the things they know about in whatever way they see them. There is no

formality in his teaching. All work on brown wrapping paper—"I use nothing else," Wood says. "It has a fine tone and it is free from impurities and for the classroom you can't beat it."

Wood used to teach three afternoons a week and twice a month conduct classes in criticism which about two hundred aspiring artists attended. Now he paints almost all day long and every Sunday drives around the country in an old Ford to visit and observe types and faces. In Iowa City he lives in a red brick house (it is the house in *Parson Weems' Fable*) which he remodeled himself, "able with equal facility to fix the plumbing, repair a broken clock, dress stone for his garden wall or paint a picture."

A "calm, self-contained person who looks at life with a clear serenity," he intends to stay in Iowa—the only American artist to get national recognition without a New York show, he "has no need of New York." He intends to continue painting and spreading his belief that "the hope of a native art in America," as he says in his pamphlet, *Revolt Against the City*, "lies in the development of regional art centers and the free competition between them. That is the only way in which we can win our independence."

WOOD, SIR KINGSLEY 1881- Chancellor of the English Exchequer

Address: b. Broomhill Bank, Tunbridge Wells, England

For years a certain witty British columnist has been speaking of "colorful" Kingsley Wood. The irony may perhaps be lost on American readers, but actually "colorful" is the last adjective that could accurately apply to Wood, a "small, precise and puritanical" lawyer who belongs to the Wesleyan Church and is primarily interested in insurance, pensions, housing and public health. Wood is also almost the last man one would expect to find high in the councils of the Conservative Party, for he did not attend one of the "public schools" or either of the universities of Oxford or Cambridge, nor is he a member of the Anglican

Underwood & Underwood

SIR KINGSLEY WOOD

Church. Yet he is chairman of the executive committee of the Conservative Party and Grand Master of the Primrose League, a body devoted to "the maintenance of religion [the Anglican], of the estates of the realm and of the imperial ascendancy of Great Britain," and in Churchill's (see sketch this issue) National Government occupies a post from which men have often advanced to the Premiership. In October 1940 it was expected that he would be among those to go in the mild shakeup of Churchill's Cabinet, but after it was all over he was still clinging tenaciously to the chancellorship of the Exchequer and had moved up to join the War Cabinet.

Sir Kingsley Wood has been in Parliament for 22 years without interruption, and has moved steadily on to greater and greater responsibility "because he is heart and soul Tory and because he is not only a clever organizer but an astute and subtle politician." Not that he has not been responsible for some very beneficent legislation and administration. He has worked hard for social insurance legislation in Britain; the creation of a Ministry of Health was due to him more than to any other man; and it was also he who introduced measures providing for the earlier closing of shops and the introduction of daylight saving. Not known for picturesque speech or any kind of dramatic pose, he has applied business methods to government. As Chancellor of the Exchequer he has the job of finding a tremendous amount of money for the conduct of the War, and the budget he announced on July 23, 1940 was the most drastic ever presented to the British people. He called on the "little man" to carry most of the War burden, since, he said, there were not enough "big men" left to carry it.

Born in London in 1881, Sir Kingsley Wood is the son of the late Reverend Arthur Wood, a Wesleyan minister. From the fact that his school is nowhere recorded it may be assumed that he went to one of the lesser-known secondary schools. He studied to be a lawyer, passed his final law examination with honors and was admitted to practice in 1903. After a time he became head of Kingsley Wood, Williams and Murphy, a London law firm. Then in 1911, at the age of 30, Wood entered the outer fringes of politics as a Conservative member of the London County Council, the body which controls the municipal life of Greater London. He was elected by the working-class district of Woolwich and he continued to represent it until 1918.

Wood soon showed himself a very able committee member, and he took special interest in questions of building, insurance, the Old Age Pension and the fixing of adequate allowances for women legally separated from their husbands. He was chairman of the London Insurance Committee from 1916 to 1919 (acting as its president in 1920, 1922 and 1923); in 1917 he presented a petition to the Food Controller that all bread should be sold by weight; and in 1918 he put forward a much more important petition to the Prime Minister advocating the establishment of a Ministry of Health. Lloyd George, then Premier, adopted the suggestion, abolishing the old Local Government Board and merging its functions into the new and wider Ministry. In this same year a knighthood was conferred on Wood, and he was elected to Parliament as a Conservative for West Woolwich.

Lloyd George appointed the new knight and member to be Parliamentary Private Secretary to the Ministry he had virtually founded. In 1922 the Carlton Club meeting of the Conservatives decided to break up the coalition government of which Lloyd George was Premier, and installed Bonar Law in his place; Wood remained loyal to Lloyd George, and accepted no office under Bonar Law. But when the first short-lived Labor administration was replaced by a Conservative one under Stanley Baldwin in November 1924, Sir Kingsley was again made Parliamentary Secretary to the Ministry of Health. In 1928 he was nominated to the Privy Council (the King's advisory council). He remained in the Ministry of Health until Labor came in again in June 1929, and in that year's elections he held his seat by only a narrow margin.

Until the constitution of the National Government in 1931 Wood remained in opposition. Then he was appointed Parliamentary Secretary to the Board of Education, and, soon after the 1931 general election, Postmaster General. At the Post Office Wood gave the first real indication of his abilities, not only modernizing its administration but making it a paying service. He also introduced cheap night

telephone service for long-distance telephone calls (familiarily known as the "Kingsley bobsworth"), a much-appreciated service not withdrawn until the War made it necessary; and as the Minister ultimately responsible to Parliament for broadcasting, he managed to work in harmony with the director general of the British Broadcasting Corporation of that day, the grim and dictatorial Sir John Reith (see sketch this issue).

In addition to this Ministerial post Sir Kingsley was also appointed, in 1931, chairman of the National Government Propaganda Committee. He had already, in the previous few years, assisted Neville Chamberlain in the Labor government's downfall; and he now proved an excellent propagandist and publicist. He continued at the Post Office until after the general election of 1935, when Stanley Baldwin made him Minister of Health. He was the first post office chief ever to be made a Cabinet Minister. Then early in 1938 he was transferred to the Air Ministry, and there he worked on the pressing job of aerial rearmament, replacing the brusque and inaccessible Lord Swinton. His own success at the job later seemed dubious to many critics of Chamberlain's government, however.

After the Munich pact in September 1938 it was Wood who is supposed to have given Chamberlain the idea of "going to the country" and asking for its votes while the mood of the day was still relief that war had been avoided. It was therefore a surprise when, soon after the outbreak of World War II, Wood was replaced at the Air Ministry by Sir Samuel Hoare (see sketch this issue). In Churchill's National Government of May 1940, however, he was placed in charge of the nation's finances as Chancellor of the Exchequer.

Sir Kingsley Wood lives at Tunbridge Wells, a pleasant spa one hour south of London. He is married to Agnes Fawcett. Plump, five-feet-five inches tall, with sparse gray hair and a "spiky little mustache," almost cherubically smiling through his horn-rimmed spectacles, Wood is popular as a departmental chief and knows how to get the best out of his subordinates. He is no orator, but can deliver a very capable speech, reading it from a manuscript. He has written many legal works on insurance and housing.

WOOLLEY, EDGAR MONTILLION
*See Woolley, M.***WOOLLEY, MONTY** 1888- Actor; director

Address: Astor Hotel, Broadway and 44th St, New York City

Monty Woolley, who currently plays the part of Sheridan Whiteside in Kaufman and Hart's (see sketch this issue) *The Man Who Came to Dinner*, is famous not only as an actor and director but as the owner of the finest beard on Broadway and one of its loudest voices. "For years," says Lucius Beebe (see sketch this issue), "there have been divided schools of thought over which of these attributes constitutes his greatest claim to the attention of posterity. Adherents of the roaring school point out that Woolley was famous long before he became the Barbarossa of Broadway, while whisker enthusiasts say that anybody can make loud lion noises, but that the beard is of a unique magnificence, a museum piece in its own right."

Woolley values his beard at about \$8,000. A few years ago Paramount Pictures asked if he would shave it off to play a part they had in mind for him. Woolley said he would part with his white plume for a bonus of \$2,000 down plus \$500 a week while it was growing back, a process which certainly would take three months. Paramount hired another actor. But Woolley wore it to great advantage as the ballet impresario in *On Your Toes* and as the visiting lecturer counterpart of Alexander Woolcott in *The Man Who Came to Dinner*.

The Man Who Came to Dinner is only Woolley's third appearance as an actor on the professional stage, but he has been in, of and about the drama ever since he went to Yale in 1907. He was born Edgar Montillion Woolley in the summer of 1888 in the old Hotel Bristol in New York City which his father owned, together with a number of other prosperous hotels. Except when he was away at school or traveling abroad with his parents, Monty spent all of his formative years in or near one of his father's hotels. In them or near them he met Lillian Russell, Victor Herbert and even Sarah Bernhardt.

Woolley attended the Mackenzie School, in Dobbs Ferry, New York until he went to Yale, where "he became the ringleader of a clique which dabbled in dramatics and profligacy." Every year he appeared in the Yale Dramatic Association's productions

and was its president in his last year. At Yale he roomed with the late Thomas Beer and was friends with Cole Porter (see sketch this issue) and Gerald Murphy and others whom he was to know the rest of his life.

Woolley stayed at Yale to get his master's degree and then went to Harvard, intending to take a Ph. D. At Harvard he studied under George Lyman Kittredge, famous for his teaching of Shakespeare and his crisp, snowy-white beard. He left, however, before he earned his Ph. D., for Professor Kittredge had advised him to follow his bent for practical stage work.

He returned to Yale and for the next three years was an instructor of English there, as well as coach for the undergraduate dramatic productions. During the War he received a lieutenant's commission and spent eight uneventful months in France in 1918. When the Armistice came, he got his old job back at Yale and stayed there, "except for occasional ventures in New York," until 1927. These ventures included a couple of temporary jobs as stage manager for New York productions and one as assistant director and cutter in the old Famous Players-Lasky studio in Astoria.

At Yale Woolley was getting a small salary from the English department; he was getting an allowance from his father; and the drama in New Haven "had a little renaissance." Three boys who studied under him are still in the theatre: Dwight Deere Wiman, the producer; Jock Whitney, the perennial "angel"; and Jack Wilson, Noel Coward's manager. Woolley was happy there and intended to stay. But the late Edward Harkness presented Yale with a million dollars to be used for an experimental theatre, and Professor George Pierce Baker, who was conducting his "47 Workshop" at Harvard, was asked to direct the enterprise, despite the demonstrations on the campus against this choice. Woolley resigned and came to New York.

After he left Yale, "three important things happened": his father died, leaving him a small but comfortable income; he raised his famous beard at Saratoga Springs; and he "made a solid success of his first professional job of directing"—*Fifty Million Frenchmen*. Ray Goetz, the producer, engaged him overnight on the recommendation of Cole Porter. He directed, just as successfully, the *Second Little Show and Jubilee*. He now tells pupils of the drama: "Scorn not the lowly musical comedy as a training ground for your talents."

Then he went to Hollywood where nothing much, except a few small parts, happened until Wiman phoned him one day and asked him to return to New York to act. Woolley says: "Everybody said for me not to think of it, but a job on Broadway is worth millions in promises in Sunset Boulevard. That's one of the troubles with Hollywood anyhow. You may get an assignment at a simply staggering figure or you may get nothing. There's no simple

G. Maillard Kesslère

MONTY WOOLLEY

substantial middle ground of \$200-a-week parts."

Woolley took the part of ballet impresario in *On Your Toes* and enjoyed doing it. He says he became a prima donna "ham all over" and used to shout to Mr. Wiman: "If you cut out that line of mine I'm going to cry. That's what I'll do." Then he appeared as the Prince of Wales in the short-lived musical romance about Gilbert and Sullivan, *Knights of Song*, and finally landed as Sheridan Whiteside in *The Man Who Came to Dinner*, where as the famous lecturer who goes to a dinner party in an Ohio town, gets hurt and has to stay on in the house for weeks, he commandeers the house, is crochety, mischief-making, selfish—and "excellent in the fattest of parts."

Woolley became well-known through his playing of Sheridan Whiteside, but in no way did this part raise him from obscurity. For many years he has been "a member in good standing of the international set: among the sparkplugs of café society the name of dear Monty is as well respected as those of dear Noel, dear Elsa and dear Cole." He basks at Antibes and the Lido; he's gone on a world cruise, reading Booth Tarkington "Little Orvie" stories to Moss Hart and Cole Porter; he holds levees in his hotel room at five in the afternoon to which the important come.

His life is made simple, however, by the fact that he has no possessive instinct at all. All he owns is an old Cadillac touring car and the usual amount of clothing—nothing else. He's never had an apartment and has always lived in hotels. His present room at the Astor "is usually a horrid welter of letters, linen and empty bottles. All he wants is a bed, a bathroom and a tele-

phone." Once when his friends complained about his hotel room's lack of individuality, he stopped at an art store and bought three identical prints to decorate it.

WOOLTON, FREDERICK JAMES MARQUIS, 1ST BARON (wōol'tūn) Aug 24, 1883- British Minister of Food

Address: Hillfoot House, Woolton, Liverpool, England

For 20 years Frederick Marquis was known (especially in the North of England) as the incarnation of ruthless efficiency—director and more recently chairman of the big chain of provincial general stores called Lewis's, Limited. He would appoint men and women to executive positions at excellent salaries, but if they didn't come up to expectations their commercial lives in his concern were short. Now in 1940 this same Mr. Marquis, later Lord Woolton, is controller of a nation's food, manager of the "biggest shop the world has ever seen." Thousands of people carry out the work of the Ministry, but Woolton's job is to see to it that the people of Britain have enough food kept in reserve in different parts of the country so "that in the worst days we can imagine we shall have enough."

Frederick James Marquis was born in Manchester, England, the only child of Thomas Robert and Margaret (Ormerod) Marquis. He attended the Manchester Grammar School and continued his education at the University of Manchester, where he took B. S. and M. A. degrees and was awarded a research fellowship in economics. It was 1908 when he migrated to the rival city of Liverpool, 40 miles away, as warden of the University Settlement and of the David Lewis Club. His work there was to guide and supervise the practical side of the curriculum of students of the University School of Social Science, and it involved living in a slum. It was pure social work, at a moderate salary.

In 1912 Marquis married Maud Mathews of Manchester. (The couple now have a son and a daughter, the heir's name being Roger David Marquis.)

Then came the First World War. Marquis was judged unfit to fight, but got a job at the War Office and later became secretary to the Leather Control Board and controller of the Civilian Boots Department. He mastered the administrative side of this trade so well that he spent the next two years, from 1918 to 1920, reorganizing the Boot Manufacturers' Federation at its own invitation.

Marquis's plunge into big business hadn't really come yet, though. The firm of Lewis's, Limited, which has a large store in Liverpool and others in Manchester and

LORD WOOLTON

Birmingham, is controlled by a family named Cohen. The late Alderman L. Cohen, chairman of Lewis's at the end of the War, had his eye on the Settlement warden, and, recognizing ability even if it wasn't founded on commercial experience, asked Marquis to join his board of directors. "It is the first time," he said, "I have asked anyone who is not of my faith and family to join the board." And Marquis did—at first as staff controller.

Lewis's stores (not to be confused with the well-known London house of John Lewis) are not exactly for the carriage trade, but aim at producing good, cheap merchandise for customers of very moderate incomes. Nevertheless Marquis, having gone into business himself from academic circles, decided to recruit an administrative staff from the university. A number of young men and women who weren't attracted to teaching, journalism or law therefore began trying their luck in retail trade. Some only considered Lewis's as a stopgap; others fell by the wayside; but others did well, and even reached the directorial board.

Marquis himself became director of merchandising and in 1928 joint managing director. By this time he was the complete businessman, and soon he added directorships of other large Liverpool concerns such as the Bon Marché store, Martin's Bank, the Royal Insurance Company, the Liverpool, London and Globe Insurance Company, the Westpool Investment Trust, and S. Reece and Sons, the largest restaurateurs in the city.

He didn't lose his early interests, however. Marquis remained honorary secretary of the University Settlement and chairman of the David Lewis Club, became a governor of his old school, and served on a Board

of Education committee for the reconstitution of the Royal College of Art as a national training school for art masters. He acted as chairman of the Liverpool Medical Research Council, became a member of the University Council and served the University as deputy treasurer from 1931 to 1936, after which he became treasurer.

Meanwhile the powers in London, 200 miles away, became aware of his administrative ability. From 1930 to 1933 he was a member of the Overseas Trade Development Council; from 1930 to 1934 a member of the advisory council of the Board of Trade; and from 1933 a member of the advisory council to the Post Office. He was president of the Incorporated Association of Retail Distributors from 1930 to 1933, and became its chairman in 1934. In 1935 he was knighted and a year later advanced to the chairmanship of Lewis's, Limited, and all its associated companies.

Marquis was put in charge of army clothing at the outbreak of World War II, and shortly afterwards was raised to the peerage and asked by Prime Minister Chamberlain to take over food control. He chose his title from the pleasant outer suburb of Liverpool, where he has his home. Churchill (see sketch this issue) is felt to have done well in retaining him as Food Minister, for he combines a faculty for large-scale planning with an appreciation of the ordinary consumer's needs. Much of his success at Lewis's has been due to the talent for seeing into the housewife's mind which now enables him to buy and market on favorable terms for the housewives of all England; he knows something of the domestic problems that poor people have to face because of his experience in working-class neighborhoods in the cotton towns of Lancashire and the slums of Liverpool; and he has given evidence of the broadest views on commercial policy in general. Not even in Labor's ranks has there been adverse criticism of the appointment of Lord Woolton, sociologist and shopkeeper, philosopher and financier.

WRIGHT, RICHARD Sept 4, 1908- Author

Address: b. c/o Harper and Bros, 49 E 33rd St, New York City

Richard Wright is a brilliant young Negro writer whose collection of short stories, *Uncle Tom's Children*, won a \$500-prize competition in 1938. *Native Son*, the March 1940 selection of the Book-of-the-Month Club, is his first full-length novel. It is a powerful, intensely gripping story of a Negro boy driven to crime by reason of a Chicago tenement environment and the pressure of racial injustice. *Native Son* has been called the most striking novel to appear since *The Grapes of Wrath*. It has been acclaimed by critics as the most honest and important work yet written about the American Negro; daring because its author, himself a Negro, has presented in frank terms the savage brutality of a black boy "gone bad." Mr. Wright has a good reportorial style: simple, direct, at times staccato, on occasion rising to heights of poetic intensity.

Though compared to Dostoevsky because it is a study of crime and punishment, the story more closely parallels, in pattern and theme, Dreiser's *An American Tragedy*. Dreiser's white boy and Wright's black boy are both social misfits; both are victims of the adolescent lure of sex and money; both commit crime not deliberately but accidentally; both are condemned to the electric chair. And the conclusion is the same: that environment was responsible for their crimes—though in the case of Wright's character there is also the frustrating, neurosis-producing effect of racial suppression.

Bigger Thomas, who is 20 years old, lives with his mother, sister and younger brother in one rat-infested room, for which they pay \$8, in Chicago's South Side Black Belt. He has been in a reform school; he and his gang commit petty neighborhood thieving; he is surly, fearful and a bully. He and his friend Gus like to imagine what they'd do if they were white. "If you

RICHARD WRIGHT

wasn't black and if you had some money and if they'd let you go to that aviation school, you could fly a plane,' Gus said. For a moment Bigger contemplated all the ifs Gus had mentioned; then both boys broke into hard laughter."

But Bigger gets a job as chauffeur to a millionaire philanthropist, Dalton, who makes his money in Negro tenement real estate. His daughter, Mary, is a radical; she asks Bigger to drive her that evening to a meeting with her Communist friend, Jan. When they try to treat him as an equal—shake hands with him, make him eat with them—Bigger is puzzled, scared, resentful. They all have drinks; Mary, very intoxicated, is brought, half-carried, to her room at two in the morning by Bigger. Her mother, who is blind, comes into the bedroom and calls to the daughter. Crazed by the fear that Mary will answer and betray his presence, Bigger puts a pillow over the girl's face, and without meaning to, smothers her. Frantic then, he burns her body in the furnace, hoping to leave no trace of the crime, and tries to implicate Jan, the Communist: dimly he knows that the Reds are also an object of mob hatred. When his Negro mistress, Bessie, learns of his crime, he kills her to protect himself, and throws her body down the air shaft of an old building. It is not long, however, before the death of Mary Dalton is traced to him (to the authorities, the Negro girl's death was negligible, as he knew it would be) and Bigger is caught while trying to escape over the tenement housetops.

The bloodshed, the horror, the tension—the swiftly paced melodramatic sequence of events—are at this point over. The latter part of the book is about Bigger's trial and defense: an exposition of an individual tragedy that symbolizes the tragedy of a

WRIGHT, RICHARD—*Continued*

race. It is Jan, the Communist, who calls on Bigger in his cell (and this time Bigger knows him for a friend) and arranges to have Max, a radical lawyer, defend him. Max's plea for Bigger, which the author bases to some extent on the arguments used by Clarence Darrow in the Loeb-Leopold case, follows the social premise that the hate of the whites toward Bigger is a subconscious feeling of guilt: by keeping him within rigid and sordid limits, they themselves actually were responsible for the murder of Mary Dalton. Bigger killed in order to keep from being killed, i. e., to preserve his integrity as a person, an individual. Max's plea becomes a defense of the twelve million Negroes in America—a nation without social, economic or property rights.

Naturally, no plea can save Bigger. He is sentenced to die. As he says: "Now I come to think of it, it seems like something that just had to be." And Bigger, searching for some meaning in his act, some self-justification, tells Max: "When a man kills, it's for something. . . I didn't know I was really alive in this world until I felt things hard enough to kill for 'em." And, for the first time in his life, because he had done something the white world really noticed, he felt a sense of freedom and power. He had always wanted, in his confused, groping way, to belong, to feel an equality with other men. In prison he at last comes to know that Max, and Jan, accept him on man-to-man terms. And he can accept them. Bigger's last words, implicit with his self-realization and self-redemption, are: "Tell Mister. . . Tell Jan hello."

Richard Wright was born September 4, 1908, on a plantation 25 miles from Natchez, Mississippi; his father, Nathan Wright, was a mill-worker and his mother, Ellen Wright, a country school teacher. His family was continually on the move, so his education was pretty much neglected. When his mother was stricken with paralysis during the First World War, he was sent to an uncle's house to live. He says he did so much fighting, lying and school-cutting that he was sent back to his grandmother, who predicted that he would end on the gallows. He was put in a Seventh Day Adventist school taught by his aunt; when he was beaten he got a razor and said he'd cut the next person who beat him.

At 15 he left home, went to Memphis and got a job as porter and messenger. He read a newspaper one day which criticized H. L. Mencken, and got interested in Mencken, thinking anybody the South didn't like must be all right. Since the Negro libraries in Memphis had few books, he had a white friend borrow books for him at the public library. He read all the books mentioned in Mencken's *Book of Prefaces*, and himself got the urge to write. For a

few years he bummed his way all over the country, working at any kind of job from ditch-digging to clerking in a post office. He drifted to Chicago, where he had heard Negroes stood a better chance of getting jobs. He was a clerk for awhile; and in 1933 had a taste of politics. "I became an assistant precinct captain in the Republican primary election," he said. "I was promised a job. I didn't get it. Next time I became an assistant precinct captain for the Democrats and was promised a job, which I didn't get. So then I became a Red. Now I'm what the papers refer to as a card-carrying Communist."

In 1935 Wright got on the Federal Writers' Project in Chicago. By this time he had sold poetry, articles and some stories to little magazines, and was working on his first book, *Uncle Tom's Children*. He came to New York in 1937, lived from hand to mouth for some months, then got on the Writers' Project. He wrote the essay on Harlem in *New York Panorama*. He also did some work on the *Daily Worker* (he says he never got orders from Stalin to cover anything) and became a contributing editor of the *New Masses*. His book of four long short stories, *Uncle Tom's Children*, part of which had originally appeared in the *New Caravan*, was a success. The stories won high critical praise; what one critic had to say of them is characteristic: "*Uncle Tom's Children* has its full share of violence and brutality; violent deaths occur in three stories and the mob goes to work in all four. Violence has long been an important element in fiction about Negroes, just as it is in their life. But where Julia Peterkin in her pastorals and Roark Bradford in his levee farces show violence to be the reaction of primitives unadjusted to modern civilization, Richard Wright shows it as the way in which civilization keeps the Negro in his place. And he knows what he is writing about."

In 1939 Wright got a Guggenheim Fellowship, which enabled him to quit the Project and complete his novel, *Native Son*. The material for this, he says, was based partly on boys he met in a Chicago rehabilitation school for Negro "Dead End" kids, and partly on the Robert Nixon case. Nixon was a young Negro who died in the electric chair in Chicago in August 1938 for killing a white woman with a brick.

Wright likes to read a lot and also likes the movies, which are a form of relaxation for him from a great deal of writing. But he doesn't exactly approve of Hollywood. He realizes that there are a lot of taboos in writing for pictures, so far as presenting Negroes in them is concerned. He wouldn't go to Hollywood if he had to write around those taboos, he says. Recently he made a trip back to Chicago, where, with the first money from his *Native Son*, he bought a home for his mother. After living for many months in Mexico, in November 1940 he was back in the United States completing a new

novel dealing with the plight of Negro female servants in Manhattan and Brooklyn.

 Who's Who in America (Addenda)

WRIGHT, RUSSEL Apr 3, 1905- Industrial designer

Address: 4 E 39th St, New York City

Russel Wright stands high among industrial designers who have put the stamp of their creativeness on the modern American home, introducing into it accessories and furniture of functional design: that is, objects designed specifically for the purpose they are to serve. He is one of the youngest of industrial designers of note.

Mr. Wright is known for taking prosaic, commonplace materials and transforming them into highly decorative and brilliant designs. He was a pioneer in bringing aluminum out of the kitchen; spun aluminum accessories and aluminum "from stove to table" pieces are spectacular successes. He has lifted wood from the kitchen to give it a place in the dining room in a variety of decorative forms such as cheese boards, salad bowls and trays. He has done wonders with copper, transforming it into original modern decorative pieces, and in lamps he has used natural fibre, such as bamboo, rattan and cane, with talent and freshness.

"Blond" maple, now a familiar term in furniture vernacular, owes much of its popularity, as do other light-colored woods, to Russel Wright, for he was one of the first designers to use a bleached maple finish for commercial modern furniture. The imprint of his designing genius has been felt in many fields—lamps, furniture, wall paper, fabrics, radio, metalware and even machines for manufacturers have all been within the range of his work.

Russel Wright was born April 3, 1905 in Lebanon, Ohio, where his father was county judge. He traces his ancestry back to two signers of the Declaration of Independence, Whipple and Morris. As a boy, Wright showed a feeling for art, and his Saturday afternoons were spent at the Cincinnati Art Academy. During the First World War he worked after school hours in an ammunition factory to earn money for courses at the Academy, and studied painting there with Frank Duveneck.

When he was 16 years old he came to New York for a year at the Art Students League, studying under Kenneth Hayes Miller and Leo Lentelli. As a climax to his year at the school he won both the first and second

RUSSEL WRIGHT

Tiffany Prizes in a student competition for the best war memorial.

Because Princeton and a legal career were family traditions, the young artist found himself enrolled at Princeton when he was 17. He distinguished himself at the college as director of the campus playhouse and for his Triangle Show sets. His outstanding work on the show sets led to an offer to go to Paris with Norman Bel Geddes (see sketch this issue), and Wright cut short his college career for theatrical work.

There followed a short span as a theatrical designer during which Mr. Wright worked with Lee Simonson, Robert Edmond Jones and Rouben Mamoulian. He designed sets for the Theatre Guild, the Neighborhood Playhouse, the Group Theatre and for various New York and out-of-town productions.

At this period the ambitious young designer started a workshop in which theatrical properties were produced. Later on he added custom-made furniture and decorative accessories to his work. As local decorators spread the word and the originality of Wright's designs became known, many of New York's department stores became customers. Next the informal serving accessories of spun aluminum and wood for which Wright became so popular were added, and as the business grew, stock articles were produced to fill reorders. It was inevitable that a small factory would be set up when Mr. Wright began getting orders from all over the country and achieving a national distribution for his products.

Because of the success and reputation of his own products Mr. Wright received commissions from manufacturers to design their merchandise. Thus within a comparatively short time he was designing rugs, wall-papers, radios, pianos, furniture, pottery, displays, showrooms and exhibits. When

WRIGHT, RUSSEL—*Continued*

he was little over 30 he was already one of America's leading industrial designers.

Russel Wright's work all has a streamlined, modern look. He is frankly a modernist, and functional design is his forte. He has lectured and written many articles on modern design. Economy, he says, can become an esthetic principle. In an article pointing out the incongruity of furniture and accessories designed for use in another age in the modern home, he wrote that absolute beauty in home furnishings depends on its adaptability to the demands of modern life. He advocates rooms "with muscles and bones that do things rather than imitate things they are not." Thus, he explained, while a canopied bed may have been a fine thing during the period it was designed to keep out drafts in early American homes, it has little excuse now in a modern, centrally heated home. It does not represent functional design.

Mr. Wright has exhibited in important museums of large cities in the United States, including the Metropolitan Museum of Art. His workshop is known as the Russel Wright Associates, and he is helped in his business by his wife, who works with him.

His newest venture is the formation of an "American-Way" merchandising project, a group effort among industrial designers, artists, and manufacturers and craftsmen to stimulate modern design of inherently American character. "American-Way" gave its first presentation of its merchandise at the Merchandise Mart in Chicago from August 1 to August 14, 1940.

Who's Who in American Art

WYLIE, MAX May 12, 1904- Radio director; writer

Address: 485 Madison Ave, New York City

Buyer of antique furniture for Macy's and professor at a university in Lahore, India have been only two of the occupations that Max Wylie has managed to cram into a busy life. He was born at Beverly, Massachusetts, the second son of the Rev. Edmund M. and Edna (Edwards) Wylie. As Edna Edwards, his mother was an author of best sellers during the early 1900's. Two of her best-known books were *The Blue Valley Feud* and *The Ward of the Sewing Circle*, the latter still in print and highly relished by lovers of early tear-jerkers. Wylie's younger brother is Philip Wylie, popular and prolific novelist, short story writer and motion picture scenarist. Another brother, Ted, was killed in Warsaw, Poland in 1936. He had been junior editor at Farrar and Rinehart's and

MAX WYLIE

had published one novel at the age of 20—*Altogether Now*. All three brothers have one curious thing in common—all were born on May 12 and every year therefore cheated of two additional ice-cream-and-cake celebrations. On their maternal side, the Wylies are direct descendants of the fierce New England preacher, Jonathan Edwards (their tenth great-grandfather, to be exact). On their father's side they are descendants of Aaron Burr.

Max Wylie attended grammar and high schools in Ohio and New Jersey. He received his B. A. from Hamilton College in 1928, then did graduate work at the University of Pennsylvania. The next few years were spent in a succession of occupations. For one year he was a buyer of antique furniture for Macy's Department Store in New York and for the next two, (1929-31) was professor of philosophy and history of the English novel at Punjab University, Lahore, British India. That stay furnished the background for his first novel *Hindu Heaven* (1933), a book about Englishmen and missionaries in India. It has been called an "engrossing narrative of fanaticism, racial discord and kindred ailments," in style derivative of Hemingway's he-man sentimentality and "marred by a terrible straining after effect."

Wylie became an instructor of English at the University of Pennsylvania after he returned from India in 1931. Evidently one year of academic life was enough for the restless young man for the next year he joined *Time* as a staff writer. After a year he flitted to the firm of Cape and Ballou, publishers. In 1933 he seems to have found his real occupation, for he joined the Columbia Broadcasting System, and has been there ever since. The same year he married Isobel Winans Lamb; they have one daughter, Pam-

ela. For one year he was a producer of radio programs, then became director of script and continuity. He has brought more new writers to the radio field than any other editor and has himself produced and written many hundreds of shows of every type "except gag comedy" for which he admits he "has no talent." For three years he has lectured at New York University in the Adult Education Department on radio script writing.

With all these duties he still has found time to write *Radio Writing* (1939), a "comprehensive textbook of the entire field of writing for the radio industry." Mr. Wylie, a realist with deep respect for the radio medium, does not think that radio writing is a special art and he is suspicious of theories about "radio technique." He insists that to write a "good script or continuity demands imagination, dramatic sense, a gift for dialogue, a sense of timing, and a knowledge of the radio's particular techniques, especially sound effects."

After 16 months of "lost week ends and lonely nights" spent in the examination of some 6,000 radio scripts, he has selected 32 for *Best Broadcasts of 1938-39*, an anthology of representative programs. "The experience," he admits, "was a considerable chore because it was necessary to eat so much stale popcorn before finding a prize." The volume is probably the first of a series of yearly books on the order of the Burns Mantle theatre books. It is valuable as a record of the most impermanent of the arts—the work that "dies with the program sign-off."

Lewis Gannett, the critic, feels that this collection may "some day be as valuable, and as revealing, as a collection of early Sears Roebuck catalogues is today."

YBARRA, THOMAS RUSSELL (ē-bā'-rā) Oct 8, 1880- Ex-foreign correspondent; journalist; traveler

Address: c/o Dodd Mead & Co, 449 Fourth Ave, New York City

When Nazi penetration into South America at last awakened the United States to

the fact that she would do well to revamp her attitude toward the republics to the South, *America Faces South* (1939), by T. R. Ybarra, veteran foreign correspondent and authority on the Latin-American question, made a very timely appearance.

Thomas Russell Ybarra was born October 8, 1880, in Boston, Massachusetts. His father was General Alejandro Ybarra, of Caracas, Venezuela, several times Governor of six of the states comprising the Republic of Venezuela, and Minister of War and Foreign Affairs; and his mother, Ellen Taylor Russell, daughter of Judge Thomas Russell of Boston. His great-grandfather on his mother's side was "Father" Taylor, long-famous New England preacher to the sailors in the flush days of windjammers.

Young Ybarra's father was, for a number of years, in business in the States, and Thomas was sent first to primary and grammar schools in Boston and then to Roxbury and Cambridge Latin schools. He spent three years at Harvard, was graduated with the Class of 1905, and studied in Venezuela and on the Continent.

After college he came to New York and began to bombard various magazines and dailies with samples of his prose and verse. Late in 1905 he joined the staff of the *New York Times*, where he began as a reporter and eventually became Sunday editor. In 1908 he published a book of jolly ballads called *Davy Jones's Yarns and Other Salted Songs*.

The *Times*, in 1924, made him correspondent in Berlin—just when the mark was taking its astronomical plunge. He was transferred 18 months later to London, where he remained about a year and a half; and in 1926 was appointed traveling European correspondent. Between 1929 and 1931 his three biographies—of Bolivar, Cervantes and Von Hindenberg—had made their way to the reading public. In 1930 he married Penelope O'Leary of New York City.

He left the *Times* in order to give more attention to writing for magazines, and for six years (1931-37) he was European editor of *Collier's*, doing, at the same time, considerable free-lance work for the American press. Within his circuit came almost every Continental country. He traveled also in North Africa, Egypt and Asiatic Turkey; toured South America for *Collier's* in 1933 and 1934; and made a return visit to Montevideo at the time of the Pan-American Conference. The log of his 1938 to 1939 tour of South and Central America appeared, for the most part, in the *New York Times* and became the basis of his *America Faces South*.

It is Mr. Ybarra's North American experience as a trained journalist, plus his South American heritage, that makes *America Faces South* of outstanding value. If his book seems something of a "hodge-podge" (his own term) it is justifiably so, for the one thing he stresses is that these South American countries are utterly dissimilar. They have no common center of culture, no unified formula, social or political.

THOMAS R. YBARRA

He gives us the history of these countries, and a glance at Central America and Mexico as well. He apprises Nazi, Fascist and Japanese penetration in various localities. The whole book is framed by a workman-like presentation of the Monroe Doctrine and the Good Neighbor Policy.

YONAI, MITSUMASA Mar 1880- (yô-nî mî-tsôo-mă-să) Former Premier of Japan

Address: Tokyo, Japan

The Japanese Emperor's appointment of Admiral Mitsumasa Yonai on January 14, 1940 as Premier to form a new Cabinet came as a surprise to Japanese and international circles, for the Admiral was little known in international politics and was not among the strong men considered as candidates. Premier Yonai succeeded Nobuyuki Abe, whose Cabinet was the third to fall in 12 months.

Premier Yonai's first speech before the Diet was a huge success. "He said nothing, and said it briefly, elegantly, forcefully." But soon he found himself faced with the problem of a food shortage in Japan, with a scarcity of labor, with a housing shortage, with the problem of American armament expansion, which was a matter of "grave concern" to him. He wasn't upset. "He was born to debts, weaned on trouble, schooled in adversity."

He was born in Iwateken in 1880, the son of a Samurai—"one of those ferocious retainer-warriors who wore two swords sharp enough to shave with, who scorned money because their liege lords supplied them with houses, clothes, food, concubines, whatever else they needed." But a few years before Mitsumasa was born Japan suddenly was turned from a feudal to a capitalist state. The elder Yonai, who had been given an inadequate political job, cracked up and deserted his family when Mitsumasa was six. His mother then worked as a seamstress and sewing teacher.

While Mitsumasa was in school, he got a job copying documents and gave his pay envelope to his mother each week, unopened. He went on to the Naval Academy where he was a "popular mediocrity": he finished at the center of his class in 1901—sixtieth among 125 cadets. At 21 he wrote a self portrait: "My strongest characteristic: gluttony—I never get enough to eat. My credo: self respect—I believe in myself. My weak points: none."

Yonai went up through the Navy "pushing himself ahead with alternate fits of rebellion and unctuousness, in alternate shifts of deck and desk duty. He lost the hearing of his

Times—Wide World

MITSUMASA YONAI

left ear in target practice, and quickly learned the political uses of deafness." He was commander of the Sasebo Naval Station from 1933 to 1934; commander in chief of the Second Squadron in 1934 and 1935; and commander in chief of the Imperial Japanese Fleet in 1936. Entering the government as Minister of the Navy in the Cabinet of Hayashi in February 1937, he served as Minister in the Navy in the two succeeding Cabinets, Konoye's and Hiranuma's.

Yonai is said to be one of the most popular and best informed men in the Japanese Navy. Nearly six feet tall, weighing 188 pounds, "with airplane shoulders and a trimotor voice," big of hands and feet and manner, with a fair complexion, he has been nicknamed "The White Elephant," with none of the Occidental connotations of the phrase. He is amiable and friendly and gives an appearance of strength and wisdom.

Yonai is a liberal, an opponent of military dictatorship and an advocate of closer relations with the United States and Britain. As Minister of the Navy in the summer of 1939 he stood firmly against the proposed military alliance with Germany. "The Japanese Navy," he said, "belongs to the Emperor. It is not for hire by Hitler, or anyone else."

It was probably because of his liberal policies that Yonai and his entire Cabinet were forced out of the Premiership in July 1940. Army circles by then had come to the conclusion that it was the urgent task of Japan to establish a new national political structure to carry out rearmament effectively, tighten State control of economy and renovate foreign policy with the construction of a new order in east Asia as the ultimate object. Yonai was not the man to do these, obviously, and so he either stepped or was pushed down, to be suc-

ceeded by Prince Konoye (see sketch this issue).

YOUNG, ART Jan 14, 1866- Cartoonist; author

Address: Bethel, Connecticut

The drawings of Arthur Henry Young (to give his full name, although he never uses it) have been for some 40 years "among both the least well advertised and the most distinguished features of American satiric art." He was born in 1866 on a farm near Orangeville, Stephenson County, Illinois, as his father was also, in 1838, six years after the Black Hawk War. The town was only 10 miles from Monroe, Wisconsin, and it was there the prosperous family repaired to run the general store. Art went to the little red schoolhouse for a while and then clerked in his father's store. As a boy he had made caricatures of all the town's leading characters and knew from the start that his life was to be devoted to art.

At 18, in 1884, he went to Chicago and studied at the Academy of Design. He found it easy to support himself by selling cartoons to newspapers and periodicals. The next year he went to New York and enrolled at the Art Students League, then he went to Paris, where for six months he studied painting at the Académie Julian and received honorable mention in a prize contest. This was the extent of his foreign study, for he became gravely ill and was taken home by his father. He married Elizabeth North of Monroe in 1885 and they had two sons. For some eight years they lived amicably, then separated: "I am an artist," he said, "and the duties and courtesies of married life are too much for me."

He was the first man in the world to draw a daily political cartoon. This he did for the Chicago *Inter-Ocean*. He was optimistic and conventional—cheerfully drawing to order cartoons on any subject. In his middle 30's he went to New York and began to read and study, and listen to debates at Cooper Union. Slowly he found himself a passionate hater of cruelty and falsehood in government and business. His art took on new power, became striking in its simplicity. To eliminate non-essentials became his constant striving. Among his

Harry Godfrey

ART YOUNG

most famous cartoons from *The Masses* (of which for a while he was coeditor) is the picture of a wife and husband captioned: "There you go," she says, "you're tired. Here I be a-standin' over a hot stove all day and you workin' in a nice cool sewer." Another was a picture of two slum children looking up at the sky: "Chee, Annie, look at the stars, thick as bedbugs!" In each he introduced humor, a sharp social protest and infinite love for his characters.

One reason he feels that he never made much money is that his humor always accompanied "savage assaults on every kind of organized meanness, cruelty, hypocrisy." During the years he has been active in campaigns for woman suffrage, labor organization, abolition of child labor and race discrimination. Always a crusader, he was arrested as a pacifist during the World War. The Associated Press once accused him of libel. His political leanings were socialistic and he ran for office twice. Now in his '70s he lives quietly in an old farmhouse in Bethel where he maintains a little Art Young gallery to which he welcomes visitors. In 1939 he published a genial autobiography, *Art Young: His Life and Times*.

He is described thus by his good friend Max Eastman: "He looks a little like a cigar-end-chewing Schopenhauer or Henrik Ibsen, notwithstanding his kind mouth and mild blue eyes, and his ability to look awfully funny when he gives an imitation of a Southern Congressman making a speech on the tariff. He looks that way when he greets you, but he will thaw out after a while and begin to look more like P. T. Barnum, his predecessor as the most illustrious citizen of Bethel."

Art Young has written *Trees at Night* (1927); *On My Way* (1928) (autobiographical); *Art Young's Inferno* (1933); and *The*

Best of Art Young (1936). Two other books which are parodies of Gustave Doré and Dante are out of print.

YOUNG, CHARLES JAC Dec 21, 1880—Mar 4, 1940 Artist

A native of Bavaria, Charles Jac Young was brought to this country by his parents when he was two years old. He studied art in New York at the National Academy of Design and under Robert Henri. Although both a painter and an etcher, Mr. Young preferred etching and was known for his landscapes, especially for his realistic snow scenes. His works are included in permanent collections in museums in many parts of the country. Mr. Young died March 4, 1940, leaving a wife and a son.

YU-T'ANG, LIN See Lin Yu-t'ang

ZEIDLER, CARL FREDERICK Jan 4, 1908- Mayor of Milwaukee

Address: b. City Hall, Milwaukee, Wisconsin; h. 504 N 33rd St, Milwaukee, Wisconsin

A Mayoralty campaign which attracted national attention in 1940 was that of Carl F. Zeidler, who ousted the Socialist incumbent of Milwaukee, Daniel Webster Hoan, who had held the office for 24 consecutive years. Waging a rip-roaring campaign of song and music and handshaking, Zeidler became the youngest Mayor of a major American city.

It was a campaign of youth and good looks against age and experience. Hoan, fifty-nine, tall, lanky and unkempt, had successfully defeated candidates in six Mayoralty campaigns. Affectionately known as "Uncle Dan," he had the gratitude of Milwaukee's voters for cleaning up a corrupt city government. His tenure of 24 years as Mayor was unequaled in any metropolitan community in the United States.

Zeidler was 32, tall, broad-shouldered, handsome, had reddish blond wavy hair and a brilliant smile. He was single and the best looking Mayoralty candidate that Milwaukee had seen in years.

Hoan reminded the voters that he had served them faithfully and well for thirty years, for six years as city attorney, for twenty-four as Mayor. Under his régime, Milwaukee, once one of the most corrupt cities in the country, had become one of the best-governed cities. Mayor Hoan asked the voters to remember that he had given them a city free of political scandal, free of crime, a city with model police and fire departments and with a city debt that was the smallest in the country on a per capita basis. Milwaukee voters had made no mistake when they quit old-time party lines to elect Socialist Hoan their Mayor in 1916.

Zeidler had no such impressive record to offer. He had been appointed assistant city attorney in 1936 when he was 28, a job from which he resigned to run for Mayor. It was his first campaign for an elective office. The son of a Milwaukee barber, he had worked his way through Marquette University, finishing the law course in six years instead of the usual seven. In high school he had excelled in football and track. At Marquette University he won acclaim as an orator and was graduated with honors in 1929. His classmates voted him as one of ten most likely to succeed. In the year preceding his Mayoralty campaign he received five civic awards for service to his community.

Friends said he set his eye on a political career, and went about getting it systematically. He decided to use his fine baritone voice as a success vehicle. He joined dozens of fraternal and civic organizations, including the Young Men's Christian Association, where he kept in trim swimming in the pool. At meetings he could always be counted on to make a speech or to sing. He said, "I gravitate toward my fellow man." He claimed he knew 50,000 Milwaukeeans by their first names.

The politically impeccable Hoan talked to the voters of the excellent government he had given them. Carl F. Zeidler flashed his brilliant smile, sang and shook hands with the voters. Typical of the rah-rah campaign he waged was an incident at an Elks Club one afternoon when 600 astonished women saw handsome Candidate Zeidler step out beside a lovely brunette mannequin in a bridal gown, walk down the aisle with her singing *I Love You Truly* in a rich baritone. Lumps filled 600 throats, and Zeidler probably won 600 votes.

The energetic young Zeidler sang at dozens of funerals, wedding and church services, addressed 293 meetings, shook hands and sang *When Irish Eyes Are Smiling* appealingly. He admitted that Milwaukee was one of the best-governed cities in the country, but declared that there was room

CARL F. ZEIDLER

for improvement, and anyway Milwaukee needed a change. It was time to drive out the Socialists, he exhorted.

While Hoan was a Socialist, Socialism had played little part as an economic doctrine in his practical reforms. In 1935, when the Socialists merged with the Progressives, he ran for re-election as a member of the Farmer-Labor Progressive Federation. He was branded as a Red by complaining bankers, utility men and real estate owners in Milwaukee, however. Zeidler ran on a non-partisan ticket, but with the Red issue raised, conservative Democrats and Republicans lined up for him.

Hoan was a little worried when Zeidler ran up 50,515 votes to his 75,313 in a field of eight candidates in the primary. But observers who knew Hoan's fine record declared he could not be beaten. When the votes were counted in the election, however, there were 111,957 for Zeidler, only 99,798 for Hoan, and the city had turned out for a record vote. Going down to defeat with Hoan was Carl Zeidler's brother Frank, the Wisconsin secretary of the Socialist Party, who ran for county supervisor.

Zeidler, Mayor of the United States' twelfth largest city, is the second youngest Mayor in his city's history, the youngest having been Sherburn M. Becker, now of New York, who was elected in 1906 at the age of 29, and who served one term. Zeidler's comment on his election was, "I used nothing else than modern merchandising methods: See 'em, tell 'em, sell 'em." Hoan said, "I leave my public duties without rancor. Said papa Zeidler: The wave in Carl's hair is absolutely natural."
